The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 496. New Series. SATURDAY, JULY 6, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,

"Investors' Review" Office,

Norfolk House, Norfolk Street,

London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Position of Government Terminable Annuities.

In answer to a question put to him by Mr. Myer, the Chancellor of the Exchequer made the following statement in the House of Commons, last Monday afternoon:—

"The terminable annuities held for the Post Office Savings Banks Fund are of two kinds—first, those which have been created to replace a certain amount of stock; and, secondly, those which have been created to replace a certain amount of cash. When the annuity is for replacement of stock, the law provides for the periodical adjustment of its amount on the basis of a valuation, so as to ensure that at the end of its currency the annuity shall have replaced exactly the amount of stock required. When the annuity is for replacement of cash, its amount is calculated once for all so as to replace that amount of cash within a stated period with interest at a fixed rate. In neither case, therefore, can any question arise of ultimate surplus or deficiency on the operation of these annuities. The Post Office Savings Bank annuity in replacement of £15,000,000 stock was last adjusted in 1903, and will be due for further adjustment next year. The Trustee Savings Banks deficiency annuity as reconstituted by the Savings Bank Act, 1904, is not charged with the replacement of a definite amount of stock or of cash. It is a fixed annual payment of £83,672 12s. from the Consolidated Fund to the capital account of the Trustee Savings Banks Fund, which is to continue until May, 1917."

It is doubtless our ignorance, but for the life of us we cannot interpret this dark saying otherwise than as a confession that the terminable annuities have been a costly institution for the taxpayer. The distinction drawn between annuities created to replace cash and annuities created to replace stock seems to be of the officially smoke-dried, red-herring type. Both classes of annuity are equally a speculation. If the State takes a man's cash in exchange for a life annuity of so much per annum it speculates on the duration of the buyer's life, and when it creates an annuity to replace so many millions of cancelled stock it speculates on the price of the stock. With the cash annuities we are not now concerned, although an account showing how much the Treasury, *i.e.*, the taxpayer, has gained or lost by them since first instituted, would be a valuable object lesson in this kind of speculation. We, however, are occupied with the annuities created to replace stock, and we cannot help thinking the permanent officials have made Mr. Asquith talk nonsense about these when they told him to say, "In neither case can any question arise of ultimate surplus or deficiency on the operation of these annuities." He is speaking of what he is made to describe as "cash" and "stock" annuities, and the saying is nonsense about either. He seems to confess as much by going on to speak of "adjustments." The Post Office Savings Bank annuity in replacement of £15,000,000 stock "was last adjusted in 1903." Just so; and why was the Trustee Savings Bank annuity "extended" until May, 1917? What can feats of this description mean if not that costly miscalculations have been made, for which the nation have to pay? On June 18, 1880, Mr. Gladstone stated

that the deficiency in the Trustee Savings Banks funds was £3,565,000, and was not the annuity of £83,672 12s. created to make good that loss by the year 1908? If it had been made good, why was the annuity extended until 1917? Was it because buying stock above par enlarged the deficiency?

We must get at the bottom of this mystery somehow, and Mr. Asquith will do well to apply his penetrating intellect to its solution. To the mere lay, untutored mind the problem appears to be as simple as the risk to the State is unquestionably formidable. Doubtless £15,000,000 nominal of Post Office Savings Bank stock was cancelled when the annuity relating thereto was created. Stock to a like nominal amount would have been bought for the Post Office Bank in the open market at various prices, much of it, as the annuity was only created about seven years ago, at prices well above par. By converting the stock into an annuity calculated to replace the same nominal amount within 25 years at most the Treasury effectually buried the cash loss to the Savings Bank on all the stock bought above par. Assume the average cost of this £15,000,000 to have been 103 per cent., paid in the shillings and pounds of the thrifty, and a trifle of £450,000 clean gone would in this way get buried out of sight. The bank remains liable for the whole of the cash originally paid by the depositors, but it will only have £15,000,000 nominal of stock to represent it when the annuity has run its course.

But here comes in another risk. Presumably the actuaries in the service of the Government calculated to be able to replace the stock at par within the term fixed by means of the annuity embracing both interest and principal. In order to make good the calculation upon which the annuity is based the stock bought to replace the stock cancelled ought not to be bought above par, because if so bought there will be a proportionate shortage at the wind up. On the other hand, if bought below par, the nominal amount of the stock will be made up before the annuity has run its term. The transaction will in that event have yielded a profit instead of a loss, just as the life annuity sold for cash will have done if the holder thereof dies within the calculated period. What we want to get possession of, therefore, is a complete cash account exhibit of the various stock-replacing annuities now being managed by the National Debt Commissioners. Upon this Post Office one created to replace £15,000,000 of stock there ought at the present time to be good promise of an ultimate profit, because the replacement stock is presumably being acquired at low prices. It is, however, probably quite otherwise with the "converted" and Chancery annuities that expired last year, whose aggregate was £3,008,538. Were these "extended" annuities annuities which would have shown a deficiency if the date originally selected had been adhered to? We are quite aware that the ruinous inroads made by the war in South Africa upon our resources compelled the then Government to suspend the operation of all the then running annuities it could touch so that the charges imposed thereby on the national revenue were cut down in the year ended March 31, 1901, by £4,434,000, and in the succeeding year by £4,536,000—or nearly £9,000,000 altogether, which has to be added to the cost of the war—but this has nothing to do with the question now under discussion. What we want to obtain is a profit and loss account of the whole of these annuities. They involve dealings in stock, and whether the nation gains or loses by them must depend on the success or failure with which the operation is in each case carried to completion. To be perfect, we should really have to know how much cash the Treasury originally received for the stock cancelled in order to create a debt-redeeming terminable annuity, and that surely could be approximately got at.

Assume, by way of illustration, that £30,000,000 nominal in Consols originally brought the Exchequer £25,500,000. For the purpose of starting a terminable annuity it is taken into account at par, and the annuity, calculated on a 2½ per cent. basis, is established on terms computed to enable the Government to replace the whole of the stock at the end of thirty years by purchases in the open market. In any event, the nation stands to lose money by this kind of operation, because the further the annuity progresses towards its term the more powerful is the leverage it exercises on the market price of the stock which has to be bought. Even if all bought in at an average of par the nation would have paid £4,500,000 more than it originally received. But we saw how the Government annuity purchases forced up the price of Consols for years before the African war broke out, and the same effect will be produced again if no other war intervenes. Does Mr. Asquith wish us to believe that the terminable annuity system could work with perfect success and smoothness when much of the stock had to be bought in at 110 per cent. and upwards? He cannot; and, therefore, he ought to tell those who prompt him to stop making him look like a novice. How much more than the sum actuarially allowed for to replace the stock converted by the successive debt-redeeming annuity creations of Mr. Gladstone and Sir Stafford Northcote has been required to buy in an equivalent nominal amount of stock? What has been the effect of the successive reductions of interest? In short, has the nation lost money by this artificial method of reducing its debt, because if it has, the time has come to change it for a better, to make preparations to convert the entire funded debt into a long-dated terminable annuity, the reinvestment of the capital embraced in which would be the business of the individual annuitant, not of the State. State-managed terminable annuities can rarely or ever result in anything but loss to the taxpayer, and in most instances, we fear, the loss has been severe.

Spiers and Pond.

We hope the position has been squarely faced now, but the report of the committee of investigation, although fairly full, does not contain enough information to enable us to make sure. And so far as can be seen, there is no intention to enlighten the shareholders beyond the point at which they can be induced to assent to the scheme of reconstruction. The position is admittedly a delicate one, and since the committee was absolutely free and independent, proprietors will probably be willing to acquiesce in the concealment of the particular directions in which the heaviest losses have been incurred. It will doubtless be recalled that the disastrous state of affairs revealed by the accounts for the year ended March 31, 1906, induced the directors to consult ten of the largest shareholders just to see if anything could be done to rescue the business from irretrievable disaster. These gentlemen became a provisional committee of investigation, and when the annual meeting was held the shareholders appointed a kind of sub-committee, with full powers, consisting of Charles A. Dingwall, Henry J. Gardiner, and William T. Holland. We may say at once that this body appears to have carried through its work extremely well, and all it says in the report now to be referred to, has the approval of the general committee, or, rather, of those members thereof who were able to give the necessary time to the consideration of the proposals. This committee, as originally constituted, represented share capital to the extent of over £400,000, or one-third, so that its counsel must have great weight, and its votes will probably ensure the passing of the scheme. When the investigators were appointed it was hoped to have the report ready not later than January 10 last, when a meeting was to be called. The gathering was held as promised, but as the committee was not ready, there was nothing to do but adjourn. Now the annual and special meetings can be held on the same day, because the annual accounts have also been issued. Six months was no doubt much too short a time in which to conduct a full inquiry into a business of such magnitude and ramifications, and even now the work is far from concluded. The committee, indeed, ask to be appointed for another year.

Without giving a hint as to their nature or situation, the committee tell us what we all knew, that there are certain branches which do not yield the return for the capital invested in them that was originally expected, and the experience of the past year has shown that in these there is little tendency to any material improvement. The amount of capital lost is estimated at the nice sum of £480,000, besides the amount standing at the credit of the various reserve funds. As to this much more information is absolutely essential, and must be given. Only one actual reserve exists, the general fund standing at £29,380. In addition, we have an amortisation of leases reserve £50,646, and debenture redemption fund £43,098, but we fail to see how either of these can be applied against lost capital. In the case of the leases account, it must represent natural wastage of assets that has already taken place, quite apart from unlooked-for deficiencies. But next Monday's meeting may clear up much. However, £480,000 of the share capital has to go, the corresponding assets having disappeared, and this is how the committee proposes to conduct the funeral. First of all, though, the preference shareholders are asked to give up the arrears of dividend to March 31, 1907, amounting to £52,500, but for this they are to get voting powers which will give them absolute control over the undertaking. Preference-holders do not actually contribute to the capital reduction, but it is proposed to exchange the present £10 shares into six £1 shares, carrying dividends from April 1 last at the rate of 6 per cent. per annum, and four £1 ordinary shares. The effect of this will be to reduce the present 5 per cent. dividend on the £10 shares to one of about $3\frac{9}{16}$ per cent., but it gives the ordinary shareholders a better chance, and the preference people an interest in future success, should it be attained. It is the ordinary shareholders, therefore, who must bear the real burden of the loss, and no one can fairly say it should be otherwise. Each £10 share will have £8 lopped off, and the remaining £2 will be divided into two £1 shares. Now, as each share of both classes will carry one vote, the existing preference-holders will have in the aggregate 600,000 votes, and the ordinary 120,000 votes, and if the ordinary proprietors kick up a dust on this score it will hardly be surprising. Needless to say, no attempt is made to interfere with the debenture debt, and the future capital will be debentures £1,006,000; 6 per cent. preference shares, £360,000; and ordinary shares, £360,000. The committee makes some sensible references to the stores, but we have never stayed in the company's hotels, and cannot say if they are "as good as or better than most hostelries of their kind." Particular mention is made of the seaside hotels, while the London ones are not specially indicated. Does the rub come there?

Let us look at the balance-sheet for a moment, although it does not add much to our knowledge. The freehold and leasehold properties are down in one item for £1,776,492, and the plant, furniture, &c., for another £459,361, so that unless the accounts are considerably expanded, the reductions which will presently appear in these items will not put us far on the track of the losses. No alterations have yet been made in the general management, but the board has, at the suggestion of the committee made equitable arrangements with the chairman and managing directors, which will give the general body of shareholders free and supreme control of the business. In the circumstances proprietors need have no hesitation in re-electing the present board for the coming year, on the understanding that no contract should be entered into with any director or manager except from year to year. It would certainly not be a good thing to clear out all the members at a swoop, because they must know more about the business than any new men, however energetic and capable. Changes are essential though, and later on will doubtless be gradually made. We may note, however, that the board has, with the concurrence of the committee, elected Mr. Henry P. Stephenson a managing-director in the place of Mr. Sidney.

From the fact that proxies in favour of the reorganisation are to be sent to the secretary, it may be assumed that the directors and committee are in accord over the scheme, and we doubt if anything much better could be devised just yet. Fortunately, encouragement comes in the shape of a much better profit display for the twelve months ended March 31 last, and doubtless the committee and the two new men put on the board a couple of years ago, Dr. White and Mr. Hopkins, have been hustling things up a bit. There is another small drop of £18,983 to £1,328,343 in the business done, and transfer fees gave £82 instead of £100, sales of the company's securities being difficult, making an aggregate of £1,328,425. But the working expenses and cost of wines, spirits, provisions, and other goods consumed were reduced by £37,852 to £1,254,691, so that the balance of profit was £73,734, terribly poor, but an improvement of £18,852. Debenture interest requires £46,340, and the remaining £27,394 will be carried forward, together with £2,791 brought in. Remaining items in the balance-sheet do not call for lengthy notice. Bills payable and sundry creditors make up a total of £102,018, which is fairly heavy, but the company's holding of wines, spirits, provisions, and other goods is valued at £185,351, cost price, we hope. Debtors, &c., owe £61,265, cash and bills amount to £26,644, and investments at cost appear at £54,017, so that the company is not quite poverty-stricken. There is not much more to be said. We do not charge the board with wantonly neglecting the business, but it has certainly failed to move with the times; shown itself incapable of realising the strength of rivals, and of diagnosing the paralysis which was creeping over the business. In a word, it was out of date, and for too long indisposed to admit that anything was wrong, or if it were, that it could be set straight. But we have no wish to be harsh, great though the sufferings of shareholders must be when shares fall from £30 to 20s.—and shall be among the first to rejoice if the business can be pulled round, and again give its unfortunate proprietors a fair return. We wish we could speak with more confidence on that point.

Economic and Financial Notes.

The First Quarter's Revenue.

Mr. Asquith seems to have underestimated the elasticity of the public revenue, for the figures of the first quarter ended last Saturday show a net increase of £600,938 in the amount paid into the Exchequer. All items of revenue except Customs show either no reduction or some increase, and the decrease in the Customs revenue is only £237,000. Property and income tax at £4,310,000 gave £473,000 more than in the corresponding half-year, but whether this increase is due to less stringency in the collection of the tax during the final quarter of the past fiscal year or to larger payments on account of the current year we have no means of knowing. The only other branch of the public income which gave an increase of six figures was the Post Office, whose total of £3,210,000 is £110,000 up. Estate duties, however, gave £85,000 more at £3,000,000, thanks no doubt to the still considerable harvest of millionaire estates. Next came the Excise duty with an increase of £50,000 at £330,000, followed by the telegraph service, the increase in which was £40,000, and the total £1,040,000. Excise, however, showed an increase of only £13,000 at £6,000,000, and it is to Excise and Customs we must at this period of the year more than to any other category of the public income that we must look for signs of expansion. The fact that Excise has done little more than stationary and that Customs have receded to a sensible amount ought therefore to prevent any indulgence in sanguine views as to what the outcome may be at March 31 next. It is, however, reasonable enough to expect that Mr. Asquith's estimates will be exceeded under various heads, for that is the rule

result of the great trade prosperity the country continues to display. And unless some financial upset occurs there is no reason to be downcast about the coming nine months. What we always lament is the fact that so much of the country's earnings should be swept away from the people into the Treasury. The total revenue paid into the Exchequer was £30,651,530, and, in addition, £1,998,471 was handed over to local authorities out of the Customs, excise, and estate duties, so that altogether £32,650,001 was received at the Treasury in the first quarter of the present fiscal year, against £31,836,300 for the corresponding period last year. And yet the revenue seemed short of the quarter's requirements by £2,018,455, if we include the debt charges payable on the 5th inst. It is, however, an apparent rather than a real deficiency, since £700,000 was advanced to buy bullion for the Mint during the quarter, while £6,116,000 nett of unfunded debt was redeemed, exclusive of the £1,000,000 applied out of last year's surplus to the purchase of stock for cancellation. Presumably, moreover, these items of capital expenditure—under Telegraph Acts £170,000, naval works £200,000, military works £150,000, public buildings £100,000, and Cunard agreement £177,235, making a total of £797,234, were provided from revenue, not by the creation of debt. In that case the redemption and "avoidance" of debt would aggregate £8,710,235 for the quarter, including the £1,000,000 from surplus brought forward. But supply services took no less than £26,520,263 during the three months. It is much to be wished that the items composing this formidable aggregate were set out in detail in the summary of income and outgo issued at the end of every quarter by the Treasury.

The Post Office Deficiency.

We are sorry to see that the Chancellor of the Exchequer adheres to the obscurantist policy instituted by his predecessors in regard to the Savings Bank deficit. He was asked on Tuesday by Mr. Swift McNeill a kind of composite question in which was embraced a request for information as to the market value of securities held by the Post Office on December 31 last. The question also went on to deal with the stock of gold problem, and Mr. McNeill further wanted to know whether a gold reserve would be formed for the Savings Bank. The whole series of queries was pertinent enough, but we are for the present concerned only with the position of the Post Office bank assets. That the bank shows a large deficit is perfectly well known. Mr. Alfred Marks computed it quite moderately in his article printed in our last week's issue at £15,000,000. Now, why should the Government follow the fashion set by the legendary ostrich and bury its head in the sand, try and hide from itself this ominous fact? "I fear," said Mr. Asquith, "I should be defeating the intention of the Act of 1904 if I gave the facts." But that Act was a disgrace to the Legislature that passed it and to the Government that framed it. Once more we ask, what would be thought of any joint-stock bank in this country which systematically ignored the depreciation upon the securities held by it and continued to take them into its accounts at cost price, no matter whether the actual loss might be 10, 15, or 25 per cent.? There would be a run upon that bank which would go far to ruin it were it to become known that such a course were pursued. We trust our banks only because we believe they deal openly with their securities and face the position each half-year. Why should the Post Office be treated as something different from other banks in this respect? It is philanthropically carried on at a loss we know, and the stock-jobbing part of its business is fertile in blunders, but it is none the less a bank like other banks, liable to its depositors for every shilling of the money it accepts from them; and were these depositors to take it into their heads to go in droves and ask for their money the bank would have to shut its doors in a week, bringing about thereby such a depreciation in the price of Consols and other Government securities as would paralyse the credit-wielding power of the Government for many a day to come. Is this danger to be ignored? Can Mr. Asquith be sure that Post Office depositors will not one of these days catch the alarm and rush to take their money out, knowing the bank to be insolvent by all the tests usually applied? He has no gold reserves whatever to fall back upon, only deficits on both current and capital account, and yet roundly declared that he could not admit the Post Office Savings Banks to be at all on the same footing as the commercial banks in regard to gold reserves, or apparently anything else. This seems the acme of recklessness, and we hope a little consideration and examination of the facts will induce Mr. Asquith to change his mind. It is not good for the Government to have the handling of an institution which is not only a losing one in its current business, but the deficiency in whose deposit accounts is a growing one, one already amounting to a sum probably larger than the total amount of debt redeemed since the present Ministry came into office.

The Coal Tax.

A correspondent some little time ago put the following conundrum to us. Evidently the writer does not believe in Free Trade—holds the view that the more you can get out of the producer for the Treasury the more prosperous trade is bound to be. We have no sympathy with that view, and cannot see any analogy whatever between the export tax on tin levied in the Malay Straits, and our recently abolished export duty on coal. Tin is a mineral not very widely distributed; at any rate, it has not been found in the crust of the globe in quantities which have kept it cheap to the consumer, and as long as Straits and Java tin command the market the export duty does not make much difference to the demand for the metal. The tax is not economically good, but it does not abate the demand, for tin is something manufacturers must have at any price. But with our coal it is altogether a different story. Coal is found everywhere in one quality or another, and a duty upon the export of our coal levied here must have the effect of crippling the power of our merchants to sell it in foreign markets, the more so as onerous royalties are already borne by the mine-owners. If this export is crippled in any degree our power over foreign markets in all directions is *pro tanto* weaker. It is argued by the Protectionists that a duty of a shilling per ton meant comparatively little in the way of hindrance, but the records of the German exports of coal told a different story, and we may be perfectly sure that if the United States were to abandon in any measure their present ruthless and suicidal system of protection, Pennsylvania anthracite coal would compete with British in all markets, especially in all Continental markets. We did not suffer so much from that export duty which the Tories put on and took off as we would have done had the United States coal miners been free to send their coal into our markets, able to do so without having to pay all sorts of monopoly charges still unknown here. But it was big enough to cause us to lose some of our custom, and had it been continued it would undoubtedly have prepared the way for that effective American competition which will one day help to relieve us from the sentimental fear that our prosperity will come to an end because we have no more coal to sell. And the fact stands out, as Mr. Lloyd George has stated, that in the six months ended May 31 last our exports rose nearly 11 per cent., to a total of 27,697,877 tons or 2,702,737 tons more than in the corresponding six months of 1905-6. Hence in part the corresponding advance in our general import trade.

"I should wish to ask you to explain in The Investors' Review what are the objections to an export duty on coal. In my ignorance I should have thought it a good tax, as by that means the nation secures for itself some of its wealth which is being rapidly made away with. Our stock of coal is one of the securities for our National Debt. When the coal is exhausted, or it becomes too expensive a process to work it with

profit, we shall have no means of paying off our debts. Coal is the life-blood of our industries, and one result of taking off the tax has been to raise the price of coal in this country, and thus penalise our industries. For instance, a director of one of the southern railways told me last week that their coal was costing them £1,000 a week more than last year, and they were expecting to have to pay still more when they made their new contracts! What compensating advantage does the country get for the loss of the two millions of coal tax? For the last 30 years the chief source of income in the Malayan States has been an export duty on tin. If an export duty on coal is economically unsound, how can one on tin be defended? Can the difference be that the tin miners and owners of tin mines are Chinese, who have no votes?"

South African Federation.

Whence arises the extreme urgency for South African Federation sprung upon the Government with apparent suddenness by Lord Selborne? Does it lie in the hunger of Cape Colony for more London loans, or in the losses incurred by the railways of all the colonies? Or, with yet more strenuousness, are the necessities of Rhodesia at the bottom of the business? The poor dear "Chartered Company"—such an imperial institution it is, don't ye know, something quite on the lines of old John Company of famous memory—must be *in extremis* for money, notwithstanding the help it has received from Mr. Moreton Mandeville and other disinterested patriots, and its open bankruptcy might have a troublesome effect upon the credit of society planets and their satellites not a few. The dukes have mostly gone away, it is said, he of Fife setting the example—they crawled out on the shoulders of the snobbish multitude long ago; but there are many left among the leaders of fashion and sport who would get perilously near the workhouse were the Chartered Company to be allowed really to come to its natural end, it and its guaranteed bankrupt railways. What idea could be more brilliant, then, than the idea of unifying all our dominions in that part of the world, and giving at worst a federal guarantee to the boodled railways of Natal, the trafficless railways of Rhodesia, and the half-insolvent railways of the Cape Colony and Orangia. We should imagine there must indeed be urgency for an all-embracing and all-concealing policy of this kind. It will be like those "voluntary liquidations" fashionable among joint-stock companies of the ichneumonised kind—liquidating the past by ignoring it, or by wrapping it up in a re-organisation and amalgamation. Was Lord Selborne kept in South Africa to make sure of the successful accomplishment of this important coup in fusions? We should not be surprised, for there are interests more powerful than that of Cabinets and stronger than Kings behind Chartered finance.

Therefore, we expect to see immediately a proposal tabled to the effect that the administration of Charterland, otherwise Rhodesia, should be taken over, provisionally, by the Home Government—that Government so rich, so rich—and that the railways promoted and guaranteed by the Chartered Company—with good pickings for good friends in the bygoing—should be fused with those of the Cape Colony, Orangia, and the Transvaal. There would be one controlling body, and for form's sake each section of the country might be expected to join in a guarantee of interest which might be effective as long as loans could be floated. There might on this basis even be a reorganisation or consolidation of the debenture debts of the Chartered Company's railways, in the carrying out of which excellent opportunities could be provided for market operations of a kind profitable to the early enlightened. It should be possible under proper management to call in the existing bonds, now at a nasty discount, and pay them off at par by means of a new "blanket" stock—the engineers of the deal could hardly ask a premium on redemption in the present distressed condition of our stock markets—and everybody would thus be made happy. But anyhow, federation is from the financier's point of view a good thing, an excellent thing, well charged with opportunities of profit to the elect, and of no consequence at all to the budding nations to be operated upon. What does it matter how the people fare? There is not enough of them in Rhodesia to count one way or another, and the leader of the raid is still Prime Minister of Cape Colony.

A Suggested Trust in "Gilt-edged" Stocks.

Frankly, we resume the publication of these Trusts with considerable hesitation, owing to the state of markets. As has often been indicated in these columns, we do not consider the decay in prices yet at an end, but by avoiding too speculative commitments and by looking for securities with substance, it is possible that we may be able to assist our subscribers. All we stipulate for is that they will not blame us if the securities we indicate sometimes show a loss on the purchase. Those in the following Trust, at any rate, should all be safe for interest, and that always ensures in the long run a recovery in price. The following list consists of securities of the trustee class which are yet not all legally suitable for trustees:—

Birmingham Canal Guaranteed Stock.—This stock touched 149½ in 1897, and can now be picked up at 110. It is guaranteed interest at the rate of 4 per cent. in perpetuity by the London and North-Western Railway.

Metropolitan District 4 per Cent. Rent Charge Stock.—This stock is also now very much reduced in price. It has been as high as 147½, and is now at or very near the lowest figure ever touched. As the interest is guaranteed by the Midland Railway, which pays a rent sufficient to give the stock 4 per cent., it is an investment that stands altogether clear of the fate and fortunes of the District Railway itself.

London and India Docks "C" Debenture Stock.—There is about £11,000,000 ordinary and preference stocks behind this debenture issue, but it is a non-cumulative stock, or at any rate holders cannot claim back dividends unless a surplus remain after paying interest on all the debenture stocks of the company, as well as the dividends on the "A" and "B" preference stocks. There is thus a risk in it, but not a great risk, and we think the stock cheap at the price given.

Gold Coast 3½ per Cent. Inscribed Stock at 84 seems also an excellent investment, although the stock has no other security than the revenues of the colony. These, however, are growing, and the railway is obtaining a considerable and increasing traffic, so that the security should be ample. It is only the present state of markets which keeps the price down. It was issued at par in March, 1902, and is a trustee stock.

Buenos Ayres Great Southern 4 per Cent. Debenture Stock.—There is about £25,000,000 of stock behind this security, which is excellent, and subject to no visible risk of any description we can think of, except a risk of being paid off at par in the event of the Argentine Government buying up the entire undertaking. This is rather remote. It has been as high as 122¾, and was never at a lower price than that now quoted.

	Price.	Cost	Interest
	£	£	£ s d
200 Birmingham Canal 4 %, guar. by L.N.W.R.	110	220	8 0 0
200 Metropolitan District Midland 4 % Rent Charge	105	210	8 0 0
250 London and India Docks 3 % "C" Debenture	80	200	7 10 0
200 Gold Coast 3½ % Inscribed	84	168	7 0 0
200 Buenos Ayres Great Southern 4 % Debenture Stock	102	204	8 0 0
		£1,002	£38 10 0

Capital Issues, January to June.

For the first half of the current year, according to the City article of the *Times* newspaper, the total issues of new capital amounted to about £70,000,000, of which about £11,000,000 was contributed by American Railroad issues, only portions of which were placed here. These figures do not correspond with those given in last Saturday's *Financial Times*. There the total of

the issues for the half of the current year is put at £106,282,000, as against an average of about £104,000,000 for the same period in previous years. As details are not set forth, we are quite unable to determine which of these totals is the right one, and except for statistical purposes it perhaps does not so much matter, because a great many of the new ventures put before the public were not taken up. If these compilers of new capital creations could set forth how much of each security has been placed amongst investors they would give us valuable data on which to found reasonings about the position and prospects of Money markets. This, however, is quite beyond the power of any statistician, because we go along in such a flip-flop style, taking no note of the way our capital may be absorbed, or for that matter devoured, that it is impossible to tell what aggregates of this description really mean. The *Times*, however, sub-divides its aggregate into various classes of securities, and we find from this that Home Corporation and county stocks—which were probably placed, at any rate, with underwriters—account for about £5,135,000, Indian and Colonial Government stocks for £13,219,000 odd, Foreign Governments for £8,380,000, and Foreign Railways for £10,977,000. Home Railways apparently came for only £700,000 in the half-year, but that must surely be a mistake, and the *Times* has doubtless failed to note the securities offered direct to shareholders without advertisements of any description. What is noticeable about the list is the comparatively small amount of mining adventures put upon the market. Their total for the half-year is only £1,160,000, or not much more than rubber companies have demanded. Motor and motor-cab companies, however, have, according to this authority, asked for £1,571,000, and financial companies, land companies, and trusts for £2,830,000. Against Telegraphs &c., is set down a total of £9,300,000, but in that would seem to be included the £8,000,000 of 4 per cent. gold bonds offered by the American Telephone and Telegraph Company simultaneously in the States and all over Europe. How much of that amount was placed here—one-eighth of it, one-fifth, or one-tenth? Then amongst the Commercial companies, whose total is put at £6,771,258, we suppose we must include the capital of the Coalite Company, and any number of other adventurous undertakings whose fate we hope has not been such as to involve the investing classes in large losses.

Changes in the Prudential's Constitution.

We are afraid that if Mr. Ramsay Macdonald had seen the circular issued by the Prudential Assurance Company to its shareholders his language about industrial insurance the other day would have been too libellous for print. And yet, as we shall take an early opportunity to show, the Prudential has treated its clients far better than any other company doing the same kind of business. It has prospered accordingly, and now the board has determined to bestow all round, as it were, further benefits out of the superabundance of its wealth. Changes in its constitution are proposed under which Sir Henry Harben, ablest of organisers, most vigorous of old men, now over 80, becomes irremovable chairman for life. It is also proposed to reduce the minimum number of shares one person may hold from 20 to 10. Then, after December of the present year the shareholders will no longer receive interest on their capital. Philanthropy? Not quite; they will get dividends. Under the old clause 108 of the articles of association surplus profits were divided into four parts, all of which seemingly went to the shareholders as bonuses over and above the 45s. per share in interest paid to them. Under the proposed new clause, of the profits remaining after 50s. has been paid as dividend on each share—being 50 per cent. on a paid-up capital of £1,000,000, which was almost wholly provided out of past profits—one-sixth only will go to the shareholders as bonus, and "four equal sixth parts of the surplus shall be distributed or reserved for distribution as a bonus in respect of such policies or classes of policies in the industrial branch as the directors shall in their absolute discretion determine." The final sixth part of the surplus is to go as bonus to "such of the superintendents, assistant superintendents, and agents of the company as the directors shall in their absolute discretion from time to time determine." This last amendment introduces a new element into the relations of principal and agent, and may evoke no small criticism in Parliament and elsewhere. Already canvassers and collectors for what is called "industrial" insurance seem to be well treated, and those of the Prudential Company not least so. Their scales of commission are necessarily high, and they enjoy other benefits seldom the privilege of the working man or woman whose weekly pence they collect. Why, then, this special bonus? And why are bonuses to both staff and policyholders to be granted only at the "absolute discretion" of the directors? This has a smack of autocracy about it that deprives it of relish. Bonuses to shareholders, it should be added, have been and are to be distributed "without reference to the amounts paid up thereon," but as the shares are fully paid the phrase seems mere ornament. Is it the same with the "absolute discretion"? Not quite.

In the circular accompanying the notice of changes in the articles a paragraph from the chairman, Sir Henry Harben's, speech at the annual meeting held in March last is given, and it recalls the fact that £200,000 was added to the industrial reserve fund out of last year's profits as well as the promise that "some systematic method" was in course of elaboration in virtue of which the reserve fund assigned to industrial policyholders might be increased so that they might share in the company's prosperity. We see now how this promise is fulfilled, and no one will quarrel with the allotment of four-sixths of the surplus profits to this purpose. Does not, however, the "absolute discretion" phrase still safeguard the interests of the shareholders in these profits? Are not the whole of the profits, in other words, still to remain the absolute property of the company, so that its directors may, if they choose, keep every penny of them, or only assign away such fragments of them as they consider good for the advancement of the business? In other words, holders of burial money policies will have no more claim in future than hitherto to more than the amount named in the bond. They may deserve no more, certainly have a right to no more; but oh, these Socialists! They will be wanting to know what would happen in the event of the proprietors coming to a resolution to wind up the business and retire to enjoy their well-earned gains.

United Railways of the Havana and Regla Warehouses, Limited.

The following are extracts from a letter addressed to the proprietors of this company, under date July 3:—

You will remember that in the last report of the directors, issued on October 12, 1906, it was stated that, owing to the increased mileage of the company's system and the extension of its business during the last two years, it had become imperative to provide greater terminal and other accommodation in the Havana. Large extensions and improvements at the Villanueva Terminus in the city of Havana, involving a very heavy expenditure, were at one time in contemplation, but, by the arrangements with the Havana Central Railroad Company, to which the sanction of the meeting is now invited, a considerable amount of this expenditure will be avoided.

The Havana Central Railroad Company is an American corporation, with an issued capital of $10,000,000 in 5 per cent. bonds and $8,162,500 in common stock. Its lines, which are operated electrically, have only recently been opened for traffic, and, therefore, no returns are yet available. It has now two lines in operation, one from Havana to Guines, and another from Havana to Guanajay. It also owns a large and well-equipped pier, with warehouse accommodation, known as Paula Wharf, an electrical power station capable of supplying power and lighting to the whole of Havana and its suburbs, and a complete system of workshops equipped with machinery of the most modern type. Its terminus is most advantageously situated on the Harbour of Havana, and is in direct communication with the Paula Wharf. It also owns a system of ferry boats, which cross the bay to Regla, and an electric tram-line in connection therewith to Guanabacoa.

In view of the competition entailed by the Havana Central Railroad Company's system and the probabilities of the develop-

ment thereof, it was thought advisable, in the interests of this company, to make some kind of arrangement, with a view to the general traffic of the large and important districts served by the combined systems being developed through their harmonious working. With this object, this company purchased $2,250,000 of the 5 per cent. bonds and $4,112,500 common stock of the Havana Central Railroad Company, and an issue of 5 per cent. irredeemable debenture stock (1966) was recently made to meet the above-mentioned purchases, and to provide monies required in connection therewith. In addition, a scheme was prepared, with the sanction of the board, the object of which was the acquisition by this company of the remainder of the bonds and stock of the Havana Central Railroad Company in exchange for debentures and deferred ordinary stock of this company. The scheme, particulars of which you may have recently observed in the public Press, involves the giving by this company in exchange for each $100 share of the common stock of the Havana Central Railroad Company of £7 4s. 4d. (equivalent to $35 at 4.85 exchange) in deferred ordinary stock of this company, and for each first mortgage 5 per cent. bond of the Havana Central Railroad Company £266 3s. 9d. (being $1,000 at 4.85 exchange) in 4 per cent. debentures of this company, and also £4 2s. 6d. in cash, being the equivalent of interest at the rate of 4 per cent. per annum for six months ended April 30, 1907, and the further sum of £1 7s. 6d. in cash as the equivalent of interest from May 1 to June 30, 1907.

This company has now received notice of the deposit of a large majority of the bonds and common stock of the Havana Central Railroad Company, which rehders the proposal operative.

In order that the scheme may be carried out, the approval of the shareholders of this company is necessary. The board are decidedly of opinion that it is essential in the interests of the company that it should be carried out, and recommend the adoption of the resolutions set out in the enclosed notice.

For the purpose of carrying out the exchange, it will be necessary to increase the capital of the company by the creation of deferred ordinary shares of £1 each. These shares will be converted into deferred ordinary stock, entitled, after 8 per cent. has been paid in any year on the ordinary stock, to receive out of the remaining profits available for dividend for the same year a like dividend, and any surplus profits available for dividend will be distributed *pro rata* between the ordinary and deferred ordinary stocks. When the two classes of stock have received dividends of 8 per cent. for two consecutive years, the deferred ordinary stock will become ordinary stock for all purposes.

The board, in exercise of their powers under the articles of association, will create and issue the 4 per cent. debentures (being part of an amount not exceeding £2,070,000), required to be exchanged for the first mortgage 5 per cent. bonds of the Havana Central Railroad Company.

The plan or scheme and proposal as presented to the bondholders and common stock holders of the Havana Central Railroad Company, and outlined above, will be laid before the meeting, and can be seen at the offices of the company between the hours of 11 and 3 on any day preceding the meeting.

Advantage is being taken of the meeting to obtain the sanction of the shareholders to the conversion of the 3,000 ordinary shares of £10 each, created by company's Act of Parliament of last year, into stock.

By order of the board,

W. J. Maslen, Secretary.

American Business Notes.

Last week's return of the New York Associated Bank pointed to very dear money at the end of the month, and it came. On Saturday the general rate for loans over the end of the week was 8 per cent., but the figure rose to 15 per cent. before the day closed, and the last loan was granted at that figure. This is not surprising when we find the manipulated surplus reserve of the Clearing-House banks down by no less than £620,000 to a mere £503,000, against £2,441,000 at the same date last year. This is the lowest surplus ever shown, except in 1903, at this time of year. Loans were reduced by £1,580,000, but deposits fell off by £3,000,000, and the specie reserve went down £1,500,000, against which less than £129,000 in greenbacks came in. The gold was mostly withdrawn for export, since the nett shipments to Europe during the week came to about £1,140,000. But the market would have been hard up in any case, because credit has been abused to an extent which must tend to keep the market bare of cash, whatever happens. Speculators and bankers are counting upon relief from the Treasury, which against its coming withdrawal of £6,000,000 in deposits has begun to pay off matured bonds. We fear they are out of their reckoning, and that, although the one operation may balance the other, money will remain dear, at any rate in spasms, until liquidation of a much more drastic description than any we have yet seen is forced upon Wall Street. It courts a smash by the persistence with which it ignores facts.

An explanation of the decrease in deposits is offered which does not seem to hang together quite. The apologists for the market say that the trust companies have been drawing away their balances in order to lend the money direct, instead of leaving it with the banks to lend. Unless, however, the whole of the money is sent away from New York or given over to banks not in the Clearing House, we do not see how the aggregate of deposits could be much affected by any movement of this kind. Supposing a trust does actually draw $2,000,000 or $3,000,000 of its bank deposits, in order to lend the money direct, the people who get the money must put it back into the banks, so that it is somewhere in the total of their deposits all the same, the only change being that it now figures in different accounts instead of in one. The real cause of the loss of deposits is, we suspect, apart from the steady outflow of gold to Europe, pressure upon the banks for cash, and probably enough the withdrawal of balances from New York by the banks out west. It is either that or mere account-cooking, in order to avert the appearance of a deficit in the reserve. Western banks, however, must be in many cases just as much in need of means as the New York banks themselves, and as the strain upon credit increases, the tendency must remain dominant to pull away every available dollar from New York.

That the necessities of the credit abusers are incalculable in their intensity continues to be demonstrated by the fresh issues made by all sorts of corporations on one pretext or another. Last week New York tried to sell £5,000,000 in new 4 per cents., and got bids for only £500,000 of that sum. The big banks and financial houses refused to put in tenders, and their abstention involved the failure of the loan, but the market reporters go on to explain that the banks want 4½ per cent. for their money and refuse to lend at 4 per cent. Under the new law the city can consent to pay as much as 4½ per cent. We are not at all sure that the loan will be a success even at 4½ per cent., for joint-stock corporations of all descriptions are paying from 5½ to 7 per cent. for accommodation upon their short term notes. We have before us a list of such issues now being hawked about the London market, all in nominal 5 per cent. bonds, and only one of these issues is offered here at par. Those of the Southern Railway 5 per cents., due February, 1910, are offered at 02½, and even Lake Shore bonds, due in the same month and year, can be had at 99¼. At these prices there will be no active market here, although some of the bonds should be excellent investments. But the stream flows on, and among other new creations announced since we last wrote are $5,000,000 of Chesapeake and Ohio five year notes which are secured by a deposit of $6,500,000 in new bonds to be created by that company to the amount of between $25,000,000 and $75,000,000. The Chicago City Railway is another concern that wants money, and its board has authorised an issue of $10,000,000 in first mortgage 5 per cent. twenty year gold bonds, of which $6,000,000 has already been sold at a price believed to be 95. The money is wanted to provide for notes outstanding to the amount of $3,000,000, and for what is described as "the work of rehabilitation." Then comes the Père Marquette Railroad, which in order to "clean up all floating debt and provide for equipment payments due this year" requires $5,000,000, which it proposes to get by an issue of $6,000,000 five year notes at par, if it can get them out at that price. The St. Louis and San Francisco is another railroad which is going in for quite an ambitious creation of new stocks. Shareholders will be asked on August 27 to authorise the creation of a general lien 15-20 year gold bond issue to the amount of $115,000,000 at a rate of interest not exceeding 5 per cent., and also to allow the ordinary stock of the company to be doubled, raising it, that is, to $200,000,000. Of the proposed bond issue $67,816,000 will be reserved to place other issues as they mature, and of the balance $10,000,000 must be issued forthwith to reimburse capital for expenditure made this year and to meet future outlays of the same description. Again, the Texas and Pacific Railway has sold $3,550,000 5 per

cent. bonds of various kinds, but we are not told at what price, and the Union Pacific Railroad shareholders have duly sanctioned the increase of $100,000,000 in that company's common stock mentioned some weeks back. This issue will be utilised apparently to redeem outstanding obligations, and an unspecified balance will go to provide for fresh commitments.

Passing to other companies, we find Mr. Schwab's Bethlehem Steel Corporation desperately hard up, so hard up that Mr. Schwab himself raised a loan of $2,000,000 in the middle of March last to keep it going. Apparently besides this borrow on personal security, $4,000,000 of an authorised issue of $12,000,000 in bonds was sold during the same month completing that operation, and now $2,500,000 in 6 per cent. serial notes, guaranteed principal and interest by the Bethlehem Steel Corporation, are to be put out. The issue is to be countersigned by the Morton Trust Company, and the money will be used to complete extensions which are apparently proving to be much more costly than had been anticipated.

The American Telephone Company, that monopolist concern which holds the controlling majority in the capital of local telephone companies all over the Union, is not at present issuing capital, and President Vail has announced that after providing for all existing and anticipated demands in the current year the company will begin 1908 with no floating debt, and with a very substantial cash balance. But this statement does not seem to take into account money received for the share capital of the company now being issued, "largely under normal conditions," making it possible for the company to go through to January 1, 1909, without further financing of any kind. Meanwhile the syndicate, which in February of last year agreed to buy $100,000,000 of convertible gold bonds issued by this company, and offered here, if we mistake not, has not been able to sell out, so the date for terminating the contract has been extended to July 1 in next year, and there is still 30 per cent. of the money to be called up, of which 10 per cent. is expected to be demanded shortly, and the remaining 20 per cent., half in October and half in January next. With assistance of this kind it is no wonder that the finances of the company are all right.

As in some sort a balance to the continued emissions of new capital to meet all kinds of deficiencies and hungers, we have a capital creation of another kind to note. This is a distribution of $24,000,000 by the Adams Express Company by way of bonus to its shareholders. It would be a delightful thing if this distribution took the form of a cash payment, but corporations in the United States rarely or ever possess any cash not borrowed or "financed," and accordingly the bonus, which is supposed to represent the surplus accumulated in past years by this privileged carrier company, is to take the form of 40-year collateral trust bonds bearing 4 per cent. interest. It thus amounts to a paper dividend of 200 per cent. upon the outstanding share capital, and the form it takes will tend to depreciate that capital in future years by the amount of interest deducted each year for the service of these bonds. The thing seems a piece of reckless folly unless the Adams Company can be sure of maintaining its monopoly and preventing competition. Any way, the feat does not add anything to the resources of the market, which is very hard up.

The lament in the United States over the drawing together of export and import values goes on crescendo, and it really must be alarming for dog-in-the-manger economists to think that the export part of the business is so profitable as to enable the nation to buy more than it has hitherto done. We here should consider this a good sign, proof that after all the energies of a people cannot be wholly shackled by a tariff, no matter how drastic. But this is not the view of the Protectionist American journalist and dabbler in political economy, still less that of the boodle pension recipient and live-by-his-wits politician, to whom Protection with its corruptions is as an earthly providence. He looks with alarm upon the decline in export values, and, above all, upon the expansion of import values. In the month of May, for instance, the excess balance of exports over imports was little more than $8,000,000 against $28,000,000 in April, and as compared with $25,639,000 in May last year and $31,269,000 in May, 1905. So rapid is the approach of the two sides of the account to an equality that fears are expressed lest the figures for the month of June should actually turn the scale and show an excess balance of imports. Clearly this cannot go on, else the tariff itself may be swept away. Fear not, distressed one! Unless, of course, the United States are at the same time cancelling all their debts abroad and thus reducing their obligations to the foreigner, or unless their mercantile marine is now earning the freights which their producers have hitherto had to pay to the British and Continental shipowners, the excess of exports must abide with you and grow larger again. And still what they call their "favourable balance" for the eleven months of the current year, whose figures have been issued, amounts to the respectable sum of $420,954,000, or about £84,200,000. That does not quite meet United States obligations of all kinds due abroad, but it is better than nothing, and gives us confidence on this side that after all we will get what is owing to us.

Passing Events.

A very interesting summary of the financial results arising from the change of Government was given in Wednesday's *Daily News* by Mr. P. W. Wilson, M.P., Lobby representative of the paper. He showed that, whereas the previous Government had in the course of five years of blood and smoke squandered the savings of the previous thirty years, raising the debt from £635,000,000 in 1899 to £798,000,000 in 1903, and bringing it down by less than £2,000,000 in the two succeeding years, the present Government had already up to the end of March last reduced the debt by upwards of £17,500,000, and will have reduced it by the end of March next by about £32,500,000 all told. This is interesting and true. True also is the fact that we have still £144,000,000 of the late Government's addition to the debt to pay off, a sum meanwhile costing the taxpayer at least £6,000,000 a year, including the cost of redemption. Equally effective is the exhibit he gives of the reduction in the outlay upon the army and navy, a reduction which we believe has been effected without any loss of efficiency. All we complain of on this score is that the cut has not been deeper, and it will have to be much deeper before the country is satisfied. Incidentally, he mentions that up to the end of last fiscal year £2,394,000 had been advanced under the Cunard agreement, and he is quite of our view regarding the proposed shipping subsidy in furtherance of that "all red" mail route, product of Imperial hypocrisy mentioned in another note.

In spite of debt reduction, moreover, the present Government has also done something in the way of lightening taxation, and will doubtless do more, but here we come to a dead halt, and must assume an attitude of opposition to the views of this rising publicist. "Old Age Pensions," he declares, "are urgently needed if only to counter the Protectionist peril." Why, old age pensions constitute a Protectionist measure. They are just the kind of thing that the Protectionists will welcome with delight as giving a pretext for the imposition of additional indirect taxes. From our point of view, indeed, we regard Mr. Asquith the deviser of an old-age pension scheme, as a recruit to the Protectionists, and if he persists with this measure he will assuredly play into the hands of the party which is now doing its utmost to get direct taxes reduced, and to so shift the burdens borne by the nation that the mass of the consumers shall bear the bulk of them. That such an acute-minded young man, one also evidently so well posted in the facts and technique of current national finance, should tumble into an error of this kind fairly makes us gasp with astonishment. Old-age pensions, he will presently discover, must be resisted by all Free Traders as a dangerous measure, not only while the Poor Law remains in its present unreformed and

waste-inducing condition, but while the Protectionist party remains active and determined, eager to seize upon every pretext for increasing the load of indirect taxation, and, above all, to so overburden the revenue as to make resorts to a Protectionist system of finance inevitable.

That is an excellent arrangement made by the Chancellor of the Exchequer in order to provide funds for the Transvaal and for Irish land purchase. He is not going to issue loans to the public on either account this fiscal year. The money is to be provided by the resources in the hands of the National Debt Commissioners, and we really do not see why this method should not be extended in other directions, and made continuous. Terminable annuities can be created against advances made out of the funds in hand, without going to the market either to sell stock or to buy it back. There is no sense in paying off debt by means of sinking funds and terminable annuities on the one hand, and creating it on the other in order to meet current or special requirements. The State always loses on operations of this kind. It cancels debt too dear and creates it too cheap. With some of the enormous amounts to be devoted in the current year out of our excessive public revenue to the redemption of debt, the Chancellor of the Exchequer might easily constitute a fund from which the whole of the guaranteed loan of £5,000,000 to the Transvaal could be provided as well as all the requirements of Irish land purchase for years to come. This policy would relieve the Stock Exchange more effectually than any amount of stock buying on the part of the Government broker, when that buying is periodically offset by fresh emissions of debt. There ought to be a considerable sum to the credit of the Local Loans sinking fund.

The debates on the Finance Bill have interested us much as revelations of the play of human motives, but have not been otherwise very illuminating. It is perfectly natural that opponents of direct taxation should fight against the proposed small increase in the death duties, and equally in the order of things that others should seek to reduce the tea and sugar duties. We have no sympathy with the former, but much with the latter, for we regard both the tea and the sugar duties as too high, an injustice to important portions of the Empire seldom regarded by the fervid and other orators who never tire of spending their breath in praise of some other portions of it, many of them best known to us as importunate debtors. But it is useless to talk of "removing war taxes" in any kind while our peace expenditure continues to be maintained on a war footing, and while the debts of the last war remain unliquidated. Perhaps when next the nation is incited by its passions to embark on enterprises of conquest and bloodshed it will remember the terrors of the past and first count the cost.

A Faculty of Commerce has been instituted by the University of Birmingham, and we have received a circular commending it to the notice of business men. The writers point out that in connection with this Faculty the Council of the University has recently created an advisory board of business men. Both the Faculty and the board seem to be the embodiment of excellent ideas. Unquestionably our universities as a rule do not train young men for commercial life any more than our great public schools, or schools of any kind, it may be said. The young man who goes into business has very often to begin his education all over again. If, therefore, the University of Birmingham can set an example in this respect, and by the help of men of business outside contrive to give a thoroughly efficient, practical education to those who attend its classes, it will have done much to remove a reproach now common against all our teaching bodies. We only hope that no attempt at "Preference," "Fair Trade," or Protectionist propaganda of any description will be made under cover of this new branch of tuition.

Australia appears to be prospering [illegible] extent, and we are delighted to [illegible] of the Commonwealth Government [illegible] day or Sunday over the [illegible] £3,247, greater than in the previous year; the duty is per cwt. at £14,[illegible], and that at £2,[illegible] more than Sir John Forrest, the Treasurer, estimated for. Of the total [illegible] Customs gave £[illegible],000, and the Post Office [illegible] £[illegible]. The Post Office revenue [illegible] £3,127,3[illegible], but [illegible] general [illegible] in many ways much [illegible] strength of such a [illegible] Premier, Mr. Deakin, [illegible] arrange for that [illegible] ward merely because the [illegible] unconstitutionally to offer [illegible] and promise complete compliance with the [illegible] wealth demands? That leads us to another question. Are the contractors basing their confidence on the fact that the Home Government is going to be [illegible] cajoled into giving heavy subsidies to that "all red" line projected in the interests of Canadian [illegible] and the Grand Trunk Railway?

Queensland is not behind the other Australian colonies in making a fine show. On the contrary, the surplus announced at Brisbane was £300,000 for the year ended June 30, the largest in the history of the State, we are told, the one that came next to being £218,000. The actual revenue was £4,[illegible],000, and the expenditure £3,012,000. We hope the colony will not hatch further loans to be floated on the London Money Market in consequence of this prosperity. Yet if the money were raised for the purpose of enabling the people to execute judiciously planned [illegible] works we do not know that we should particularly object.

It is with regret that we note the whole-hearted way in which Sir Wilfrid Laurier appears to be throwing himself into this "all red" line mail route agitation. Not only will he damage his own reputation as a prudent political leader by following this course, but the reaction sure to come will do not a little to [illegible] the sentiments entertained by the home people towards the Canadian Dominion. Did Sir Wilfrid know anything at all about business, he could not but comprehend that, as the very able correspondent, whose letter appeared in last week's issue pointed out, there is no profit or mercantile foundation of any description for a project of this fantastic kind. Overland trade between Australia and Europe is a practical impossibility, and trade between Australasia and the Canadian Dominion can never be extensive. Therefore, there is no ground whatever for the establishment of such a mail line. It could only end in disastrous competition, and in loss to all concerned, most of all loss to those taxpayers here and in Canada who had to find the money. What analogy is there between such a project and the position of the Canadian Pacific Railway? a concern which Sir Wilfrid described as "one of the greatest railway companies in the known world." It is hardly that, but it is a great enterprise all the same. We do not know, however, that it is disposed to boast of its feats in Pacific mail steamship running or owning, and its magnificence will not be enhanced by the establishment of a rival service. Sir Wilfrid should really drop this boosters' project, else he will get into trouble.

It is not £10,000,000 that Russia wants to borrow just now, but only £5,000,000, or a little more than £5,000,000 if the rouble be taken at its par value. The debt is to be raised by five issues of Rentes, presumably of 10,000,000 roubles each, with coupons dating from June 14, 1907, and in the first instance the money will doubtless be sought at home. There is hope to be a great deal of capital [illegible] in Russia at the present time, because of the uncertainty of the Empire's domestic affairs. Enterprises are stifled, checked, or prevented from growing by the continual political unrest in which the country is kept by its [illegible]

masters. None the less will the Western markets be tested to see whether they are willing to absorb any of these bond issues, and if they do this little essay will be regarded as a valuable indication of the temper with which a large new foreign loan might be received.

It is too bad of the *Times*, but quite what it has taught us to expect, that it or its "engineering correspondent" should attribute to "politics" the rejection of the sophistically framed Electricity Supply Bill of the London County Council. Politics, as was painfully demonstrated at Tuesday's meeting of the Council, had nothing to do with the action of the Committee by whom the Bill was examined. The explanation of its action was that given by Sir John Benn and Mr. McKinnon Wood. The Bill, so said Sir John, had been emasculated in order to make its rejection certain, so that a charge might thereby be founded against the Progressives. It was thrown out by both Conservative and Liberal members of that hybrid Committee, said Mr. Wood, because it was, in effect, a fraud of a Bill. Just so, but what we want to know is why these "private enterprise" gentlemen should be so eager to step between the citizens of London and risk of loss. The rejection of the Bill, says the *Times* in its curious "Engineering Supplement," "was, of course, due to the frank announcement of the new County Council of its intention to carry out the mandate of the recent elections not to pledge London's credit in such a costly and hazardous enterprise as the sale of power to a section of the community in the face of strong competition." And that, "of course," is about as far from the truth as the average monopolist advocate could get. Since when did our company promoter become philanthropist, and intrigue, suborn, lobby, bribe, and generally Americanise politician and Press, in order to put himself in a position of hazard as shield for the rate or tax payer?

There is not much that is interesting or valuable in the July number of the *Financial Review of Reviews* beyond Mr. George Withers's article on "Vanishing Capital and the Expanding Income-Tax." That is a good, well-written essay, in which it is argued with cogency that the subdivision of incomes into earned and unearned inflicts injustice on people whose incomes arise from marketable securities. They pay a higher scale of tax and stand to see their capital disappear by depreciation on the market. The risk is undoubted, but ought not the argument to be applied against an income-tax of any kind? Is not the earned income subject to risks, different in kind perhaps, but greater often, on the whole, than those attendant upon the possession of dividend-paying stocks and shares? And why seize upon a passing phase of markets in order to raise prejudice against a tax graduation which, however rough and illogical in itself, does at least make a beginning in a change of system that may in time bring us a scientific apportionment of the citizen's burden to the citizen's back? We dislike Mr. Asquith's beginning because it is crude, and because it leaves untapped large reserves of revenue, and thereby rivets upon us a system of indirect taxation infinitely more inequitable than the direct, but this does not lead us to agree with Mr. Withers, and all he says about "the migration of English capital" in consequence of the weight and unfairness of our taxation is at best brilliant bunkum. Has he studied the taxation of foreign countries?

Apart from the intimation that the bizarre "mail contract" had been cancelled and tenders for a new one invited, the most interesting thing in Lord Northcote's King's Speech, recited at the opening of the Commonwealth of Australia Parliament, was his illustration of the infallible consequences of Protection. Amendments, he announced, to the tariff are to be proposed, having for object the placing of the national industries "on a sound and permanent basis under equitable conditions." And among these "equitable conditions" will be bounties "for the encouragement of new industries," all doubtless most friendly and helpful towards closer union with the Mother Country, all truly conducive to the enrichment of the consumer and general taxpayer, by whom tariffs are sustained and bounties provided. No wonder the inhabitants are likewise to be asked to add to their naval and military burdens; but when all these demands upon the taxpayers and non-combatants have been satisfied out of their earnings, all bounties to raise up industries cheerfully furnished, and the new mail service or services established as drains upon the nation's wealth—mostly mortgaged wealth—where will the public creditor come in? Will his treatment continue to be "preferential?"

The latest stride in Japan's march of progress takes it a step ahead of Western nations, for it has now established a Financial Commission, a thing which has no prototype unless we count the Spanish effort in that direction. The headquarters of this commission are to be in London, and already Mr. Reiziro Wakasuki, Vice-Minister of Finance, has arrived upon the scene, together with an able and efficient staff. Here they intend to reside permanently, making excursions to France and the United States whenever necessity may arise, and the aim and object of the commission will be to report to the Japanese Government on the financial and economic situation over here, and to instruct the people of this country as to the true state of things in Japanese finance. As a start off, Mr. Wakasuki informs those who may be thinking otherwise that Japan has no idea of floating a new foreign loan, for she has no need of further capital from abroad. Her financial position at the present moment is entirely satisfactory. The estimated revenue of the Budget has been exceeded by 30 million yen in the actual accounts, expenditure is below estimate, and thus we consider the reaction and depression caused by the war as a thing of the past, with the future on all sides full of promise. It is pleasant to start the commission in such fair-sailing weather, but in any case, good times or bad, the idea is laudable and deserves imitation.

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

VAN.—The shares were quoted xd. on May 15. Unless otherwise specified in contract notes your purchase on May 2 ought to include the dividend.

TIMOTHY.—(1) We think a little more of this stock might be bought. (2) Prospects anything but encouraging. Doubt if you could sell except at a cruel sacrifice. Better perhaps sit still for the present. You are 3s. in credit still.

B. W. J.—The bonds you propose to buy should be good enough, although we do not like the financial methods of the people who control the company.

BUTLER.—(1) It is not intended that anybody should know what the company is doing or capable of doing. In the present condition of markets generally, and of this market in particular, we think the shares had better be parted with. (2) We do not think this company's shares are at present marketable at any price. The debentures, even if only the "A" issue, should be held for the present, as affairs have been looking up in that part of the world.

EDINA.—(1) We should be disposed to sell, not only for the reason you give, but also because the market is one that is easily manipulated. (2) A good enough purchase at the present price, but we would not like to say that the lowest has yet been touched.

HEADINGLEY.—In the present state of markets it is quite likely the price will drop further. The enterprise, however, is a good one, and if you mean to take them up and keep them the bonds should be worth buying at present figures.

SHEEN.—(1) Only middling, as the value of the ore seems to be declining. (2) Prospects are very fair, but at present price there seems little scope for further improvement.

GRASMERE.—Somewhat risky, as the company paid away too much in dividends in the past, and its financial condition is none too sound. Still there is just a chance that you might see a recovery on the current price. You can see a list of the shareholders either at Somerset House, or at the company's office on payment of 1s. We are not much in favour of the principle of averaging. Occasionally it might turn out all right, but as a rule it means throwing good money after bad.

Royal Exchange Assurance.—Mr. George Forbes Malcolmson has been elected deputy-governor in the place of Mr. M. G. Megaw, who retires from that office, retaining his seat on the court.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

It is sometimes hard to realise that the once popular and rampant Kaffir Circus is now for all practical purposes a dead market. We should not care to have to set down the multitude of reasons that have led to this deplorable condition of affairs, although they might all be summed up in a single word, "dishonesty," but the fact remains that, taking weeks in and out, of all the leading markets on the Stock Exchange, that devoted to South African shares is by far the idlest. Weeks and months pass by without a semblance of activity traceable to public interest. Every day we studiously ask leading dealers if the public is doing anything, and we are rewarded with a pitying kind of smile, half implying that we ought to be put under restraint. It is safe to say that the public has done nothing this week. A small business has gone forward on Continental account, but the market has fallen into such a helpless condition that dealings are often practically impossible. A few small buying orders came from Germany a day or so back, but they did not result in business. Directly anyone shows the slightest inclination to purchase prices are put up against him, and, on the other hand, the smallest offerings have the effect of putting quotations down. Buyers and sellers seem quite unable to meet on common ground, and the result is stagnation that has become absolutely chronic. We cannot describe the tendency of the past few days, because one did not exist. At one moment things were dull because the tame professor of one of the halfpenny sheets declared that an earthquake had occurred within a 5,000 miles radius of the Isle of Wight. Dealers chased it from California to Peru, slick across the South American Continent and the ocean to the Rand, back to New York, and then came to the conclusion that the shake-up had been postponed. Why it could not have been kept until Independence Day, when the American people usually give a very decent imitation of an earthquake, is a mystery still. Other causes of dulness were a little more weeding out of a few weak ones in London, the suicide of a German operator that did not occur, and the settlement in Paris. Berlin was greatly annoyed when she found that the fictionites had put the heaviness down to her account, because Bourse operators there were holding Paris responsible for anything that happened. As a fact, there was a small amount of French buying in the middle of the week when the settlement was near its end and open defaults seemed improbable, and the majority of prices show little or no nett change. There was some selling of East Rands against purchases of H. F. Company's shares, the latter company being now entitled to a quarter share of the East Rand profits. Comparisons of capital were supposed to make the H. F. shares very tempting, and it may be all right enough, but is it quite certain that the quarter share will be distributed among the shareholders? There was some fear that July 4 would witness a renewal of the strike agitation on the Rand, but whether or no, we fancy the output figures will be disappointing for a month or two. The Chinkees are gradually leaving South Africa, but the mineowners can get plenty of natives if they care to try and play the game.

Land and Exploration shares moved irregularly within the smallest limits, and nothing stood out, but Diamond shares after a steady opening went rather flat, supposed to be due to Paris sales. All leading shares weakened; De Beers, Premiers, and Jagersfontein, and some of the doubtful sorts were distinctly out of sorts. Rhodesians were usually on offer, and as no one showed the least inclination to pick up any of these fine bargains prices had to go down.

Very occasionally a Jungle share was mentioned, but each time a decline resulted, and jobbers soon came to the conclusion that discretion was the better part of valour. The market, therefore, dried up. All West Australians, however, did not go down. Horseshoes were in some demand, Associated almost reached par again, and Perseverance were bought from the colony. Ivanhoes, Fingalls, and Hainaults were also better, but Kalgurlis were a dull spot. Deep Leads were miserable and neglected, and the Broken Hill group was much quieter than of late. One of the incidents of the week was the further collapse in Zincs, and rumours of reconstruction are too persistent to be pleasant.

Copper shares have been by far the busiest market, with Rio Tintos prominent, as usual. Copper metal had a good rise to begin with, and Tintos touched 84¼, falling soon to 83¾ when the metal relapsed again. Another turn soon came, copper reaching the round £100 per ton once more, and Tintos immediately shot up to 85¼. Great Cobars were pushed up to 9¼, and after relapsing to 9 were soon improving again, and other leading shares, such as Amalgamated, Anaconda, Tharsis, Capes, Bostons, Utahs, all climbed up. Spasskys were easier, but that did not matter a great deal. Mount Elliotts and Lyells also went down. Tin had a sharp rise, and the share list went with it.

Among Miscellaneous mines, El Oros and Esperanzas slipped back after recent rises, and the Indian section was generally dull, although Nundydroogs encountered small buying. Mysore West and Wynaads were lowered on the news that the Tank block is to be closed down. Camp Birds picked up on the dividend. Waihis had a rise, but did not retain all of it. Siberians kept their prices, but were dull. Cobalts hardened a trifle.

English Crown Spelter Company.—The output of raw calamine and blende from the mines during 1906 fell off by 692 tons to 7,591 tons and the quantity of discarded ores created in the dressing works were also smaller at 11,137 [illegible]. These produced 8,170 tons or 741 tons less of [illegible] blende, nett dry weight, while the [illegible] was rather heavier at £4 12s. 11d. [illegible] company, the average assay of the ore raised at the mines showed an improvement of 2·05 per cent at 35·18, and the price realised was also better at £20 10s. 10d. against £18 7s. 9d. in 1905 and £21 16s. 8d. in the previous year. Results from the smelters were not quite so satisfactory, as the [illegible] were not finished in time to allow the [illegible] the year's working, and nett profit, [illegible] for depreciation, came to £6,992 less at £11,647. With the balance brought forward the disposable total was £11,[illegible] pared with £18,237 and the dividend has, therefore, [illegible] down from 17½ per cent to 12½, leaving £[illegible] to be carried out. The Welsh Crown Spelter Co., Limited, which stands in the balance-sheet as a debtor for £11,[illegible], paid under the debenture guarantee or lent to the [illegible] has proved a failure, and the option granted on the property [illegible] having been exercised, the liquidator is taking steps to [illegible] of the plant and machinery by auction.

Eaglehawk Consolidated Gold Mines.—Ore crushed during the year to March 31 was 11,801 tons, which together with the sands treated by cyanide yielded gold to the value of £24,523. Interest, &c., raised this to £[illegible], and after providing for all expenditure, including that in [illegible], there was a profit balance of £4,711. Of that £[illegible] is absorbed in paying a dividend of 6d. per share, £1,000 is allocated to depreciation, and £3,210 will be carried forward against £2,[illegible] brought in. Important alterations and additions [illegible] as earlier as £2,919 were made to the plant and machinery, but the [illegible] in efficient condition, and no further expenditure is anticipated for a considerable time. In his report the [illegible] says that the development at the bottom level has not come up to expectations, and the advisability of stopping the [illegible] increasing the development work at other points of the mine must be considered without delay, as the quantity of payable stone in sight will only last seven months.

Mills' Day Dawn United Gold Mines.—In the half-year which ended on April 13 this company [illegible] gold, concentrates, cyanide, bullion, and [illegible] interest on fixed deposit yielded £70, making an aggregate revenue of £[illegible]. Expenses of every kind were £[illegible], and the company paid dividends of 3s per share, [illegible] with tax, a sum of £47,250, there was an excess of [illegible] ments over income of £4,021. For the previous half-year the excess was £2,526, and we hope the figures will not be increased. Development work has been [illegible] good proportion to the output, and the [illegible] probably the same as at the corresponding [illegible] 120,000, but the average value is slightly less. Prospects however seem encouraging enough, and it is expected that the output will be maintained during the present half-year at 5,000 tons per month. It is intended to [illegible] of dividends, and prospects of a bonus are held out as well.

Brilliant Gold Mining Company.—Tributors are still at work in the old mine belonging to this company, but the number of parties has dwindled to 16 with 45 men against 21 and 63 men a year ago. In the six months to April 11 these parties raised 1,398 tons yielding 1,081 ozs., which realised £[illegible], and of this the company's percentage was £1,113. Hauling charges gave another £190, making £1,312 from this source, compared with £1,838 for the previous half-year. Two [illegible] have been kept at work prospecting in the intervals of attending to repairs to the mine workings, and raised 50 tons from a rich block of stone discovered near the Brilliant and St. George boundary, which gave 90 ozs., worth £315. Work on the Scotchholm Mine has not so far yielded great results. A [illegible] started east from the main straight shaft at 514 ft. was driven 205 ft. through disturbed country, with only small [illegible] of poor stone, and the run of stone appears to have [illegible] south than was anticipated. It is expected, however, that the main body will shortly be reached, and a considerable [illegible] formation found in a crosscut driven east from the 514 ft. level, although carrying no payable ore, is considered worth further attention. At the 614 ft. level 660 tons were crushed for £[illegible] or an average of £2 0s. 3d. per ton. The question of [illegible] tion to enable the more speedy development of the Scotchholm Mine has been raised by some of the shareholders, but the directors hope that such a course will not be necessary.

Metropolitan Coal Company of Sydney.—The output of coal for the 12 months ended March 31 was 322,[illegible] tons, an increase of 30,190 tons over the previous year, and the [illegible] profits on sales amounted to £20,538. Other revenue brought the total up to £21,301, of which [illegible] charges and debenture interest took £5,042, and after writing £[illegible] capital expenditure account, the balance remaining, £[illegible] brought in, was £12,682. The dividend on the [illegible] ference shares having been paid, the 10 per cent [illegible] ference shares receive a distribution of 5 per cent, and £[illegible] is put to a general reserve, leaving £[illegible] to be carried forward. Liabilities to creditors amount to £[illegible], against which they owe £12,441, but cash is small at £[illegible], and [illegible] be found for the dividends declared, the position is [illegible] good. The original leases, acquired in 1888 for £[illegible], deferred shares, have either run out, or will expire [illegible] next, but arrangements have been made for their renewal on terms which are said to be satisfactory, and the [illegible] viewer reports that the coal developed in all the seams in the east is equal to a supply at present output for 50 years to come.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for nine days ended June 30, $4,982, increase $1,367.

Argentine North Eastern.—Traffic receipts for week ended May 24, £2,610, increase £548; aggregate from January 1, £41,278, increase £7,590.

Assam Bengal.—Traffic receipts for week ended June 1, Rs. 90,945, increase Rs. 26,312; aggregate from Jan. 1, Rs.19,82,192, increase Rs. 4,45,621.

Bilbao River and Cantabrian.—Traffic returns for June £7,533 decrease £2,837; aggregate from January 1, £55,115, decrease £8,167.

Canadian Northern Railway.—Traffic receipts for week ended June 21, $202,300, increase $57,600; total from July 1, $7,164,700, increase $1,795,800.

Egyptian Delta.—Traffic receipts for week ended June 15, £4,577, increase £651; aggregate from January 1, £52,650, increase £10,294.

Lucknow Bareilly Railway.—Traffic receipts for week ended May 25 Rs. 42,288, decrease Rs. 941; aggregate from January 1, Rs. 7,86,107, decrease Rs, 2,855.

Midland Uruguay.—Receipts for month of May, £6,485, increase £1,071; aggregate from July 1, £68,497, increase £13,995.

North Western of Uruguay.—Traffic receipts for May, $25,000, increase $5,538; aggregate from July 1, $236,359, increase $44,561.

Quebec Central Railway.—Traffic receipts for the 4th week of June, $30,257, decrease $2,126, aggregate from January 1, $425,704, increase $17,074.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended June 1, Rs. 20,157, decrease Rs. 173; aggregate from Jan. 1, Rs. 5,20,745, increase Rs. 142,766.

Uruguay Northern.—Gross receipts for month of March, £1,520, increase £12; aggregate from July 1, £16,228, increase £1,941.

White Pass and Yukon Railway.—Traffic receipts for week ended June 30 amounted to $60,536.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending June 29, £1,508, increase £203; aggregate from January 1, £34,514, increase £2,290.

Cockermouth and Keswick Railway.—Receipts for week ending June 29, £971, decrease £18; aggregate from January 1, £20,652, increase £480.

East London Railway.—Traffic receipts for April, £3,882, decrease £128.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending June 29, £470, increase £155; aggregate from January 1, £11,491, increase £761.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending June 26, £838; decrease £20; aggregate from January 1, £19,201, decrease £56.

Blessington and Poulaphouca.—Traffic receipts for week ending June 26, £12, decrease £5; aggregate from January 1, £261, decrease £32.

Bristol Tramways and Carriage.—Traffic receipts for week ending June 28, £5,029, decrease £277; aggregate from January 1, £127,232, decrease £2,248.

British Electric Traction.—Receipts of all the Associated Companies for the week ending June 21, £28,225; 419½ miles.

Burnley Corporation.—Traffic receipts for week ending June 29, £1,217, increase £28; aggregate from January 1, £30,969, increase £1,113.

Dublin and Blessington.—Traffic receipts for week ending June 26, £138, decrease £12; aggregate from January 1, £3,018, increase £45.

Dublin and Lucan.—Traffic receipts for week ending June 28, £124, decrease £2; aggregate from January 1, £2,747, decrease £8.

Dublin United.—Traffic receipts for week ending June 28, £6,519; increase £725; aggregate from January 1, £133,671, increase £9,055.

Edinburgh and District.—Traffic receipts for week ending June 29, £5,289, decrease £47; aggregate from January 1, 1907, £125,122, increase £1,293.

Hastings and District.—Traffic receipts for week ending June 27, £987.

Isle of Thanet.—Traffic receipts for week ending June 29, £706, decrease £61; aggregate from October 1, £13,789, increase £19.

London County Council.—Traffic receipts for week ending June 22, £32,972, increase £5,590; aggregate from April 1, £369,801, increase £53,556. Miles 116⅜, against 99.

London General Omnibus.—Traffic receipts for week ending June 29, £21,794, decrease £3,995; aggregate from January 1, £521,250 decrease £59,216.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending June 29, £6,252.

London Road Car.—Traffic receipts for week ending June 29, £9,010, decrease £358; aggregate from January 1, £199,323, decrease £6,936.

London United.—Traffic receipts for week ending June 28, £7,111, decrease £70; aggregate from January 1, £154,161, increase £2,643.

Rossendale Valley.—Traffic receipts for week ending June 28, £225, increase £23.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending June 30, £1,103, increase £301; aggregate from January 1, £28,851.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending July 1, £16,003, increase, £3,422; aggregate from January 1, £428,235, increase £42,629.

Auckland Electric.—Traffic receipts for four weeks ending June 21, £10,157, decrease £98; aggregate from January 1, £63,538, increase £2,119.

Brisbane.—Traffic receipts for month of June, 1907, £12,560, increase, £905.

British Columbia Electric.—Nett earnings for May, $49,958 increase $24,436. Nett earnings, including income from investments, from July 1 to May 31, $642,721, increase $189,990.

Buenos Ayres and Belgrano.—Traffic receipts for week ending April 14, £4,033, increase £227; aggregate from January 1, £52,452, increase £3,865.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for week ending July 1, £6,751.

Calcutta.—Traffic receipts for week ending June 29, Rs. 39,264, decrease Rs. 2,807; aggregate from January 1, Rs. 12,66,061, increase Rs. 1,28,826.

Cape Electric.—Traffic revenue for month of May, Cape Town, £10,675; Port Elizabeth, £3,035.

Cartagena (Colombia).—Traffic receipts for September, £10,646.

Carthagena and Herrerias.—Traffic receipts for the month of June, £4,516, decrease £107; total from January 1, £31,191, increase £3,725.

Kalgoorlie Electric.—Traffic receipts for May, £3,937; aggregate from January 1, £19,545.

Lisbon Electric.—Earnings for May, milreis 134,479.

Madras Electric.—Traffic receipts for fortnight ended June 30, Rs. 15,606, increase 21 per cent.; aggregate from January 1, Rs. 2,03,902, increase 19½ per cent.

Melbourne Tramways and Omnibus.—Traffic receipts for June, £39,500.

Mexico Electric.—Nett earnings for month of May, $182,135, increase $1,600; aggregate nett earnings from January 1, $760,448, increase $25,136.

Perth (W.A.) Electric.—Traffic receipts for week ended June 28, £1,327, decrease £74; aggregate from January 1, £37,587, decrease £1,175.

Rio de Janeiro.—Nett earnings for May, $155,192; aggregate from Jan. 1, $757,357.

Sao Paulo.—Traffic returns for May: nett earnings, $102,504, decrease $2,806; aggregate from Jan. 1 $572,496, increase, $27,855.

Twin City Rapid.—Traffic receipts for the month of April, $465,220, increase $49,807; aggregate from January 1, $1,821,162, increase $199,248. Nett traffic receipts, $247,131, increase $28,875; aggregate from January 1, $908,775, increase $76,436.

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Reduced from 4½ per cent. on April 25.)

Norfolk House, Friday Evening.

As everybody expected, short credit has been very cheap this week in the open market. In the final agony at the end of last week call money rose to 5 per cent., and many people paid 4 to 4½ per cent., very few getting advances for less, but the release on Monday of the money gathered up to pay off the matured Victoria debentures and the great mass of dividend and other disbursements incident to the beginning of the half-year put the market in funds, and although it has been every day paying off part of its indebtedness to the Bank of England, the supply of free balances has been so abundant that bankers had difficulty in getting more than 2½ per cent. on seven-day loan and have had often to accept 2 per cent. on call money. In the outside market rates often fell to 2 per cent. Yesterday the tendency was slightly firmer and bankers more easily got 2½ per cent. for a week. Call money both yesterday and to-day has commanded 2 to 2½ per cent., the release of the Government dividends being in considerable measure offset by the heavy repayments due at the Bank yesterday. Moreover, upwards of £1,000,000 on account of the Japanese conversion loan was handed over by the issuing banks to the Bank of England. Payments at the Bank were again large to-day, and will continue until Monday next, when several millions become due. After that there will be short bills running off, so that the market has not much prospect of securing a long spell of easy rates.

Discounts naturally felt the effect of the present cheapness in money, and instead of being 3 9/16 or 3⅝ per cent. they dropped back to little better than 3½ per cent. We may call the rate now 3 5/16-⅜ per cent., with a tendency to steadiness induced by the aspect of yesterday's Bank return. That was not nearly so favourable as might have been looked for. It showed, for example, a decrease of £1,103,000 in the reserve of the banking department, notwithstanding a nett inflow of £1,097,000 in gold from abroad; but the fact is that the demand for currency by the community not only swept away all this imported gold, but £335,000 in coin in addition, besides £768,000 in notes. Had it not been that gold came in from abroad the market would probably have been discussing an advance in the Bank rate.

In other respects, too, the exhibit is not particularly exhilarating, since, after allowing for the market repayments of the first three days other securities still show an increase of £4,913,000 on the week, and the total is £40,892,000, which is just £4,345,000 more than at the corresponding date a year ago and upwards of £10,000,000 more than the aggregate for the first week of June. We consequently infer that the market had yesterday some £10,000,000 still to pay back to the Bank before it could clear, and the liquidation of this debt will sweep away all the Government dividend money and a good deal more. It therefore remains the fact that unless the Bank steadily accumulates gold not only can we have no confidence in continued cheapness in money, but in all probability the later months of the year will see it sensibly dearer than it is now.

What are the prospects in regard to bullion? They are mixed, we are sorry to say, and in spite of the various amounts picked up in the open market, as well as of the large inflow of the past Bank week, the bullion exhibit would have been by no means cheerful, but for the help afforded by the India Council, which has released £1,000,000 of its hoard during the past month, and the Bank is still losing gold in small amounts sent abroad. Nearly all that it received yesterday, for instance, would have been swept away again by the withdrawal of 203,450 sovereigns for Paris and 100,000 for the vague "Continent." These withdrawals went against £362,000 in bought bar gold received, but the nett inflow for the day was brought up to £308,550 by the release of another £250,000 by the Secretary of State. On the balance of his half-year's dealings he can have little more to let go.

Very little gold has come to us or will come from the United States unless the unforeseeable happens, only about £400,000 having so far been shipped. New York shipments to Paris, however, continue, and have no doubt relieved our market from French demands, although these are not yet at an end, in spite of the fact that the Continent has been a keen buyer of bills at 3¼ per cent. in our market this week. Long-dated bills, however, are not popular with anybody, and some houses quote 3⅞-4 per cent. for them.

To-night the Paris cheque comes at 25.14, so there may be competition by France on Monday for the small amount of about £440,000 then for sale. Large further supplies are on the way, and if no unexpected demands are sprung upon us the Bank should get slowly stronger. With, however, both American and most Continental markets higher than ours, nothing can be predicted with certainty, least of all while the necessities of financiers remain clamant everywhere.

No calls of the slightest consequence are payable on new issues next week beyond the £875,000 due on Wednesday on the India 3½ per cent. loan.

Silver.

The Indian bazaars were again buying with some freedom, and a good deal of this week's business has been for prompt shipment for the July settlement in Bombay. At the same time, the steady absorption of the metal by the United States Treasury has curtailed available supplies, and the heavy stocks of cash metal which have weighed down the market for some time have been freely drawn upon. The spot quotations consequently advanced to 31 1/16d. per oz., and although there was a slight relapse when the bazaar demand was satisfied for the time being, it was promptly wiped out on the following day, but to-day, in the absence of business, the price again slipped back, closing, however, steady at 31d. per oz. Forward metal has been less sought after, and after touching 31 3/16d. per oz., finished at 31 1/16d. per oz. Applications for the Rs. 60,00,000 of Council drafts in India, on Wednesday, amounted to Rs. 3,78,49,000 in bills and Rs. 1,65,00,000 in telegraphic transfers, and of these Rs. 35,04,000 were accepted in bills and Rs. 24,96,000 in transfers, tenders at 1s. 4 1-32d. and 1s. 4 1/16d. per rupee respectively, receiving about 5 per cent. Next week the amount to be offered is increased to Rs. 70,00,000.

The Stock Markets.

At the beginning of the half-year there has been the usual demand for investments on the part of insurance companies and other corporations with money to stow away, and also a little buying on the part of the public. This, however, was soon satisfied, and markets have fallen back into the apathetic state where they have lain so long. Much of the buying recently noticed in trustee securities dealt in by the Consol market would appear to have been speculative, since at the Consol settlement the names passed for stocks to be taken up were mostly those of bank officials. Still, there has been investment business doing, and there is every reason to believe that it will continue to be done—of a sort—because the public is undoubtedly itching to buy. And where the stocks are of a high or reasonably solid class we really do not see why it should not buy. It may be that with many securities, especially those yielding the lowest rates of interest, we have not yet seen the worst, but where the revenue is safe under all conceivable circumstances, no permanent harm can come to the investor who puts away money in such ways now. Unfortunately for speculative holders of the least prolific of these classes of stocks the present mood of the investing classes does not encourage the hope that buying will flow much into that channel. Investors now want at least 4 per cent., and will hardly look at anything yielding less. If they can get 5 per cent. so much the better, and new securities, like the fresh share issue of the Law Guarantee and Trust Company, which offer 5 per cent., are sure to come off best of all.

But are we at the end of the weary liquidation? Not in the more purely speculative classes of securities, in Yankee Railroad shares, in bolstered domestic issues of venturesome, raw or overcapitalised enterprises, and as long as we cannot be sure that the worst has been seen in these directions we must count upon the permanent tendency all round to be towards lower quotations. Just think what the partial disclosure of capital waste made this week by the investigating committee of the Spiers and Pond company means. No encouragement is given by facts such as that committee's report discloses to anybody to invest in hotel securities or in industrial, catering, manufacturing, or distributing companies of any description which carry a more or less formidable weight of dead capital, capital used up but never written off, capital dishonestly superimposed at the start. Financiers may plot to manipulate markets, engage their capital and credit in producing an advance in prices, but the public with such examples before it refuses to part with its money. "It sulks," the market man says.

Trustee Securities.

At the Consol settlement in the beginning of this week money was comparatively cheap. That is to say, most borrowers who had stock to carry were able to get the credit they required at 3¼ per cent., and nobody seems to have paid more than 3⅜ per cent. to the August settlement. These rates are certainly easy compared with what the "bull" of Consols has often had to pay at past settlements, but even 3¼ per cent. still means a loss to the holder on the balance of interest paid and received, because Consols do not pay quite 3 per cent. at current market quotations. We must, therefore, still look upon the Consol market as an overloaded one, and the relief afforded by the Chancellor of the Exchequer's announcement that he would issue no loans this year is thus all the greater. It was welcome news to an embarrassed market, but it did not sustain the price of Consols or give it any vigour. A slight recovery did take place in the early part of the week, but the market soon slackened off and became dull with a tendency to recede.

This has not been the case with other securities of this class, for not only has some improvement occurred in India stocks with a good investment business in the 3½ per cents., but the stocks of the London County Council have continued to harden up, and some other domestic Corporation stocks have shown a slight disposition to advance. Colonial Government stocks are likewise better all round, we may say, and a moderate investment demand for some of them has been felt. This tendency to improvement is pretty certain to continue and become stronger, provided these borrowing communities keep away from our market, and do not attempt to flood it with fresh issues. Colonial Corporation stocks, too, have partaken to a slight extent in this recovery of tone, for it is really that more than any marked elasticity in prices.

Foreign Government Securities.

There has been the usual aridity of business in this department, but prices have been steady, and quite a noticeable advance has taken place in the various loans of Brazil. Japanese bonds have also hardened a little, but there has been no appreciable change in the quotations for Egyptian securities, although the financial position in Egypt would seem to be better. At any rate, the banks and financiers interested in preventing

anything like a general liquidation of inflated positions in Egypt have succeeded in putting the Cassa di Sconto on its legs again, and thereby in all probability prevented further and perhaps still more disastrous suspensions. We do not know that the position of Egyptian credit institutions has been really strengthened by this step, but it is something to gain time, and the resources of Egypt are so elastic, so exhaustless in some respects, that time may in this instance cure all. Russian bonds have seldom been dealt in, and there is not much life in the Argentine market. Investors absorb Chinese loans in a small way, and there is now and then some trade done in Chilian.

Home Railway Stocks.

The half-year has wound up brilliantly for our railways, and their published receipts for the six months, according to the analysis of the *Railway News*, show an aggregate of £52,341,332, being an increase of £1,204,807 upon the corresponding week of last year. In the final week alone the increase was £106,308, and there ought to be some increase in dividends out of all this gain in gross, provided the figures accurately adumbrate the facts. Unfortunately we cannot be sure of this, because the returns are, generally speaking, made on the old-fashioned rule-of-thumb plan, so that in very few instances does the half-year's income as finally adjusted correspond with the aggregate of the weekly exhibits. But at the worst dividends should be maintained, and as prices have receded grievously during the six months the mere fact that no further reduction takes place ought to give something of a stimulus to this depressed and by many spurned section of the Stock markets. As an indication of what may happen, we notice that Home Railway preference stocks have certainly been in appreciable demand, and nearly all of leading ones are quoted higher in price on the week. The buying has not been extensive, but the mere fact that people have come in to buy at all has encouraged the dealers to raise quotations. They will be quite ready to put them higher still if the public continues to come for these stocks, and when this has happened the demand may be diverted on to the ordinary stocks. We hope it will be so, though not to an extent which might encourage the companies to resume their demands for more capital on a large scale.

Colonial, American, and Foreign Railway Stocks.

Gamblers in Grand Trunk lower stocks put up the prices on the issue of the monthly statement. It showed an increase in the nett earnings for the month of May more than twice as great as the market expectation, but even so the improvement did not provide a very substantial basis upon which to found a steady advance in prices, and the market for both Grand Trunk stocks and Canadian Pacific shares remains artificial. It is sustained not by the actual known facts, but by the anticipations diligently cultivated of a great harvest in the North-West, a harvest for which the necessities of Europe, as foreshadowed by the backward weather prevalent in all its grain-growing territories, will enable the farmers to get fine prices. It is much too early yet to count the gains in this fashion, and we simply do not believe one-quarter of the glowing recitals of crop prospects with which we are almost daily treated by interested parties in the Canadian Dominion. Nor has the time yet come to despair of the European grain harvest. Things may not be so bad on this side, nor so good in North America as Rumour, ever a tipsy medium, asseverates.

About United States railroads we have just as little to say. The Wall Street market has successfully slithered by the monetary stringency which developed at the end of the half-year, and although money is still far from cheap there, the leaders of the market evidently expect to be able to engineer another campaign for the rise by much the same devices as Canada employs to keep the boom in its stocks going in Montreal and London. Harvest prospects are said to have improved in the West, rain had fallen in time and refreshed the growing crops, [illegible] encouraged that the harvest will be much better than was till lately expected, and it is argued as a foregone conclusion that the harvest cannot be [illegible] will constitute an excellent [illegible] railroads unprecedented traffic [illegible] freight rates, and larger profits. We should not be [illegible] the palate to buy on the [illegible] mostly well paid for, and as a matter of fact [illegible] buying or doing much in any way to the [illegible] market. A fomented gamble in Union Pacific was [illegible] noticeable most days, but on [illegible] markets it means the dumping of so much more [illegible] by London on Wall Street. That is not [illegible] the American market-players desire, but it is [illegible] we can meanwhile do for them, and the more people here sell on the rise stocks which they have [illegible] holding, the better will it be in the long run for their peace of mind and pockets. For Wall Street is a [illegible] inflated region.

A somewhat dragging tendency has been observed by the Argentine Railway group, in spite of the magnificent traffic exhibits most of the companies have made, but that is merely the result of an [illegible] on the part of people with money to invest. The [illegible] also continues rather overloaded with the new issues, which, although in moderate demand, have not yet been all absorbed by any means. Until they have been taken up and stowed by investors, we must expect this department to remain in a more or less [illegible] condition, but there is nothing wrong, nor does the prospect appear to be in any appreciable degree clouded. We should buy here rather than sell, in other words. Failing a gamble in Rosarios, or some such [illegible], the players have again concentrated their energies upon the stocks of the old Mexican Railway Company, and they have been vigorously driven upwards. Is there good ground for this advance? We cannot [illegible] Mexico is a country which has made wonderful progress under President Diaz, the life duration of the Republic, but it has not really gone forward with such strides as would warrant anybody in purchasing Mexican preference or ordinary stocks for investment at current prices. In all such cases it is better to resist the temptation to buy than to follow the fashion, because where the foundation is uncertain [illegible] prices are invariably followed by reaction. And Diaz is an old man now; who knows what or who will follow him? Very little business has been done in the securities of Brazilian Railways, or in those of the Island of Cuba, and, in fact, apart from the Guayaquil and Quito scandal, or whatever it is, there has been little to ripple the surface of this part of the market for many months past. We see, by the way, that the Council of Foreign Bondholders, "in compliance with a request received from an influential body of the holders of bonds" in this Guayaquil Railway has formed a committee to look after their interests. It looks a fairly representative committee, and will, we hope, act with vigour.

Brewery, Bank, and Commercial Securities.

Brewery shares have not been in favour, nor yet Brewery debentures, but the market has not been further depressed for them, and that is something to be thankful for. The market for Bank shares has been favourably influenced by the dividend announcements so far made, which are dealt with in another column. They have never receded much, and consequently no particular advance was to be expected, but there is always a certain demand for this class of security on the part of investors, and as gambling is impossible therein the mood may change without producing much alteration in prices. Dock securities have scarcely been touched this week, and there has not been much more than usual going on in the Commercial and Industrial section, where, however, a rather stronger tendency has been exhibited, product of a certain amount of scattered buying. This has not led to any

thing remarkable, and we do not think it is necessary to enter into much detail. We cannot say why Rosario Drainage bonds should have risen or Valparaiso Drainage bonds should have fallen this week more than last, nor yet why Nitrate shares should still advance, or what moved somebody to buy Spiers and Pond's preference shares at £3. Nor is there anything more to be said about Financial Land and Investment securities beyond mentioning a recovery in Hudson's Bay shares, attributable to the same cause which has produced the advance in Grand Trunk stocks, some little weakness still in the various Egyptian securities connected with land, and a jump in Pekin Syndicates.

Miscellaneous.

The only remarkable movement amongst the minor groups of stocks is another slump in the stock of the London General Omnibus Company, which dropped on Thursday to 60. This is only an outstanding instance of the tendency of all this class of securities, Tramway and Omnibus stocks being weak with rare exceptions, such as Brisbane ordinary and British Columbia preference and preferred. The shares of the B.E.T. also rallied a little after the shareholders' meeting held in the beginning of the week, but they have barely maintained the position then taken up, nor is there anything particular happening amongst Telegraph securities, because business in them is quite narrow and spasmodic. National Telephone stocks, however, have been steady, as well as those of the Eastern Telegraph Company, and Anglo deferred was popular. In Iron, Coal and Steel securities, Shipping securities and things of that kind, the revival hoped for has not yet taken place. Dunderland bonds, though, have drooped and we wonder when that "frost" is going to thaw into admitted failure. Neither there nor amongst Gas stocks and Insurance shares is anything to be noted except occasional weakness, and a rise in Ocean Accident, Phœnix, and Sun Life and Sun Fire, but the dealing has been most scattered. Financial Trusts have suffered rather than rejoiced, yet Mexican Central Railway Trust certificates have improved. In fact, the broad aspect of all these divisions of the Stock Exchange is one of apathy, and as the records of the daily official list are scanned the mind is always driven to conjecture how the bulk of the Stock Exchange members contrive to earn a living.

Friday Evening's News.

Firmness has continued on the Stock Exchange today, with a steady flow of investment business of no great volume. In fact, it is the speculative markets which have become animated, particularly that for Rhodesian shares. Speculators in these have been quick to seize the "tip" contained in Lord Selborne's deliverance about the necessity for immediate federation in South Africa. They see in that move a prospect of the Chartered Company getting relief from its guarantees, from the cost of administrating its territories, of "compensation" to it, and have been putting up shares as an earnest of what they hope will come. They have been buying, in other words, in the confident anticipation that, as England continues to be mostly peopled in the manner described by Thomas Carlyle, they will presently be able to unload at first-rate profits.

Most notable of all, however, has been the jump in Tanganyika shares, which have gone up £1 in the last two days, not because the public has been buying at all, but owing, it is said, to very heavy purchases by two of the leading inter-bourse finance houses known to be most deeply committed to the Kaffir Circus and South African finance in general. There are rumours that these houses intend to form a Philanthropic Trust, Limited, the "limited" being strictly confined to themselves. We know nothing about this, but are perfectly sure that whatever the ultimate value of Tanganyikas may be they are not as a reasonable speculation worth their present price.

The Middlesex and Bristol loans are not being subscribed with any avidity, for the reason given in the introduction to this week's review of markets—the public wants more for its money. Applications, however, are coming in for the Law Guarantee and Trust issue, and, good things offering 4 per cent. or more will probably find a ready market for some time to come. There is nothing particular to say about any other security, new or old, in the markets, and we have no premiums to quote this week, since there are none recorded on these new securities. Japanese scrip, however, continues firm at 1 premium, and the absorption of the Straits Settlements loan and other recent stocks also goes on.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: Exchequer Bonds 2½ p.c. ½, to 97-97⅓, Local Loans Acct. ⅓, to 95¼-95⅜, Bk. of England 2, to 262-267, India 3½ p.c. Acct. ⅜, to 98⅜-99¼, do. Scrip ½, to 49½-50, do. 3 p.c. Acct. ½, to 86⅜-87¼, do. 2½ Acct. ½, to 72½-73⅜. **Fall:** Annuities 2½ p.c. ¼, to 82½-83, do. Acct. ½, to 82½-83, Irish Lands ¼, to 84¼-84⅜, do. Acct. ¼, to 84¼-84⅜.

CORPORATION STOCKS.—Rise: Water Board Acct. 1, to 88½-89½, Metrop. Cons. 2½ p.c. 1, to 75-77, L.C.C. 3 p.c. Acct. ⅜, to 87-87½, do. 3½ p.c. ⅜, to 98-98¾, do. 3½ p.c. Acct. ⅜, to 98-98⅜, do. Scrip ⅜, to 78⅜-79¼, Birmingham 3½ p.c. 1, to 99-101, do. 3 p.c. 1, to 87-89, Middlesex ⅜, to 85-87, Staffordshire 1, to 84-87, Bristol 3½ p.c. Deb. 1, to 98-101, Sheffield 3 p.c. 1, to 87-90. **Fall:** Bristol 3½ p.c. Red. ½, to 95-99, Glamorgan ½, to 85-88, Hull 3 p.c. 1, to 85-87, Southampton ½, to 95-98.

COLONIAL GOVT. SECURITIES.—Rise: Canada 1911 ½, to 101-103, Cape 4½ p.c. Deb. 1, to 101-103, do. 4½ p.c. 1879 1, to 101-103, do. 1917 ½, to 101½-102½, Sierra Leone 2, to 99-101, Straits ½, to 41-42, Victoria 4 p.c. Loan 1, to 101-103, Antigua 1, to 102-104, Canada 1911 ½, to 101-103, Cape 1882 ½, to 101½-102½, do. 1916 ½, to 102-103, Ceylon 3 p.c. 1½, to 87-89, Gold Coast 1, to 83-85, Natal 1937 1, to 107-109, New S. Wales 1933, 106½-107½, do. 1924, 100½-101½, do. 1918 ½, to 100-101, do. 1935, ½, to 87-88, do. 1930 ½, to 99½-100⅜, New Zealand 1929 ½, to 108-109, do. 1940 ½, to 98½-99½, Newfoundland 1913 1, to 101-102, Queensland 1915 ½, to 101½-102½, do. 1924 ½, to 104½-105½, 1921 ½, to 98-99, do. 1945 1, to 100-102, Sierra Leone 1925 1, to 96-98, S. Australian 1916 ½, to 102-103½, do. 1924 ½, to 105-106, Straits 3½ p.c. Insc. ½, to 96-97, Tasmanian 3½ p.c. Inscr. ½, to 98-99, do. 3 p.c. Insc. ½, to 87½-88½, Victoria 1919 2, to 104-106, do. 1920 1½, to 104-105, do. 1921-1926 1, to 99-100, do. 1923 1, to 99-100, do. 1911-1913 ½, to 101½-102½, do. 3½ p.c. 1929-1949 1, to 100-101, W. Australia 1911 ½, to 101½-102½, do 1915 ½, to 97½-98½, do. 1920 ½, to 97½-98½.

COLONIAL AND FOREIGN CORP. STOCKS.—Rise: Cape Town 1953 1, to 99-101, do. Suburbs 1951 1, to 97-99, Christiania 1, to 99-101, Copenhagen, 1898 1, to 88-91, do. 1887 ½, to 86-89, Cordoba 1887 Certs. 2, to 33-37, do. 1889 Certs. 2, to 33-37, Launceston 1, to 99-101, Melbourne 4 p.c. 1, to 100-102, Moncton (N. Bruns.) 1½, to 98-101, Rio 4 p.c. ½, to 88-89, Rosario 1887 3, to 55-57, do. 1888 3, to 55-57, do. 5 p.c. 3, to 55-57, Yokohama ½, to 99-100. **Fall:** Bloemfontein 1, to 92-94.

FOREIGN STOCKS.—Rise: Argentine 1897, 1898, 1899 and 1900 all 1½, to 83½-84½, do. (Port of B.A.) ½, to 100-101, do. 1907 ⅜, to 21½-22, Brazilian 1883 3, to 83-85, do. 1879 3, to 84-87, do. 1888 2, to 86-88, do. 1889 3, to 81½-82½, do. (W. of Minas) 2½ to 95½-96½, do. 1895 3½, to 98-99, do 1903 3½, to 98-99, do. 5 p.c. Stlg. Bd. 1, to 99-100, Chinese 5 p.c. Imp. Rly. Bds. ½, to 101½-102½, do (Kowloon) ½, to 24½-25, Egyptian Pref. ½, to 96-97, Japan 1895 ½, to 100½-101½, do. 1907 ½, to 80½-81, do. Scrip. fully pd. ½, to 100¼-100⅜, Russian 4 p.c. (Nic.) 1, to 74-76, Uruguay 3½ p.c. 2½, to 70-71, German Imp. 3 p.c. ½, to 82½-83½, Jap. 5 p.c. Cons. ½, to 46-47, Prussian 3 p.c. Stlg. 1, to 82-84. **Fall:** Guatemala 2, to 24-26, Norwegian 3½ p.c. 1, to 96-98, San Paulo (State) 1, to 86-88, Swedish 1880 1, to 94-96, do. 1900 1, to 97-99.

HOME RAILWAYS.—Ordinary—Rise: East Lon. ¼, to 3-3½, Glasgow and S.-W. Pf. ½, to 61-62, Gt. Nthrn. "A" ½, to 36-37, Barnsley 1, to 48¾-49½, S.-W. Pf. 1, to 101-103, Brighton Pf. 1, to 130-132, Tilbury 1, to 118-123, Metrop. Surplus Land 2, to 66-68, N. Lon. 1, to 88-93. **Fall:** Barry Ord. 2, to 185-190, Rhymney Pf. 1, to 97-100.

Leased.—Rise: Notting. and Grantham 1, to 112-115.

Debentures.—Rise: Cardiff 2, to 79-82, Gt. Estrn. 1, to 112-114, Gt. Westrn. 4 p.c. Deb. 2, to 117-119, do. 5 p.c. Deb. 1, to 143-146, Lancs. and Yorks 1, to 87-89, Lon. and Blackwall 1, to 114-117, N.-W. 1, to 90-92, S.-W. "A" 1, to 88-90, do. 3 p.c. Cons. 1, to 88-90, Brighton 4½ p.c. 1, 123-126, Chatham 1st 1, to 118-121, Tilbury 1, to 110-113, Midland 2, to 73-75, Neath and Brecon 1st 1, to 101-104, do. "B" 8, to 65-70, N. British 1, to 85-87, N.-Eastern 1, to 87-89, N. Staffs. 1, to 85-87, St.-Eastern 5 p.c. 1, to 133-136.

Guaranteed.—Rise: Forth Bridge ½, to 110-112, Gt. Cent. and Mid. Joint 1, to 99-101, Gt. Eastrn. Rent Charge 1, to 110-112, do. Irre. Guar. 1, to 111-113, Gt. Westrn. Rent Chge. 1, to 141-144, do. Cons. 2, to 141-144, Lancs. and Yorks. Minimum 2, to 164-168, N.-W. 1, to 116-118, Brighton 1, to 135-138, District Met. Guar. 5, to 35-45, Midland 1, to 71-73, N.-Eastern 1, to 114-117, N. Staffs. Trent, &c. ½, to 26½-27½. **Fall:** Fishguard-Rosslare 1, to 98-101.

Preference.—Rise: Caledonian No. 2 1, to 108-111, do. 1884 1, to 107-110, do. 1887 1, to 107-110, do. 1902 1, to 107-110, do. 1904 1, to 107-110, do. 1906 1, to 107-110, City and S. Lon. 1903 1, to 110-113, Gt. Cent. 4 p.c. 1, to 100-103. **Fall:** Gt. Cent. 1894 1, to 54-58.

INDIAN RAILWAYS.—Rise: Assam Bengal 1, to 81-84, Bengal N.-W. Ord. 1, to 147-151, do. 3½ p.c. Pref. 1, to 90-93, do. 2nd

Pref. 1, to 100-103, Bengal-Nagpur 1, to 101-104, Bombay, Boroda 2, to 97-100, E. Indian "C" ¼, to 23-24, do "B" ½, to 25-26, do. Def. Ann. Cap. 2, to 110-113, E Bengal "B" ¼, to 24-25, G. I. P. 3 p.c. Guar. 1, to 106-109, Indian Mid. 1, to 99-102, Rohilkund and Kumaon Ord. 1, to 141-144, Scinde, Punjab "B" ½, to 24-25, S. Mahratta 1, to 99-102, S. Punjab Ord. ½, to 124-127, Nizams Stk. 1, to 112-116, W. of India Portuguese 2, to 102-105.

Banking and Discount Company Dividends.

It was to be expected that our joint-stock banks would make a fine show of profits for the past half-year, for circumstances have been wholly in their favour except at one point—the price of their Stock Exchange securities, which has gone down. Money has been more or less dear throughout the half-year, and the banks have had opportunities much above the average of employing their resources at good rates. It has been otherwise with the discount companies, and no one ought to have been surprised if these had betrayed some loss of profits owing to the difficult conjunctures in which the cross currents of the short credit market have frequently placed them. All the more pleasant, therefore, is it to find the Union Discount Company maintaining its position. In fact, it has done better in the past six months than in the first half of 1906, for not only is the 11 per cent. per annum dividend again to be paid, but £15,000 is placed to reserve, making it £405,000, against £10,000 a year ago. In addition, £5,000 is added to the dividend reserve fund, and the balance carried forward has been raised to £55,725, as against £52,006 a year back.

As for the joint-stock banks, most of those that have thus far made their dividend announcements appear to have dealt frankly and honourably with the depreciation in their securities. The directors of Parr's Bank, for instance, write down its Consols to 83, which is quite sufficient for the present, and after providing for the usual dividend at the rate of 19 per cent. place £15,000 to bank premises account, £15,000 to officers' pension and provident fund, against only £10,000 a year back, and still have £148,163 left to carry forward, against less than £120,000 a year ago. Not only has the bank written down its Consols below the present market price, but all its other investments are likewise put below current quotations. The Union of London and Smiths Bank does just as well, although in a different way, for £150,000 of the past year's profits is set aside by the directors against depreciation of securities, while the dividend and bonus are maintained at the previous rates. With all this the balance carried forward has been reduced only by about £39,000 to £145,000. Surely an ample nest-egg.

The London and Westminster, again, has set aside £100,000 towards the depreciation of its securities, besides writing off £16,000 from the cost of premises, and has about £16,000 more to carry forward than it had twelve months back. Only one London bank has issued its announcement without making any mention of depreciation, and that is the London and South-Western, but perhaps that vital point will be dealt with in the report. The Williams Deacon statement is merely an interim one announcing the usual dividend at the rate of 15 per cent. per annum.

In the case of the London, City, and Midland the dividend is also maintained at the usual rate of 18 per cent. per annum, while £50,000 is applied out of the half-year's profits to write down Consols and other investments held "below market value." Also £5,000 is added to the pension fund, and the balance carried forward is £168,057, as compared with £140,777 carried out at the corresponding date last year, and £171,517 brought forward in January last.

Writing down figures are not disclosed by the London Joint-Stock Bank either, but its directors intimate that after writing down all securities held, including Consols, to market value or under, out of the half-year's profits, the free balance is £139,700, out of which a dividend at the rate of 11 per cent. per annum is paid, being the usual rate, £5,000 applied in reduc-

tion of cost of buildings, £5,000 added to the reserve, and £5,000 to the superannuation account. This still leaves £25,700 to be carried forward, or about £3,000 more than the amount so left at the corresponding date last year, and compared with £20,843 brought in at the beginning of the half-year.

Lloyds Bank dividend is merely an interim one, and for that reason probably its board says nothing at all about depreciation, but merely announces an interim distribution at the rate of 17½ per cent. per annum, or 14s. for the half-year, the same as before.

Critical Index to New Investments.

India 3½ per Cent. Rupee Loan.

The Government of India invites tenders for a loan of Rs. 2,50,00,000, bearing interest at the rate of 3½ per cent. per annum, and not liable to be discharged before December 31, 1920. Tenders will be received at Calcutta until July 17, and at Madras, Bombay, and other places on the preceding day, and until the local time corresponding to noon standard time of July 17. Following the usual practice in making these loans the minimum price will be recorded by the Comptroller-General before the tenders are opened, but will not be disclosed unless any tenders are rejected as being below the minimum.

Middlesex County 3½ per Cent. Stock.

Applications will be received at the Bank of England for about £767,700 of the above stock, or such amount as may be necessary to raise the nett sum of £730,000 in cash, the price of issue being 97 per cent. The proceeds will be applied towards the cost of asylum buildings, main road and bridge improvements, light railways, school buildings, and other purposes. The stock ranks *pari passu* with the existing 3 per cent. stock as regards security, and is redeemable at par on June 27, 1947, but may be repaid on or after June 27, 1927, on six months' notice. Existing debt amounts to £2,807,827, but £350,000 of this will be paid off out of the new issue, while the rateable value of the administrative county is £6,237,215. The stock is a trustee security, and, allowing for gain on redemption, yields a few pence over 3 9/10 per cent.

Law Guarantee and Trust Society, Limited.

Out of a subscribed capital of £2,000,000 in £10 shares, only £200,000, or £1 per share, has been paid up, and the society now requires more funds to meet the extension of its business. Instead, however, of making a further call on the existing shares, it has erected new capital to the extent of £500,000 in the form of 5 per cent. cumulative preference shares of £1 each, and offers half of these for subscription at par. The society carries on a business of mortgage, debenture, forged transfer, contingency, and licence insurance, undertakes fidelity and other guarantees, and will also act as a trustee for a commission. Some of its commitments, it is to be feared, involve the taking of big risks, and the item of "properties in hand" appearing in the balance-sheets has shown a decided tendency to increase. Still, profits have been good, and the dividend for the past six years has been at the rate of 10 per cent. per annum, while a reserve fund of rather more than the paid-up capital has been accumulated, and as the new shares rank in priority to all other shares against the assets, including the uncalled capital, they ought to be well enough secured.

Lancashire Dynamo and Motor Co., Limited.

This is a small company established at Trafford Park in 1899 for the purpose of manufacturing dynamos, motors, and subsidiary apparatus. It has a capital of £150,000, divided into 500 5½ per cent. cumulative preference shares and 1,000 ordinary shares of £100 each, of which 470 preference and 850 ordinary have been issued, but the business has grown to an extent necessitating the raising of funds by loans and overdrafts. In order to repay these and to provide for further working capital an issue of £50,000 5 per cent. first mortgage debentures was this week offered for subscription at par. On December 31 last the total assets were valued at £229,345, of which £41,304 represented land and buildings, £79,697 machinery, plant, &c., £11,272 tools, and £34,475 materials, stores, &c., nothing being included for goodwill, but the liabilities at that date were not disclosed in the prospectus. Profits, too, although set out for two years and nine months to December 31, are given before allowing for depreciation or interest on loans, &c., and are therefore equally useless as a guide to the company's position. It is significant, however, that the reserve fund is now only £15,500, even with the help of an unspecified amount derived from premiums received on ordinary shares. But the issue may be well enough for local consumption.

Bristol Corporation 3½ per Cent. Redeemable Stock.

Following the example set by the Middlesex County Council, the Bristol Corporation offers £341,500 3½ per cent. stock, or such other amount as may be necessary to raise the sum of £327,228 and the expenses of the issue, at the price of 97 per cent. Of the proceeds, £216,735 will be applied for the purposes of the new dock undertaking at Avonmouth and other dock works, and the balance of £110,493 for the requirements of the Corporation as a municipal, educational, and urban sanitary authority. On March 25 last the total debt for all except dock purposes was £2,732,568, and on April 30 the dock debt was £5,421,332, against which there are accumulations in hand on account of sinking fund of £203,987 and £256,090 respectively. The new stock ranks equally with all stock previously issued, and is redeemable at par on July 4, 1965, but may be redeemed on or after July 4, 1925, on three calendar months' notice.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

Antofagasta (Chili) and Bolivia Railway Co., Limited.

This company's experience during the year 1906 was almost everything that could be desired, and the directors are in a position to issue a very satisfactory report and statement of accounts. The receipts topped the round million, the actual figure being £1,007,089, which was an increase against the preceding year of £201,207. On the other hand the expenditure rose by £166,210 to £605,076, a substantial rise, but not necessarily a bad sign. It was largely due to the increased traffic handled, partly to the higher scale of wages now prevailing all over South America, and partly to higher upkeep charges. The number of passengers carried increased by 49,765 to 287,078, and the weight of goods and minerals moved advanced by 92,855 metric tons to 670,119 tons. Of the total 223,480 tons of nitrate per cent. was up traffic, and 446,639 tons, being 66·63 per cent., was down traffic. The business in animals and vehicles only reached 1,009 tons, but this figure showed an increase of 249 tons, and at the mole 408,000 tons were handled compared with 289,625 tons—very satisfactory progress. Balance of nett profit is £401,113 or £35,057 more, and to this must be added profit on investments realised £5,383, which is something to be proud of—registration fees, &c., £765, and balance brought in £20,390, making £427,221 in all. First the directors put £50,000 to renewals account, write off £5,000 from the purchase price of the Huanchaca company's rights, and the total cost of the conversion of ordinary stocks with £2,000 Subscriptions to earthquake fund, &c., were £750, and interest, discount, exchange and income-tax took £36,703, leaving £327,868 from which £250,250 has been already distributed for debenture interest, preference dividend and interim dividend on the deferred stock. The directors now propose a final dividend of 5 per cent. on the deferred, making 7½ per cent. for the year, and leaving £25,118 to be carried forward. Good progress is being made with the extensions, and the prospects for the current year seem very fair, although the fall in exchange is depriving the company of the benefit of an increase in the sterling receipts. During 1906 three new offices were opened and eleven closed, but one closed down in August owing to exhaustion of supply. This year two offices have been re-opened and two new ones. Construction is proceeding in the case of four, and negotiations are on foot for the construction of others. Up to the present the industry has been much hampered by want of water, but a new pipe-line for supplying the district and the railway is in a forward state and will be completed in a few months.

The Assam Railways and Trading Co., Limited.

This company's gross earnings from all sources amounted to Rs. 10,06,281 for the year ended December 31 last. This was an increase of about Rs. 54,000 on the previous year, but the nett earnings fell off by Rs. 23,419 to Rs. 4,08,634. Turned into sterling at 16d. per rupee, the profit for the year was £609 up at £70,652. Out of this the directors meet the interest on the preference and new 6 per cent. shares, besides paying a dividend of 10s. per share on the "A" preferred shares, making with the 6s. paid last December 8 per cent. for the year and leaving £4,147 to carry forward. The "B" shares get nothing. Capital expenditure in the year was £8,189, making the total to date £943,449.

Bank of New South Wales.

If the figures presented in the half-yearly report of this institution may be taken as a guide, and we think they can, conditions ruling in Australia during the half-year ended March 31 last were still fairly satisfactory. After providing for bad and doubtful debts, fluctuations in the value of investment securities, reducing the valuation of bank premises and including recoveries from debts previously written off as bad, the profits were £149,802 or £12,116 more than in the corresponding period. In addition the balance brought forward was £27,733 compared with £18,232, so that all told the disposable credit comes to £177,535 against £155,919. Rebate on bills not due required £8,220, the dividend will again be at the rate of 10 per cent. per annum, and another £25,000 goes to the reserve. Next the directors add £15,000 to the Buckland Fund, which provides for exceptional cases of officers not covered by the provident fund rules, and the balance forward is raised from £22,617 to £29,314. Reserve fund now reaches the round £1,500,000 against the present paid-up capital of £2,000,000, but the latter is to be increased, as intimated by special circular last March. Notes in circulation are only a trifle higher at £1,085,704, but the deposit and current accounts are some £880,000 larger at £26,235,346. The actual public deposits in the colonies are something like 1½ millions higher, but the Government and London accounts show a reduction of roughly £600,000 between them. Bills payable, &c., are about £35,000 up at £3,338,069. On the assets side, the coin, bullion and cash balances have increased £470,000 to £6,451,586, and good increases appear in Queensland Government notes and notes of other banks. Money at short call in London, however, has been reduced £850,000 to £1,365,000. Investments have gone up nearly £500,000 to £2,291,723 and bills receivable come to £3,586,085, or practically no change. The main items, bills discounted, loans and advances, total £19,481,752 or about £900,000 more, bank premises are £15,000 less at £700,000 and the balance-sheet totals £35,001,770 against £33,833,785.

New General Traction Co., Limited.

This company's report for the year ended March 31 last provides some interesting reading and material for much reflection. It is a fairly important enterprise, as these tramway-owning companies usually are, and while we do not wish to put the concern on a par with the B.E.T., because we think its future prospects are a good deal brighter, there is no getting away from the fact that just at present things are not exactly flourishing. The most important operation of the year was unquestionably the lease of the company's Philadelphia undertakings to the Philadelphia Rapid Transit Company as intimated in a circular issued to the shareholders on January 9, 1907. These undertakings, which were known as the Philadelphia, Morton, and Swarthmore Street Railway Company and the Media, Middleton, Aston, and Chester Electric Railway Company, were consolidated into one concern, bearing the name of the Darby, Media, and Chester Street Railway Company, with a share capital of $850,000 (all of which has been issued) and an authorised debenture capital of $1,500,000 in 4½ per cent. first mortgage bonds, $850,000 being issued to this company. It now holds $848,000 of the bonds and $695,000 of the capital stock issued in exchange for the securities possessed in the two companies before amalgamation. Under the lease both principal and interest of the bonds are guaranteed by the Philadelphia Rapid Transit Company, who also guarantee a dividend commencing at 1 per cent. for the year to July 1, 1907, and rising by 1 per cent. each year up to 5 per cent., which will be reached by 1911, the return thereafter to be at the same rate. To enable this lease to be concluded the New General Traction Company had to release the Darby, Media, and Chester Street Railway Company of its obligations for certain sums standing in the accounts as "cars leased to the Media, Middleton, Aston, and Chester Electric Railway Company," and "remittances to Philadelphia" which have been written off in the profit and loss account, as the property was leased free of debt other than the bonds. These items together amount to £19,225, and account for the greater portion of the loss for the year under review. No further expenditure will have to be incurred for the Philadelphia undertaking, while a revenue of £9,022 gradually increasing to £14,582 will be derived from the securities held by this company. The other interests possessed are in the Coventry Electric Tramways, which is showing substantial progress, the Norwich Electric Tramways, which shows no signs of improvement, and the Douglas Southern Electric Tramways, which has given satisfactory returns. The accounts of all these companies are attached to the report, so that shareholders can see the exact position. Revenue of the New General Traction for the period under review was £14,768 compared with £14,127, but in the previous year there was a special credit of £2,211 from the Coventry Company on account of dividends accrued in 1904, so that actually the improvement on the year was £2,852. One or two other items produced £16, making £14,784; but general expenses took £2,483, interest on debentures £12,540, and interest on loans £1,836, in addition to which there were the sums written off to which reference has been already made. These really came to £18,741, but a transfer of £3,575 from special reserve, extinguishing the fund, reduced the deficit to £15,166. Under all heads, therefore, the outgo was £32,025, meaning a debit balance of £17,241 to be added to that brought in, making a total of £27,101. Needless to say, there is no dividend for the £370,000 of share capital, £250,000 being preference and the remainder ordinary, and we find that the dividend arrears on the preference shares reach the heavy sum of £90,000. Truly a most unfortunate condition of affairs, and even when the Philadelphia revenue reaches its maximum the position will hardly be flourishing. Total share and other interests, exclusive of some money spent on extension and new construction for the Coventry Company, are £653,773, no reserves are possessed, and the company has raised loans of £54,700. Discount on issue of debentures £8,100 and preliminary charges connected with new undertakings £608 have yet to be written off.

Howard and Bullough, Limited.

This company's thirteenth report covers the year to May 31 last. It states that after making due allowance for depreciation, bad and doubtful debts, the profit was £198,068, to which the balance of £10,176 brought forward had to be added. After deducting the interim dividends declared there is £171,994 to be dealt with, out of which £45,000 is placed to the reserve fund, raising it to £275,000. Then the balance of the preference dividend is paid, together with a final dividend at the rate of 11 per cent. on the ordinary shares, making 8 per cent. for the year. In addition the ordinary capital gets a bonus of 1s. per share, so that altogether it receives 13 per cent. and £30,000 is set aside to dividend reserve. Even then £10,744 is left to carry forward. Except that the capital sunk in the business, including goodwill, &c., was increased £18,785 nett last year to a total of £887,350, there is nothing to comment upon in this Anglo-American company's balance-sheet. The amount allowed for depreciation is nowhere mentioned, but the auditors state in their certificate that "due depreciation has been made," not only on this account, but for bad and doubtful debts, and certainly the company is nowhere giving indications of financial weakness. On the contrary, it has about £131,000 in cash in hand and at its bankers, and apart from the debenture issue of £250,000 it may be said to owe nothing, while reserve funds are steadily accumulating.

San Paulo Match Factory, Limited.

This company was formed in April, 1906, and a good deal was made in the prospectus of the existence of a convention of manufacturers under which prices were regulated. The undertaking, however, had hardly been transferred to its British owners before the convention collapsed and keen competition set in with disastrous results. According to the prospectus the profits from September 12, 1904, to December 31, 1905, were Rs.607,878 $027, equivalent to £30,103 per annum, but for 1906 the nett profits of the Brazilian company were no more than Rs.286,395 $567 or £18,496. Of this £1,506 was placed to depreciation account and £1,699 to the statutory reserve, leaving £15,291 for the English company. The whole sum, however, is not available for distribution, £4,566, being the proportion for the period from January 1 to April 19, having to be put to reserve, and after providing debenture interest and sinking fund and administration expenses, and writing £553 off preliminary expenses and £375 off discount and charges of debenture interest, a balance of £3,569 remained, which the directors carried forward. This is far from an encouraging start, and all the comfort the directors can give is a statement that if prices will only return to a more remunerative level they are assured that their original expectations of good dividends will be fully realised. Out of a share and debenture capital aggregating £252,535 the purchase of shares in the Brazilian company took £236,000 and the remainder is largely represented by such intangible assets as £7,125 for discount and charges on debentures and £4,976 for preliminary expenses, which are being written off at the slow rate of 5 per cent. and 10 per cent. per annum respectively. Creditors are light at £702, while debtors owe £6,192 and cash comes to £9,715, but £1,903 has to be found for debenture interest outstanding and the company is purchasing more machinery, so that the funds will probably be found to be none too large.

Champagne Freres, Limited.

A little better display is made by this company for the year 1906 than the last report gave, for there was actually a profit of £8,272, and if the promise of the directors is kept, the current year will do better still. So they think they will soon be in a position to consider the question of redeeming part of the debentures, and a year hence a resumption of dividends on the preference shares may come into sight. This is not a very brilliant show at the best, but it is something, and the company does not appear to be getting deeper into debt, although it does owe £14,382 to sundry creditors, £9,663 of it in Paris. Cash in hand, however, comes to £4,229 and sundry debtors owe the company £24,461. What, however, strikes us always about this company is the weight of management charges, although these have been reduced compared with preceding years. The managing directors, for instance, still get £3,000 per annum, and the directors' fees are still £577, although that is £479 less than in the preceding year. Various changes in the composition of the

management have, however, been made, which will raise the total Paris management charges to £3,600 per annum. The trading profit, it may be added, was £6,166 up at £13,783, and the management has at last found a packing sieve for the fruit which will eventually result in "a considerable saving of expenses."

Canada Company.

Sales of land during the period from January 1 to May 31 were larger than in the corresponding months of 1906 at 133¾ acres, but the average realised fell from $70.91 to $36.67 owing to the smaller proportion of better class land. Land leased with right of purchase increased from 2,838¾ acres at $13.28 to 3,346¾ acres at $13.61, and six town lots were sold at an average of $19,10 against none last year. The total sales therefore were 562¾ acres more at 3,484¾ acres, but the average fell off by $0.37, and at $14.56 was only $2.24 per acre above the 1894 valuation compared with $3 a year ago. Receipts from land sold or converted to freehold dropped by £4,025 to £9,087, and rent, &c., yielded £5,372 or £465 less, but lumber receipts were higher and minerals and prospecting fees gave an additional £327 at £497, the total revenue being £3,794 down at £15,629. Funds in hand, consisting of deposits and accrued interest, amount to £14,127 or a decrease of £11,514, but liabilities have been reduced by £8,650 to £2,227, leaving a surplus of £11,900 compared with £14,764, out of which it is proposed to pay a dividend of 25s. per share against 35s. for the six months ending July 10.

Otago Harbour Board.

Like many other things in New Zealand, the ports controlled by this board were prosperous in 1906 and the revenue rose to £76,444 or £3,929 more than in 1905. This was the highest figure ever attained, and was reached in spite of the reductions made in dues and shipping charges in 1904. These reductions are computed to have been equivalent in all to £5,000. A dispute seems to have arisen with the Government over the value of lands which have been taken away from the board, but the Premier has promised that no further lands embraced in the board's endowments will be taken for public purposes without ample compensation. Some members estimated the loss that would have been involved had the Government pursued its expropriation policy at from £500,000 to £600,000. Out of last year's revenue £10,998 was transferred to sinking fund account, but why is the board converting so many of its terminable bonds into 5 per cent. consolidated stock? Its total debt is £692,400, and the sooner that is all paid off out of revenue the better. Interest alone took £35,882 last year and working expenditure of all kinds absorbed all but £2,590 of the balance.

Kelly's Directories, Limited.

Trading profits in the year ended March 31 showed a recovery of £1,819 at £46,903, but the balance brought in was £755 smaller at £10,087, and the total available was therefore £1,064 up at £56,990. After allowing for £3,145 written off printing and publishing plants, and providing for administration charges, debenture interest, preference dividend and interim dividend on the ordinary shares, the surplus available was £33,834 compared with £31,647. Out of this a further dividend of 13s. per share is paid on the ordinary shares, making 9 per cent. for the year, together with a bonus of 3s. per share, or the same as for the two preceding years, and £4,000 is again put to reserve, leaving £2,187 more at £12,274 to be carried forward. Freehold premises have been increased by £2,786 to £61,317, and printing plant by £908 to £58,548, while the publishing plant is valued at £1,429, or only £145 less after deducting the sums now written off. Copyrights, goodwill and works in progress, too, are £732 higher at £331,461, and it would be interesting to know if these changes are in any way connected with the liability of £7,259 appearing in the balance-sheet under the heading of Slater's Directory, Limited. Reserve with the present addition will amount to £30,000, while Consols, trade and other investments stand at £72,404 or a decrease of £708. Sundry creditors are comparatively light at £11,847, against £28,409 due by sundry debtors, and while stocks are £1,041 lower at £3,351, cash and bills have increased by £671 to £23,916, and money on loan and with interest is £2,542 up at £5,629.

H. Herrmann, Limited.

The directors report that the general furniture trade in 1906 continued to be unsatisfactory, but owing to the steady development of new branches by the London department and better results obtained from the Evansville business the outcome for the year showed distinct improvement. Yet gross profits, including £8 from transfer fees, were only £3,196, while expenses and interest absorbed £7,897, leaving a loss of £4,701, which is reduced to £3,368 by the appropriation of the balance of the reserve fund. With a share capital of £150,400 the company owes £6,866 to sundry creditors and on bills payable, and has had to borrow £20,000 from its bankers on the security of debentures having a floating charge. Purchase of business account stands at £29,000, the figure to which it was reduced in 1897, freehold and leasehold property is valued at £17,812, and plant, &c., at £30,001. Stocks of timber, furniture, however, amount to £67,905, sundry debtors owe £31,897 and the company has £307 in bills receivable and £4,952 in cash, so that the position is not irretrievably bad, and if the economies expected from the additions to the factory now being carried out are realised, the directors' anticipations that the period of losses in carrying on operations is at an end may easily prove correct.

Hazell, Watson and Viney, Limited.

This firm of printers and proprietors of publications made a profit last year ended March 31 of £[illegible] brought forward, the distributable sum of £[illegible] all expenses as well as interest on debentures and preference shares. The dividend on the ordinary shares is maintained made up to 10 per cent. for the year by a [illegible] or 7 per cent. less income-tax for the [illegible] and a balance of £3,851 will then be left to carry forward. The company has a debenture issue of £[illegible] owed trade creditors £21,185 at the date of the [illegible] against sundry debtors who owed £[illegible] sum reserved for discounts and doubtful debts. It also has an investment of £9,504 in Latin [illegible] things, besides £2,742 invested in railway [illegible] and bonds at cost. These investments are, perhaps, part of the reserve fund, which amounts to £25,000. Machinery, plant, fixtures, copyrights, goodwill, &c., less an [illegible] ance for depreciation, form an entry of £128,257, the freehold and leasehold works in various parts of the country being in addition entered at £78,924 after deducting a mortgage of £11,000 outstanding on certain freeholds.

Lautaro Nitrate Co., Limited.

The cost of production showed an [illegible] the year ended December 31, quite apart from [illegible] due to the earthquake, and gross profits [illegible] by £32,977 to £102,218. Expenses, including £[illegible] tors' percentage of 1905 profits, £1,000 contributed to the earthquake fund, and £500 provided against depreciation of investments, took £18,915, and after writing off £13,[illegible] tion of plant, grounds, &c., the nett profits, with £1,933 brought in, were £28,697 lower at £131,197. A year ago a [illegible] balance of the cost of the Oficina Ballera was written off and £15,960 was applied to redemption of debentures, but this time £10,423 was transferred to reserve, and the [illegible] works is increased by £8,500 to £23,500. Then another £4,000 is added to fire insurance fund, and after paying a dividend of 16 per cent., or the same as for the two preceding years, the directors take £3,713 for their percentage of the [illegible] £1,560 is carried forward. Including the debentures [illegible] on January 1, 1906, the cost of the property was reduced during the year by £30,000 and now stands at £435,362, against which the reserve and fire insurance funds have increased by £14,[illegible] at £60,269. Investments representing these funds are £1,422 down at £40,970, but notwithstanding this the [illegible] for depreciation on them is £578 better at £3,478. Liabilities to creditors and on bills payable show a big increase of £11[illegible] to £322,523, but, on the other hand, nitrate in transit is £107,786 up at £271,627, and debtors owe £37,543 or £16,009 more. An advance of £78,490 to £227,386 in stocks, however, is offset by reductions of £65,[illegible] to £19,452 in cash and £16,972 to £1,166 in bills receivable.

United States Brewing Co., Limited.

With £5,634 from interest, the profits earned during the year ended March 31 by the three breweries now [illegible] pany amounted to £117,446. Of this £40,863 was written off for repairs and depreciation and £13,455 for [illegible] sale of the Hupfel Brewery, while New York expenses took £1,991, leaving a surplus of £61,138. Adding £195 for interest and transfer fees and deducting London office charges and debenture interest, together with £2,[illegible] debentures purchased, the amount available was £36,346. This was increased to £45,102 by the sum brought in, and after paying preference dividend the ordinary shares receive 5 per cent. for the year at the cost of a reduction of £2,[illegible] the balance carried forward. The sale of the Hupfel Brewery produced £131,828, of which £59,664 was in cash, and this has been used with the balance of the proceeds of the sale of the Albany Brewery to pay off £[illegible] of the first mortgage debentures, leaving £318,800 outstanding, of which a further £[illegible] has since been redeemed. Additions to property account, less sales and transfers, amounted to £[illegible], and after [illegible] £101,080 for nett value of the Hupfel Brewery and [illegible] depreciation this item stands at £88[illegible]. Against [illegible] there is a reserve of £63,613 employed as working capital. [illegible] liabilities are comparatively small at £[illegible], while sundry debtors, including mortgages, loans, &c., stand at £[illegible] stocks are valued at £[illegible], and cash amounts to £[illegible]. In addition, the trustees for the debenture holders have £[illegible] in cash and £72,105 on mortgage representing the balance of proceeds from the sale of the two breweries.

Leicester Brewing and Malting Company.

In its twelve months ended May 31 last this company earned nett £21,250, which was a little more than in the preceding year. The directors are accordingly able to make up the dividend on the ordinary shares to 10 per cent., but they [illegible] £6,520 to carry forward against £4,[illegible] brought in. They are sorry to report that two of the [illegible] have been taken away under the 1904 Act, but [illegible] cannot be held a loss, since [illegible] awarded. We wish other boards of [illegible] speak with equal candour. No profit and loss [illegible] is published, but the balance-sheet is clear and the [illegible] appear to have any formidable [illegible], although the debt of £34,070 to sundry creditors seems a little heavy.

The Egyptian Hotels, Limited.

Glowing prosperity is exhibited in the report of this company for its past year ended April 30 last, a total of £3,235

being brought out after meeting all expenses plus £11,412 applied to the redemption of debentures and other writings down. Accordingly the directors are able to declare a 20 per cent. dividend upon the ordinary shares after meeting all other charges, leaving £2,899 to be carried forward, against £1,414 brought in. It is spending much money, particularly in enlarging Shepheard's Hotel, but, on the other hand, it is receiving handsome prices for some portions of its land sold, and has still to receive £120,000 on account of these sales, all of which will be applied, for the present at any rate, in meeting capital expenditure and in reducing debt. Originally debenture debt was £280,000, and the directors hope when all the money coming to them from land sales has been received to wipe this debt completely off. At the present time the total outstanding on "A" and "B" debentures together is only £138,600. Thus the position is one of quite unusual strength, and the business does not seem to be over-weighted with charges of any description. The total administrative expenditure amounts to only £9,625.

W. H. Chaplin and Co., Limited.

Business in the wine and spirit trade was far from good during the year ended March 31, and what demand there was appears to have been for cheap qualities. This company, however, seems to move with the times, as the directors report that their turnover was well maintained and the effect of the changed conditions was a decrease of no more that £675 to £11,075 in trading profits. With £1,397 brought in the total revenue was £682 down at £12,468, and after providing £300 for depreciation of leases and paying income-tax and auditors' fees the nett surplus came to £11,891, compared with £12,585 a year ago. Out of this the dividend on the ordinary shares is repeated at 8 per cent., but only £500 or half last year's amount is put to reserve, the managing directors take £114 less at £341, and the bonus to the staff is cut down by £172 to £511, leaving £1,489 to be carried forward after paying directors' fees of £500. The nett reduction in property account in the 12 months is £257 at £36,194, against which the reserve now stands at £14,500, all, however, in the business. Current liabilities are £10,183 up at £51,340, but sundry debtors and bills receivable show an increase of £3,765 at £65,564, and stocks are £6,384 larger at £103,167, while cash is only a few hundreds down at £3,937.

North Staffordshire Tramways Co., Limited.

This company is worked by the Potteries Electric Traction Company, from which it received £12,050 for the year ended December 31. A few shillings more were scraped together from interest, transfer fees and miscellaneous sources, and after providing £63 for administration and general expenses, and £7,000 for debenture interest, a balance of £4,988 remained. Adding £627 brought in the available balance was £5,615, and out of this the preference dividend is met and the ordinary shares receive 5 per cent., leaving £815 to be carried forward. During the year £4,243 was spent in doubling certain sections of the line to meet the requirements of the increased traffic, making the total expenditure on capital account £260,181. The issued share and debenture capital is £232,000, and as the reserve and renewal fund only amounts to £4,094 the Potteries Company has had to be called upon to advance no less than £23,628. Other liabilities are small at £440, but the assets, apart from £5,275 due under the working agreement with the Potteries Company, consist of £307 in cash and £14 in Consols.

W. and T. Avery, Limited.

This weighing machine business continues to do extremely well, and besides paying a 10 per cent. dividend on the ordinary shares the directors can add £5,000 to reserve and slightly increase the carry forward to £7,784. Profits for the twelve months were £25,791, exclusive of £7,585 brought in, and after providing £5,603 for depreciation. Debenture charge for the year was £4,000, the preference dividend took £5,930, and the ordinary dividends £10,662. The addition recommended will make the reserve fund £98,000, and the directors propose to extinguish the item of goodwill standing at £71,595 by writing it off this account. The reserve will then amount to £26,405, and no doubt will be steadily built up again. The financial position looks very good, the company possessing such assets as stock-in-trade and work in progress £114,636, debtors £38,675, investments £82,373, and cash £11,880, while the sum due to creditors is only £24,443. Additions to the property account for the period under review were £13,167, making the total outlay £212,105, against which there is a depreciation reserve of £57,665, leaving the balance-sheet value at £154,439, a very moderate sum.

Trustees, Executors and Securities Insurance Corporation, Limited.

Except that some important amendments to the articles of association are proposed, this business has now got pretty well settled down again after the complete reorganisation of its capital a year or so ago. During the twelve months ended May 31 last the revenue from every source was £95,749, which includes interest, dividends, commissions, and transfer fees £64,784, profit on realisation £20,113, and other items £10,852. Compared with 1905-6 the total shows a small decline, fluctuations being inevitable in a business of the kind; and after providing interest on debenture stock £17,000, administration £6,846, directors' remuneration, accountants' charges, and auditors' fee £4,336, a fairly heavy sum, debenture trustees' fees £630, and a few smaller charges, the balance remaining is £66,678. This is a drop of £2,824, but the credit brought in was £14,147 against £523, the smallness of the latter sum being due to special circumstances connected with the capital charges. The total available for appropriation therefore amounts to £80,825, of which £5,000 is added to the reserve fund, and £8,000 written off the fund's investments. Dividend on the 4½ per cent. preference stock comes to £23,615, and the directors declare dividends aggregating 5½ per cent. on the ordinary stock, the same as before, carrying forward £15,325. Reserve fund now stands at £135,000, of which £100,000 is in trustee securities, and the £8,000 now applied from revenue brings these to present market values. The remaining £35,000, although not trustee stocks, are good enough securities, ordinary investments stand in the books at £1,149,726, and the directors say this amount is fully represented in the aggregate by present values, according to a valuation based on the market prices of such of the securities as are officially quoted (about three-fourths of the whole), and to an estimate of the value of the unquoted securities. Winchester House, including £78,042 spent on rebuilding, which has taken a longer time than anticipated, has a balance-sheet value of £298,042. The new offices were not ready for occupation until the early part of this year, but a substantial portion of the new holding has since been let, the rentals from which will benefit future accounts. There is an interest of £22,000 in the Liverpool Safe Deposit, debtors of various kinds, and loans against security amount to £32,747, and the cash balance is £20,586, while £28,596 is owing to sundry creditors.

African Association, Limited.

For its seventeenth year ended December 31 last this company made a profit of £83,962, after increasing the contingencies fund to £3,500, less whatever may be voted as directors' fees. Out of this sum the directors propose to pay a balance dividend of 7 per cent. on the ordinary shares, making up the total distribution for the year to 12 per cent. This, however, only takes £40,083, and the remaining £43,879 is halved between the ordinary and the founders' shares. Holders of the ordinary shares get a bonus of ½ per cent. and the remaining £20,270 of their portion is carried to ordinary shares reserve. The founders get all their portion except £790, having received an interim dividend of £5 per share on January 1 last, to which one of £20 is now added. This is equivalent to 312½ per cent. upon these shares, but the company can obviously afford to pay the money away. It is accumulating money, and owes very little on current account considering the large amount of stock held and of money sunk in shipments outwards and homewards. These three items foot up to about £435,000 and the amount owing to sundry creditors is only £64,161. The company has £163,679 invested in the shares and debentures of other companies or lent upon security, and sundry debtors owe it £54,981. Property of all kinds stands at only about £143,000, and the business is obviously first-rate of its kind.

East Surrey Water Company.

During the year ended March 25 a further 6½ miles of main were laid, and the additional service storage reservoir works at Alderstead were completed and put into use, the necessary funds being in part provided by an issue of 700 £10 ordinary shares and £3,700 in debenture stock, which produced, with premiums, £15,778. The number of customers supplied was increased by 712 and the gross income from all sources amounted to £45,090, of which £27,162 was retained as nett profit. Adding £2,616 brought forward the disposable balance was £29,778, and after providing debenture interest and dividends on the pre-preference stock and preference shares and placing £2,000 to renewal and contingency fund, the original ordinary "A" shares receive 10 per cent. and the ordinary "B" shares 7 per cent., leaving £3,419 to be carried to the new account. The contingency fund was also increased by £2,680 from dividends and interest, and as only £821 was spent out of it on buildings, machinery, &c., there is a balance of £11,409, of which £3,409 is invested in Consols. Capital expenditure totals up to £557,548 against £555,863 issued, and, as noted last week, the company is offering another 600 £10 ordinary shares for sale by tender.

Lungla (Sylhet) Tea Co., Limited.

Although there was a further slight drop of 7,125 lbs. to 2,358,589 lbs. in the crop for 1906, and a further increase of 0.22d. to 4.89d. in the cost per lb., the financial results, thanks to a rise of 0.76d. to 7.13d. in the average price obtained, were decidedly better. Nett profits from tea sales rose by £6,610 to £20,839, and in addition £379 was received from the insurance company for damage by hail, tea seed produced £255, and sisal plants £34, while interest and transfer fees gave £102, and credit is now taken for £67 for difference between cost and par value of debentures cancelled. The balance brought forward was £877 smaller at £731, but after meeting debenture interest and managers' commission the amount available for distribution nevertheless came to £5,755 more at £17,890, out of which the directors pay 6 per cent. on the ordinary shares compared with 3 per cent., and transfer £5,000, or double last year's allowance, to reserve, carrying forward £1,190. This brings the reserve up to £17,500 or a little over 6½ per cent. of the block account of £263,177, but the directors are now engaged in reducing the debenture debt, and last year paid off another £5,000, leaving £50,000 outstanding. Floating liabilities, including £4,185 for borrowed money, are £1,953 higher at £25,483, but assets in London and India come to £6,495 more at £39,733. Cash, however, owing probably to the repayment of debentures has been reduced from £3,065 to £624.

Borelli Tea Co., Limited.

The crop for the year ended December 31 amounted to 874,123 lbs., or an increase of 54,052 lbs., of which 50,035 lbs. was from

the Phoolbari estate and 4,017 lbs. from the Hari hurah garden. Prices were only 0.10d. and 0.04d. better at 8.35d. and 7.60d. per lb. respectively, and the improvement in gross receipts came to £2,284 at £29,986, but expenses rose by £1,145 to £25,171, and after paying managers' commission the nett profits were £989 up at £4,363. Miscellaneous receipts raised the total to £4,453, but as £109 was brought forward, compared with £952 deducted a year ago for debit balance and loss on writing down the Indian assets to 1s. 4d. per rupee, the disposable total was £1,667 larger at £4,562. Out of this the preference dividend is paid, and the ordinary shares receive a distribution of 4 per cent., the first since 1897, and £482 or £373 more is carried forward. Very little change has taken place in the balance-sheet compared with a year ago. Block account still stands at £85,540, and the investment in Tezpore Tramway shares remains at £1,680, but machinery and buildings have been further written down and are now valued at £5,515. A small reduction in bills payable to £10,300 is neutralised by an increase of £152 to £1,580 in sundry creditors, and drafts in transit have risen by £124 to £1,096, while, on the other hand, stocks are much the same at £11,413, but debtors are £1,853 up at £3,830 and cash has risen to £1,108.

Jetinga Valley Tea Co., Limited.

The past season's crop was only 13,748 lbs. larger than that of the previous year at 1,001,963 lbs., but the average realised was 0.88d. better at 6.98d., and the gross receipts, including £431 from tea seed sold, came to £29,590. Cost of production rose from 5.29d. to 5.44d. per lb., leaving nett profits at £6,884, to which were added £943 brought forward and £9 from transfer fees, making a total of £7,836 to be dealt with. Out of this the preference dividend is paid and the ordinary shares receive 5 per cent., and after setting aside £750 for the provision of further labour, £1,239 or £276 more is carried to the new account. Liabilities on bills payable and to sundry creditors amount to £11,560, and, on the other hand, stocks of tea are valued at £10,705, debtors owe £4,768, and cash comes to £1,445, while £1,450 has been advanced on account of the current year's crop. Block account is valued at £106,982 against a paid-up capital of £108,715, and although the company is now ten years old no attempt has ever been made to form a reserve fund.

Singlo Tea Co., Limited.

This company's Assam gardens were affected by blight during the year ended December 31 and the output consequently showed an increase of no more than 81,919 lbs. at 1,191,224 lbs., while the average price fell from 9.69d. to 9.48d. At the Dooars estates the crop was 175,405 lbs. larger at 807,274 lbs., and the price improved by 1.12d. to 7.25d., with the result that nett profits from all sources were £7,490 better at £15,130. London office charges, managers' commission, &c., absorbed £2,262, leaving a balance of £12,893, out of which debenture interest and trustees' fees took £3,105, and £9,788 was deducted from the debit brought forward, reducing it to £3,231. Estates account remains at the old figure of £239,165, and so far from any reserves or depreciation allowance having been accumulated nothing has yet been done to provide for the redemption of the £50,000 debentures which mature in 1911 and are repayable at 102 per cent. Bills payable are £2,607 higher at £25,657, but other creditors have been reduced a little, and the total floating liabilities on balance show an increase of £2,152 at £32,586. On the other hand, stocks have risen by £9,917 to £30,946, debtors, including £2,019 due from other tea companies, are £7,203 up at £8,812, and cash comes to £1,521 against £836. No tea company's report nowadays is complete without a reference to the iniquity of the duty, and this company falls into line with the remark that the unsympathetic attitude of the Chancellor of the Exchequer necessitates active measures being taken to make public the injustice of the tax. Yet it is admitted in the next paragraph that the general statistical position of tea is much stronger than it has been for some time, and although the rise has been in common tea more than in fine qualities the directors expect this to right itself during the current season, which does not look as if the burden was doing so much injury after all. The real trouble with this undertaking is that while the average yield even in a year described as a "record" one is only about 380 lbs., the capital value is the comparatively heavy one of £45 per acre.

Attaree Khat Tea Co., Limited.

This company invariably fixes its estimates at a very high figure, and in the year ended December 31 it again had the mortification of seeing the actual crop fall short of expectations. The output, however, was still 41,476 lbs. above that of the previous season at 1,063,285 lbs., and the average price was much about the same at 8.88d., with the result that gross receipts rose by £1,405 to £39,540. An increase in expenses took most of this gain, and with £176 more at £1,373 brought forward and £70 from miscellaneous sources the nett surplus was only £300 better at £9,134. In spite of this the directors feel compelled to increase the dividend to 10 per cent. compared with 8 per cent. a year ago and 5 per cent. in 1904, and in order to do this they transfer £1,000 or half last year's amount to reserve, carrying forward a few more pounds at £1,373. This addition brings the reserve up to £12,000 against a block account at £68,[illegible] but as the capital account, including £3,580 raised from premiums, is only £70,531, the whole of the fund has to be employed in the business. Sundry creditors and bills payable are £1,343 up at £8,087, but the small overdraft at the bank has been paid off, and less is owing for unpaid wages at the garden. Stocks, on the other hand, are practically unaltered at £10,467, and a drop of £324 to £[illegible] than covered by an increase of £[illegible]

Rajmai Tea Co., [illegible]

An increase of 70,622 lbs. in [illegible] was secured at the cost [illegible] gross receipts, [illegible] £2,[illegible] much heavier [illegible] £1,413 at £[illegible] receipts yielded [illegible] was £4,410 better at £[illegible] bore, came to £[illegible] usual dividend of 10 per cent. [illegible] of 3s. per share, and, [illegible] year in succession, increase the amount carried forward to £7,911. Block account is unaltered at £[illegible] per cultivated acre, and against this there [illegible] £30,000, of which £[illegible] the other £20,000 is invested [illegible] Liabilities to sundry creditors amount to £[illegible] pany in addition owes £2,691 to the bank [illegible] draft, £597 for drafts in transit, and £[illegible] To meet this stocks are £1,457 up at £[illegible] £3,924, and cash to £518, so the position is [illegible]

Assam Frontier Tea Co., Limited.

After setting aside the usual £5,000 for debenture redemption, the surplus revenue for 1906 was £22,255, out of which fixed charges were met and 6 per cent. paid on the ordinary shares, leaving £9,208 to be carried forward as against £[illegible] in. It seems to us that the results ought to have been considerably better in spite of the renewed failure of the [illegible] to show a profit, for the company [illegible] the deficiency having jumped from £2,[illegible] The directors say that according to the most recent advices this item will again be a serious one in the current year. Why should this be so? Is it because, as some others, the crop is carried down from Assam to Calcutta and brought back again, so that the agents of the company may secure a [illegible] the business, or is it merely because of adherence to established routine? If rice can be grown in the province or on the company's territory, why all this expenditure? The balance-sheet shows liabilities to sundry creditors amounting to £[illegible], exclusive of £10,072 representing money payable [illegible] account of the 1906 season. Against this, however, the company had £101,043 worth of tea in transit receivable this year, and it is amply in funds, having deposited £[illegible] in London, besides cash to the amount of £[illegible] in India and here.

Jorehaut Tea Co., Limited.

Including 37,301 lbs. from bought leaf the outturn for 1906 was 1,909,174 lbs. or an increase of 68,497 lbs. over the previous season after deducting the crop from the Outrup garden which was sold, and the average price rose to 9.44d. [illegible] 9d. and 7.84d. in the two preceding years. Gross proceeds amounted to £74,274 against £[illegible] and £[illegible], while expenses, notwithstanding a loss of £1,[illegible] rice, were only £502 up at £30,703. Profits on working were consequently £3,244 better at £[illegible], out of which £[illegible] paid for commissions to the staff and £[illegible] for debenture interest fees, leaving, with £[illegible] brought in, a disposable total of £[illegible] Out of this a dividend of 12½ per cent. [illegible] is paid, and £1,250 is put to reserve, leaving £[illegible] to be carried forward. In addition to this transfer [illegible] £750 received as bonus on shares held in Borelea Wharf, Limited, is transferred to reserve, making the total to £[illegible] A call of £2 10s. per share made by Borelea Wharf, Limited, amounting to £750 will be debited to [illegible] standing at £22,000. Property account was [illegible] £60,530 to £62,170 by the sale of the Outrup estate and [illegible] acres at Sylhet, but this money is to be used for the opening up of a new garden. The large balance carried forward is due to improvements in buildings and machinery at Changsari with the object of centralising [illegible] which are expected to take two years to complete. Liabilities to sundry creditors have been [illegible] at £7,271, but stocks [illegible] at £8,[illegible] £10,386, and cash balances are [illegible] has already been spent on account of the [illegible]

Kepitigalla Rubber Estates, Limited.

A severe drought was experienced during the greater part of 1906, which [illegible] and the results [illegible] to March 31, 1907, [illegible] the estates. The output [illegible] cwts., while [illegible] 57,098 lbs., and with [illegible] £27,133. [illegible] £[illegible] of £18,[illegible] charges of [illegible] loss are added [illegible] annum compared with 7 per cent. promised in the prospectus [illegible] carried forward. [illegible] The company has 1,214 acres [illegible] two years up to fifteen years [illegible]

ing additional land purchased, is £190,053 and expenditure on development since the company took over the property is £8,529, while the company still has £24,830 cash in hand. Floating liabilities are moderate at £6,114, and against these debtors owe £1,026 and produce on hand is valued at £9,306. Preliminary expenses were heavy owing to the underwriting charge of £10,000, and there is still £9,824 to be written off out of future profits.

HARDEBECK AND BORNHARDT, LIMITED.

Business with this firm of wholesale jewellers shows no signs of improvement as yet and profits for the year ended May 13 were again lower. The decrease, it is true, was only £94, part of which was offset by the larger receipts from interest and transfer fees, so that the total available was no more than £69 down at £4,231. Preference dividend, however, requires £3,600, so that the ordinary shareholders have to go without a return and the balance forward is increased to £9,754. A year ago the ordinary shares got a dividend of 3 per cent. with the help of £1,099 taken from reserve, but the directors apparently see no hope of any immediate recovery, and consequently refrain from making any further drafts on the all too slender reserve. That fund was also relied upon to provide depreciation at the end of 1905-6, and although no mention is made of the fact, further small sums seem to have been taken from it during the past twelve months, as it is down to £2,963, against leasehold property, plant, goodwill, &c., nominally valued at £59,489. Sundry creditors are £1,142 up at £2,214, while stocks have been reduced by £4,162 to £53,650, but sundry debtors owe £3,791 more at £7,145 and cash is rather better at £4,769. Securities and other investments at cost stand at the old figure of £11,667, and it would be interesting to know what depreciation should be written off to bring these down to actual market values.

Letters to the Editor.

DUMONT COFFEE CO., LIMITED.

SIR,—I presume you have seen the report of the directors of this company for the year to December 31 last.

It is over ten years since the formation of the company, and surely, as it has turned out a failure owing to overcapitalisation, the time has come for some steps to be taken to improve its position by reducing the capital. But of this I see no indication in the report, and, though written to on the subject, the directors obstinately refuse to do anything.

The planting of Para rubber was held out to the shareholder as a means of improving the position of the company, but according to the directors' own showing, the elevation is too high for its successful cultivation, and nothing is left but coffee. It is quite evident therefore that the unfortunate ordinary shareholders will never receive any dividends, though their money (£399,990) helped to pay in part the enormous sum of £1,200,000 paid for the purchase of the property. My suggestion was that the ordinary £10 shares should be written down to £5 and the preferences to £7. There would then in the course of a year or two be a chance of the directors being able to replace the 5½ per cent. debentures by others at 4½ per cent., as was done recently in the case of the Nuwara Eliya Tea Estates Co., which reduced its 6 per cent. debentures to 5 per cent., the gain on which would give the ordinary shareholders a dividend of 1 per cent., and gradually, as the debentures were paid off, a still larger dividend, and preference dividends would not be always in arrears, as at present.

I may say that I do not impute any blame to the directors, for at the first it looked, from the reports of experts and the large acreage of magnificent heavy-bearing coffee, as if it was likely to turn out a good thing. But now that, after a lapse of ten years, it has turned out a failure, it is time for the directors to place the company on a better footing, even at the sacrifice of a large amount of capital.

I am, yours faithfully,

SHAREHOLDER.

July 3, 1907.

The liquidators of the Merchant Banking Co., Limited, announce a further return of £1 per share, making with the previous distributions a total of £3 10s. per £4 share within a year of the bank going into liquidation. What a pity it is that this business cannot be resuscitated. Is all our international exchange and credit business to pass into the hands of Continental and American bankers?

An extraordinary general meeting of A. and F. Pears, Limited, will be held at the Holborn Restaurant, London, W.C., on Thursday, July 11, 1907, at two o'clock in the afternoon, when the resolutions which were passed at the extraordinary general meeting of the company, held on June 26, 1907, will be submitted for confirmation as special resolutions.

Mr. R. H. Nunn, general manager of the Union of London and Smiths Bank, Limited, retires after upwards of 45 years' service. Mr. J. E. W. Houlding has been appointed manager of the bank, Mr. P. J. Wiffen, Metropolitan branch manager, and Mr. F. W. Ellis, assistant manager, head office. Mr. H. H. Hart and Mr. L. E. Thomas will continue to act as country and foreign manager and country branch manager respectively.

The Banco Español del Rio de la Plata has established a London branch at No. 3, Lombard Street, E.C.

TRADE AND PRODUCE.

WHEAT.—The trading of the early part of the week was rather irregular, and demand was poor, but wheat was firmly held, the sharp fall in America being counteracted by bad weather and smaller shipments. English wheat has again been scarce, and is now from 9d. to 1s. higher than a week ago, while foreign also has risen. Holders of spot parcels put their quotations 1d. higher than a week ago, as demand increased, and business in distant wheat has been more or less checked by the high prices asked. Farmers' deliveries for last week came to 23,007 qrs., averaging 31s. 2d., against 14,858, averaging 30s. 3d., a year ago, but the total average for this season is still lower than last at 26s. 10¼d. against 28s. 9¼d. Imports for the week were 527,497 qrs., a good deal lower than last week's, and the estimated quantities of wheat and flour on passage are also less at 2,915,000 qrs. against 3,020,000 to the United Kingdom, and 2,080,000 against 2,240,000 to the Continent. American markets were depressed at the opening, but developed a better tone on the strength of continued unfavourable weather news, and prices advanced ½c. to 1c. Expert Snow's monthly report, however, giving a favourable forecast of the coming crop, brought about a sharp reaction. The visible supply this week is 46,540,000 bushels against 47,009,000 last.

WOOL.—With the London sales at hand, markets are quiet, and there is only just sufficient inquiry for colonial wools to make topmakers refuse lower prices for the present, but it is said that in medium and low crossbreds spinners and manufacturers anticipate some easing off in values at the coming sales. No further fall has taken place in home-grown wools, and buying is now pretty general at the present prices of 28s. to 29s. per tod of 28 lbs. for the finest growths, lower varieties ranging from 25s. to 27s. The yarn market is active, but business in manufactured goods is slack, and the unfavourable weather is having a bad effect upon autumn orders in the home trade. Fortunately, shipping keeps fairly well up to the mark and Australia and Canada continue important customers.

COTTON (from our Manchester correspondent).—Our market during the week under review has been unsettled in most quarters, owing to the fluctuations in American cotton. Business all round has been on a small scale, and sellers have made very little headway in booking orders of any magnitude. Prospects for the American crop are uncertain, and the figures published by the United States Government on Tuesday as to the condition of the plant were discouraging. Values keep on a very high level, and trade must be restricted until more reasonable terms can be secured by purchasers. The demand all round for piece goods has been of small dimensions. Very little buying has transpired for our large consuming markets of the East. The outlook all round for India is encouraging, owing to the rains being of a fairly satisfactory character. Most of the outlets of our dependency, however, are well supplied with goods, and where buyers have to make replacements much higher prices have to be paid. No particular new feature has presented itself as regards China, and the demand is of a dragging character. The Mediterranean markets are slow, and the financial situation in Egypt is being reflected in the piece goods trade here. Home trade advices are poor, although for the autumn a moderate turnover has transpired in heavy goods. Some of the houses have large stocks of light materials, which they are unable to move. American yarns for home use have met with a quiet business. Few sales of weight have occurred in either twist or weft. Spinners have not sold the production of the machinery. In shipping descriptions a moderate inquiry has been dealt with, but there is still considerable difficulty in arranging sales. Bolton spinnings closed rather firmer, but no appreciable increase can be recorded in the amount of business passing.

Sir Jacob Behrens and Sons' report states that the condition of the American cotton crop was much worse than had been expected. A rise of ¼ cent in America and about ¼d. per lb. in Liverpool took place. The trade expected a condition of about 76 per cent., and the Bureau report gave a condition of only 72 per cent.—the worst June report on record. The big crop report of 1904-5 had a condition on June 25 of 88 per cent., and if the present report can be relied upon, the situation looks very serious. With the huge increase in spindles, both in England and also on the Continent, we shall require a large crop in future if all the mills are to be kept going, and it will be nothing less than a catastrophe if this season's crop is a failure. Considerable realising took place in America on Wednesday, which has affected the Liverpool market, and prices have lost part of the advance. Egyptian cotton is in improved demand, and quotations have advanced ⅛d. to 3/16d. per lb.

COAL.—Trade continues as busy and prosperous as ever, with no special feature of interest, unless it be in the renewal of the steam contracts which expired on June 30, for coalowners and the railway companies cannot agree as to prices, the former demanding 12s. per ton nett at the pits, the latter offering 10s. 6d. Prices are going up everywhere; even house coal values are maintained in most cases, and with demand from abroad as heavy as ever and home requirements not slacking off, there is no likelihood of them going down, especially as wages have risen within the last six months. In some cases they are 10 per cent. higher, and the latest decision in Scotland has given the colliers a fourth increase during the past six months of 6¼ per cent., raising their wages to 6s. 9d. per day. Welsh docks and railways were very busy last week, the quantities of coal shipped from south ports amounting to 428,077 tons, an increase on the corresponding week last year of 86,596 tons, and Cardiff alone shipped nearly 300,000 tons. The anthracite market continues firm, with prices now 30 per cent. higher than they were in 1905.

COPPER.—Messrs. H. R. Merton and Co. give the visible supply as 12,298 tons against 11,729 a month ago. June supplies total 22,573 tons and deliveries 21,904 against 27,661 and 28,490 tons respectively a month ago. Stocks in England and France amount to 6,198 tons against 5,879, and the Chile charters for May are given as 1,600 tons. Deliveries do not include 100 tons shipped to America from warehouses. Markets opened with cash £1 and three months £1 5s. over final prices last week, but the increase in the visible supply and freer offerings by holders caused values to fall away a little early in the week. Later more steadiness was displayed, a scarcity of cash, together with an improvement in demand for both near and distant dates, kept prices up, and prevented the rapid fluctuations of last week. To-night prices were steady at £99 12s. 6d. for cash and £93 2s. 6d. for future delivery.

TIN.—Messrs. A. Strauss and Co. give the visible supply as 11,211 tons against 11,612 a month ago, shipments from the States amounting to 1,705. Deliveries in London during June were 1,295, and in Holland 1,197 tons. This decrease in the visible supply helped the market at the opening, and with an advance in Eastern advices business done being quoted there on the basis of £187 5s. c.i.f., and an improvement in the demand on this side, the cash quotation rose practically all the week until on Thursday it reached £200. Three months' metal shared in this gain and touched £184, but the market weakened, and to-night the closing figures were below the best at £199 15s for spot and £182 for three months.

IRON AND STEEL.—Demand for Barrow hematites has been slightly better, and prices have gone up, mixed Bessemers having advanced 6d. on the week to 82s. per ton f.o.b. Warrants are now 76s. 6d., but not much business is done, because very little prompt metal is available, as stocks were further reduced during the week, and are now only 21,171 tons. East Coast hematites are still more scarce, as there are no available stocks to draw upon, and very little can be had from the makers, who are almost all sold well ahead. So scarce is it, in fact, that Spanish pig-iron has been bought to take its place. An almost unprecedented importation, says the *Engineer*. And the stock of Cleveland pig-iron is also being rapidly reduced, Connal's stores now containing only 271,758 tons, a decrease this year of 266,396, with the result that prices are rising again to a more reasonable level. Shipments of pig-iron from the Cleveland districts last month were exceptionally heavy, and amounted to 172,808 tons, nearly as much as the "record" quantity of April last, or 20 per cent. better than those of June, 1906, and 80 per cent. than of June, 1905. In manufactured iron and steel there is an improvement in demand, but it is not yet as good as could be wished, and the outlook is not regarded as altogether satisfactory.

TEA.—The small auction of 6,838 packages Indian resulted in a rather dearer market, good liquoring teas and the lower grades of leaf both showing an advance in price, while medium sorts sold steadily. 1,303 packages of new season's tea were included in the auction, practically all Assam and Darjeeling, but little of any special character, and it sold without any change in quotations, the total average for the week coming to 7.34d. against 6¾d. a year ago. Ceylon markets also had a stronger tone, and medium and common teas were dearer, showing an advance of ¼d. per lb., with better competition for finer grades. The quality still continues disappointing, but it is expected that better teas will arrive in two or three weeks. 30,940 packages were brought forward, and the average obtained was 7.27d. against 6.83d. in 1906. Last month's statistics, given in Messrs. W. J. and H. Thompson's circular, are not altogether satisfactory from the brokers' point of view, for clearances show a falling off of nearly 4 millions on last year, and the fact that the shortage in stocks has been reduced to 9 millions seems to indicate that supply is once more gradually equalling demand.

SUGAR.—The weather has not been favourable for sugar consumption, but, in spite of general stagnation, the imports in June were very fair, so that, says Mr. Czarnikow, even after the enormous delivery in May, the falling off may not be excessive. According to imports of refined and deliveries by our refiners, the shortage should be less than 10,000 tons. The tone has been dull again after last week's slight recovery, as realisations by speculators upon an unwilling market caused on Tuesday a decline from 9s. 9½d. to 9s. 7d. for August, and from 9s. 6d. to 9s. 5d. for October-December, after which there was a slight rally to 9s. 8d. and 9s. 6d. respectively. The Paris market has only given way fractionally, and new crop especially is at fully 1 franc premium, which helps to steady the old crop. On French sugars will largely depend the course of our market this summer; without liberal supplies from France our stocks in other European countries might run down too low, considering that they have to last till the end of September, and possibly longer if there is no inducement either in prices or in the weather to begin harvesting earlier.

For America more Java charters are reported now, exceeding last year's total, but a fair quantity still remains to be bought to fill the season's requirements. The Java June shipments are 50,000 against 14,000 in 1906 and 85,000 tons in 1905, and the (generally incomplete) Eastern shipments 41,000 against 55,000 against 25,000 tons. The meltings in U.S. during the last two weeks are up to last year's, and it is not as yet certain that, in addition to a shortage in New Orleans, distribution in Atlantic ports will show a deficiency of 70,000 tons during June-December, as tabulated last week. The June meltings are stated at 180,000 against 201,000 tons, though the weekly returns only show 8,10,000 tons less. Notwithstanding this correction, the combined stocks in Cuba and America show a new [illegible] tons excess, as against [illegible] in May. The weather over there has been hot, favouring the [illegible] and consumption, and had it not been for [illegible] the advance to 3 5/32 cents reported from New York might have made further progress. As it is the quotation for [illegible] has slightly declined to 3 5/32 cents. The [illegible] Cuba having come to an end, the [illegible] improve during the hot months. The [illegible] the three ports for the week were 22,000 tons, while [illegible] tons, reducing stocks to 418,000 tons.

MINING RETURNS.

Abosso.—Crushed 3,617 tons, 2,172 ozs.; 2,997 tons tailings, 687 ozs.; 1,092 tons old tailings, 201 ozs.; total, 3,060 ozs.

Associated Northern Blocks.—Milled 3,619 tons of ore; treated 1,400 tons slimes; yield, £14,188 sterling.

Balaghat.—4,550 tons quartz, 2,508 ozs.; 4,004 tons tailings, 381 ozs.; total, 2,889 ozs.

Barrett.—210 ozs. gold, value £850.

Bonanza.—Crushed 3,081 tons, 1,102 ozs.; cyanide and slimes 3,298 tons, 859 ozs.; total, 1,961 ozs.

Boston Copper.—Shipments of sulphide ore to smelter, 17,300 tons.

British Broken Hill Proprietary.—2,368 tons crude ore produced 355 tons concentrates, containing 217 tons lead and 9,230 ozs silver; also mined 340 tons carbonates; total, 2,708 tons.

Broken Hill South Silver.—20,421 tons crude ore produced 3,086 tons concentrates, containing 55,548 ozs. silver and 2,191 tons lead.

Champion Reef.—15,021 tons stone, 8,460 ozs.; 20,375 tons tailings, 2,325 ozs.; total, 10,785 ozs.

Chinese Engineering.—Output of coal 21,000 tons; sales, 20,500 tons; consumption, 1,175 tons.

Day Dawn Block and Wyndham.—Treated 900 tons value, including concentrates, &c., £2,850.

Dharwar Reefs.—Crushed 1,080 tons, 493 ozs.; tailings assay per ton 4 dwt.

Duff Development.—Prospecting dredge, 39 ozs.; No. 1 dredge, 48 ozs.

Glynn's Lydenburg.—Crushed 2,925 tons, 565 ozs.; cyanide 1,872 tons, 651 ozs.; slimes 1,033 tons, 373 ozs.; total, 1,589 ozs.

Golden Pole.—Crushed 1,509 tons crude ore, 766 ozs.; 1,520 tons sands and six tons concentrates, 273 ozs.; total, 1,039 ozs.

Great Cobar.—Treated 7,400 tons; output matte, 556 tons; contents, 207 tons copper, 537 ozs. gold, 3,050 ozs. silver. Ingot copper made at Lithgow Works, 290 tons [illegible] tons.

Lace Diamond.—Loads washed (25 days), 24,230, yielding 4,435 carats, equal to 13·76 carats per 100 loads; total loads blue ground on floors, 806,375.

Lloyd Copper.—Output 133 tons.

Mexico Mines of El Oro.—Shipped 420 tons ore, value U.S. $90 gold and 65 ozs. silver per ton.

Mills' Day Dawn United.—Crushed 1,508 tons, value, including residues, £4,600.

Mount Lyell Blocks.—Treated 5,887 tons crude ore, 47 tons fine copper.

Mysore.—16,150 tons quartz, 15,289 ozs.; 13,000 tons tailings, 1,705 ozs.; basebar, 147 ozs.; total, 17,151 ozs.

Mysore West Mysore-Wynaad.—Crushed 2,221 tons, 518 ozs.; cyanided 2,304 tons, 197 ozs.

New Vaal River Diamond.—Diamonds registered by diggers on the Vaal River Estate, £[illegible].

North Broken Hill.—Treated 2,300 tons crude ore, [illegible] 380 tons concentrates, containing 257 tons 9 cwt. lead and 7[illegible] silver.

No. 2 South Great Eastern.—Crushed 1,450 tons, for 1,040 ozs.

Nundydroog.—7000 tons quartz, 5,451 ozs.; 6,480 tons tailings, 561 ozs.; total, 6,012 ozs.

Ooregum.—10,246 tons stone, 4,773 ozs.; 8,330 tons tailings, 783 ozs.; total, 5,556 ozs.

Oriental Consolidated.—Gross receipts April, $65,420.

Oroville Dredging.—Gross returns $15,334.

Peiser Diamond.—Output 14,016 loads yellow ground washed, yielding 996 carats diamonds, equal to an average of 7·1 carats per 100 loads.

Phillips River Gold and Copper.—Hopetoun 118 tons of copper matte; 50 tons for transhipment per *Orizaba*; 50 tons for transhipment per *Moultan*.

Queensland Copper.—Ore treated, 1,524 tons; produced, 337 tons matte, containing 150 tons fine copper.

Regina Diamond.—103 loads, yielding 104 carats washed, and 110 loads, yielding 8 carats, from the north-east [illegible] ground working.

Roberts Victor Diamonds.—14,443 loads washed, producing 7,160 carats, equal to 49·5 carats per 100 loads.

Scottish Gympie.—Crushed 5,700 tons, 2,050 ozs.

Sheba.—Output, 5,300 tons, 2,000 ozs.

Tasmanian Smelting.—Silver lead bullion shipped contained 850 tons lead, 131,000 ozs. silver, 675 ozs. gold.

Tasmania Gold.—Crushed 1,850 tons, 1,225 ozs.; concentrates 104 tons, 415 ozs.; cyanide, 2,150 tons, 148 ozs.; total, 2,488 ozs.

Tonga.—70 tons, value £4,000.

Transvaal Gold.—Crushed 8,516 tons, 2,400 ozs. Central cyanide 4,230 tons, 1,155 ozs. Central slimes 3,[illegible] tons, [illegible] ozs.

Kameel's cyanide 625 tons, 175 ozs. Kameel's slimes 475 tons, 146 ozs. Elandsdrift 280 tons, 122 ozs. Total, 4,738 ozs.

Voorspoed Diamond.—Washed 18,122 loads, producing 4,367 carats.

Vereeniging Estates.—Output 20,340 tons.

Waihi Gold.—Crushed 27,205 tons, and £63,450 gold and silver, produced.

Weardale Lead.—Ore raised, 449 tons; pig lead smelted, 316 tons; average price obtained for pig lead sold, £19 17s. 6d. per ton net.

DIVIDENDS ANNOUNCED.

BANKS.

Anglo-Foreign.—Usual interim at the rate of 5 per cent. per annum for half-year ended 30th ult.

Bank of Bengal.—At the rate of 10 per cent. per annum for the past half-year, placing to reserve Rs.500,000, and carrying forward Rs.507,000.

Bank of Madras.—At the rate of 10 per cent. per annum for past half-year, with reserve Rs.200,000, and Rs.286,000 carried forward.

Bank of New South Wales.—At the rate of 10 per cent. per annum, placing £25,000 to reserve, £15,000 to Buckland fund (officers' benevolent fund), and carrying forward £29,314.

Bradford District.—At the rate of 12½ per cent. per annum, placing £5,000 to reserve, and carrying £9,955 forward.

German of London.—Interim of 5s. per share for past half-year.

Halifax and Huddersfield Union.—Interim of 8s. per share for half-year ended 30th ult.

Lancashire and Yorkshire.—Interim for past half-year at the usual rate of 15 per cent. per annum.

Lloyds.—Interim at the rate of 17½ per cent. per annum.

London and Hanseatic.—Interim for first half-year of 1907 of 5s. per share, or 5 per cent. per annum.

London and South-Western.—At the rate of 16 per cent. per annum for half-year ended 30th ult., £10,000 appropriated in reduction of premises account, and carrying £61,000 forward.

London and Westminster.—6½ per cent for half-year ended 30th ult. After placing £50,000 to reserve and setting aside £10,000 to cover depreciation in investments other than Government securities, £18,000 is carried forward.

London Trading.—For past half-year at the rate of 5 per cent. per annum.

London City and Midland.—Interim at the rate of 18 per cent. per annum, appropriating £50,000 to writing down Consols and other investments to below market value, transferring £5,000 to officers' pension fund, and carrying forward £168,057.

Manchester and County.—Half-yearly at the rate of 15 per cent. per annum, with £15,500 written off investments, and £21,376 carried forward.

Natal.—Interim at the rate of 5 per cent. for half-year ended 30th ultimo, being at the rate of 10 per cent. per annum.

North and South Wales.—Interim at the rate of 14 per cent. per annum for half-year ended 29th ultimo.

Union of London and Smiths.—10 per cent. per annum for the past half-year, and a bonus of 1 per cent. per annum, with £150,000 applied to write down investments, and £145,379 carried forward.

Union of Manchester.—Usual 12s. per £11 share, with £2,000 to premises reduction account, £2,500 to pension fund, £5,000 to reserve, £7,500 to reduction of Consols fund (writing Consols down from 85 to 83⅓), and £10,765 carried forward.

Williams Deacon's.—Interim for half-year ended June 30 of 12s. per share, being at the rate of 15 per cent. per annum, payable on on the 16th inst.

MINES.

Apex.—10 per cent. for half-year ended June 30.

Camp Bird.—Interim of 1s. per share for the quarter ending July 31.

Clitters United Mines.—Interim of 6d. per share.

Day Dawn Block and Wyndham.—Interim of 6d. per share on account of the current year, payable 25th inst.

Ivanhoe Gold.—First quarterly interim in respect of the year 1907 of 5s. per share, payable July 30.

Quintera.—Final of 1s. 6d. per share, making 2s. 3d. per share for 1906, payable 8th inst.

Talisman Consolidated.—At the rate of 1s. per share, payable August 1.

MISCELLANEOUS.

Aboukir Company.—Interim of 4 per cent., payable July 15.

Apollinaris and Johannis.—Final at the rate of 5 per cent. per annum on the ordinary shares, making 5 per cent. for the year ended March 31, placing £20,000 to reserve, and carrying forward £13,760.

Atlantic Merthyr Collieries.—Interim at the rate of 6 per cent. per annum on the ordinary shares for half-year ended 30th ult.

Debenture Corp.—Interim on the ordinary stock at the rate of 4 per cent. per annum for half-year to the 30th ult.

Edwards Air Pump.—Interim for first half of 1907 at the rate of 10 per cent. per annum.

Fraser and Chalmers.—Interim of 4 per cent. on the ordinary shares and 7½ per cent. on the preference shares, payable July 20.

Harrison, Barber, and Co.—Interim at the rate of 5 per cent. per annum for six months ended June 30.

Home and Colonial Stores.—15 per cent. on the cumulative ordinary shares for quarter ended 29th ult.

J. Cawthra and Co.—For half-year ended May 31 at the rate of 7 per cent. on the ordinary shares.

J. F. and H. Roberts.—For past half-year at the rate of 7½ per cent., £4,560 being carried forward.

Linggi Plantations.—Interim at the rate of 7 per cent. per annum for half-year ended June 30 on the preference shares.

Liverpool Mortgage Insurance.—Interim at the rate of 5 per cent. per annum.

National Discount.—At the rate of 10 per cent. per annum for half-year ended 30th ult., with £12,700 carried forward.

National Telephone.—For half-year ended June 30 at the rate of 6 per cent. per annum on the preferred and deferred stocks, with £130,000 to reserve, and about £10,000 forward.

New Westminster Brewery.—Interim at the rate of 6 per cent. per annum on the ordinary shares for half-year ended April 9.

Northern Corp.—Interim at the rate of 8 per cent. per annum on the ordinary shares for half-year ended June 30.

Oregon Mortgage.—For half-year at 9 per cent., making 8 per cent. for the year, and a bonus of 2 per cent., making a total distribution of 10 per cent. for the year, with £5,000 to reserve and £2,000 laid aside for readjustment expenses.

Patent Enamel.—Interim for half-year ended 30th ult. of 10 per cent. per annum on the ordinary shares.

Prudential Deposit Trust.—At the rate of 5 per cent. per annum on the ordinary and ordinary "B" shares for year ended May 31.

Raphael Tuck and Sons.—Final at the rate of 10 per cent. per annum for six months ended April 30, making 8 per cent. for the year.

Ripponden Commercial.—At the rate of 20 per cent. per annum for half-year.

Riverside Orange.—Interim dividend on account of the year ending Sept. 30, 1907, payable July 15, at the rate of 12 per cent. per annum.

Simplex Conduits.—Interim for six months ended 30th ult., at the rate of 7½ per cent. per annum on the ordinary shares.

Singleton Benda.—3 per cent. for the year on the ordinary shares, carrying forward £2,354.

Vickers, Sons, and Maxim.—Interim of 1s. per share on the ordinary shares.

Watson, Woodhead, and Wagstaffe.—Interim at the rate of 4 per cent. per annum on the ordinary shares for half-year ended May 31.

NEXT WEEK'S MEETINGS.

Monday, July 8.

Aux Classes Laborieuses.—Institute of Chartered Accountants, noon.
Colorado Mortgage and Investment.—85, London Wall, E.C., 12.30 p.m.
Dumont Coffee.—Winchester House, noon.

Merchant Banking.—Cannon Street Hotel, noon.
Nedeem Tea.—5, Fenchurch Street, E.C., 11 a.m.

According to the "Jewish World," Sir Samuel Montagu has chosen the title of Lord Swaythling, from the name of the village in Hampshire, near Southampton, where he owns a large estate of several thousand acres.

The Business Exhibition at Olympia was opened on Thursday, and will remain open until the 13th instant.

Mr. James Farquharson Remnant, M.P., has been appointed chairman of Samuel Allsopp and Sons, Limited, in succession to Mr. C. J. Stewart, from September 30 next.

The statement of accounts of Williams Deacon's Bank, Limited, on June 29, shows liabilities on current accounts, deposit, and other accounts at £4,829 660, and cash on hand at the Bank of England and money at call and notice £3,857,398.

COMPANY MEETINGS.

NATIONAL BANK OF NEW ZEALAND.

The thirty-fifth ordinary general meeting was held on Tuesday last at Winchester House, Mr. Robert Logan presiding.

The Chairman remarked that New Zealand had again had a prosperous year. Trade had again been active and sound generally. Exports and imports had for the most part increased, both in quantity and value, and rural interests had flourished on the excellent prices obtained for produce. It must, however, be recognised that this state of affairs might not continue. The present strong position kept the community well prepared for any check in the wave of prosperity, and the directors did not feel any immediate concern as to the future, even should wool and other staples recede somewhat in value. It was also to be borne in mind that New Zealand was growing in wealth and population, and that new industries were being introduced. The bank's year had been noteworthy in witnessing the issue of their new capital; the strength so afforded had given much satisfaction in New Zealand, and it could not fail to be of permanent advantage to the company. Although there had been this addition to the capital, local advance business had not been allowed to increase except in ratio to their enhanced deposits, and the policy of caution and of advancing slowly had ever been present to the minds of the board. Perhaps, the most noteworthy feature of the business had been the expansion of their bill purchases both in London and in New Zealand. One serious drawback had been the breakdown of the San Francisco mail service. The Prime Minister, Sir Joseph Ward, was, however, quite alive to the absolute necessity for a speedy and, above all, a regular mail service between the colony and the Mother Country. The directors had for the present stopped the transfer of shares in the bank from the London to the colonial register. This was a course which had been adopted by other companies, and it had been carried out in their own case after consideration, with the approval of the general manager. The directors believed that the step was in the best interests of the shareholders. The balance-sheet showed that the business of the bank continued to expand rapidly; almost every item exhibited an increase. It would be a satisfaction to the shareholders to learn that the reduction in the value of the company's securities was comparatively small, that it was amply provided for, and that their holding in Consols was and always had been nil. Although they had only had the use of the full amount of the increased resources for six months of the year, the gross profit had increased by over £32,000, and the nett profit by nearly £20,000. The charges had been practically the same. The result of the year's trading was a nett profit of £87,401 and a disposable profit of £96,568, including the balance brought forward. From this amount the directors had placed £15,000 to the premises account, in order to enable them to pay out of profits for the bank's new building at Wellington, and, at the same time, to keep down the figure representing the value of their "landed property, premises, and furniture." Having referred to the bonus awarded to the staff in recognition of the good work done by them, he stated that the proposed dividend and bonus required £38,750 —an amount which, owing to the increase in capital, would be raised to £45,000 next year if the same dividend and bonus were then declared. It was proposed to add £25,000 to the reserve fund, increasing it to £325,000. As for several years, £3,500 was transferred to the officers' pension fund, and the balance carried forward was £10,318. The bank's prospects for the current year were excellent so far. In conclusion, he moved the adoption of the report.

Mr. Edmund C. Morgan seconded the motion.

Sir John Purcell and Mr. Frederick Walker congratulated the board on the very satisfactory result of the past year's working, and after the chairman had replied to remarks made regarding the question of opening new branches, the motion was unanimously adopted.

Colonel Paget P. Moseley, of Messrs. Byas, Moseley and Co., has joined the board of directors of the Investment Registry, Limited.

The Rock Island-'Frisco Lines have removed from their temporary offices, 11, Regent Street, to the Cunard Building, 29, Cockspur Street, where Mr. Alexander Jackson, general European agent, has charge of freight, passenger and emigration matters.

The *Book Monthly* is, as all self-respecting magazines should be in July, a holiday number, because it tells us what various celebrities like to read during their off-time. The editor has appealed to many literary "people of importance," and from many has he had response. A brief reponse in some cases, not to say abrupt; a joking response in others, but from several come serious and instructive letters on the proper things to read in holiday time, and how to read them; and they show a great diversity in the literary mind, with one common tendency to prefer old and tried friends to the new and unknown. The editor also lends his aid to help the tastes of the hesitating by an excellent list of the recent books published that will prove suitable to holiday readers. Mr. A. J. Philip contributes an article on Public Library Fiction, or what the man in the street and others really do read, which is interesting but not, perhaps, as illuminating as it might be, and we turn for better entertainment to the more than ever interesting "Personal and Particular," and those never-failing sources of pleasure and profit, the "New Books" lists.

PUBLIC INCOME AND EXPENDITURE

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and June 29, 1907 —

PROSPECTUS.

In consequence of the extension of the Society's business, the Capital has been recently increased by the creation of 500,000 £5 per cent. Cumulative Preference Shares of £1 each, having a preference both as to capital and dividend, and the Directors now offer for subscription 250,000 of these Shares.

The Preference Shares rank against the assets of the Society (including the uncalled capital, £1,800,000) in priority to all other Shares for repayment of capital, and will be entitled to a fixed Preferential Dividend at the rate of £5 per cent. per annum. The dividend on the Preference Shares is cumulative.

The Preference Shares carry the right to attend and vote at General Meetings upon all questions affecting the rights and privileges of the Preference Shareholders.

During each of the past six years a dividend of 10 per cent. has been paid on the Ordinary Shares. The General Reserve Fund at the 31st December, 1906, was £205,000, and the balance carried forward to 1907, after providing for the payment of a 10 per cent. dividend, was £30,567 19s. 4d.

Payment in full may be made on allotment, or at any subsequent time before the final instalment becomes due. The amounts paid up on Shares allotted will rank for dividend as to the amount paid on application from the date of allotment, and as to all subsequent payments from the dates thereof respectively.

The dividends will be paid half-yearly, on the 1st July and the 1st January in each year, and the first payment will be made on 1st January, 1908.

The minimum on which the Directors may proceed to allotment is a subscription for 50,000 Shares. Of the issued Share Capital 100,000 Shares of £10 each were offered in the year 1888 and allotted in full, and 100,000 like Shares were offered in the year 1902 and allotted in full, and on all the said Shares £1 per share has been paid up.

Application will in due course be made to the Stock Exchange for a quotation of the Shares now offered.

Preference in allotment will be given to the present Shareholders.

No part of this issue has been underwritten. The usual brokerage of 3d. per share will be allowed to Stockbrokers in respect of allotments on applications bearing their stamps.

Applications for shares should be made upon the Form accompanying the Prospectus, and sent to the Society's Bankers, Messrs. Child & Co., together with a remittance of the amount of the deposit. Where no allotment is made the deposit will be returned in full, and where the number of shares allotted is less than the number applied for the balance of the deposit will be applied towards the remaining payments.

Copies of the Society's Memorandum and Articles of Association, and of all Special Resolutions which have been passsd, may be inspected at the Registered Office or any of the Branch Offices of the Society.

Prospectuses and Forms of Application can be obtained at the Registered Office or any of the Branch Offices of the Society, or from the Society's Bankers or Brokers.

Dated 1st July, 1907.

NEW ISSUE.

INDIA 3½ PER CENT. LOAN FOR 250 LAKHS OF RUPEES.

The Secretary of State for India in Council hereby gives notice that the Government of India has issued a notification dated this day inviting Tenders for a Loan of two hundred and fifty lakhs of rupees (Rs.2,50,00,000), bearing interest at the rate of Three and a Half per cent. per annum, and not liable to be discharged before the 31st of December 1920.

Tenders will be received by the Comptroller-General at Calcutta until noon standard time on the 17th July, 1907, and by the Accountants-General at Madras, Bombay, Allahabad, Lahore, and Rangoon, on the 16th July and until the local time corresponding to noon standard time, of the 17th July.

The minimum rate at which tenders will be accepted will not be declared beforehand. It will be recorded by the Comptroller-General before the tenders are opened, but will not be announced unless any tenders are rejected as being below the minimum.

The instalments will be payable on the 31st of July, 14th of August, and 10th of September.

Copies of the Notification published by the Government of India can be obtained on application to the Financial Secretary, India Office, Whitehall, S.W.

India Office, 3rd July, 1907.

NOTICE.

THE STOCK EXCHANGE.—NOTICE.

NO MEMBER OF THE STOCK EXCHANGE IS ALLOWED to ADVERTISE for business purposes, or to issue circulars to persons other than his own principals.

Persons who advertise as Brokers or Share Dealers are not Members of The Stock Exchange or under the Control of the Committee.

A list of Members of The Stock Exchange who are Stock and Share Brokers may be seen at the Bartholomew Lane entrance of the Bank of England or obtained on application to EDWARD SATTERTHWAITE,
Secretary to the Committee of the Stock Exchange.
Committee Room, The Stock Exchange, London, E.C.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 497. New Series. SATURDAY, JULY 13, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P O. Drafts should be made payable to

CLEMENT WILSON,

"Investors' Review" Office,

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Half-Year's Foreign Trade Returns.

It must really be distressing to Protectionists to find our imports showing a faint tendency to fall back, and we should like to see how they account for this in the absence of an obstructive tariff. The decline for the month of June is a mere £71,000, and though the increase for the six months has been upwards of 6 per cent., or £27,810,000, sanguine reactionaries might seize upon the accident to comfort themselves with the thought that the country's business is at last beginning to go to the bad. There need be no real fear of that under present circumstances, and the decline of June is quite accidental, caused principally by the smaller quantities of some of the articles of consumption received during the month. An increase of 5 per cent. took place in the weight of wheat imported, and the value of the entire quantity went up by over 11 per cent., thanks to the scare about harvests worked with such industry by the American gamblers, but wheat-flour, barley, oats, Indian corn, and rice all came to hand in smaller quantities, and mostly at prices very much the same as those of a year back. Rice continues to be dearer, and there was a slight advance in the prices of all the other cereals, but nothing to speak of, not nearly enough as a rule to compensate for the decline in quantity. Apart from cereals there was a smaller import likewise of live cattle and sheep, of beef, butter, margarine, and cheese, as well as of eggs and sugar.

Had it not been, indeed, for the largely increased import of copper at a much enhanced price, of raw cotton, also dearer, of flax and jute, with smaller increases in tea and hemp, the aggregate value of the imports would have been sensibly down. As it is the passes in the main so much to the good, provided our wants in food of all kinds have been supplied to an additional extent from home sources. That, we fear, is past praying for in the present condition of domestic agriculture, and we must regard the slip in these directions as a transitory one. Our demand for the fibres necessary to our textile manufactures continues to give eloquent testimony to the flourishing condition of these industries, and although there has been a slight relapse in the import of sundry raw materials such as wool, hides, and timber, the whole amount is eloquent of a prosperous state of business, both at home and abroad. Our industries must be well employed to make it profitable for traders to bring such augmented quantities of raw materials into the country. For the six months the increased value of raw materials and articles mainly unmanufactured has been £39,570,000, of which cotton alone contributed upwards of £17,000,000 followed by an increase of £7,148,000 in wool and £3,300,000 in other textile materials, iron ore, scrap iron and steel, tea, have come to hand to a value of £1,107,000 more than in the same six months of the past year. Against this we have an increase for the six months of £8,074,000 in the commodities described as articles wholly or mainly manufactured. These articles, however, include a great many things which are really to us raw material, as has often been explained. For example, iron and steel and manufactures thereof show an increase of £3,654,000 for the half-year, and in this description is included not only

all kinds of crude metal products—castings, iron wire, pipes and tubes, bridge and other plates, steel ingots, bars, angles, and shafts, copper regulus and precipitate, unwrought or part wrought copper, and pig and sheet lead—but quicksilver, tin blocks and ingots, crude zinc, &c., &c., which are pure raw materials.

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.

The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board" values.

Exports in the past month showed an increase of just 8 per cent., or £2,471,882, the total being £33,111,069. A decrease, however, of rather more than 2 per cent. occurred in the value of foreign and colonial goods reshipped abroad, the decline being £153,801 and the aggregate £7,098,226. If the exports and re-exports are added together it will be seen that the total is really not so much below the value of the month's imports, which was £47,810,648. For the six months the exports have gone up by 14.2 per cent. and re-exports by 16 per cent., against an increase of only 9.2 per cent. in the value of the imports for the same period, and the aggregate trade for that period has reached a value of over £586,000,000. Where are our goods going? That is always the interesting question, and it always produces the satisfactory answer—they are going everywhere. All the world, for example, is a customer for our coal, the increased value of which for the past month was £1,407,753, the increase in quantity being over 3,214,000 tons at a total of 30,802,213 tons. Two years ago, under the *règime* of the export duty on coal, the total weight sent out for the six months was only 23,765,627 tons. We are not only sending larger quantities of this fuel abroad, but getting better prices for it, since the quantity went up rather less than 25 per cent. last month against an increase of 46 per cent. in the value, and it would appear that the demand from Germany and France gives the principal impetus not only to the increased quantity but to the increased price. Some even go so far as to suspect the Germans of sinister designs against our manufacturing industries. It would be quite within the power of German industrial combinations to play upon our coal market by purchasing excessive quantities and taking them away so as to drive up prices against our own iron and steel makers. It is perhaps more reasonable to regard the expansion in the demand as product of the release of the trade from a vexatious impost and of the greater industrial activity in those countries which form our principal customers. All the world has been expanding, and most Continental countries have been taking more coal from us during the past six months, except Russia and Spain.

We have said so much about our textile industries and their universal market in recent months that it is unnecessary to go over that ground again just yet; but we cannot omit to notice the flourishing condition of our trade in machinery because there are flaws in it, or at least there is one flaw. In the aggregate for the past six months we have sent out £14,932,000 worth of machinery alone, an increase of nearly £5,000,000 upon the total for 1905, and nearly £2,200,000 more than in the same half of last year. All branches of this the most profitable group of manufacturing industries we have are not, however, equally flourishing, and we should really like to know why it is that the demand for British locomotives should be so small upon the Continent of Europe. For the six months we sent to the whole of Europe only about 3.3 per cent. of our total exports of locomotives, measured by values. The trade has increased so that the aggregate value of the export of this class of engine alone was £1,656,182 in the six months compared with £1,319,000 the previous year and £1,141,000 in the first half of 1905, but the European demand shows very little elasticity in any direction. It does grow, but in a manner which only exasperates because there ought to be a much larger consumption for our locomotives on the Continent than the best of these figures exhibit. Do we fail in that direction because our manufacturers pay no attention to Continental requirements and simply offer engines of the same pattern that they find a demand for at home, or which we can dispose of in countries whose development in railways and other public works is dependent upon supplies of British capital? Countries in South America, for instance, have taken about £1,006,000 worth of British locomotives, and two years ago the value of their purchases was £213,547. How has this trade expanded if not through the enormous amounts of British capital poured into South America? We have also a fine trade with India, a passable one with Australia and New Zealand, all loan supported, but seem to do nothing to speak of with Canada and precious little with any country outside our control either as premier state in an empire or as money-lenders. We think this might be remedied.

Europe, for instance, does much better with most other classes of machinery produced in this country. It took in the past half-year nearly 65½ per cent. of the

entire value of agricultural steam engines exported and nearly 28 per cent. of our exports of miscellaneous steam engines. Also Europe absorbed almost 66 per cent. of our agricultural machinery other than steam engines exported, and fully 84 per cent. of the value of British-made sewing machines exported. If we can do so well with sewing machines in spite of the competition of the United States and of every other obstacle that the ingenuity in devising obstructive tariffs can create, why cannot we get a larger market abroad for British locomotives? Europe took, for instance, 51 per cent. of the textile machinery shipped abroad this year to the end of June. There was a notable decrease for the month in the value of new ships supplied to foreign customers in the past month, the total value being only £882,752 compared with £3,324,577 in June, 1906, but that this also was a merely accidental deflexion, as it were, is proved by the fact that for the six months the value of ships exported was £5,572,000, or only about £240,000 less than in the first half of last year. In this trade likewise we hold the field, and tariff-blessed Germany is obliged to go to Belfast for her ocean palaces which she cannot afford to build at home.

The Post Office Savings Bank Deficiency and Official Indifference.

Mr. Asquith did well to reassure the City last Friday regarding the conservatism of the present Government. He disclaimed any intention on its part to interfere with the rights of private property, and assured his hearers that it would hold as sacred as its predecessors the rights of such property. "We shall maintain," he said, "the sanctity of contract and the impossibility of expropriation, even for the best public purposes, without adequate compensation and adequate security for any form either of public or private investment." He maintained further that no one was justified—presumably by anything the Government had done or said—in entertaining any real apprehension that these conditions "are in any danger of being imperilled or undermined." We gladly agree. The Ministry means well, and some of its members work hard, but the City has suffered its political prejudices to obscure its judgment on this point, and has allowed all manner of wild imaginings to fill its head until the talk one hears would often lead one to suppose anarchy and spoliation to be imminent dangers. We have no fears of that kind, never had, and think it a pity the Chancellor of the Exchequer should ever have been driven by thoughtless talk to make the asseveration he did. A Ministry that has to keep assuring and reassuring people of its good intentions is never a very strong Ministry, and weakens its position in so doing. It would have looked stronger, and therefore have been stronger, if it had gone straight ahead and allowed its deeds to interpret its intentions.

But has the City no ground at all for its distrust? In relation to the rights of property it has none. The Ministry should have its confidence rather than its dread on that score. It is busy paying off debt; it deals most tenderly with all interests likely to be interfered with; it is bureaucratic and not at all socialist, timid rather than courageous in dealing with real abuses, anxious to be economical, but yielding in its attitude towards departmental spendthrifts, and as anxious to avoid unpleasantly upsetting reforms or to screen official blunderings as Governments always are. In many ways it is a good old Tory Government, and not least in its handling of finance.

Witness Mr. Asquith's treatment of the Post Office Savings Bank deficiency. Mr. McNeill put two questions to him on Tuesday, in one of them asking particularly into the deficiency in its assets and the treatment that that is to receive. The newspapers did not print the questions, and as without them the answer cannot be understood we give them here. Mr. McNeill asked Mr. Chancellor of the Exchequer, "(1) whether he is aware that a considerable proportion of the deposits in the Post Office Savings Bank belongs to persons in the well-to-do classes, attracted by a higher rate of interest, including compound interest, than can be obtained outside the Savings Banks for deposits repayable on demand, and this, although the deposits in the Savings Banks are guaranteed by the State; and seeing that the terms on which the business of the Post Office Savings Bank is conducted have resulted in a depreciation in the value of the securities held against the deposits, and an annual loss in the income account, such loss amounting for the year 1906 to £119,870, which loss falls on the general taxpayers, does he purpose to take measures to correct this abuse of the Post Office Savings Bank?"

"(2) Whether he is aware that in the years 1894 to 1899 (both inclusive) the Commissioners for the Reduction of the National Debt purchased on account of the Post Office Savings Bank £44,990,000 Consols at an average price of £107 14s. 6d. per cent. That on December 31, 1906, the Commissioners held on account of the Post Office Savings Bank £59,977,000 Consols at a cost price, on balance, of £103 0s. 3d. per cent; that the market value of Consols being at that date about 86 per cent., there was then a depreciation in the value of the Consols so held of £10,000,000. Whether his attention has been directed to the definition of a deficiency in the cognate case of the Trustee Savings Banks, contained in 26 and 27 Vict., c. 25, secs. 6 and 7, and 43 and 44 Vict., c. 36, sec. 1; whether there was in the funds held on account of the Post Office Savings Bank, on December 31, 1906, a deficiency within the meaning of 24 and 25 Vict., c. 14, sec. 6, and does he purpose to take measures to issue the amount of the deficiency in the manner directed by the Act, *i.e.*, to issue the amount out of the Consolidated Fund?"

To these questions the Chancellor of the Exchequer read out the following reply:—

"Inquiries which have been made from time to time do not bear out the conclusion that any large proportion of the deposits in the Post Office Savings Banks belongs to classes other than those for whose benefit the banks were intended. Whatever may have been the case in past years, the present difference between the Savings Banks rate of interest and the rates obtainable elsewhere is not likely to operate unduly to divert moneys to those banks. I do not think that the terms offered to Savings Bank depositors can be held accountable for the depreciation in the value of Government securities. As regards the deficiency of income—although it was increased by special causes last year—I am not without hope that it may be very materially reduced in the near future, owing to the more remunerative investments now available for the fund. And in any case it has to be remembered that from 1801 to 1805 the Post Office Savings Banks business was conducted without any loss of income being incurred, that in the later years of that period the surplus income was paid to the Exchequer, and that on balance the Exchequer has gained more than it has lost in connexion with the Post Office Savings Banks."

This answer is eminently bureaucratic and thoroughly unsatisfactory. We are not much concerned with the social classification of the depositors, although it has an important bearing upon the eleemosynary aspect of the Post Office Savings Bank as an encourager of thrift among the poor, but it might be valuable to know how the permanent officials proceeded to "inquire." Did they look at the names and addresses in the pass books and study topography; ask the local postmasters to send a circular to depositors to fill up, or what? And has the custom decreased among the middle classes of opening accounts at the bank for their infant children?

Leaving that point as not at the moment germane, we invite the attention of readers to the language the officials make Mr. Asquith father about the deficit. There is a shortage of income, he is allowed to indicate, although the officials decline to let him say what, but he shirks altogether the deficiency on capital account. That and other messes will be

all wiped up when Consols rise again, we presume. There is now a loss on working the bank, it would seem to be admitted, but formerly there was a profit, and in the later years of the period 1861-95 "the surplus income was paid to the Exchequer, and on balance the Exchequer has gained more than it has lost in connection with the Bank."

Behold the true bureaucrat! A mere "Parliament man" left to himself could never display such ineptitude, such quiet contempt for common arithmetic. Imagine the chairman of an ordinary bank standing up at a shareholders' meeting to announce no dividend because the accounts showed a loss instead of a profit, and proceeding to harangue the meeting thus:—"It's all right, my friends, I assure you. We have made a loss last year—last ten years—it is true, and there is a nasty and growing deficiency on the securities account, but in former years, as you doubtless know, we made large profits, and gave you very good dividends. Our securities, too, in my grandmother's time, showed a large surplus in market over cost price, so you have nothing at all to be disquieted about, no investigation is required, deposits have not been withdrawn, the business goes on as usual, and after all the profits you have had in the past more than balance the losses now made."

Would a business handled in this fashion last long, do you think? Is it much to be wondered at after all that the City should distrust the financial acumen and resoluteness of the present Government when it finds the Chancellor of the Exchequer meekly giving voice to official-screening drivel like the "answer" quoted above? Either the Post Office Savings Bank is an institution governed by the ordinary rules of business or it is a costly imposture, for whose mismanagement the taxpayer will one day have to find an undefinable number of millions. The officials, through the mouth of Mr. Asquith, practically admit that the bank is not conducted on business lines, and that it is now in a mess both on capital and revenue account. Is it indifference or sloth that prevents the Chancellor of the Exchequer from taking steps to get fully at the facts in order to discover what losses have to be made good, what reforms are necessary so as to be in a position to apply adequate remedies? He will have to bestir himself soon whether he likes to do so or not, and the longer he puts off the worse will the state of the bank's affairs become. Insolvent banks may, and often do, exist for years, possibly in favourable circumstances for generations, but when they come to the end of their tether at last the havoc their disappearance works tends to be epoch making.

Economic and Financial Notes.

The Sun Life Assurance Company of Canada.

The English manager of this important Canadian enterprise has obligingly forwarded to us its thirty-sixth annual report for the year 1906, accompanying it by the figures for the preceding year, and by a statement in vindication of the investment policy of the managers in Canada designed to rebut the charges levelled against them by the Canadian Parliamentary Commission on Insurance. We are not going to take up the dispute again just now, because the full evidence has not yet been before us and also because it is obvious that no unity of view can be reached as long as the principles governing business such as this Sun Life of Canada carries on are so radically different from those that obtain in this country in the management of all offices of good class. It is not habitual for insurance managers here to boast of successful speculations, and that is practically what the Macaulays do in the circular before us. Leaving that point and coming to the report for the past year, what are the plain facts? The company does a large business unquestionably, and it has accumulated a quite handsome mass of funds, the total of the insurance fund alone being £4,410,140 at December 31 last. The business, however, is worked at a very heavy expenditure, no less than 28.52 per cent. of the premium income last year, and as everybody who reads this journal knows we have always insisted that such a rate of expenditure could not possibly permit the office to deal fairly with the insured. If the insured get large benefits or sensational bonuses they must be the product either of excessive charges, of account manipulation, or of successful speculation, never the outcome of thrift and prudent investment. In the present case we find that the claims paid by death and maturity of endowments as well as for accidents covered in combined policies came in the past year to no more than 32.35 per cent. of the premium income. In the preceding year the policyholders received on all accounts rather more than 35 per cent. of the premium income, but even so the proportion seems to us distressingly small in a company which has been more than a third of a century in existence, and whose accumulations of funds are so extensive. To whom do these funds belong when all the claims have been paid and the bonuses bestowed? Are they the property of the shareholders whose paid up capital is £21,575, or are they divisible amongst the insured? We ought in fairness, however, to add that the bonuses in reduction of premium payments or distributed in cash amounted last year to £42,263 and the year before to £32,288, but even if we add these disbursements to the amount paid away in claims, the proportion of the annual revenue distributed to the policyholders looks rather mean, particularly after reading the vaunts of the managers, and we must not forget that the company has now, thanks to its large accumulations, an income from dividends and rents, which last year amounted to £225,839 and in 1905 to £197,041. Also in the past two years the revenue has been credited with nearly £198,000 as profit on sales of bonds, &c. Adding these receipts to the income from premiums and putting together on the other side all the payments made to policyholders, including bonuses, we find that the proportion of total payments to total income was less than 27 per cent. last year and under 26½ per cent. in 1905. Whatever the business that produces results of this description may be, it cannot be dignified with the name of life insurance. We regret to have to say this, but really the people of Canada, in imitation of those of the United States, seem to have taken up this method of earning a living without mastering the principles that govern real life insurance. They aim at drawing money into their hands in order to blossom out as powerful financiers.

The Sugar Duty.

Pledges are quite harmless to the Parliamentarian—until the General Election comes round—and those who declared that they were against the sugar tax had no difficulty in forgetting the past when compelled last Tuesday to choose between giving the Government a beating and going back on their word. The Government won on Mr. Cox's proposal to cut the existing duties down by one-half, had a majority of 137 in fact, and everybody was happy, the Opposition in having baited the Ministry for hours, and the Ministerialists in having vigorously warded off a nasty attack. It was a very good game of ins and outs, and well played, but it will hardly advance the House of Commons in the respect of the nation. Nor does the victory of the Government alter the fact that the sugar tax is a bad one, bad for the consumer, bad for our manufacturers, bad for beer drinkers, and bad for our export trade, reacting injuriously therefore upon the import trade. It has not even the justification that it has proved to be good for the West Indies, for they have not been able to revive their cane sugar industry by its help, with the blessings of the Sugar Convention thrown in, to an extent worth the weight of a tenth of a tenth of a farthing per lb. added to the price of sugar to the home consumer.

Nor did the vote alter the fact that the Chancellor of the Exchequer could have lowered or even abolished the sugar duty, and relieved his supporters from the painful necessity of swallowing their pledges or evad-

ing them, if he had possessed the resolution and inventiveness requisite to make him a skilful manager of national finance. A determination to enforce economy, a little more resolution in dealing with contractors for the army and navy, or the submission of the Estimates to the scrutiny of a Committee of the House, an avoidance of pledges to introduce old age pensions next year, some grasp of the causes of waste displayed in handling the debt, with other obvious measures, and Mr. Asquith might have had enough revenue in prospect to not only ease the income-tax gall much more than he has done, but to at least begin the reduction of the tea and sugar duties as well. A tea duty of 5d. per lb. and a duty of ½d. per lb. on sugar, all in a time of peace, are relics of a state of war which the Government ought to have been in a position by this time to begin to remove. We could have done, for instance, with a limitation in debt reduction, if no other means served; but the truth is, the politician remains as much as ever the servant of the permanent officials, and they as a body are never in favour of economy. It needs a very strong man to overawe this, the most powerful trade union in all civilised countries, and neither Mr. Asquith nor his colleagues appear to be such men. They all present the official view, and make common cause when it comes to the pinch with those upon whom they have to rely for priming. And we go on paying the taxes, taxes so heavy in time of peace that were another war to break out, a war for the settlement of the troubles of South-Eastern Europe, for the inheritance of the Turk, or any big conflict, we should be too exhausted to be able to carry on our share in it with resolution and success. Can you not see that the strength of the Empire is being sapped by the heavy taxation and the unending demands of the revenue spenders for more and yet more money? There is something beyond and above a question of pledges in the maintenance of the sugar tax which the late Government was driven to impose in its straits for money. Come another big war, and it might have to be raised to 10s., 12s., 15s., 20s. per cwt. ere we had been fighting many months, because neither Government nor nation has meantime accumulated reserves.

Mr. Asquith on Writings Down.

No opportunity is lost by the Chancellor of the Exchequer to try and reassure the City about the excellent qualities and good intentions of the present Government in all that relates to the stability of finance of mortgages, land values, and property in general. It is very good of him to cheer us up in this fashion, but we are sorry that his own uncomfortable position as the responsible head of the biggest bank in the world, the Post Office Savings Bank, should have led him on Wednesday, at the lunch following the opening of the fine new offices built in the Strand by the United Kingdom Temperance and General Provident Institution, to deprecate the practice of making a clean balance-sheet at stated periods. He spoke with feeling doubtless, but the subjoined passage from his speech contains most dangerous doctrine to offer to business men. He was quite right in characterising as "nonsense" much of what has been written about our national credit, but he was not right in belittling the practice of writing down the value of securities held by any public body every year or half-year to the market price of the day or below it. The bank whose fate he controls has neglected this duty, and is now in such an irreparable mess that we may prepare our minds for the announcement one of these days that a "terminable annuity" for, say, £20,000,000 has been created in order to cover its deficiency. Doubtless insurance companies are not under the same pressing necessity to deal with their securities as banks. An insurance company is not called upon to pay out money to depositors without notice, and if its investments do slip a little bit below the price at which they could be sold, it may make no difference for some time to the power of the office to meet its obligations as they arise. None the less will its balance-sheet be a false one if it permits the value of its securities to remain unwritten down to the market price for any length of time. The policy-holders will consider themselves to be possessed of more security than they actually have, and the ultimate consequence may be great discredit to the office which thus plays fast and loose with its balance-sheet. From this point of view, therefore, Mr. Asquith's speech was not a reassuring one, and will not increase the esteem with which the City is always disposed to regard the man in charge of the nation's finances. Here is the *Times'* condensed report of what he said:—

He did not know whether they had recently been engaged in the somewhat gloomy process of "writing down," a process which he thought was very much to be deprecated, except when taken at comparatively long intervals, and with a full consideration not only of the past and the present, but of the contingencies and prospects of the future. A great deal of nonsense had been talked, and still more nonsense had been written, in the course of the last twelve months on the supposed depreciation of our national credit. Anyone who took the trouble to make himself acquainted with the comparative figures would know that, whatever depreciation there had been in the value of gilt-edged or premier national securities, it had been more than counterbalanced by the fall in the corresponding securities of other countries; and to put it down, as some short-sighted writers had done, to some special instability in our social and economic condition was not only to ignore facts well within the reach of those who took the trouble to seek for the truth, but to entirely misread the governing factor of the situation. The truth was that while there had been circumstances—some of them, he might say, exceptional—and others highly abnormal—which accounted to some extent for the fall which had recently taken place, he was glad to think that we were now recovering. But the fact was that the fall had been largely due to the activity and prosperity of our own trade. It was an elementary truth, but one which was difficult to drive into some people's heads, that when they could get 5 or 6 per cent. for their money they would not readily be content with 2, 2½, or 3 per cent., and a great deal of the so-called depreciation in the value of good securities had been due to competition in more remunerative employment of capital. He thought—and he spoke with some knowledge of the case—that they might fairly consider that in this matter we had touched bottom, and that the upward process had begun, although it was far from him to predict the number of curves and gyrations that might take place. But there were distinct signs that an upward movement was in progress, and was likely to continue.

The Zinc Corporation.

Another case of hope blighted, we fear. We always admire the simple faith of the public, its perennial hopefulness, and wish we could cheer it up about something. This Zinc Corporation is no good at all for any benevolent purpose of the kind. Its new "process" is no more a success than its old, and the operations for the half-year ended February 28 last have added £13,841 to the profit and loss deficiency, making the total £26,321. No doubt £28,383 has been written off for depreciation in the course of the company's brief life, but there is small consolation in that, because the money came out of the premiums received on the shares sold. So the board in a small way has merely written off capital lost, having nothing else to draw upon. The balance-sheet has little worth having to show for a paid-up capital of £293,088 and a debt due to the Broken Hill Block 10 Company (£111,420) and sundries (£23,506) aggregating £134,033. It also owes £9,011 nett to the Commercial Bank of Australia, Limited, the gross debt there being £10,028, set off by cash in London and Australia. The expenditure for the year, including £620 in directors' fees, £468 for travelling expenses, £9,042 for "redemption," and treatment of tailings, £2,000 for residues, £1,808 for wages, salaries, and general expenses, &c., came out at £13,841, and gross receipts from the sale of concentrates amounted to £2,010. Besides that meagre result, a profit of £520 is claimed on sales of sulphuric acid. The process is therefore a failure still, or the dumps themselves are a failure, and it might be well to recognise the fact, instead of continuing to throw away good money. Those who cling to their belief in miracles may subscribe towards a fund for an "independent report." We should not, in spite of our desire to do the needy a good turn when possible. It is for the Broken Hill Proprietary Block to people and the Commercial Bank to look after things if they find themselves left with nothing but the "dump" and a magical process as security for their advances.

The mine, though, should be all right, since it has had cash and shares and guarantees for all the stuff it can hand over. It is the poor bank and the still poorer shareholders here that seem to deserve most commiseration. But Australia is a great country.

A Trust of Good Chance.

This week we have made up a group of stocks which offer fair chances of improvement, and at the same time yield well on to 5 per cent. Readers can pick for themselves, but the interest on all these five securities ought to be safe, come of market prices what may :—

Siamese 4½ per Cent., 1907.—This loan was offered at 98 in January last, to provide funds for the construction and extensions of the Government railways, but was not fully subscribed by the public. It has since been on sale by the underwriters, and at about 2 discount is a fair investment of its class.

Argentine Great Western Railway 5 per Cent. Third Debenture Stock.—By the amalgamation with the Buenos Ayres and Pacific Railway this stock, which was issued in February at 102, now ranks before some £12,000,000 of stock on which good dividends are being paid. When the Transandine road is completed the line will form part of a system extending from Buenos Ayres to Valparaiso.

Antofagasta (Chili) and Bolivia Railway 5 per Cent. Debenture Stock. This also is a third charge on a railway doing a very big business. Until a few years ago its traffic principally consisted of minerals, but new nitrate grounds were then opened up in the neighbourhood of the line from which substantial benefits are derived, and there is also the possibility that the exploitation of the rich tin mines of Bolivia may in time bring considerable additional traffic to the company. For the past year a dividend of 7½ per cent. was paid on the deferred capital, so that the interest should be perfectly safe.

Egyptian Delta Light Railways 5½ per Cent. Preference Shares. These have gone down recently in sympathy with Egyptian things generally. The business of the line, however, lies in the agricultural districts, and as the condition of affairs is said to be satisfactory, there is every prospect that the improvement noted in the report just issued will continue. A full dividend on these shares has just been declared for the first time, as against 4½ per cent. for the previous year, and we have therefore taken the yield at 5 per cent., but so long as the fallaheen prospers there is little doubt that the full 5½ per cent. will be paid.

Mercantile Investment Trust 4¼ per cent. Second Debenture Stock.—This is an issue made last month at 97½, but the company has been in existence since 1884, and during the last five years the dividends on the deferred stock have risen from 3½ to 5 per cent.

	Price.	Cost.	Interest.
	£	£	£ s. d.
200 Siamese 4½ % 1907	96 ..	192 ..	9 0 0
200 Argentine Great Western 5 % 3rd Debenture Stock	109 ..	218 ..	10 0 0
200 Antofagasta (Chili) and Bolivia 5 % 3rd Debenture	105 ..	210 ..	10 0 0
20 Egyptian Delta 5½ % Preference..	9½ x.d. ..	190 ..	10 0 0

American Business Notes.

Another bad New York Bank return and another halting "bull" campaign on Wall Street. The two things hardly seem consistent, but you must not look for logic from gamblers, least of all from overburdened ones. The "averaged" return of the associated banks revealed the fact that the surplus reserve had dwindled in the week ended July 6, to a trifle of £173,000 or so, notwithstanding a decline of £2,700,000 in the deposits, now back to £207,268,000. But then specie slipped away to the extent of £336,000, and greenbacks were drawn into the active circulation to the amount of £789,000. These movements are in order at the time of year, but the decrease in loans and discounts continues a mystery deepened by the gamblers' greater wants. They have fallen away £2,160,000 to £210,116,000, and the interpreters of finance persist in saying that the financial trusts are taking over the loans. To us that continues to look like nonsense, but perhaps there is a juggle with cash balances going on as part of the window-dressing necessities of these trusts. The decline in the deposits may be partly accounted for by a make-believe concealment of debts at the close of the half-year by the trusts in the Right Hon. Sir Joseph Ward's non-patent manner. Smart man, Sir Joseph, could give the Yankee points any day and beat him!

Whatever the reason for the movements of the bank display, the figures do not appear to form a good foundation on which to support an advance in prices such as Wall Street and Tom Lawson have been attempting. Still less is the hardness in the exchange, and 5 to 10 per cent. for money, good props for a rising market, coupled as it is with further withdrawals of gold for Paris. True, the export of gold last week was rather less than £300,000, but it continues to go to Europe, another £350,000 having been "engaged" on Monday. This makes the entire shipments to date about £5,600,000 of which £730,000 is said to have been sent here, in spite of the most strenuous energy in bill-discounting over here. We therefore infer that the game now being played in the sight of Europe is a desperate one, and that appears to be the view taken by the American public as well as by our own. That the position is desperate seems to be further indicated by the employment as "bull" herd of Mr. Thomas W. Lawson, the well-known "Bustonian," as Mr. Still has wittily dubbed him. But lately Mr. Lawson was a "bear" for all he was worth and much more; now he is a "bull" who comes to the rescue of the distressed market with a rankly larded prediction of a rise of "from 30 to 60 points" in Wall Street securities, especially "coppers," hitherto objects of his hatred and "bear" contempt. He has been to Europe, without calling upon us, it would seem, and being crassly ignorant of all things European, having fallen into bad hands, too, poor man, he has gone home with the most upside-down conception of our own and the Continent's financial condition the most rabid of "bulls" could attain. We are just smothered in money and don't know how or where to go to lose it. Our civilisation is played out; we have nothing more to offer than fat purses, and Mr. Thomas W. Lawson has pity. "Follow me," he advertises by cable, "and I will relieve you." The good man! but he forgets that we are not yet all lunatics, though he may be one.

The inference we should draw is that New York financiers are about as near the end of their resources as our chartered company, and perhaps near the end of their wits as well. Otherwise how could they have chosen the grotesquely ebullient Lawson to head a syndicate formed to unload their paper wares by prophesy. Ah, well, we are not all fools yet, and if these fellows want to see a "30 to 60" per cent. rise on Wall Street, they had better buy its rubbish themselves. Did we hold anything so unsubstantial as the average American railroad shares or Amalgamated copper shares we should take the Lawson clatter of words and mumbo-jumbo sentences as a broad hint to sell. The public seems to be of this view likewise, for it is selling. He is the funniest of funny men, though, this droll "Bustonian" candour itself and of a transparent crudity of ignorance. His eloquence reminds us—we cannot say why, and it is of no consequence—of a certain refrain in the doggerel of the nursery, which used to run somewhat thus :—

"We carried the boat and got it afloat
All on a saucy winter sea;
We saw the sharks and had horrid larks
Until the waves they drownded we."

What a lot of verdigris there must be on copper!

The profits of the Standard Oil Trust have not been so good lately. Mr. Rockefeller did not know anything about the affairs of his venture, his position having been "purely honorary" for a dozen years back, so he told the United States District judge at Chicago last Saturday. Presumably he draws his dividends and cares for nothing else, has no thought of the men he has ruined, the people he has plundered by his monopoly. But the secretary of the company, Mr. Charles Pratt, knew lots, and told the court that the profits for 1903 were £10,200,000, for 1904 £12,200,000, and for 1905 £11,400,000, there or thereabouts. A few million dollars back or fore make no difference. Even at the lowest the profits amount to 57 per cent. on a capital of £20,000,000. But whence has come the decline? Has the Trust been paying the losses on the mercantile marine adventure, or has it suffered by the partial collapse on Wall Street, or is the copper hold-up proving expensive? We do not know, for the Trust is a close corporation, very close, and the people of the United States submit to its exactions in meekness, being well bribed, and Mr. Aked's ministrations are of a sweet savour to the rich John D. What more would you have?

New issues of capital are not so striking this week. There are plenty of them, but they are mostly small, and of no interest here. The Chicago and Alton Railway, though, wants about £320,000 for improvements, and the Brooklyn Rapid Transit Company, a controlling company, is making provision for the issue of £5,000,000 in order to finance its dependents, the Nassau Electric Railway and the Brooklyn United Elevated Railway. Of this, the Nassau Company gets £1,000,000. Of greater interest is the account given in the New York *Chronicle* of the formidable expansion in the commitments of the New York, New Haven, and Hartford Railroad since it came under the dictatorial control of Mr. Mellen in 1903. This gentleman seems to be bitten by a mania for buying up any and every property which he thinks useful to his road. He bought control of the New York, Ontario, and Western, a road quite out of his region, and has been eagerly laying hold of the local electric lines throughout the territory run across by his New Haven road. The result has been alarm in Massachusetts, and a check by its legislature. Meanwhile the share capital of the New Haven Company has been increased since June 30, 1903, by about £10,200,000 to £24,400,000, and the bonded debt by £18,962,000 to a total of £20,999,000. At the earlier date the outstanding bonded debt was only £2,038,000 or so, and to the latest total we have to add the French loan raised a few months ago—another £5,597,000—so that altogether the capital invested in the New Haven property and developments has been augmented in about four years' time by nearly £35,000,000. Nor is this all, for the subsidiaries of the company have likewise been busy in adding to their debts to an aggregate of nearly £3,700,000. This is headlong progression on a scale the copper combine could hardly rival, and it will probably lead to trouble.

Canadian crops out west are going to be just splendid and no mistake. We hope Europe will have the money to pay for them, and 5,000 immigrants reached Manitoba last week, and the more mouths there the fewer here, and Europe's taxes are heavy as heavy can be. Meanwhile predictions are more than fulfilled about the wheat acreage and the probable yield in Saskatchewan. Here is how the *Times'* Montreal correspondent figures it all up:—1,958,246 acres under wheat, increase 598,000 acres, or 43.05 per cent.; under oats, 772,273 acres, increase 227,000 acres, or 41.65 per cent.; and under barley, 60,601 acres, increase 22,640 acres, or 58.93 per cent. There are also 8,074 acres under flax and 702 acres under "spelz"—he means "spelt," we imagine, a kind of wheat called German, otherwise bearded barley—both showing increases. Returns from Manitoba and Alberta have not yet been received, but if they are like Saskatchewan and "the west will harvest a crop of not less than 100,000,000 bushels of wheat this year"—a "record-breaker," indeed, and an emigrant-breaker, too, perhaps, if the dream does not come true, or if the crop cannot be sold at a price to recoup cost, including interest on advances to farmers and a "living wage" to the cultivator.

The Sovereign Bank of Canada seems to have been managed with too little regard to the quality of the securities it took against advances. A domestic revolution took place in it lately, a new manager was put in, and he promptly recommended that £140,000 should be written off for bad debts, £50,122 for depreciation and £9,620 from bank premises account, that one contingent fund of £108,300 should be set aside against accounts in liquidation and another of £160,000 against "unsatisfactory advances." In all, therefore, over £448,000 of the bank's resources are either lost or locked up. All the reserve fund is wiped out. The paid-up capital of the bank is reduced by £200,000 to £600,000. No less than 7,000 of the shares belong to the Dresdner Bank, a fact accepted as "reassuring" to the Canadian Imperial mind. How many more banks there are in a similar plight? This "Sovereign" bank, the *Times'* correspondent says, probably "came nearer the people" than any other bank in the Dominion—it took their savings, that is by giving high rates of interest for them, and then had to gamble to make a profit. The new management appears to be continuing the old policy towards depositors, for instead of drawing their savings out the people have been pouring money in, no less than £108,000 having come to hand in March and April.

We are not sure that we should not make the Canadians and Yankees welcome to their triumph in San Paulo, Brazil. They have got control of the Sorocabana Railway to be sure, but that involves not only the payment of all charges upon its debt of £3,800,000, but the recoupment to the Provincial Government of the whole cost of the property within 60 years. In addition the syndicate will have to spend some millions more perhaps in re-equipping the railway, in constructing a port at San Vicente, and in building extensions in various directions, &c. Above all, the syndicate has to back up the policy of the Provincial Government in forming a corner in coffee and had to endorse the loan of £2,000,000 lately obtained by it for that purpose. On the whole, we wish the brilliant financiers of the New World joy of their bargain, and think the San Paulo Railway Company well out of a risky adventure.

Passing Events.

It cannot be said that Lord Welby had a particularly satisfactory budget to unfold at the meeting of the Metropolitan Water Board. There was a small surplus upon the past year's income and expenditure, but it amounted to no more than £33,000, the income having been £2,837,000 and the expenditure £2,804,000. This, however, is better than in previous years, for the nett surplus over the two and three-quarter years during which the Board has managed the London water supply has been only £35,748, or an average of about £12,000 per annum, and that is not nearly enough if the Board is going to liquidate its debt, as it must do, within a hundred years, pay off that is to say, the whole of the capital given for the properties of the companies and the money spent on the additions thereto. The sum calculated to be payable yearly towards the reduction of the debt is £83,000, but the sinking fund does not come into operation for 20 years, and meantime the statutory sinking fund on the debt which the Board has incurred since it came into power has been fed by £20,000 set aside out of revenue, so that the position is not so very unpleasant. The thing to grumble at is the frightful cost which the water undertaking has been to the people of London, and it is a growing cost, for on March 31 last the total debt was £47,045,000, or an increase of £350,000 within the twelve months. Does this include the debts of the separate companies which the Water Board took over?

We see that the Loan Bill introduced into the Transvaal Parliament provides that half the guaranteed loan of £5,000,000 is to be devoted to the establishment of a Land Bank. The conception is an excellent one, and, properly managed, we have no doubt whatever that a bank of the kind will prove of immense benefit to the settlers by enabling them to obtain advances on moderate terms. As they are freeholders, moreover, the bank will possess an excellent security for whatever money it does advance. The fact, however, that so much of the money is to be assigned to this enterprise makes it all the more unnecessary that the whole loan, or even half of it, should be raised at once. A land bank cannot make a splash and cover the whole country with loans right away. It must begin in a small way, and go forward tentatively until it has tested the business, and we should think that if as much as £250,000 was absorbed by the bank within the next twelve or eighteen months it would be quite as much as prudence dictates.

This seems to be the view of the Transvaal Government, for after setting forth the position of its finances, Mr. Hall, the treasurer, remarked that a portion of the loan "might be required for the Land Bank and the service of the Intercolonial Railway Council this session." The bank should be all right, but what is the Railway Council going to do with borrowed money? Its revenue, Mr. Hall said, fell off £600,000 last year—the income of the Transvaal itself having shrunk by £328,000—and presumably it is short of cash. Is it going to borrow a bit of the guaranteed loan to pay for "betterments," often a roundabout way of providing money for interest, or does it think that the system it controls will bear extension? Particulars will be valuable; and in the meantime we are delighted to learn that General Botha's Government is determined to practise the most rigid economy to readjust and lighten taxation, so as to cheapen the cost of living. "Mining being a perishable industry," added Mr. Hall, "the revenue from that source would be ear-marked for the establishment and the fostering of more stable industries." Good, provided the industries are such as might without that become indigenous.

Jingoism produces the same results, whether in a republic, in a monarchy or in a great empire, and the people of the United States appear to be going to suffer for the truculent bluster of their newspapers against Japan. Not so many weeks ago they were talking of declaring war and shouting abuse at the young empire, and when they found that this was getting dangerous and backed down, they none the less left the minds of the American people possessed with a certain fear lest danger should arise in that quarter. Their consciences perhaps make them sensitive, and so the United States fleet, or a formidable portion of it, is to be sent round into the Pacific before the winter comes on—to guard the Philippines, we suppose, to prevent Japan from seizing the Sandwich Islands, to roam about in an empty ocean seeking for foes that do not exist. This will add a nice round sum to the navy budget of the Washington Government; but what does that matter when it is so tremendously flush of cash as to be able to go on digging that Panama Canal without borrowing?

Talking of the Canal reminds us that there are once more unpleasant stories current regarding its practicability. More of the engineers in charge have been "chucking the job," it is reported, and some express doubts whether a lock canal is, after all, practicable. Not much regard need be paid to that kind of tale. The people of the States can excavate and build a lock, or any other canal, at Panama if they make up their minds to it. And they have made up their minds, so that if the undertaking costs them £100,000,000 before all is over, they will go through with it.

South Australia had a bigger trade in 1906 than in any previous year of its history, imports having mounted to £9,702,264 and exports to £11,933,171. The exports of staple products show remarkable increases, a Reuter's message says, and we are glad to note the fact. As long as the colony is able to export much more than it imports it should be able to pay its debts and something more.

Further particulars have also been furnished regarding the position of Queensland through the same agency, which tells us that sheep in the colony have increased by more than 100 per cent. in the last four years, and now total 14,886,000. There is also an increase of 450,000 in the number of cattle, now up to 3,414,000. We trust no droughts will come along to spoil the chances of further developments in these directions, and that meanwhile out of the proceeds of its wealth the colony will make provision for storing its water supply.

What are the Imperially minded expected to think of the move made by the Treasurer of South Australia, Mr. Peake, to get the other states of the Commonwealth to join in intimating to the Imperial Government that as Australia has loans maturing next year to an amount exceeding £10,000,000, the Transvaal loan ought to be issued forthwith so that it should not come into collision with Australia when it has to reborrow. Is this unity of Imperial interests, or what? Mr. Peake does not seem to have got much satisfaction from his brother politicians, but did it not occur to him that if his colony and its neighbours had been a little more prudent they need not have feared the competition of any rival borrower? Is it good finance to promise to pay off debt and then make no provision whatever for doing so?

A most suggestive report is that just issued by the liquidators of the Merchant Banking Co. Briefly, it recites the fact that since voluntary liquidation was resorted to on 16th July of last year, the whole of the bank's liabilities have been discharged and three returns of capital made to the shareholders aggregating £3 10s. on the £4 paid up share. This has all been done within one year of the commencement of liquidation, and the balance-sheet, dated 3rd July, 1907, shows that altogether £262,500 has been handed back to the shareholders, while there are still accounts outstanding to the amount of nearly £37,000 which may bring other moneys in. Accordingly it is suggested that the winding up of the liquidation should be delayed for a little. Delay is, indeed, unavoidable if the assets are to be nursed, so Mr. Henry Mackenzie and Mr. Fladgate May will continue in charge, Mr. C. E. Greenwood, the late secretary, retiring. But is no attempt going to be made to get together again a business so valuable?

We see that the Chancellor of the Exchequer had to borrow £1,500,000 on deficiency account last week in order to meet the interest on the National Debt. The week's revenue was the fine total of £2,747,445, but the National Debt alone swept away £4,327,503, and the previous week's drain for supply was also formidable at £5,760,000. Therefore, balances were run down until even with the help of the £1,500,000 borrowed from the Bank they had still to be drawn upon to the extent of £281,785. This is a very much better display than the late Government familiarised us with, but we hope the day may not be distant when it will be possible to meet the charges upon the National Debt without having to go to the Bank for part of the money.

Very pleasant was the news communicated to the Victorian Parliament on Wednesday by Sir John Madden, Lieut.-Governor. In his opening speech he announced that during the year ended with the past month the debt of Victoria had been diminished by £1,014,000. We hope this will go on, for in dimishing debt these colonies will find their salvation. We are not so sure, however, that the further statement made by him to the effect that the Government intends to recommend a policy of judicious railway construction with the object of settling people on the land was bodeful of much further effort in diminishing debt. It rather seems to point to a renewal of the loan raising policy, and, perhaps, also of loans raised to buy land on which to place settlers.

The Ottawa Census Office has published an announcement to the effect that the population of Canada is now 6,000,000, which means an increase of 1,250,000 during the last six years. The inflow of population has doubtless been great, both from the United States and from Europe, but we hardly expected to see such an increase as this, and can only hope that it does not imply undue haste, particularly in settling people on the lands of the cold North-West.

As foreshadowed in our issue of the 29th ult., the amalgamation of the Phoenix Assurance Co., Limited, and the Pelican and British Empire Life Office has now been announced. The new company will be a very strong one, and proposes to do not only fire and life but accident business. Its united funds, exclusive of the paid up capital, will amount to £6,446,000, and the premium income is put at £1,945,000. In appearance rather more favourable terms are given to the shareholders in the Pelican and British Empire Company than we guessed. They are to receive one new Phoenix share of £5 "fully paid" for each seven shares in their own company. We guessed that the exchange would be made on the basis of one share for eight, and then it did not enter into our calculation that the shareholders in the Pelican Company would be relieved of all liability. Their own shares carry a liability of £9, and those of the Phoenix Company one of £45. By the arrangement now entered into, however, the Pelican shareholders get relieved of their own liability and are not asked to assume any liability for uncalled capital in the new company. They therefore make a most excellent bargain. These £5 fully paid shares will rank alongside the other shares of the Phoenix Company for dividend. Phoenix shares are quoted at 32-33, and as the existing shares of the Pelican Company barely stand at £4 each, there is a substantial bonus on the present arrangement accruing to them by the transaction. The new company will be called the Phoenix Assurance Co., Limited, and there will be one board of directors, a strong and influential body, which only requires a manager of high capacity to help it to carry out its policy.

We have read with pleasure Mr. George A. Touche's remarks at the shareholders' meeting of the Trustees, Executors and Securities Assurance Corporation with reference to the real function and position of such companies. As long as they keep to the business of distributing investments over a great variety of securities so as to better protect the interests of their shareholders they are institutions of the utmost value. We are as great a believer in the trust principle as Mr. Touche can be, and have never attacked any of these companies except when they have seemed to depart from their legitimate business and become, as he said, finance companies, joining in all sorts of Stock Exchange gambles, underwriting new issues and running risks foreign to the real business of a trust. Thanks in great measure to the care and ability with which Mr. Touche has managed this Trustees Company he was able to tell the shareholders that the total investments of the company aggregating £1,149,726 were intact, that is to say, the company has not lost by the terrific depreciation which has gone on in domestic securities. Less than half its holdings are in home stocks. The money has been spread over securities of the Argentine Republic, the United States, the British Colonies, Mexico, Central America, Africa, and the European Continent, with Asia coming in at the tail.

The Union Bank of Australia's branch at Black Range, Western Australia, will be closed as from 13th inst., and a new branch at Sandstone in the same State has been opened.

Mr. William Robert Macready, hitherto chief surveyor at the head office of the Central, has been appointed chief clerk of the town fire department of the Liverpool and London and Globe Insurance Company, at No. 1, Cornhill, in succession to Mr. Keysell, recently appointed fire manager of the Employers' Liability Assurance Corporation, Limited.

The Union of London and Smiths Bank announce that a branch will be opened at 117, Victoria-street, Westminster, as soon as the necessary alterations are completed; also the business of the Hampstead branch will be transferred on August 1st from 39, Heath-street, to 55, High-street, Hampstead, N.W.

Critical Index to New Investments.

Great Northern Railway.

An issue of £264,700 3 per cent. preference stock, being the balance of £1,500,000 authorised by the company's Act of 1899 and by a resolution passed at an extraordinary meeting held in August, 1901, is offered by the directors for subscription at the price of 75. The new stock ranks *pari passu* with the £1,235,300 3½ per cent. stock already issued, and is entitled to a preferential dividend of 3 per cent. per annum, contingent upon the profits of each year in priority to more than £20,000,000 ordinary stock, upon which the dividends paid in the past year exceeded £650,000. It is a trustee security, yielding at the issue price about £3 16s. 3d. per cent., and under normal conditions of the market would be considered cheap.

Wynberg Municipal 4½ per Cent. Loan, 1937.

Applications are invited by the Standard Bank of South Africa for an issue of £93,000 of the above stock at 96 per cent., to provide funds for the construction of a waterworks storage reservoir and for the extension of drainage scheme. The present borrowing powers of the municipality upon the security of the revenue amount to £313,325, and under the Wynberg Municipal Drainage Act £60,000, making a total of £373,325, of which £123,400 has been issued in the colony and £141,000 in London. This new stock ranks *pari passu* with existing issues and is repayable at par on July 1, 1937. The official valuation of the properties liable to rates within the municipal area has increased from £274,510 in 1897 to £2,582,695 in 1906, and the municipality also owns waterworks valued at £116,892, drainage works £87,349 and municipal buildings, &c., £24,590, or a total of £228,831, taken at actual cost. For the financial year 1905-6 the actual revenue from all sources amounted to £31,332. The loan, while good enough, seems rather dear.

The Trust Union.

This company was formed in May, 1905, with a nominal capital of £600,000 to acquire the assets of two other companies, for which it paid £232,000 in 5 per cent. cumulative preference shares and £21,000 in ordinary shares. Except for another seven £1 ordinary shares, these are all that have been issued, and in order to raise further funds, £100,000 4 per cent. debenture stock was offered this week for subscription at 97½. On May 15, the date of the last balance-sheet, a valuation of the assets showed a surplus, after providing for all liabilities, of £430,685 as security for the debenture stock, while the profits in each year since the formation of the company are stated to have been sufficient to pay the interest nearly five times over, so that the issue is amply covered.

Stagg and Mantle, Limited.

This well-known business of silk mercers, linen drapers, &c., was established nearly a century ago, and has been in the sole ownership of the vendor for the last eight years. It is now converted into a limited liability company, with a capital of £100,000, divided equally into 5½ per cent. cumulative preference and ordinary shares of £1 each, and the vendor takes the whole of this sum, less £7,000, which he is to provide for alterations suggested and approved by the London County Council, and for additions to the premises. Of this price, £10,000 is to be paid in preference shares, £10,000 in ordinary shares, and the balance of £60,068 in cash, but Mr. Orpin undertakes to pay an underwriting commission of 5 per cent. on all the shares offered and the expenses connected with the formation of the company, except stamps and fees. The assets handed over consist of stock £28,702, book debts £9,459, furniture, fittings, &c., £8,213, leases £18,130, cash in excess of liabilities £1,028, goodwill £20,246, and the above-mentioned £7,000, so that no fresh capital is brought into the business by this issue. The accountants certify that they have audited the

accounts continuously for over a quarter of a century, but only the results for the three years to January 31, 1906, and for the period from February 1, 1906, to February 9, 1907, are disclosed. These show an average of £11,175 per annum, after deducting what is stated to be an adequate allowance for depreciation of fixtures and furniture, but before providing for depreciation of the leases. On this basis it is estimated that, after providing £500 for amortisation of leases, transferring 10 per cent. of the nett profits to reserve, and meeting the preference dividend, the surplus should be sufficient to pay 7 per cent. on the ordinary shares, with £3,357 over for further contributions to reserve, managing director's, and directors' remuneration. The proposition is put forward very fairly, and the preference shares should be a safe enough investment, while the ordinary are not without attraction.

New Publishing Co., Limited.

The gorgeous advertisements of the Yankee organisers of the *Times* Book Club have impressed a number of well-meaning people with the belief that the tales of huge profits made by publishers at the expense of the authors had some foundation in fact, and this undertaking is the outcome of that simple faith. It has been formed with a capital of £50,000 in £1 shares "for the purpose of establishing and carrying on a publishing business to deal with all classes of books on free and equitable lines," and subscriptions were invited for 47,493 shares. The company has no connection with the *Times* or the *Times* Book Club, but a member of the club is the promoter, and has undertaken to pay all preliminary expenses up to allotment, estimated at £2,000, for which he receives £1,000 in cash and £2,000 in shares, and apparently the appointment of secretary to the company. No restrictions as to the price and time of sale will be attached to books published, generous terms will be given to all local distributing agencies which afford reasonable facilities to the public to inspect the books before purchase, and, in fact, author and public alike are to receive untold benefits from the cleverness of this band of enthusiasts. All these things are to be accomplished, and yet the shareholders are to receive not less than 10 per cent. We can only hope that none of the various interests will be disappointed. The directors can qualify for their posts by an investment of £100, and in return will receive £200 per annum and reasonable travelling expenses, together with one-tenth of any profits remaining after 8 per cent. has been paid on the capital. It is a risky venture, especially as none of the directors appear to have any special qualifications for the business, and the public will be wise to let them try the experiment with their own money.

Blue Bell Gold Mines, Limited.

In a prospectus inviting subscriptions for 100,000 ordinary shares of 4s. 2d. each issued by the Investment Corporation, Limited, this Canadian company is described as being "well established"; yet it was only registered in Toronto on April 8 last. The company has a nominal capital of $5,000,000, of which $2,000,000 are reserved for working capital, and owns 28 claims in the Larder Lake district of Northern Ontario "staked out by experienced miners, men who know gold property when they see it." The description of the wealth to be obtained by merely scratching the ground is enough to make speculators' mouths water. A good deal of high falutin' language is indulged in about the directors of this company having been responsible for the rise and success of the Great Cobalt district, and about their standing being such that they could not be associated with anything not in every way legitimate and honest, and the mining experts go into rhapsodies over the results obtained from two samples submitted to them for assay. All that is said may be true enough, but something more is required to explain why it is necessary to come here for a paltry $100,000 of the capital. If there is much ore like the samples, it would take less than 20 tons to produce the cash asked for.

Deerlodge Consolidated Mines, Limited.

This company acquires the Emery Gold and Silver Mine in the State of Montana, U.S.A., together with certain neighbouring properties, covering an aggregate area of about 220 acres, for which it pays £84,000 in cash and £90,000 in shares. Of these sums the Consolidated Investment Company, Limited, takes £23,650 in cash and £55,000 in shares as its profit on the deal, and the Central Mines Development Company, Limited, £15,000 in cash and £35,000 in shares. The Consolidated Investment Company also receives £10,000 in cash for preliminary expenses and £16,000 for underwriting the 160,000 shares, which are offered for subscription out of the total capital of £250,000. A working capital of £50,000 will be provided out of this issue, of which it is proposed to spend £20,000 on the erection of a 150-ton mill and £10,000 on development. The mine was located in 1888, and has been worked on a small scale by successive owners, who have contented themselves with taking out and shipping only the actual pay streak, the balance of the lode material having been either packed back into the stopes or put upon the dumps. Owing to the nature of the development work carried out, there does not seem to be much ore in sight; but it is estimated by the expert who examined the property that the "actual, probable, and possible" ore in the Carbonate Hill claim alone amounts to 360,900 tons, of which 134,900 tons are considered to be worth £312,000 nett, while another £48,000 is expected to be derived from the dump and the stope fillings. On the basis of 75 tons of dump material, 75 tons from lode, and 34 tons pay streak per day, it is calculated that with 250 working days per annum a profit of £59,766 would be earned in about a year after the commencement of operations. The Emery lode has been proved on some of the neighbouring claims, and according to Mr. Addie, the property offers favourable prospects of good and steady returns for many years. But is all estimate and the shares are decidedly speculative.

Electrical Securities Trust, Limited.

The promoters of this company are of opinion that the great increase in the construction of electrical undertakings at home and abroad has produced a large amount of bonds, debentures, and shares of electric lighting, power, and traction companies which offer chances for safe and remunerative investment. By way of making a beginning they have acquired from Bruce, Peebles, and Co., Limited, and the Electrical Conversion Syndicate a number of securities, most of which were taken in payment for the construction and equipment of electrical enterprises. For these they pay £105,000 in £1 shares and £95,000 in cash, and in order to provide the latter sum an issue of £100,000 5 per cent. 10-year debentures, forming part of an authorised total of £200,000, was offered for subscription at par. The total share capital is £200,000, and in addition to the 150,000 shares above noted, 507 have been taken up for cash and 10,000 are paid to the Alliance Trust Co., Limited, as commission for underwriting the debentures. It is stated that the debentures are secured by the transfer to the Alliance Trust of investments to the value of £200 for each £100 of debentures. The trust deed also provides that should the total income from the investments in any one year after June 1, 1908, not be equal to 7 per cent. on the outstanding debentures, the company may be called upon to substitute others, or lodge additional securities, which will produce sufficient revenue to make up the income to 7 per cent. No indication, however, is given as to the standing of the securities lodged, and, for all intending applicants can tell, these may be a miscellaneous lot of issues made by unimportant undertakings, for which it would be difficult to find a market. The mere fact that this may be the case makes the debentures a somewhat risky investment.

Buenos Ayres Central Railway.

An issue of £600,000 in 4½ per cent. first mortgage debentures, due 1950, is announced by the River Plate

Loan Trust and Agency Company on behalf of the purchaser. The price asked is 87 per cent., so that the bond should prove attractive to those not afraid of a little risk. In this instance the risk does not seem to be really very formidable, as the Central line, according to the map and prospectus, occupies a good position, and will soon be connected with the Entre Rios Railway, so as to be able to work through traffic with and for it. The money now being raised is to provide for accommodation of this traffic by improving the rolling stock, increasing the capacity for handling the business on the main line, completing the extension to Rojas, and so on. Traffic receipts showed a noticeable improvement in 1906 over 1905, and there was also a gain of nearly £8,000 in the nett income, while for the first five months of the current year gross earnings show an improvement of 20 per cent. Messrs. J. G. White and Co., Limited, set forth the actual position of the undertaking in a carefully drafted letter to the issuing company.

EAST INDIAN RAILWAY COMPANY.

Subscriptions will be received at the Bank of England for £2,000,000 3½ per cent. debenture stock of this company, guaranteed as to principal and interest by the Secretary of State for India in Council. The loan is required for the general purposes of the company, and is in addition to issues of 3 per cent. debenture stock for £8,000,000 already made. It is not redeemable until on or after August 4, 1937, but may be redeemed at par, either wholly or partially, after that date, with the consent of the Secretary of State, on twelve months' notice. The stock is, of course, a trustee security, yielding about £3 13s. 6d.

Deposits against future queries may be lodged with the Publisher.

Mithra.—(1) The company is in very good hands, and has made a most promising beginning. On present results the shares seem fully priced, but there are possibilities which make them look a fair speculative purchase. (2) This has not such a good chance as No. 1, as promoters' profits were large and preliminary expenses heavy. Still, the possibilities for the next few years are so great that the shares might be worth buying to a small extent. (3) A very doubtful proposition which had better be left alone. (4) These are 10s. shares. We are doubtful about buying the shares, although the company is said to be doing better, and would prefer the debentures as a speculative investment. (5) Results so far obtained do not afford much foundation for an opinion as to the merits of the company. Leave the shares alone until more is known of its operations. (6) We fear there is not the slightest chance of a dividend yet. The company is steadily improving its position, but has a lot of leeway to make up before it can hope to pay anything on its ordinary stock. (7) These should be a fair enough investment, although there is little room for improvement in capital value at present. We have a balance of 18s. to your credit.

A. McK.—Both of these stocks are perfectly safe. We cannot say when a rise will take place, but one must come in time, and it would be a pity to sacrifice stocks of this kind, whose interest is secure under any circumstances.

R. L. R.—(1) We fear you cannot hope to see these stocks reach the figures you paid, but do not sell yet. We are not in favour of averaging as a rule, and would not recommend it in this case. Better wait for a recovery, and then sell. (2) This company is feeling the strain of severe competition in the class of work it turns out, and its position is hardly strong enough to enable it to stand up to its rivals. We are inclined to say cut your loss.

TIMOTHY.—(1) Hold these, but do not buy more. Last report showed some falling off in revenue. (2) These may be kept for the present. See our issue of April 27. (3) Purely a speculation, but has prospects. Hold what you have, but do not average unless you bought originally at a very high figure.

J. H. W.—This company was reorganised two or three years ago, and although it is no doubt doing better at present its financial position is not strong. Debenture debt exceeds issued share capital and proportion of ordinary is very small. See our issue of February 23. Thanks for your very interesting letter and for your good wishes.

H. R.—The buying is what the market calls "ragged," *i.e.*, without substance, and we should not like to buy, even for a gamble, until the stock has gone back, say 3 to 4 points.

R. D. P.—Accounts of this property are glowing, but it is a long way off, and there appear to be engineering difficulties to overcome. It is a question whether the company has sufficient capital to carry the scheme through. It is said local people are willing to [illegible], and if they do, it may help the company to success. Meanwhile there is practically no market for the shares.

PUBLIC INCOME AND EXPENDITURE.

ABRIDGED PROSPECTUS.

EAST INDIAN RAILWAY COMPANY

ISSUE OF £2,000,000 EAST INDIAN RAILWAY £3 10s. % DEBENTURE STOCK.

Principal and Interest guaranteed by the Secretary of State for India in Council, as mentioned below.

Issued under the authority of the East Indian Railway Company's Act, 1895 (58 Vict., ch. 20), and constituted by the undermentioned Trust Deed.

PRICE OF ISSUE, £95 PER CENT.

Three Months' Interest due on the 4th November, 1907.

THE GOVERNOR AND COMPANY OF THE BANK OF ENGLAND give notice that they are authorised by the Directors of the East Indian Railway Company to receive applications for £2,000,000 £3½ per cent. Debenture Stock at the price of £95 for each £100 of Stock.

The sanction of the Secretary of State for India in Council has been obtained to the issue, under the authority of the East Indian Railway Company's Act, 1895, of the present loan, which is required for the general purposes of the Company, and is in addition to issues of £3 % Debenture Stock for £8,000,000 already made under the same Act. The payment of both principal and interest is guaranteed by the Secretary of State out of the revenues of India in manner appearing in an Agreement between the Secretary of State and the Company, dated 10th day of July, 1907.

The Register of the Debenture Stock is kept at the Company's Offices, and the Stock will be registered therein in the names specified in the requests made for that purpose.

Applications, which must be accompanied by a deposit of £5 per cent., will be received at the Chief Cashier's Office, Bank of England, E.C. In case of a partial allotment, the balance of the amount paid as deposit will be applied towards the payment of the first instalment. Should there be a surplus after making that payment, such surplus will be refunded by cheque.

Applications must be for multiples of £100. No allotment will be made of a less amount than £100 Stock,

The dates on which the further payments will be required are as follows:—

On Tuesday, the 30th July, 1907, £25 per cent.;
On Tuesday, the 27th August, 1907, £20 per cent.;
On Tuesday, the 24th September, 1907, £20 per cent.;
On Tuesday, the 22nd October, 1907, £25 per cent.;

but the instalments may be paid in full on or after the 30th July, under discount at the rate of **£3½ per cent.** per annum. In the case of default in the payment of any instalment at its proper date, the deposit and instalments previously paid will be liable to forfeiture.

The Stock will be registered in the Company's books on or after the 4th November, 1907, but allotments paid up in full in anticipation may be registered forthwith. (*N.B.*—The Register of the Stock will be shut from the 14th October, 1907, to the 2nd November, 1907, inclusive.)

Applications for the Stock must be on printed forms, which may be obtained at the Chief Cashier's Office, Bank of England, E.C.; at the Branches of the Bank of England; at the Offices of the Company, 28-30, Nicholas Lane, London, E.C.; or of Messrs. Mullens, Marshall & Co., 13, George Street, Mansion House, E.C.

The List of Applications will be closed on, or before, Wednesday, the 17th day of July, 1907.

BANK OF ENGLAND, E.C.
12th July, 1907.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Reduced from 4½ per cent. on April 25.)

Norfolk House, Friday Evening.

Discount houses have begun the half-year well, and should be able to lay up a nice sum in profits against the difficult times likely to be encountered towards the end of the year. All week they have got their money at 2½ per cent. on seven-day loan, and call money has often been no more than 2 per cent. The supply has not been excessive by any means, but the Bank return shows that the amount of available credit is still sufficient to prevent anything approaching immediate stringency. To-day's payment for £500,000 more Treasury bills than the Treasury took up in expired paper did not ruffle rates in the least.

While this is the position in the short loan market, discounts have been tending to harden. In the beginning of the week it was difficult for bill brokers to get as much as 3⅜ per cent. on three months' remitted bills. They did ask 1/16 per cent. more, but seldom got it, whereas on Thursday the rate on such bills had advanced almost to 3⅝ per cent., and some of the houses talked of 3¾ per cent. In fact, 3 7/16 per cent. has, so far, been about the best of it for paper of this usance, and even that rate would not have been readily obtained but for the unwillingness of the banks to take anything but short bills from the brokers. This points to a fear on their part lest trouble should lie ahead, and also explains why short-dated bills should be so comparatively easy to sell.

The market dipped this morning by 1/16 or so, and we fear the three months' rate became no better than 3½ per cent., but there was a disposition to stiffen it up again before the close, and the dealers are kept apprehensive by reports of "bills returned" and big failures among the Egyptians. Six months' bank bills were quite hard at 4 per cent. as a minimum.

Why should the longer-dated usances have kept so hard? There is no particular reason beyond the hidden rottenness and the resulting universal unsettlement of money markets coupled with the fear of renewed disturbance to credit in New York, difficulties in Manchester, in London, and on the Continent. And although both the French and German markets look more comfortable, the Bank of France in particular showing an increase this week of over £1,000,000 in its stock of gold against a decline of more than £5,000,000 in its active note circulation, exchanges are still low enough to warn credit dealers here that they must not let discount rates fall. The Paris cheque has only recovered a centime to 25.15 during the week, and gold continues to go away, probably to Egypt, and may also go to South America. Our market remains more disturbed than it will admit by the unseen consequences of the Egyptian collapse, and although no important breach in the delicate superstructure of credit has yet taken place, there can be no doubt that losses will have to be faced which must embarrass users of credit in London and other parts of the country as well as on the Continent, and that may bring some high heads low before all is settled. It behoves the discount houses, therefore, to maintain their rates, and the longer they can do so the better. If they let them slip the Bank of England will probably have to sweep the open market bare of credits before the month is out.

Prospects of gold arrivals continue good enough. The Transvaal output for June, notwithstanding the strike of white labourers on the Rand, amounted to £2,155,976, the total production being 507,559 ozs., or a mere 16,918 ozs. less than in May, which had one more working day. Even if this output should fall

off a little in coming months, it appears probable that the supply will remain in excess of last year's, and although the amount to be dealt with next week in our bullion market is only £390,000 in from South Africa and £60,000 or so from other quarters, the shipments this week from South Africa to London amount to £968,000. Unfortunately, these supplies of gold produce other effects than those connected with the strengthening of the market. Prices are raised by the over-abundance of the metal; that is to say, gold is depreciated against commodities, and as prices go up the demand for currency expands, so that the effect of the gold imports is more or less neutralised. Hence to some extent the gold hunger visible in so many parts of the world, a hunger which leads us to infer that money in the market is not going to be made cheap for the borrower by this means. It is much more likely to act as a paralysis-inducing stimulant.

This week's Bank return is interesting, owing to the very large repayments the market has made to the Bank, other securities being down £8,055,000. That this reduction of the market's debt should have been accomplished without disturbing rates is most satisfactory, but we must not forget that the Treasury gave help to the amount of £3,050,000, including the £1,500,000 it had to borrow in order to pay the dividends. Hence other deposits have fallen off only by £3,769,000, because the banking reserve is also £732,000 up, in spite of the fact that about £383,000 of the £736,000 nett received in gold from abroad was drawn into the circulation. The public appears to have been changing notes for gold, as the active note circulation is less by about £380,000. That gold should be sucked into the circulation at the same time that the Bank remains liable to drafts for export affords ample warranty for the cautious action of the discount market.

The Bank of England is probably far from looking with confidence to the near future. It has the power also to screw that market up, since, in spite of the very large repayments made this week, it is estimated still to hold about £3,000,000 of bills taken from the brokers. Should the running off of this debt fail to effect a hardening in rates outside, it would take very little borrowing on the Bank's part to make outside rates as tight as a drum, and it is more probable, in view of all contingencies, that the early autumn will see a renewed advance in its rate rather than a decline.

Calls on new issues are rather important this week, aggregating, as they do, £2,943,000. Of this, the largest single item is £1,000,000 due next Thursday on County Council scrip. But Monday's total is the most formidable of all, amounting, as it does, to about £1,610,000 made up of £387,000 by the Argentine Government on its internal bonds sold here, £758,000 on the Straits Settlements loan, £200,000 on B.A. and Pacific new debenture stock, and £112,500 on Quebec and Western debentures. Miscellaneous smaller calls make up the total. Some of these loans give other countries power over our gold.

Silver.

Only a very moderate inquiry has been received for silver on account of the bazaars this week, but the Indian Government is still believed to be buying moderately, and the market consequently remains steady. Prices on Monday advanced to 31¼d. per oz. for spot and 31⅜d. per oz. for delivery two months forward, but the improvement was promptly lost the following day, and quotations remained at 31d. per oz. for both positions until Thursday. A rise of ⅛d. then took place owing to a few orders of a general character, and this was followed to-day by a further gain of ⅛d., making both prices 31¼d. per oz. Applications for the Rs. 70,00,000 Council drafts on India offered this week amounted to Rs. 3,60,84,000 in bills and Rs. 2,94,00,000 in telegraphic transfers. Of these Rs. 27,11,000 were allotted in bills and Rs. 42,89,000 in transfers, tenders at 1s. 4 1-32d. and 1s. 4⅛d. per rupee receiving about 7 per cent. The amount to be offered next Wednesday is increased to Rs. 80,00,000.

BANK OF ENGLAND.

The Stock Markets.

We regret to say that the anticipations from time to time indulged in by us continue to be justified. It would really be most pleasant to be able to admit that we have been mistaken, but there is unhappily little chance of that for some time to come. The investment business is fair, but nothing remarkable, and quite insufficient to brace markets up while the position of credit everywhere remains strained or precarious. That Egyptian crisis, for instance, is only superficially plastered over. Credit is being employed to hide the depths of insolvency below, but that does not help markets; it rather demoralises them, and beneath the surface the disease continues to spread. Manchester is a good deal disturbed by the losses already inflicted or in prospect over this Egyptian collapse. In London, too, a most respectable firm of foreign bankers, Messrs. Joseph and Bergel, had to pull up this week from the same cause, and it is impossible to say how far the still solvent credit institutions in Egypt are impairing their strength by the efforts they make to prevent further large insolvencies from coming to the surface.

The American market, however, continues to be the principal source of our troubles, and seems likely to afford us ground for anxiety at least throughout the rest of this year. The railway and other corporations that have been trying to borrow in New York and Europe have not been very successful, and an underwriting syndicate has had to take up most of the Union Pacific Company's bond issue, only about £800,000 having been sold. The Atchison Company has also done badly, having received only about £1,800,000, chiefly from abroad, it is said, domestic lenders being quite out of conceit with these issues. The company is apparently appealing to a syndicate which is willing to lend what it wants for six months at 6 per cent., taking an option over the unsold bonds. Then the Baltimore and Ohio Company is said to have borrowed £1,000,000 simultaneously with the announcement of a dividend at the rate of 6 per cent. on its common stock. Thus it goes on because the commitments entered into before the crisis developed force corporations to borrow on no matter what terms.

Our market has also been afflicted this week by the new demands made upon it from various quarters, and the reception given to these demands proves that, as we have kept insisting, the British public is in no mood to lend at fine rates of interest. The small Middlesex loan has gone mostly to the underwriters who, according to the *Times*, had to take 76 per cent. of the whole, small though it was. Others inform us that the percentage unsold was still higher, and in spite of the announcement that the Great Northern issue and the Bristol loan have been taken up, we are assured by investment brokers that their clients have not applied for either. So when towards the end of the week it became known that the East Indian Railway Company was about to offer £2,000,000 in 3½ per cent. debenture stock, the Consol market became quite sulky and depressed. Both the rate of interest and the price would have looked tempting a few years ago, for the loan is to be offered at 95, but so little confidence does the board feel in its success, that it is being underwritten for a commission of 1 per cent., and the present indications are that it will get a cold reception.

All the markets of the world have overstrained their credit, and consequently any new demands upon them cannot fail to excite displeasure, not to say disgust. It takes our own market all its time to avoid a repetition of the periodical fits of depression bordering upon disaster that have laid hold of it during the past twelve months. It has no disengageable means with which to take up new loans, and the public is not disposed to come to its assistance, except on terms which lenders who have been spoiled to such an extent by easy borrowing in past years are not yet prepared to concede. In time the position will right itself, borrowers will be delighted to offer higher rates of interest, and the necessity laid upon them to do so will act as a restraining influence upon their spendthrift habits, and the stock markets will, after two or three further drastic purgings, attain to a healthier condition. But this will take many months, perhaps years, and meanwhile nearly all Governments, as well as municipal and joint-stock corporations of every degree have over-committed themselves, forged ahead as if everything were just as usual, as if the hundreds of millions of realised wealth swept out of existence by the Cuban, South Africa, and Russo-Japanese wars could be spared without inconvenience. Their position is consequently such that they must borrow on any terms to a certain extent, and until actual commitments have been cleared off or adjusted all stock markets will continue to be afflicted in the way they are now. Prices will be unstable, and the recoveries that from time to time take place will be almost entirely the product of "bear" covering.

Trustee Securities.

The market for these has been poor throughout the week, buying most limited, selling consequently difficult, and prices without animation. The price of Consols dips on every fresh announcement of new loans, and the investment demand which was felt a week or so ago in India stocks, London County Council stocks, in some provincial municipal securities, and in colonial issues of various kinds has subsided. India stocks close flat on the new Railway Loan. There looms ahead of the Colonial market those new issues which must be made to prevent default in the repayment of loans about to fall due, and in spite of the improved position of Australia through a succession of good seasons it will be with no small trouble and sacrifice that the money to renew the debt will be provided; prices are meanwhile good. Many of our own municipalities are just as much in need of loans as Bristol, some of them in greater need, but they are not going to get money at 3½ per cent., and must make up their minds to offer at least 4 per cent., with the stock even then more often than not placed at a discount, underwriting commissions allowed for. In a market thus constituted speculation is almost inconceivable unless a "bear" attack were made upon prices, which is most unlikely, because in the great bulk of these securities nothing resembling an active market exists. A sale is a matter of negotiation.

The Foreign Market.

Paris has been steady on the whole this week, and inclined to absorb some of its specialities, like De Beers shares, but it has, on the other hand, sold Rio Tinto shares to an extent which has contributed sensibly to the disorganisation of that corner of the market. Russian bonds, however, are being demonstratively purchased on French account, and dealers here declare that this means the approach of another big Russian loan. That is highly probable, else why has the Russian Press taken to abusing the French Government, threatening a rupture of the Franco-Russian Alliance? As that Press is completely under the control of the bureaucratic Government, the assumption of an attitude of this description points to difficulties in the negotiations for launching another Russian loan on the Paris market, but it is probably coming all the same, because Russia is the master of the high finance of Europe, which has committed itself much too deeply to the fortunes of the Empire to be able to draw out. Were a loan to be refused, and

Russia to make default on even a portion of its foreign-held debt, there might be serious affliction amongst some of the great finance houses of the Continent. Business in foreign bonds here has been confined mainly to Japanese bonds, because investors continue to take these and little else. But they have been scared off this week by Yankee bluster, and close flat. The rise in Brazilian bonds which has been manipulated is not a consequence of investment buying, but a preliminary, so it is said, of a new loan from that quarter also. The rumour has caused the advance to be replaced by depression. Argentine Four per Cents. have just been put down—no business. Egyptian bonds have remained tolerably steady, and unaffected by the smash amongst the financial gamblers of Alexandria and Cairo, but the business in them has dwindled to small proportions, and altogether the Foreign market is a hungry one. Contango business hardly exists in it.

The Half-Year's Dividends.

Dividend estimates for the past half-year current in the Home Railway market are tolerably cheerful. The markets, that is to say, are looking for increases in many instances, and for decreases only in a few. Taking the increases first, it is thought that the North-Eastern Company may pay a dividend at the rate of 5⅝ or even 5¾ per cent. per annum against 5¼ per cent. for the first half of last year, Midland deferred a 2½ per cent. rate against 2¼, the Great Western Company a 4 per cent. rate against 3¾, the North-Western 5¾ per cent. against 5⅝ per cent., and the Lancashire and Yorkshire 4¼ per cent. compared with 4 per cent. Among the smaller lines, the Furness is expected to give a 3 per cent. rate against 2¼, and the North Staffordshire an increase of ¼ per cent. per annum at 4¼ per cent. Dividends at a rate per annum identical with the payments for the first half of 1906 are expected on the following:—South-Western 4 per cent., Great Eastern 1¾ per cent., Taff Vale 4 per cent., and City and South London 2¼ per cent. The Great Northern Company is also expected to pay the same rate of 3 per cent. per annum, with, however, a larger balance left to carry forward, and the Central London might, it is thought, pay at the rate of 4 per cent. On the other hand, it may not give more than 3 per cent.; all depends on the amount carried to reserve. These following lines are in the black-books, being expected to yield less:—Nothing to ½ per cent. per annum is expected on Metropolitan stock against a dividend at the rate of 1½ per cent. for the corresponding half-year; a decline of ½ per cent. per annum to ¾ per cent. is also looked for on South-Eastern ordinary, and Chatham preference may only get 2¾ per cent. against £2 17s. a year ago. The Great Central Company, too, is expected to provide no more than 1 per cent. per annum on its 1889 preference stock against 2 per cent. As for the poor District Company, it may again give 15s. to holders of its guaranteed stock, or 1½ per cent. per annum, and the recipients should be glad to get as much as that. We are not so sanguine as the market.

Home Railway Stocks.

Traffic receipts for the first week of the new half year were wonderfully good considering how wet the week was and how much the Great Western Railway suffered in consequence through the diminution in the Henley Regatta traffic. The *Railway News* says that the increase was £64,684. No surprise would have been excited had there been a decrease, but the market was not made strong by the figures, because the public temper remains hostile to this class of stocks. The market, too, dreads the effect of dearer coal, of dearer materials of all descriptions. It is also afraid of the agitation amongst railway servants, and even if the dividend estimates given above should be justified in every instance—we are very doubtful about the market's guess about the District—the larger or even distributions will do little or nothing to stimulate buying. Continuation rates have again been light, for the market was able to get its money ¼ per cent. cheaper than at the end of June, viz., at 3¾ per cent., and the weight of the account was lightened in many instances by the extent of the position open for the fall, so that loans to the end of the month could be negotiated at from 4½ to 5 per cent., while on South-Eastern deferred there was usually no rate at all. For all that the market is without life and likely to remain so. An investment demand, however, continues for the secured stocks.

American, Canadian and Foreign Railways.

About Yankee Railroad shares, the only remark worth making this week is that the Continent appears to have joined with resolution in the selling. Once or twice this week New York cables have told us that on balance London bought a few shares, but this does not alter the fact that every steamer which leaves our shores for America carries home some of the securities formerly held here. And the weakness on Wall Street is frequently accentuated by dumps of this description. If the Continent, therefore, persists in selling, as it is but too likely to do, having been well warned by Mr. Thomas Lawson, as well as by the demoralised state of Wall Street, we may soon have another crisis over there, and each fresh break down promises to be worse than the one that preceded it. Money is also very uncertain in New York, and this week flurried up to 8 per cent. or more on call loans, thanks probably to the withdrawal of Government deposits from the banks, for it has since gone back again to from 6 to 7 per cent., but there will be no real solidity in the Wall Street market any more than in ours this year, and therefore we continue to advise those of our readers who may be holding American Railroad shares to dispose of them on every rise, and to avoid being drawn into the whirlpool again until the long agony of credit contraction has worked itself to its natural conclusion. It is ominous that bonds are disposed to fall in price, even good bonds.

The same remark applies to Canadian Railway securities, and we become more and more suspicious of them the more we read of the wonderful harvest that is coming, the marvellous development of industries which is going on, and the diligent efforts of all kinds made to persuade us that no country in the world at the present time offers such a field for the investment of money as Canada. Apparently, however, there is a considerable account open for the fall both in Yankee rails and in Grand Trunk stocks and Canadian Pacific shares, so that contangoes were not heavy this time although they perhaps look rather higher. The new account is a nineteen day one, and the fact that 4 to 5 per cent. was again paid to carry over speculative positions open for the rise in Yankee Railroad shares, or that the contango on Grand Trunk ordinary stock was increased by 3d. to about 1s. 6d., is no indication that the account open for the rise has become larger during the past ten days. If the account open for the fall is really considerable it may produce occasional jumps in quotations, but the market is not solid at any point and ought to be left alone by those who regard the contents of their purse.

On Argentine Railway stocks, contango rates were sensibly lower, about 5 per cent. instead of 5½ at the previous settlement, and there is comparatively little active speculation in these, while investment buying is felt here more than in any other part of the Foreign Railway market with a favourable result on prices. It is not vigorous buying but tolerably steady, and in time will be effective, provided no fresh demoralisation occurs through further appeals for capital. Already it has sensibly lifted prices.

In the Brazilian group the only striking movement has been a sharp relapse in San Paulo stock, which has been sold by frightened holders who do not like the arrival of Yankee and Canadian financiers to disturb the quiet harmony hitherto existing between the railways of that province. We think the alarm is somewhat exaggerated, but it depressed San Paulo stock at one time, although the decline has been more than recovered, and the effect upon other Brazilian railways has

been rather damping. Uruguayan railways are quite out of the current, but firm, and scarcely any business goes on in the various issues of Russian Railway bonds, some of which appear to us to be quite low priced, even allowing for a continuance of disorder, more or less, throughout the whole empire. Nor has there been any appreciable business in the Cuban section, which remains out of favour and distrusted, prone to recede for no particular reason that we can discover except distrust of American designs. Forced liquidation, however, affects this market perhaps as much as any, because it is a new market and the stocks of some of the railways, particularly the United of the Havana, were very much inflated by purely speculative influences some time ago. This always means that when a Stock Exchange falls into adversity the recoil becomes excessive where particular stocks have been rigged to excess. Mexican Railway stocks have been helped by "bear" closing, and some further acquisition by the "bulls," but the movement on the week is trivial.

Banks and Industrial Securities.

Bank shares have been well supported this week, and the declarations made by the London banks for the past half-year have sensibly contributed to strengthen prices. Dividends have been maintained, and with few exceptions the directors of the banks have confessed and provided for the losses caused by the depreciation of Consols and kindred securities. None of them have gone so far as Manchester and County and Manchester, Liverpool, and District, both of which have written down their Consols to 82, but they have either taken them into the balance-sheet at 83, or written them down to the market price of the day, when the accounts were made up. In some instances this has involved withdrawals from the reserve funds, but as these are usually ample the sacrifice has not been of a very important description, and the accounts as published uniformly indicate a profitable half-year's business, as will be seen from our analysis of the individual reports and the summaries given elsewhere. Brewery things have been shuffled a little, and Bieckert's closed 10 lower.

Commercial securities are beginning to attract a little attention, and there ought to be bargains to be found, at any rate amongst the debenture issues of many of these companies, as well perhaps as amongst their preference shares. Business, however, is thin, and will not develop much in present circumstances. The firmest market is that for nitrate shares, and the only prominently flat section has been that for Motor 'Bus and Cycle securities. It is said that a new issue of shares is contemplated by the Argyll Company, and if that expectation proves to be true, we are sure to see considerable further demoralisation in this part of the market. The shares of the new Vanguard "Motor 'Bus' 'Company are now being quoted, and at figures which by no means encourage firmness in the market, the price of the ordinary shares being put at 2s., and of the preference at 7s. 6d. The debentures which replaced the preference shares of the London Motor Omnibus Company were quoted at 65-70, representing, the *Morning Post* says, from 3¼ to 3½ for the old £5 shares. That is by no means brilliant, and a "10 per cent. price" means a sham market.

Electrical things have been heavy. Land stocks strong, with a rise of 5 in Hudson's Bays. The Insurance market has not been ruffled in any way by the news that the Phœnix and Pelican offices have been merged into one company, and dealings are slow in all this group. Prices were also little disturbed anywhere in the Iron, Coal, and Steel group, and all we can say about them is that the market is quietly steady, ready to improve if it gets a chance. Tea and Coffee shares attract buyers still, and Telegraph and Telephone shares have been firmer. Financial Trusts, too, have been good in places.

The Banks and Their Securities.

All the great banks of the kingdom have behaved admirably in the matter of writing down the prices of their securities. They have not all told their shareholders how much of their profits or of their reserve has been set aside in order to cover the depreciation in their Consols and other stocks, but where this information is concealed the directors announce that they have written the securities down below market prices. Two Manchester banks, the Manchester and Liverpool District and the Manchester and County, have written their Consols down to 82, the District at the expense of a draft upon its reserve. Most of the other banks have only brought the price to 83, and have, generally speaking, avoided touching reserves. The London and County, for instance, has taken £100,000 from the half-year's profits, while maintaining the dividend at the rate of 20 per cent. per annum, in order to write down its investments, and still had £100,000 left to carry forward. It is true that the amount thus assigned is merely £25,900 more than the directors set aside a year ago to premises account and the reserve, but these accounts can well afford to wait. The Capital and Counties has also taken £100,000 to reduce the book cost of its investments, or £60,000 more than was assigned to other accounts a year ago. To do this a balance forward on the comparison of half-years has been reduced by £5,547 to £49,774, but none the less does the ability to make liberal provision for losses wholly beyond the control of the management indicate excellent profits for the past half-year. Messrs. Glyn, Mills, Currie, and Co., too, have written their Consols down to 83, and the London and Provincial Bank has also put its Consols at the same figure by a transfer from the account of provision for bad and doubtful debts and contingencies. This has relieved the current revenue, which was none the less satisfactory, enabling the directors as it did to pay the usual dividend of 18 per cent. per annum, to add £10,180 to the reserve fund, to apply £10,000 in reduction of cost of premises, and to give £5,000 to the pension and gratuity fund. This still left £50,852 to carry forward. Will Mr. Asquith note this excellent example, and go and do likewise.

Friday Evening's News.

A very heavy settlement in the investment section of the market was concluded to-day, and did not disturb money rates in the least. All the business to be done, however, seems to have been embraced in the account just closed, and now that the market has entered upon a nineteen day one, its aspect is one of desolation. No business of any magnitude is going on, and mouths gape for rumours, the more thrilling the better. Paris bought a few Tinto shares to-day, and prices were tolerably steady all round, but it was not because of the inflow of buying orders. The new issues of the week were quoted as follows:- Middlesex scrip 1 discount, Bristol scrip par, and Great Northern new preference at 79¼ against an issue price of 78½. No inside difficulties of any sort were even hinted at in connection with the account just finished. Outside, however, failures were talked of, and more than one "bucket-shop" is said to be needy.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—**Rise:** Exchequer 1909 ⅛, to 103-104. Bk of England 2, to 264-269. **Fall** 2½ Annuities 1905 and Account both ¼, to 82¼-82⅜, Irish Ld Stk. Accounts ¼, to 84-84½, Local Loan Account ¼, to 95-95½, Transvaal Account ¼, to 93¼-94, India 3½ p.c Account 1½, to 97-98, do. 3 p.c Account 1½, to 85-86, do 2½ p.c. Account 1, to 71¼-72¼.

CORPORATION STOCKS. Rise: Metro Water "B" Account ½, to 89-90, Belfast 1, to 98-100, Mersey Dks. 1, to 94-96, Stvns. 1, to 86-88, Bristol Deb. 3½ p.c ½, to 99-101, Leeds 4 p.c Cons. 1, to 105-107. **Fall:** L.C.C. 3 p.c Account ¼, to 83-83½, Lancashire 1920 1, to 83-85, Glasgow 3½ p.c. 1, to 98-101, Hull [illegible].

COLONIAL AND PROV. GOVT. SECURITIES.—Rise: British Guiana Cons. 1, to 100-102, N.S.Wales 1915 ½, to 102½-103½, Quebec (Prov.) 5 p.c. MINING NEWS AND NOTES.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No cuttings or any advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

There was not much cause for complaint on the way the Mining sections commenced the week. Great expectations were formed that the Tanganyika outburst was merely the preliminary to a well spread and well sustained rise, not only in Rhodesians but in Kaffirs and any other sections that could be roped in. Members turned up early on Monday and in considerable numbers to participate in the fun, and prices led off in most encouraging style. Values were raised a point all round to the accompaniment of plenty of noise, and then matters paused, waiting expectantly for the appearance of the brokers with pocketsful of public orders. Presently in they came, but came jobbing books, but oh! heavens, the whole blessed crowd wanted to sell! Outsiders, if they did anything at all, offered up a prayer for the opportunity last week's rise had given them, and cut some more losses, thankful for even the small ease to ease the agony. This so disgusted the professionals that they began to sell as well, pleading the Russo-Japanese Armistice and Japan as the reason, and also the imminence of the settlement, which commenced on Tuesday. So the early strength soon gave way to dulness and making-up prices were not quite as flattering as had been hoped.

So far as outward appearances went, there was no increase in the speculation open for the rise and rates showed little change. The general charge for continuing Contango, Limit, and Finance shares was 6½-7½ per cent., but Kaffir stocks, Mexicans, and Johnnies were all arranged at 5½-6½ per cent., Continuation at 4½-5½ per cent. and Last Rands at 3-4 per cent. Among Diamonds, De Beers were continued at 4½-5⅝ per cent., New Vaals and Premiers at 5-6 per cent and Jagers at 4-5 per cent. In the Rhodesian group the principal interest centred round Tanganyikas, owing to the renewed gamble in the shares, and givers sometimes paid as much as 6-10 per cent., but the rate subsequently eased off to 5 per cent. The general rate was 6-8 per cent., and Charterd were done at 4½-4¾. West Australians and Siberians were taken in at 6-8 per cent. where any business was open, and with the exception of Hannans, Coolgardies and Fingalls, which were carried over at higher rates, the West Australian rate was 6½-7½ per cent. Nearly all the business in the remaining sections was arranged at 5-8 per cent., and Great Cobars were done at 5-7 per cent. and Jumpers at 5 per cent. Of the Copper shares Cananeas was the favourite, and the charge on Turtles and Anaconda was 5½ per cent., a very light rate considering the heavy rise during the settlement.

Making-up prices provided a good amount of [illegible] by Tanganyikas in the South African group, which showed a rise of 1⅝. Ferreiras rose 1, Crown Deep 7/8, De Beers deferred 1⅛, H. F. Cos, Central Minings and [illegible] Reefs, Northern Coppers and Robinsons ¼, and a host of others ¼ or less. New Vaals, however, showed a rise of [illegible] those ¼. West Australians and Kalgoorlies were slightly better in a few cases, and among West Australians Great Fingalls rose 5s, Ivanhoes 5s, Horseshoes and Oroya Brown Hills 2s 6d, and Sons of Gwalia 5-32. Broken Hill things did not show much

movement, but Norths were up 3/16 and Proprietary were 3-32 better. Zincs made up just 5s. lower. Copper shares exhibited big rises, led, of course, by Rio Tinto, which were 3¼ up. Bostons rose 1/16, Anacondas 1, Capes ½, Great Cobars and Newhouse Mines ¼, Spassky's 1/16 and Cerro Muriano ¼. Mount Lyells were exceptionally 3/16 lower, allowing for the dividend of 3s. 6d. per share. Tins were irregular, and Siberians higher if they moved. Several American shares were up, especially Frontinos and Esperanzas, but Dolores and Le Rois were each lower. Mysores had a rise of almost ¼, and in the New Zealand group Waihis were 9-32 and Talisman 7-32 higher.

No increase in public interest followed the adjustment of the account, and prices soon began to look sickly. Dealers were faced with a 19-day account, which is so often disagreeable, especially in times like the present, and instead of going away for holidays in the hope of forgetting all about the Stock Exchange and its miseries, members are being kept in town by the weather. The Rhodesian crowd maintained their gaiety longer than might have been expected, "Tanks" being lifted to 5½, and the Banket group went ahead so nicely that the ignorant might almost have thought there was a chance of a dividend some day. But it turned out that the market had found a "bear," and was merely engaged in the usual pastime in such circumstances of quick torture. And when the bottom did fall out of the Rhodesian boomlet a few "bears" would have been mighty useful animals. Paris took to selling in the middle of the week, the break in Copper having a depressing influence, and alarmist stories were put about concerning the relations between Japan and America. Some of the English papers are at their old game again, fomenting strife. The Rand output for June did not have any influence either way, the figures, allowing for the day short, being almost identical with those of May, but the labour returns were not too encouraging, both Chinkees and natives showing a considerable reduction. But the coincidence is striking enough to raise suspicions. The public resolutely refusing to play, there was nothing for it but realisation by the professionals who had taken a part in the speculation, and Tanks were down to 4⅝ almost before one could wink. All other Rhodesians went sharply lower and Gold shares, Land and Finance and Diamonds went rattling down. A most inglorious end to the latest boom.

Copper and Copper shares have played their part in keeping up the excitement, and there is a fine gamble afoot that will ruin some people unless they are mighty careful. What the real position is no one ever knows. According to all accounts, a tremendous shortage in the metal exists for the early part of the present month, and colour was given to this view by a steady rise in the price, which Tintos and other Copper shares were not slow to follow. Then came a bad smash in Wall Street. For all the world as though a fearfully overloaded bull position had been built up and the alleged shortage was all a myth. The fall in the price on this side was not so severe as in New York, but Rio Tintos soon fell to 4 or more, and the entire Copper share market was pretty badly upset. Mount Lyells were banged about at first, supposed to be due to forced realisations, and all kinds of sinister stories concerning recent developments at the mine were put about, but the selling suddenly ceased and the price began to pick up again. Tin had a heavy fall, but shares showed no particular weakness.

West African things were dull as usual, but West Australians displayed some irregularity. Boulders, Perseverance and Sons of Gwalia were all in some demand, and after opening dulness Gt. Fingalls partially recovered. South Kalgurlis were easier, a report just issued showing that the ore reserves are less than a year ahead of the mill. Deep Lead things were inclined to pick up, and the Broken Hill group, although business was on a very small scale, showed firmness. Zincs were harder at one time, despite a poor return for May, but fell away again on the issue of a most disastrous-looking report.

Among Miscellaneous Mines the American section, which embraces such things as San Franciscos, Strattons, Alaska Treadwells, Esperanzas and Tomboys, was strong on the whole, although Camp Birds and the Le Roi shares slipped back. Indian Mines were easier with the exception of Mysore, which had a fair rise. Siberians suddenly came to the front again, and New Zealand shares hardened, but Cobalt things were not very gay.

Transvaal Gold Mining Estates.—Bullion produced during the year ended March 31 realised £203,194, against which the mining expenses were £139,087 and head office charges £6,393. Balance of nett profit was £57,713, profit on old shares gave £3,644 and general revenue £5,891, making £67,249 in all. Prospecting, claim licences, 10 per cent. tax on profits, amount written off for certain claims abandoned, and special repairs took a total sum of £15,572, leaving £51,677, but the directors distribute £60,422 in the shape of a 10 per cent. dividend, so that the sum brought forward of £46,945 was reduced to £38,200. A considerable amount of work appears to have been accomplished during the year and on Theta Hill a good deal of success has attended the prospecting operations. Development work is now being proceeded with and a considerable tonnage of ore has been exposed, showing very satisfactory assays. A good body of ore has also been exposed on Brown's Hill and developing and prospecting are still going on, but at the North Clewer claims work was stopped owing to the then shortness of native labour. The work will however be restarted when conditions are favourable and it is good to note that there are more promising indications at Peach Tree Creek. On Vaaholk, one of the company's farms, very considerable prospecting work has been done with good results, and on Elandsdrift the company started work on its own account after the contract with the tributor expired. A careful estimate of the payable ore reserves in the various mines discloses a total tonnage of 198,778 tons against 199,422 tons last year, and in addition a further 56,530 tons of low-grade ore has been developed, a portion of which may later prove of sufficient value to mine.

Village Main Reef.—Shareholders have just received the report of this company for 1906, over three months later than last year. No explanation is given of the delay, though we notice the manager's reports are dated as far back as February 25. Owing to the absorption of the Wemmer it is a little difficult to compare the results for the two years. During the year 419,668 tons were crushed giving a total gross revenue from all sources of £727,797, or about 34s. 8d. per ton. Working costs amounted to £469,218, or about 22s. 4d. per ton. These results show increases of 1s. 7½d. and 1s. 0½d. per ton for the year. Working profits were £258,579, or 12s. 4d. per ton, but from this is deducted £22,463 for profits of the Wemmer prior to completion of purchase which have been applied to reduction of cost. Sundry receipts, including interest and transfer fees, produced £2,267, giving a gross income of £238,383, of which debenture interest, directors' fees, taxes, &c., absorbed £39,049 and two dividends of 4s. each £198,000 leaving £34,266 to be carried forward. During the year £150,000 debentures were issued to enable the company to acquire the freeholds and to purchase new machinery. The balance-sheet shows a fairly strong financial position, but the directors have again debited the reserve fund with £36,458 for the depreciation on machinery, plant, &c. Developments in the lower levels are said to show a better grade of ore and the tonnage in reserve is estimated at 2,281,362; of this 699,438 tons are of the average value of 2.76 dwts. It would be of some assistance if mine managers would give an idea of the probable life of the mines they work. According to some estimates we have seen the life of these properties is calculated at about twelve years, and on a basis of 40 per cent. dividends this would mean that the shares are worth about £3⅛ to an investor accepting 6 per cent. and providing for the investment of his sinking fund at 4 per cent. Surplus assets (such might occur) are, of course, not taken into consideration in making this calculation.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns*

The London City and Midland Bank.

The profits of this great bank, the total of whose balance-sheet now stands at £60,456,600, were only £4,766 up for the half-year ended June 30 at £334,397, as compared with the outcome of the first half of 1906. This is against an increase of £35,000 in the same half of last year, but profits were probably then swollen as the result of absorptions. The balance brought forward, however, was £52,515 larger than a year ago at £171,517, so that the entire free balance of £505,914 showed an increase of £57,281 on the comparison of half-years. The directors accordingly announce the same dividend of 18 per cent. per annum and also write £50,000 off the cost of their investments, including Consols, bringing them "below market value"; £5,000 is also again put to officers' pension fund, but nothing is written off bank premises, against £20,000 twelve months ago, and the balance carried out is at £168,058, about £3,500 less than that brought in. None the less is the position a strong one, and the balance-sheet exhibits no changes of any unpleasant kind. The liability of the bank on deposit and current accounts has risen within the twelve months by £635,558 to a total of £50,955,874, while, on the other hand, the liability on acceptances has fallen back £320,749 to £2,764,112. Cash in hand and at the Bank of England is £311,497 up at £8,789,711, and money at call and short notice has shrunk only £65,645 to a total of £6,871,613. The aggregate value of the investments is also down £199,660 to £6,599,985, but that decrease is presumably in the main the consequence of writings down. Bills of exchange are £309,712 higher at £4,929,766, and there is likewise an increase of £279,446 in the advances on current accounts, loans on security, &c., the total of which is now £29,114,264. Bank premises at £1,387,149 show a decline of £22,510, although nothing has been written off for the past half-year.

London and South-Western Bank.

For the past half-year this bank's gross profit amounted to £325,737 or £32,042 more than at the corresponding date last year. The balance brought in was also £22,161 up compared with a year ago, so that the free revenue was brought up to £151,192, of which £89,000 was the proceeds of the last half-year's business. Current expenses rose by £6,856 to £144,069, and £27,496 more at £81,147 was paid as interest to customers. The increase in rebate was only £904 at £8,520. Out of the half-year's profits the directors pay the same dividend at the rate of 16 per cent. per annum and write £10,000 off premises account, leaving £61,192 to be carried forward, but the authorised addition of £3,000 to the staff fund was taken off gross profits. Compared with the amount carried out a year ago the changes in the balance-sheet are not of much significance or large amount. In the liabilities, capital and reserve remain

as before at £1,000,000 each. Liabilities on current and other accounts, however, show an increase of £272,099 at £14,167,667. In the assets, cash in hand and at the Bank of England is down a trifle of £382 at £2,094,767, money at call and short notice is, at £1,031,040, £113,480 lower, but investments are higher by £274,551 at £4,195,462, Consols to the amount of £750,000 being held by the bank and taken into the account at 85. It also holds £250,000 of Local Loans stock which is brought into the balance-sheet at 95, so there is room for writings down here as well, it is to be feared, as in the bank's holdings of other securities to an aggregate amount of £1,913,868. Loans and advances have shrunk a mere £18,323, and the total is £7,561,804. Freehold premises show a reduction of £7,628 at £550,252. To balance the account an item of £179,032 is entered as "other assets," including outstanding advices, freehold and leasehold properties and stamps, &c. This makes the two sides of the balance-sheet tally at £16,659,661, but the exhibit is not altogether satisfactory.

The London and Provincial Bank, Limited.

The gross profits of this now large bank for the past half-year came to £336,907, or £31,140 more than in the same half of last year. Adding £48,308 brought forward, the total was made up to £385,214. Current expenses took £10,631 more at £132,871 and left £148,033 for distribution, out of which the board pays the usual dividend at the rate of 18 per cent. per annum, adds £10,181 to the reserve, making it £1,435,000, all invested as a separate account in £1,728,916 Consols taken at 83, £10,000 to the premises account, and £5,000 to the pension and gratuity fund. This leaves £50,852 to be carried forward, or £2,347 more than was brought in on January 1, and £9,265 more than the total thus added to the profits twelve months back. A sum not stated has been taken from the bad and doubtful debts reserve to write the Consols down to 83, and bring other investments under market values. Last year at this date the reserve got £150 more than now, but the other assignments are identical in the two half-years. In the balance-sheet liabilities on current account show an increase of £400,478 at £14,298,662. Changes in the assets are none of them great, but cash is better by £148,178 at £1,888,249, and call and notice money £150,000 higher at £1,500,000. Investments at £4,083,224 show a drop of £43,408, loans and advances, including bills not stated separately, have risen by £162,874 to £8,969,853, and premises stand at the moderate total of £230,369. The aggregate of the balance-sheet is now £16,671,695.

Glyn, Mills, Currie, and Co.

This being a private joint-stock bank of unlimited co-partnery nothing in the shape of a report is ever issued, but the balance-sheet for the half-year to the end of June is fairly explicit, and shows some interesting changes. Capital and reserve remain as before at an aggregate of £1,500,000, one-third of which is reserve, but current accounts have slipped back £323,682 to £9,195,552. The liability on deposit accounts, however, is greater than at this time last year by £47,747 at a total of £4,398,821. The item "reduction of bank premises account" has been increased to £20,624 against £10,150 on June 30, 1906. In the assets the most remarkable change is again in money lent at call and short notice, the total of which is down £1,093,795 compared with a year ago, and that in its turn showed a decrease of £594,000, so that the figure is now brought down to £3,310,584. Cash in hand and at the Bank of England is also less by £199,151, but the total is still a very fine one at £1,946,069. Investments, including £1,204,820 in Consols written down to 83, and £521,000 of 3 per cent. 1909 Exchequer bonds taken into the account at 96, show an increase of £220,212 at £2,925,561, so that there must have been considerable additions to the items composing this total as is the custom with private banks. Bills discounted, loans, and other securities have fallen off £192,819 to £6,562,783. This decline, however, is of no significance whatever because a year ago the total was up £1,414,000, and we may take it that the shrinkage to no small extent balances or coincides with the decrease in the item of money lent at call and short notice. The total of the balance-sheet is now £15,114,996.

The Manchester and Liverpool District Banking Company.

The directors of this wealthy Lancashire banking company have taken £185,000 from the reserve to write the price of their Consols down to 82, and so strong is it that they might have put the price down to 80, and still have left the reserve fund at a higher figure than the paid-up capital. For after making this reduction and adding £10,000 out of the half-year's profits to reserve, the total of that fund is £1,670,000 or £170,000 more than the total of the paid-up capital. Such is the value of thrift practised over a long series of years. In the past six months, ending June 29, the gross profits came to £235,824 or £7,126 more than in the corresponding half of 1906. As £41,110 was brought forward this enables the board to pay the same dividend of 21s. per share, equivalent to 17½ per cent. per annum on the paid-up capital, to add the above-mentioned £10,000 to the reserve, together with £5,000 to the pension fund, still leaving £41,775 to be carried forward. The working expenses of all kinds at £83,900 were £2,189 up, but the divisible profits notwithstanding were £8,057 better at £188,025, thanks to the larger balance brought forward. In the balance-sheet cash in hand and at the Bank of England amounts to £2,040,240 or almost £110,000 more than in the corresponding half-year, which in its turn showed an increase of almost £280,000. Money lent at call and short notice is up £58,505 to £1,206,915, but the item [illegible] £877,000 a year back, so that [illegible] sequence. Investments are also [illegible] at £3,135,375 and the £1,111,112 held [illegible] is now carried into the balance-[illegible] securities have doubtless been [illegible] decline in investments is easily [illegible] are £127,891 higher at £2,534,868 and [illegible] by £145,580 to £9,466,988. [illegible] at about £472,000, bank premises, as the [illegible] remaining at the strikingly modest total of £ [illegible] standing the constant improvements and [illegible] and to the property. The liabilities of the bank [illegible] and other accounts show an increase of £ [illegible] £15,736,962, and the total of the balance-sheet [illegible] £19,552,102.

Bank of Liverpool, Limited.

No particulars are given by this powerful northern bank as to its writing down of securities held in the year ended June 30 last, but the directors make the comforting announcement that "the present market value of the bank's investments is in excess of the figure at which they stand in the balance-sheet." And the gross profits for the year were good, showing as they did an increase at £401,066 of £55,695 upon the previous year. That year, however, contained only six months' profits from the absorbed Craven Bank, so that the expansion is less than it seems and does little more than mark the year's [illegible] business goes on. Nett profits came to £245,876, after meeting all working charges which amounted to £[illegible], and the directors are therefore able to provide for two half-yearly dividends of 5 per cent. each, together with a bonus of £[illegible] to the shareholders. In future the dividend and bonus will be distributed in more equal portions than hitherto. These [illegible] together absorb £183,750. £10,000 is set aside for [illegible] tax, the directors add £30,000 to the investment reserve account and £15,000 to the ordinary reserve, as against £45,000 out of the profits of the year, and still they have nearly £7,000 more left to carry forward at £30,877. The reserve fund will now amount to £820,000 against a paid-up capital of £[illegible]. From the balance-sheet we gather that changes have been comparatively unimportant in the position of the business during the year. The liabilities of the bank on current and deposit accounts show a slight diminution of £164,144 at £[illegible], of which £930,807 is liability on acceptances, a very fluctuating item always. Amongst the assets, cash in hand and at the Bank of England is up £12,350 at £631,470 and money lent at call and short notice is £105,415 higher at £1,[illegible]. Short loans on stocks and other negotiable securities show a reduction of £182,000 at £676,872 and investments are £88,[illegible] down at £2,449,056. On the other hand, bills of exchange have increased nearly £135,000 to £2,267,400, and there is also an increase of £367,294 in loans and advances to customers, &c., after debiting the bank's acceptances "as per contra." This item now stands at £9,582,753. Bank premises have also increased by £19,414 to £442,701, and the aggregate of the balance-sheet is £17,551,010. Outside the balance-sheet two items stand which have to be mentioned for record purposes; one is a "liability on indemnities and on credits open, but not yet accepted against," which is put at £[illegible]. The other is a liability of £280,811 on bills discounted with the Bank of England. A year ago the total of the bills under discount with the Bank of England was £297,928.

National Discount Company.

How wonderfully close these discount companies run with their profits from half-year to half-year, no matter whether the business done is larger or smaller! It mostly grows larger while profits just hold, a proof that the competition for bills every year becomes more acute. This old company, for instance, made a gross profit during the past half-year of £[illegible] against only £118,000 in the first half of 1906, but rebate this time [illegible] £100,843 as compared with only £94,257 a year back. It results that after meeting current expenses, up £232 at £12,[illegible], the nett profit, with £10,723 brought in, was only £55,000 against £53,232 with £11,775 brought in, a sensible increase [illegible], but then the business done is much larger. Bills discounted have risen on the year £2,225,755 to £13,886,062. Considering, however, the character of the half-year shareholders have every reason to be satisfied, for they get a 10 per cent rate of dividend just as before with £12,751 left to carry forward, or only £2,000 more. The company in increasing its business, as all such seem compelled to do, had to lean upon market credit to a proportionately greater extent. "Deposits and sundry balances" are accordingly larger by £1,624,230 at £12,[illegible], and bills rediscounted have risen from £3,881,797 to £[illegible], an increase of about £[illegible]. Capital and reserve remain as before at respectively £810,005 and £[illegible], and the total of the balance-sheet is the handsome one of £17,[illegible].

The Union Discount Company of London, Limited.

Last week we congratulated the management of this company on the excellent results displayed for the past half-year, and the report and accounts now published do nothing to take away from the commendation then given. The business appears to have been wonderfully profitable to the [illegible] Company's profits rose by £30,000 to £[illegible], and as expenses went up only a few hundreds, the free balance was nearly a [illegible] larger. Indeed, as £51,193 was brought forward against £53,770 available a year back at the same date, the increase in working expenses was more than compensated by the larger

balance brought in. Very prudently the board has utilised the greater part of the increased free income to add to what may be called the informal reserve represented by rebate of interest on bills discounted not due, the increase of which was £22,478 compared with the corresponding half-year, and the total £135,061. This still enabled the board to add £15,000 to the reserve fund and £5,000 to the provident reserve fund, or £20,000 in all and twice as much as was set aside this time last year. After again paying a dividend at the rate of 11 per cent. per annum, £55,725 is left to carry forward, or upwards of £1,500 more than was brought in. These larger gains, however, have not been secured without a sensible extension in the business done, and, we may add, in the risks run. Loans and deposits, amongst the liabilities, including provision for contingencies, have fallen off £913,243 to £14,856,204, but bills rediscounted are larger by almost £2,668,000 at £6,382,245. The aggregate of bills discounted shown on the assets side has risen, indeed, by £3,107,652 to £18,259,159, and there has at the same time been an increase in the cash, which is £346,248 up at £826,328. Consols, Exchequer bonds, Indian Government and other securities are much the same as a year ago, or only £43,555 down at £2,649,617. The decrease on the past two years, however, is about £238,000. The board has curtailed its loans on securities at call and short dates, which a year back showed an advance of £455,000 at £2,485,928. The total is now only £887,624, a decrease of £1,598,300. In spite of this decline, the aggregate of the balance-sheet is £1,812,000 higher at £22,734,000, and the business is thus proclaimed to be the biggest of its kind in the kingdom.

"Bodega" Co., Limited.

Considering the condition of affairs which prevailed in the City, it is hardly surprising to find that the trading profits of this undertaking for the year ended March 31 suffered a further drop of £1,371 to £77,638. Most of this decrease was offset by a saving of £979 in expenses at £52,657, and with £1,494 brought forward and £759 from interest and transfer fees, the nett revenue was only £133 smaller at £25,729. Of this, £3,103 or £147 less was provided for maintenance and repairs, so, after transferring another £2,118 to the sinking fund established last year, the directors are again able to pay a dividend of 5 per cent. on the ordinary shares, and to add a few pounds to the balance carried forward, raising it to £1,508. Freehold and leasehold properties, trade mark, &c., have been reduced by £665 to £351,298, and against this the sinking fund now stands at £4,235, with a corresponding increase to £12,706 in the amount invested in the Sun Life Office policy. Sundry creditors show very little change at £9,491, but mortgages and interest are £7,681 down at £49,147, while, on the other hand, stocks have been reduced by £7,791 to £59,208. A drop of £787 to £4,039 in sundry debtors is accompanied by an addition of £1,254 at £21,344 in cash balances and investments representing the general reserve of £14,000 are unaltered at £19,991.

English Sewing Cotton Co., Limited.

The directors report that the accounts for the year ended March 31, 1907, result as follows:—After providing £28,902 for depreciation, and £38,309 for debenture interest, the net profit for the year is the sum of £266,484; deduct directors' fees, law charges, and auditors' fees, £11,637; leaving a nett trading profit for the year of £254,847, to which has to be added the balance from last year of £67,302, making a total of £322,149. This balance the directors propose should be dealt with as follows:—Payment of preference dividend for year ended March 31, 1907 (of which 2½ per cent. was paid on February 9, 1907), £50,000; a dividend at the rate of 8 per cent. on the ordinary shares for the year ended March 31, 1907, £80,000; to the general reserve, £50,000; to extinguishing "closed works account," £22,631; to the fund for equalisation of dividends, £50,000; leaving to be carried forward to next year £69,518, thus balancing the account.

TRADE AND PRODUCE.

Wheat.—Prices have shown a tendency to recede during the past week, thanks principally to the better crop advices from the United States and Canada. The foreign supply has also been good, shipments to Europe announced early in the week amounting to a million quarters of which about half came from Russian and Danubian ports. The relapse in prices has not amounted to more than a few pence at most, but the market is going against sellers, and if weather picked up at home we should probably see the markets lower all over the country. Shipments are being hurried forward from the United States and Canada, and as prospects improve buyers will be less and less disposed to pay what they are asked. Farmers' deliveries last week were 20,795 qrs. realising 31s. 3d. compared with only 9,625 qrs. at 30s. 2d. in the corresponding week of 1905, and the total deliveries for the season amounted to 2,574,875 qrs., with an average of 26s. 11½d., against 2,864,439 qrs. and 28s. 7d. Imports into the United Kingdom were 499,007 qrs. for the week and 18,194,271 qrs. for the season against 714,513 qrs. and 18,517,033 qrs. respectively a year ago. Quotations on Thursday hardened a little on disappointing news from Russia and a bullish American Bureau report, but Hungarian advices were better, and with the fine weather the improvement was quickly wiped out. In America the price has firmed up a little owing to reported large orders for export, but the rally was merely the consequence of "bear" closing, and in spite of that the closing prices in the middle of the week were slightly down. Wednesday's sales in New York amounted to 2,500,000 bushels and exporters took ten boat loads, whatever that may mean. Wheat shipments from the River Plate have been less important than the market anticipated and the supply from Australia has not been full, but the general prospect is certainly unfavourable to the operator for the rise, and in spite of the wretched state of crops at home, there are as yet no indications that the world's supply will in any way fall short of requirements.

Wool.—Very brisk competition from both home and Continental dealers was experienced at Wednesday's wool sales. America, too, was a large buyer, and prices show an all-round improvement, the advance being most pronounced in those qualities suitable for the American trade. The total quantity offered was 13,200 bales, and this was followed by another 12,000 bales on Thursday. The domestic markets, however, have not been strong, and no recovery has occurred at Leicester, where what is called the slump still maintains its sway. In finished goods there is also some indication of slackness, thanks to the unfavourable weather, which has told with disastrous effect upon the retailer throughout the country. The losses suffered in that quarter have tended to restrict orders, and although reports from various manufacturing centres in England and Scotland point to a fair business being done, the trade is undoubtedly backward. Rochdale merchants, for example, report that, although inquiries are being made about winter flannel, little actual business has been done. Manufacturers, however, are not yet pressing for orders, because they have an impression that they may be able later on to get more remunerative prices.

Cotton (from our Manchester correspondent).—During the week under review our market has presented a generally quiet appearance, and not much change has shown itself in the general position of affairs. Towards the close American cotton has shown a tendency to droop, and rather an unsettled feeling is prevailing in most sections. The outlook for the American crop is improving, the weather in the cotton belt being better than formerly. Messrs. Neill Bros., in their circular just issued, give particulars of telegrams lately received in which the plant is said to have made good progress. Manchester traders are looking forward to a lower level of values, as it is considered that with cheaper rates a fair amount of business in piece goods can be done. At the moment, however, shippers are not stimulated to purchase more than sorting-up lots. Rather more offers have been about for China, and odd sales have occurred in shirtings. The demand for India has not improved very much, but exporters seem to be keeping pretty well in touch with quotations. The minor markets of the Continent have operated sparingly in goods of a miscellaneous character. Advices from Egypt are of a discouraging character, and rumours current in this market of financial difficulties rather unsettle trade generally. South American buying is on a small scale, although offers have been mentioned for printing cloths. Home trade goods have been quiet in most sections. Distribution is a little better in light fancy materials, but still the season has been a poor one. T-cloths and Mexicans move off slowly in the commoner qualities; certain producers are wanting business rather badly. Burnley manufacturers only meet with retail orders. In home trade American yarns quotations have been rather irregular, and only a quiet business has been put through. Wefts rather drag in demand, and in the lower numbers the margin is said to be unremunerative. There is still a fair amount of pressure for delivery, but spinners have met with few orders of any importance. In shipping descriptions a fair Continental inquiry has been about, but few sales of weight have occurred. Offers from India for two-fold yarns have been too low to be put through. Bolton spinnings have been in some request, chiefly in combed descriptions. Carded counts in the poorer qualities are getting rather irregular in quotation.

With regard to American cotton, Sir Jacob Behrens and Sons report that up to the commencement of the week prices gradually advanced, in view of the strenuous efforts of the "bull" party, but a decided reaction set in yesterday, and the whole of the advance was lost, quotations now showing a loss on the week. The new crop appears to be making good progress, and although late, there is every prospect of a fair yield, provided the remainder of the season is favourable. Messrs. Neill Bros., in their interesting circular of the 9th inst., estimate the visible supply on July 5 at 4½ million bales, or about a million bales in excess of the previous year, when cotton was nearly 1¼d. per lb. lower in price. This is equal to 19 weeks' consumption. Although Messrs. Neill Bros., in conjunction with other reliable authorities, consider the average condition of this year's crop to be 10 per cent. below that of last year, they deprecate Mr. Price's forecast of 9,854,000 bales as being issued solely to further his own ends, and point to his forecast of 11 million bales for last season as against the 13¼ million bales already delivered. Messrs. Neill Bros. also consider the bureau report as unreliable, and made altogether in the interests of the cotton-growers. Egyptian cotton is in rather better demand, and quotations have been advanced ⅛d. per lb.

Coal.—No activity has been developed in the coal trade, which has begun to assume a holiday appearance. Seaborne coal, however, has been in fair demand in the London market and the trade generally is considered to be in a healthy position for this time of year.

Copper.—The Copper market has tended towards disorganisation this week, thanks to the concession which the monopolist holders in the United States have been compelled to make to the consumer. This is regarded as only the beginning of a serious recoil. In the end of last week, when the bulk of the

trade was in sales at three months, the price was only 5s. down at £93 per ton, while the cash price was £99 5s. per ton with a steady market. By the end of the week spot standard copper had receded to £95 7s. 6d. per ton and three months to £89 7s. 6d., with the tendency adverse to holders.

TIN.—Tin also showed weakness at the end of last week, when the price receded about 55s. to £184 10s. per ton. At the decline buyers then bought rather freely and the market has on the whole been steady since with a somewhat improved tendency in the price, so that in the middle of the week spot tin was quoted at £188 5s. per ton, three months, however, being quoted at £179 15s. as compared with £182 last Monday. Attention was then mainly devoted to future metal, and the support forthcoming was sufficient to bring about a recovery to £182, while the price for immediate delivery sagged to £186 15s.

IRON AND STEEL.—The market for iron warrants in Glasgow has been flat, and it looks probable that a period of decline has set in. Advices from the United States indicate that both production and consumption are falling off there, and the same indications are afforded by the Continent. As orders get executed it is therefore by no means unlikely that business will fall off in all countries, with the result that prices must give way. The *Iron Age* of New York states that the United States production of pig-iron in June was about 61,000 tons less than in May at 2,232,000 tons, but for the first half of the year the total output is said to have been 13,500,000 tons, and the weekly production on July 1 was at the rate of 527,830 tons, which is the highest figure ever reached. But this very fulness of production, in the face of the declining orders from railroad and other corporations that cannot borrow money to pay for what they order will tend to force prices down. It is noticeable, however, that the demand for British pig-iron has begun to slacken, and if prices fall away in the United States they may soon reach a point at which it would be unprofitable for our makers to ship. Recently they have had an excellent market in the United States, because of the excessive price at which the monopolists there have offered their metal. After paying the duties levied our makers have been able to undersell the Pittsburg market. It is officially stated that the average price realised for Cleveland pig-iron during the past quarter was 56s. 4.45d. per ton. This is an advance of 1s. 4.22d. on the average for the previous three months and 5s. 7d. above that for the corresponding quarter of 1906, and is the highest reported since 1900.

TEA.—Out of a total of 10,985 packages of Indian tea offered this week 9,884 packages were new crop and included a fair selection from all districts, several Dooars invoices being on offer. Messrs. W. J. and H. Thompson report that, on the whole, the quality was satisfactory, although without special characteristics, and the average prices obtained ruled about ½d. to 1d. above last year's opening rates. So far little has been forthcoming from Cachar and Sylhet, but the first sale of Dewan realised 1¾d. more than in 1906. Apart from an occasional advance in common leaf the most noticeable event was the improved demand for medium broken Pekoe, resulting in a rise of ¼d. to ½d., especially for the thicker liquoring parcels, and for the whole sale the average worked out at 7¾d. compared with 7¼d. a year ago. Previous reports of short crops in India have been fully confirmed by mail advices, and the market looks for the present level of quotations to be maintained for some weeks to come. Exports from Northern India to all ports during June were 10,634,200 lbs., compared with 11,300,000 lbs., and the total since April 1 is now 14,340,600 lbs. against 16,824,100 lbs. The quantity of Ceylon tea brought forward was rather larger at 33,087 packages, but prices were well maintained, and buyers readily paid another ¼d. per lb. for any parcels where an improvement in quality was noticeable. Medium broken Pekoes were still sought after at rather better rate, and common leaf was firm at previous figures, but better liquoring and tippy brokens were irregular, the general average being 7⅝d. against 6½d. Java sales amounted to 2,000 packages, and with a good demand prices were well maintained.

SUGAR.—According to Mr. Czarnikow's weekly report the slight recovery of Thursday last was not of long duration, and with warmer weather, small export figures from Germany, good crop reports from Java, and fears as to the fate of the Convention, there was more pressure to sell. August moved from 9s. 8d. to 9s. 5d. to 9s. 5¼d., May from 9s. 8¼d. to 9s. 7d., though Licht's weights confirm the information that the crop in North-Western Europe is in a rather backward state. With present prospects of smaller stocks, inferior crops, and increasing consumption, it seems that European supplies next season cannot be over-abundant, even if Russia sends some sugar here in September, 1908. It is only if sowings were to take place next spring regardless of cost, and the following crop should be quoted at a serious discount, that deliveries might be curtailed and a feeling of uncertainty be justified. The June figures for the United Kingdom are very satisfactory, showing only a small falling off in deliveries. The exports from Austria are only 49,000 against 62,000 tons, but Hungary will probably show an increase. It is in Germany that export figures look bad, being 76,000 against 118,000 tons, whilst France will show an increase, but Belgium and Holland a decrease. The trade are prepared to see the May deficit in European stocks of 400,000 tons reduced by half during June-September, and most of the falling off in deliveries will occur in Eastern and American exports. In the United States the advices from this side in the early part of the present week had a depressing effect upon buyers, but the quotations for preferential sugars remain unchanged at 3.83½ cents equals 9s. 10½d. c.i.f. for 96 per cent. non-preferential, while [illegible] sugars resulted in a decline [illegible] day or two a better tone has been [illegible] foreign sugars are apparently [illegible] decline. Landings in the three [illegible] melting 400,000 tons, reducing [illegible] 317,054 tons a year ago.

MINING RETURNS.

Abbontiakoon Block 1.—Treated 6,000 tons of 2,240 lbs., yielding 2,750 ozs. bullion.

Akrokeri: Ashanti.—Crushed, 2,270 tons, 814 ozs.; 1,040 tons tailings, 82 ozs.; total, 896 ozs.

Alaska Treadwell.—Crushed, 76,130 tons ore, $81,697.; mixed 1,440 tons sulphurets: value, $58,457.

Angelo.—90,000 tons milled, 7,218 ozs.; sands, 17,085 tons, 4,083 ozs.; slimes, 8,415 tons, 641 ozs.; total, 12,24[illegible]

Ashanti Goldfields: Obuasi, crushed, 4,692 tons, 2,[illegible] ozs.; tailings, 450 ozs.; cyanidation, 1,262 ozs.; total, 3,[illegible] ozs.

Associated of Western Australia.—Milled, 6,[illegible] tons, £1,[illegible].

Ayrshire Gold.—Crushed, 7,990 tons, 1,870 ozs.; Cyanided, 5,580 tons, 939 ozs.

Bernheim (Mazoe).—Crushed, 870 tons, 297 ozs. (equals 4.70 dwts. per ton).

Bibiani Gold Fields.—Crushed, 3,457 tons, 1,512 ozs.; cyanide, 2,270 tons, £1,362; total, 1,832 ozs.

Brilliant Central.—Crushed, [illegible] tons quartz, value, including residues tailings and concentrates, at £2,400.

Briseis Tin.—Shipped 12 tons, realising 7 tons for New Brothers Home No. 1; block tin cleaned up 8[illegible] tons.

British Broken Hill Proprietary.—2,421 tons [illegible] produced 306 tons concentrates, containing 190 tons lead and [illegible] ozs. silver.

Broken Hill Proprietary: Refinery products.—Fine silver, 353,451 ozs.; soft lead, 4,042 tons; antimonial lead, 53 tons.

Broken Hill South Blocks.—Ore raised, [illegible] tons, lead concentrates produced 1,297 tons, assaying [illegible] per ton lead, 8½ ozs. silver, 7 per cent. zinc; total value, £[illegible].

Broomassie.—Crushed, 1,095 tons, 1,022 ozs. [illegible] the plates, concentrates of an assay value of £33 10s. per ton.

Burbank's Main Lode 1904.—Crushed, 1,310 tons, 721 ozs.; 884 tons by cyanide, 132 ozs.; total, 853 ozs.

Burma Ruby.—100,000 loads washed, [illegible] showing rubies valued at Rs. 100,000; royalties, Rs. 22,000.

Cason.—Milled, 31,000 tons, 9,200 ozs.; sands, 21,400 tons, 4,004 ozs.; slimes, 9,700 tons, 1,332 ozs.; total, 14,[illegible] ozs.

Central Chili Copper.—Production, 140 tons [illegible]

Chilingue.—1,300 tons copper ore and 1,842 tons lead ore, producing 335 tons copper matte and 250 tons lead bullion, containing 134 tons copper, 250 tons lead, and 47,[illegible] ozs. silver.

Chinese Engineering.—Output of coal, 28,000 tons, [illegible], 24,000 tons; [illegible] plant, 1,400 tons.

City and Suburban.—Crushed, 25,[illegible] tons, 6,085 ozs.

Clutter United.—Ore treated, 1,815 tons. Mill and [illegible] on hand.—Tin and wolfram, £2,240; gravel and [illegible] product, £581; total, £2,[illegible]87.

Coen United Main Reefs.—Crushed, 18,515 tons, 3,712 ozs.; sands and concentrates, 18,515 tons, 2,168 ozs.; [illegible]

Crown Deep.—Crushed, 30,[illegible] tons, 11,[illegible] ozs.; tons, 3,240 ozs.; slimes, 11,340 tons, 1,[illegible]88 ozs.; total, 14,[illegible]28 ozs.

Crown Reef.—Crushed, 10,855 tons, 6,183 ozs.; mixed gold concentrates, 10,002 tons, 1,740 ozs.; slimes, 7,[illegible]18 tons, 3[illegible] ozs.; total, 8,[illegible]30 ozs.

Driefontein Consolidated.—Milled, 2[illegible] tons, 1,[illegible] ozs.; sands, 14,815 tons, 2,424 ozs.; slimes, 5,[illegible] tons, [illegible] ozs.; total, 7,[illegible] ozs.

Durban Roodepoort Deep.—Crushed [illegible] tons; sands, 7,120 tons, 931 ozs.; slimes, 3,[illegible] tons, [illegible] ozs., 4,[illegible] ozs.

Durban Roodepoort Gold.—Quartz milled, 11,[illegible] tons, 3,[illegible] ozs.; tailings, 7,215 tons, [illegible] ozs.; sands, 3,[illegible] tons, [illegible] ozs.; total, 3,[illegible] ozs.

Dunbar Pioneer Gold.—Crushed, 1,[illegible]08 tons, [illegible] ozs.

Eastchuck.—Crushed, 1,[illegible] tons, 272 ozs.; [illegible], 112 ozs., copper plates, 106 ozs.

East Gwanda.—Crushed, 8,[illegible]03 tons, 3,[illegible] ozs.; [illegible], 277 tons, 638 ozs.; total, 3,823 ozs. Slimes, [illegible] tons treated, 330 ozs.

Empress (Rhodesia).—Ran [illegible] Crushed, 4,8[illegible] tons, [illegible] ozs.

Extras an Copper Estates.—Ore smelted, 2,8[illegible] tons, [illegible] copper, £4,250.

Ferreira Gold.—Crushed, 22,[illegible]13 tons, 8,[illegible] ozs.; sands, [illegible] concentrates 14,[illegible] tons, 2,8[illegible] ozs., slimes 6,[illegible] tons, 1,[illegible] ozs.; total [illegible] ozs.

Ferreira Deep.—Crushed 22,[illegible] tons, 6,[illegible] ozs.; sands, [illegible] tons, 2,[illegible] ozs.; slimes 6,[illegible] tons, [illegible] ozs.; total [illegible] ozs.

Filabusi Copper and Sulphur.—Ore produced, [illegible] tons; slimes, 5,[illegible] tons.

French Rand.—Crushed 17,[illegible] tons, 3,[illegible] ozs.; sands and concentrates 12,400 tons, 1,[illegible]8 ozs.; slimes [illegible] tons, [illegible] ozs., total 5,[illegible] ozs.

Geldenhuis Estate.—Crushed 17,8[illegible] tons, 4,[illegible] ozs.; tailings 1,852 ozs.; slimes, 430 ozs.; dump by the Stark process, [illegible] ozs.; total 7,[illegible] ozs.

Gaika Gold.—Crushed 1,019 tons, 700 ozs.; cyanide 1,[illegible]48 tons, 149 ozs.; value [illegible]68

Cape Copper.—Okiep 1,228 tons of 16 per cent., equals 196

tons of fine copper. Nababeep: 4,767 tons of 4 per cent., equals 190 tons of fine copper.

Giant.—4,822 tons, 2,583 ozs.

Geldenhuis Deep.—Crushed 28,700 tons, 7,030 ozs.; sands 19,240 tons, 2,553 ozs.; slimes 9,830 tons, 557 ozs.; total 10,140 ozs.

Glen Deep.—Crushed 19,440 tons, 4,432 ozs.; sands 11,700 tons, 2,033 ozs.; slimes 7,680 tons, 622 ozs.; total 7,087 ozs.

Globe and Phœnix.—Crushed 6,457 tons ore, 2,569 ozs.; tailings, average assay value per ton, 2.27 dwts.; cyanide 4,496 tons, 399 ozs.; slimes 1,383 tons, 199 ozs.; total 3,167 ozs.

Golden Horse Shoe.—Ore treated 22,728 tons, 12,235 ozs.

Great Boulder Perseverance.—Treated 16,610 tons for 6,895 fine ozs. gold and 852 fine ozs. silver.

Great Boulder Proprietary.—Treated 11,824 tons, 11,125 ozs.; tailings (old) 6,524 tons, 976 ozs.; total, 12,101 ozs.

Great Fingall.—Ore 22,302 tons, 5,226 ozs.; tailings 21,944 tons, 1,980 ozs.; concentrates 358 tons, 1,077 ozs.; total, 8,283 ozs.

Gwalia Consolidated.—Crushed 1,875 tons, 239 ozs.; sands 1,075 tons, 303 ozs.; slimes 1,624 tons, 295 ozs.

Hainault.—Crushed 1,200 tons, 395 ozs.

Hannan's Reward and Mount Charlotte.—Crushed 2,625 tons, 407 ozs.; royalties from tributors, £257.

Hutti (Nizam's).—870 ozs. from 2,300 tons crushed; tailings, 240 ozs. from 2,000 tons; total, 1,110 ozs.

Ida H.—June, crushed 1,340 tons, 831 ozs.

Ivanhoe.—Ore crushed 19,010 tons, 2,519 ozs.; sands 9,250 tons, 1,532 ozs.; slimes 7,960 tons, 3,324 ozs.; concentrates 1,800 tons, 2,956 ozs.; total, 10,331 ozs.

Johannesburg Consolidated Investment.—New Primrose, 7,027 ozs. from 18,428 tons treated; New Rietfontein Estate, 9,032 ozs. from 16,818 tons treated; Witwatersrand Gold, 9,854 ozs. from 32,300 tons treated; Glencairn Main Reef, 4,257 ozs. from 17,050 tons treated; Ginsberg Gold, 3,087 ozs. from 8,583 tons treated; Consolidated Langlaagte Mines, 7,425 ozs. from 22,328 tons treated; New Unified, 2,846 ozs. from 9,055 tons treated; Buffelsdoorn Estate, 560 ozs. from 4,200 tons of slimes.

Jubilee.—Mill, 1,124 ozs. from 4,982 tons crushed; cyanide, 493 ozs. from 3,838 tons.

Jumpers.—Crushed, 10,400 tons; from mill, 3,528 ozs.; from tailings, 1,531 ozs.; from current slimes, 301 ozs.; from accumulated slimes, 346 ozs.; total, 5,706 ozs.

Jumpers Deep.—Crushed 17,609 tons, 4,091 ozs.; sands 11,230 tons, 1,400 ozs.; slimes 5,919 tons, 365 ozs.; total, 5,856 ozs.

Kalgurli Gold.—9,178 short tons, 6,266 ozs.

Killarney Hibernia.—Crushed 4,714 tons, 362 ozs.

Knight's Deep.—33,900 tons, 10,431 ozs.

Koffyfontein.—Recovered 2,650 carats diamonds.

Lake View Consols.—11,079 tons treated, 3,113 ozs.

Lancaster Gold.—Crushed 16,000 tons, 2,552 ozs.; cyanide 10,450 tons, 1,342 ozs.; output 3,894 ozs.

Lancaster West.—Crushed 6,327 tons, 1,172 ozs.; cyanide 5,178 tons, 854 ozs.; total, 2,026 ozs.

Langlaagte.—Ore crushed 31,239 tons, 6,224 ozs.; concentrates 550 tons, 822 ozs.; tailings 20,140 tons, 2,316 ozs.; slimes 14,927 tons of 2,000 lbs., 1,269 ozs.; total 10,631 ozs.

Langlaagte Deep.—Tons crushed 27,441, 6,821 ozs.; tons sands 17,506, 1,890 ozs.; tons slimes 10,029, 550 ozs.; total 9,261 ozs.

Lancefield Gold.—7,024 tons ore treated, 2,634 ozs.

Le Roi.—Shipped 11,722 tons, containing 2,368 ozs. gold, 4,450 ozs. silver and 242,300 lbs. copper.

Le Roi No. 2.—Shipped 1,740 tons, nett receipts $24,236, being payment for 2,188 tons shipped, and $1,341 (£276 10s.), being payment for 98 tons concentrates shipped. In all $25,577 (£5,274). Vancouver Mine: Shipped 83 tons, nett receipts are $8,542, being payment for 100 tons concentrates.

Luipaards Vlei Estate.—Crushed 14,610 tons, 2,724 ozs.; tube mills, 558 ozs.; cyanide 1,493 ozs., slimes 251 ozs.

Matabele Reefs.—Blanket crushed 1,909 tons, winning 577 ozs. bullion. Alice Cyanide (on tribute): 900 tons, 107 ozs.

May.—Crushed 14,000 tons, 3,175 ozs.; cyanide 10,285 tons, 2,202 ozs.; slimes 4,419 tons, 363 ozs.; total 5,740 ozs.

Merton's Reward.—Crushed 730 tons ore, 342 ozs.; 514 tons sands, 84 ozs; 228 tons slimes, 35 ozs.; total, 461 ozs.

Messina (Transvaal) Development.—Output 247 tons copper ore.

Meyer and Charlton.—2,090 ozs. from 12,750 tons crushed; 3,176 ozs. from cyanide; total 5,266 ozs.

Montana.—Drumlummon: Value 6,090 tons tailings and fines, $9,200; gold 370 ozs., silver 3,300 ozs. Lucky Girl Group: Crushed 1,500 tons ore, yielding 580 ozs. gold and 500 ozs. silver.

Mount Boppy Gold.—6,075 tons, 1,035 ozs.; cyanide 3,606 tons, 1,512 ozs.; slimes 2,346 tons, 667 ozs.; concentrates, tonnage 34,150 ozs.; total 3,364 ozs.

Mount Molloy.—Smelted 687 tons ore, 88 tons sulphide flux, and a quantity of matte, containing 9 tons copper, producing 48 tons of blister copper.

Mount Morgan (Queensland).—18,530 tons ore, and produced 8,117 ozs.; copper treated 12,316 tons ore and metalliferous flux, and produced 415 tons of blister copper, containing 410 tons of copper and 4,565 ozs. of fine gold.

Mount Zeehan (Tasmania) Silver-Lead.—590 tons silver-lead ore, containing 247 tons lead and 33,400 ozs. silver.

New Comet.—Milled 17,000 tons, 4,011 ozs.; 11,669 tons sands, 1,475 ozs.; 5,331 tons slimes, 517 ozs.; total 6,003 ozs.

New Goch.—3,117 ozs. cyanide from 16,695 tons crushed; 3,224 ozs.; total 6,341 ozs.

New Heriot.—Crushed 9,100 tons, 4,248 ozs.

New Kleinfontein.—Milled 28,763 tons, 7,749 ozs.; sands 19,652 tons, 2,620 ozs.; slimes 9,221 tons, 634 ozs.; total 11,003 ozs.

New Modderfontein.—Crushed 21,011 tons, 5,360 ozs.; sands and concentrates 13,347 tons, 1,462 ozs.; slimes 8,195 tons, 642 ozs.; total 7,464 ozs.

New Queen.—61 tons crushed, 42 ozs.; concentrates £115; tailings assays average £1 0s. 9d. per ton.

New Zealand Crown.—Crushed 2,022 tons ore, value of £4,065.

Nigel.—Crushed 7,720 tons, 4,287 ozs.

Nigel Deep.—5,015 tons, 2,425 ozs.

North Broken Hill.—Treated 2,291 tons crude ore, producing 387 tons concentrates, containing 270 tons 6 cwts. lead and 6,966 ozs. silver.

North Randfontein.—Ore crushed 16,218 tons, 3,566 ozs.; tailings 10,080 tons, 1,965 ozs.; slimes 5,938 tons, 675 ozs.; total 6,206 ozs.

Nourse.—Crushed 31,480 tons, 8,359 ozs.; sands 19,130 tons, 3,875 ozs.; slimes 11,740 tons, 956 ozs.; total 13,190 ozs.

Oroville Dredging.—Gross returns $17,267.

Oroya Brownhill.—Crushed 10,850 tons, 7,083 ozs.

Pena Copper.—16,750 tons, shipments 7,459 tons; 69 tons fine copper in precipitate produced.

Penhalonga Proprietary.—Crushed 7,800 tons ore, 813 ozs.; 193 tons concentrates, 769 ozs.; total, 1,582 ozs.

Porges Randfontein.—Crushed 14,360 tons, 3,763 ozs.; concentrates, 1,451 tons, 465 ozs.; tailings, 8,568 tons, 1,375 ozs.; slimes, 3,908 tons, 402 ozs.; total 6,005 ozs.

Prestea Block A.—Crushed 6,508 tons, 3,475 ozs.; tailings, 4,134 tons, 494 ozs.; total 3,969 ozs.

Princess Estate.—Crushed 8,069 tons, 2,857 ozs.; cyanide, 5,508 tons, 999 ozs.; total 3,856 ozs.

Rezende.—Crushed 3,400 tons ore, 900 ozs.; sands, 3,000 tons, 279 ozs.; two tons concentrates, 15 ozs.; total 1,194 ozs.

Rhodesia.—Colleen Bawn, crushed 742 tons, 170 ozs.; 421 tons by cyanide, 291 ozs.; 218 tons slimes, 102 ozs.

Rhodesia Consolidated.—Nelly: Crushed 1,685 tons, 648 ozs.; cyanided 810 tons, 220 ozs.; total 868 ozs.

Robinson Central Deep.—Crushed 19,765 tons, 8,376 ozs.; sands and concentrates, 11,600 tons, 2,199 ozs.; slimes, 7,594 tons, 745 ozs.; total 11,320 ozs.

Robinson Deep.—35,887 tons, 16,255 ozs.

Robinson Gold.—Crushed 32,401 tons, 15,455 ozs.; sands and concentrates, 20,755 tons, 5,816 ozs.; slimes, 12,197 tons, 1,783 ozs.; total 23,054 ozs.

Robinson Randfontein.—Ore crushed 14,689 tons, 3,377 ozs.; concentrates, 1,450 tons, 440 ozs.; tailings, 8,325 tons, 1,476 ozs.; slimes, 4,606 tons, 510 ozs.; total 5,803 ozs.

Roodepoort Central Deep.—Crushed 8,389 tons, 2,234 ozs.; cyanide, 5,620 tons, 1,007 ozs.; total 3,241 ozs.

Roodepoort United.—3,757 ozs. from 14,757 tons crushed; 2,223 ozs. from cyanide; total 5,980 ozs.

Rose Deep.—Crushed 30,300 tons, 6,428 ozs.; sands, 19,500 tons, 2,441 ozs.; slimes, 9,829 tons, 820 ozs.; total 9,689 ozs.

Santa Isabel United.—Crushed 476 tons, yielded £1,031 bullion; concentrates, £80.

Selukwe.—Crushed 6,284 tons, 1,608 ozs.; tailings assay, 1.87 dwt. per ton; cyanide 4,556 tons, 489 ozs.; total 2,097 ozs.

Simmer and Jack.—55,660 tons, 20,696 ozs.

Simmer and Jack East.—34,800 tons, 9,899 ozs.

Sons of Gwalia.—Crushed 13,152 tons, 2,511 ozs.; tailings 7,020 tons, 1,051 ozs.; concentrates 205 tons, 552 ozs.; slimes 3,270 tons, 377 ozs.; total 4,491 ozs.

South African Option Syndicate.—Diamonds and precious stones, viz.: 1,003½ carats diamonds and 14,999 carats miscellaneous precious stones.

"O.K." Copper.—837 tons of crude ore treated, producing 80 tons fine copper.

South Kalgurli.—Crushed 6,671 short tons ore, 1,926 ozs.

South Randfontein.—Ore crushed 14,931 tons, 3,467 ozs.; concentrates 1,575 tons, 431 ozs.; tailings 9,025 tons, 1,375 ozs.; slimes 4,416 tons, 537 ozs.; total 5,810 ozs.

Surprise Gold.—Crushed 2,850 tons, 950 ozs.; cyanide, 495 ozs. from 3,375 tons.

Talisman Consolidated.—3,470 tons of ore, value £17,517.

Theta.—Crushed 1,620 tons, 358 ozs.; 726 tons by cyanide, 101 ozs.

Tingha Tin.—Production of tin 34 tons 10 cwts.

Tomboy Gold.—Crushed 8,100 tons ore, yielding bullion value $71,500; concentrates shipped 410 tons, value $28,000.

Transvaal and Delago Bay Investment.—Output 32,003 tons.

Utah-Bingham.—Shipment $17 per ton.

Van Ryn.—Crushed 19,780 tons, 5,673 ozs.; sands 13,200 tons, 2,195 ozs.; slimes 6,507 tons, 579 ozs.; total 8,447 ozs.

Village Deep.—Crushed 19,500 tons, 4,086 ozs.; sands and concentrates, 13,984 tons, 2,700 ozs.; slimes 5,105 tons, 579 ozs.; total 7,365 ozs.

Village Main Reef.—Crushed 37,000 tons, 9,369 ozs.; sands and concentrates 25,440 tons, 4,326 ozs.; slimes 10,389 tons, 625 ozs.; total, 14,320 ozs.

Vivien Gold.—Ore 3,000 tons, 636 ozs.; tailings 1,800 tons, 193 ozs.

Vogelstruis Estates.—Quartz milled 8,600 tons, 2,243 ozs.; tailings 6,110 tons, 580 ozs.; total, 2,823 ozs.

Wanderer (Selukwe).—Cyanide 18,042 tons, 2,304 ozs.

West Rand Central.—Crushed 2,475 tons, 397 ozs.; cyanide 1,920 tons, 393 ozs.; slimes 1,140 tons, 80 ozs.; total, 870 ozs.

Whim Well Copper.—Shipment, 103 tons copper ore, 21 per cent.

Windsor Gold.—Crushed 5,054 tons, 628 ozs.; treated 3,074 tons, 710 ozs.; total, 1,344 ozs.

Witwatersrand Deep.—Crushed 31,159 tons, 8,185 ozs.; sands and concentrates 30,957 tons, 4,588 ozs.; total, 12,773 ozs.

Wolhuter Gold.—Crushed 17,600 mill tons; sands and slimes, 17,600 tons; from mill, 3,585 ozs.; from slimes, 2,204 ozs.; total, 5,789 ozs.

Worcester Exploration.—Crushed 4,127 tons, 1,112 ozs.

Zeehan-Montana.—270 tons silver-lead ore, containing 155 tons lead and 17,600 ozs. silver.

Zinc Corp.—Treated 5,067 tons tailings; recovered 992 tons concentrates, assaying 44 per cent. zinc, 7½ per cent. lead, 10 ozs. silver; assay of tailings 16.26 per cent. zinc; residues, 6.97 per cent. zinc.

River Plate and General Investment Trust.—Interim at the rate of 5 per cent. per annum on the deferred stock for half-year ended June 30.

Siemens Brothers and Co.—4 per cent., writing £9,004 off expenditure, &c., and £2,000 off the value of investments, carrying forward £5,739.

Scottish American Investment.—Interim for first half of 1907 at the rate of 12½ per cent. per annum, payable Aug. 1.

Union Discount of London.—At the rate of 11 per cent. per annum for the half-year, placing £15,000 to reserve, £5,000 to provident reserve fund, and carrying forward £55,725.

United River Plate Telephone.—Final of 5 per cent. on the ordinary shares, making 8 per cent. for the year.

Wagon Finance.—Interim at the rate of 5 per cent. per annum for past six months.

Welford and Sons.—Interim of 8 per cent. per annum for half-year ended June 29.

NEXT WEEK'S MEETINGS.

MONDAY, JULY 15

Bukit Rajah Rubber.—20, Eastcheap, E.C., noon.
Crompton and Evans' Union Bank.—Derby, 2.30 p.m.
Day Dawn Block and Wyndham Gold Mining.—Cannon Street Hotel, 12.30 p.m.
Great Boulder Main Reef.—Salisbury House, 2.15 p.m.
Grootfontein Exploration.—Cannon Street Hotel, noon.
Indian Glenrock (Wynaad).—Winchester House, noon.
Kent Coal Concessions.—Cannon Street Hotel, 2.30 p.m.
Lovell and Christmas.—Holborn Viaduct Hotel, 3 p.m.
Prestea Block "A."—Cannon Street Hotel, 12 [illegible] p.m.
Village Main Reef Gold Mining.—Cannon Street Hotel, noon.

TUESDAY, JULY 16

Abbontiakoon Block 1.—Cannon Street Hotel, 12.30 p.m.
De Lamar Company.—Salisbury House, noon.
Delahaye and Co.—Winchester House, 2.30 p.m.
Dorada Extension Railway.—Finsbury Pavement House, 2.30 p.m.
Lake Copais.—Winchester House, 2.30. p.m.
S. Hoffnung and Co.—102, Fore Street, E.C., noon.

WEDNESDAY, JULY 17.

American, English and General Trust.—Winchester House, noon.
Assam Oil.—Winchester House, noon.
Deccan Goldfields Development.—Winchester House, noon.
Denny, Mott and Dickson.—Cannon Street Hotel, 2 p.m.
Henry Lamplough, Limited.—Cannon Street Hotel, 12.30 p.m.
Lochgelly Iron and Coal.—Glasgow, 3 p.m.
Manchester and Liverpool District Banking.—Manchester, noon.
National Discount.—Cannon Street Hotel, noon.
United Exploration.—Cannon Street Hotel, 3 p.m.
Wanderer (Selukwe) Gold Mines.—Cannon Street Hotel, 12.30 p.m.

THURSDAY, JULY 18

Apollinaris and Johannis.—Holborn Restaurant, 3 p.m.
Bank of Liverpool.—Liverpool, noon.
Chili Telephone.—42, Old Broad Street, 12.30 p.m.
Costa Rica Railway.—Winchester House, 2.30 p.m.
Electric Construction.—Winchester House, 12.30 p.m.
Gold Mines Investment.—Cannon Street Hotel, 3.30 p.m.
Penhalonga Proprietary Mines.—Salisbury House, 3 p.m.
Union Discount of London.—32, Cornhill, E.C., 12.30 p.m.
William Murray and Co.—Edinburgh, 12.30 p.m.

FRIDAY, JULY 19.

C. Arthur Pearson Limited.—Winchester House, 2.30 p.m.
Golden Lanes.—Salisbury House, noon.
Oroya Brownhill Company.—Salisbury House, noon.
Peel River Land and Mineral.—Winchester House, 1 p.m.

COMPANY MEETINGS.

MERCHANT BANKING COMPANY.

A general meeting of this company was held on Friday, at Cannon Street Hotel, to receive from the liquidators a report of the progress of the liquidation of the bank.

Mr. H. Mackenzie, F.S.S.A., one of the liquidators, presided. He said: We have called this meeting to comply with the terms of the Companies' Act, and to give you an account of the progress of the liquidation of the bank, as well as to discuss with you and decide upon the course to be adopted in the future. From the figures before you, namely, the balance-sheet of July 16, 1906, the date on which the bank went into voluntary liquidation, and that of July 3, 1907, it appears that the liabilities have been entirely discharged; they were, in fact, all paid within six months from the date of liquidation. We have further been able to distribute three dividends on account of capital; the first, amounting to 30s. per share, was made five months after the resolution to wind up the company; the second of 20s. within eight months, and the third of 20s. has just been declared. Those three dividends amount to £3 10s. out of the £4 paid up on the shares, and we venture to hope you are not dissatisfied with the first year of our liquidation. We may add that the liabilities and the returns of capital were alike paid without any assistance whatever either from the London and Hanseatic Bank (with whom, as you were informed at the general meeting, an arrangement was made to advance us money if required) or from any other source. We cannot resist the observation that the above facts furnish a striking commentary upon the solvency of the Merchant Banking Company, at a time when the board thought its credit in the discount market so diminished as to induce them to recommend voluntary liquidation. It will be no surprise to you if we are unable to give an equally favourable report of our future prospects. We have still a number of assets to realise, the book value of which aggregates in amount the 10s. short paid, but the actual value of some of them is at present difficult to estimate. We have had some sharp rebuffs, and have been obliged to make unexpected appropriations for some failures. One debtor in Hamburg who had always been reported to the bank as of the highest standing and integrity is now, we understand, in gaol for fraud. Another firm abroad who had acted as agents for this bank for upwards of 30 years took advantage of our going into liquidation to do the same, but under very different circumstances, for up to the present we have been unable to either make them insolvent or to recover anything from them. Besides this, there are other causes which contribute to the expected deficiency, but I am glad to be able to report that the expense of liquidation is not amongst them, the whole cost of carrying on our business having, so far, been defrayed out of profit, This is, of course, due in a great measure to the high rates ruling for money by which we have benefited, as we have had considerable balances to lend in the market. There is actually a profit under this head of £2,823 19s 6d. The causes to which I have referred are the compensation payable to the staff (a matter to which I shall presently revert) and the forced realisation of certain assets held by the bank, most of which were acquired as security for accounts which proved bad. Some of these assets have been for many years on our books, and probably few of them would ultimately have occasioned loss to the bank had time permitted of our awaiting a favourable opportunity to realise them. In the actual circumstances we have thought it our duty to dispose of as many of these securities as possible without studying too closely the valuation at which they stood in the books of the bank; still, I need hardly say we have done our best to obtain the current market value, and in most cases the amount involved was not large. Two of those assets are, however, of considerable importance. You have sometimes heard reference at our annual meetings to an estate of building land we have long held near Manchester. When I undertook the management of this bank eight years ago we held some 38 acres; this had been gradually reduced to 11 acres at the date of liquidation, and the sales made were all at prices showing a good profit to the bank. Quite recently we have succeeded in selling a considerable area, but have been obliged to accept a much lower price than formerly. The account must, therefore, eventually show a loss; the area we now hold is reduced to about four acres. We hold another freehold, some 40 acres of suburban land, near Adelaide, South Australia, but this, we fear, will prove less easy of realisation. Up to the present we have failed to obtain any offer for it. There remain also on our hands debentures and shares of sundry companies which will certainly bring in money, but to force them on the market just now would be to throw them away. We cannot, of course, pledge ourselves to an exact estimate of what these various assets will realise, but the amount ought in our opinion to be such as will give you a further dividend of not less than 2s. per share; in favourable circumstances we may be able to pay more. The position is, therefore, as follows:—We have returned you £3 10s. per £4 share within the year, and we hope to make you a further return of at least 2s. You will thus have got back not less than 90 per cent. of your money, that is to say, 72s. per share, which compares favourably with the price about this time last year of 30s. It was an unfortunate circumstance that the deficiency could not be made good by the sale of the goodwill of this bank, which in our opinion was certainly worth buying. Now as to the future. With so few accounts left open it is evident that our expenses must be greatly reduced, and with this end in view we consulted the advisory committee who have drawn up the resolutions which they will shortly lay before you, and of which you have had due notice. The report and balance-sheet is now before you, and as it has been in your hands for over a week I will, with your permission, take it as read. I therefore move that the report and balance-sheet be adopted.

Mr. Stanley F. May, one of the liquidators, seconded the motion, and said that a letter had been received from a shareholder asserting that the shareholders had no reason to feel indebted to the late management, which had brought the shares down from £4 to 30s. He (Mr. May) held no brief for the gentlemen referred to, but having been one of the liquidators for twelve months, and for two years previously one of the auditors of the bank, he knew that the charge was not well founded. He had no hesitation in saying that had the liquidation been undertaken six or eight years ago, it would have been not only less favourable to the shareholders, but, perhaps, even disastrous.

A shareholder asked what the position of the bank was at the time mentioned.

The Chairman replied that to the best of his recollection the price of the shares then was from £2 to £2 2s. 6d. A considerable amount of capital was locked up, and had liquidation taken place the liabilities of the company could not have been met without a very substantial call being made on the shareholders.

Mr. W. J. Peake-Mason said they as shareholders ought to feel very much indebted to the gentlemen who came into the bank at a time of such stress, and by good management had to such a great extent retrieved the position. He was glad that something had been done for the staff, but he thought the directors had sacrificed the goodwill of a business which had been trading for 100 years. He had never heard before of such a rapid liquidation. The old directors might have given the gentlemen who had been more recently in charge the chance of carrying on the business. He thought that the allowance of £150 per annum for the expenses of the liquidators was too small, and that the limitation to that amount was detrimental to the interests of the shareholders.

The Chairman explained that negotiations had been unsuccessfully carried on with two banks for the sale of the goodwill.

The resolution was adopted.

Mr. E. H. Tootal (chairman of the advisory committee) moved and Mr. Henry Gordon seconded the resolutions referred to by the chairman.

A discussion took place, in the course of which it was decided, on the motion of Mr. W. J. Peake-Mason, seconded by Mr. H. Edlmann, to eliminate the clause limiting the liquidators' expenses to £150.

The resolutions as thus amended were adopted.

W. H. CHAPLIN AND CO.

The tenth ordinary general meeting of W. H. Chaplin and Co., Limited, was held on Thursday, at the Hotel Cecil, Mr. W. H. Chaplin, managing director, presiding.

The secretary (Mr. W S. Godfrey) having read the notice convening the meeting, and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said the gross profit was practically the same as in the previous year, but they had to spend a little more in earning it, and had to provide a larger sum for losses by bad debts, so that the nett profit was £687 less. The sundry creditors and bills payable were larger, but the increase was offset by an increase in the sundry debtors and stocks. The increase in stocks was mainly accounted for by their having to carry large stocks of three vintages of champagne—1898, 1899, and 1900 - besides older ones. Two of these large vintages would have to carry them over until the 1904's were ready. Their success was not due to any exceptional transactions, but was to be attributed to their consistent endeavour to meet the wants of their customers in small things as well as big. As to the prospects of the future, he thought they might look forward to better times, but not in the immediate future, as, with the decreased value of securities and the continued imposition of the very high income-tax, the necessity for economy pressed on all classes. A further reason for the diminution in their trade was undoubtedly to be found in the teetotal wave. During the first half of 1907 there was a distinct improvement, and this was confirmed to a small extent by the returns of duty payment. For the six months to June in this year there was an increase on the corresponding period of last year of 174,000 gallons. In foreign spirits there was also an increase of 341,000 gallons. He hoped these figures gave some promise that the wine trade might return presently to something like its former prosperity, which reached its high-water mark with the 18,000,000 gallons which paid duty in 1876. But he feared they would have no large improvement in their business until confidence was fully restored on the Stock Exchange. Their trade was threatened next year with a new Licensing Bill, which the Premier had assured his disappointed temperance supporters should be a "better Bill" than the one introduced this session. Of course, there were many slips between promise and performance, and it might be that the Bill would not get through. If the proposed time limit were carried, it would inflict on many a licence-holder a cruel injustice, and compel him, after contributing his quota under the Act of 1904 to the compensation of his fellow-traders who had been extinguished under that Act, to surrender his licence and his living uncompensated and unprovided for. Besides the licence-holder there was the enormous number of the public who had invested in securities of the great brewing and allied industries, and a strong committee had been formed under the chairmanship of Mr. Stanley Boulter to protect their interests.

Mr. H. C. Hawkins seconded the resolution, which was carried unanimously.

Messrs. John Ramsay Drake and Charles Hermann Runge have joined the board of the London Produce Clearing-House.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 498. New Series. SATURDAY, JULY 20, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Industrial Germany.

Some time ago we received a letter of remonstrance from a gentleman who described himself as an "old and constant reader of THE INVESTORS' REVIEW," but he was a partial reader, because everything relating to economics which he found in it, and which was not relating to Free Trade, he frankly said he skipped. After telling us this, he went on to say that he was a convinced Protectionist, and, with the usual habit of Englishmen who neither read nor think to any purpose, he saw everything good in other countries in contrast with everything evil at home. There is no such thing as an unemployed segment of society, according to this gentleman, in nations blessed with Protection. Everybody is happy and prosperous there, and he evidently longs for the day when we shall come under this wealth-spreading *régime*, by which the more that is taken out of a man's pocket the fuller the pocket will be. The letter was marked "private," so that we could not print an interesting and suggestive discourse. It was suggestive, because the opinions of the multitude were reflected in it, the multitude who feel that something is amiss, and, not knowing what, assimilate the fallacies of the Protectionists, and cry out against Free Trade.

Were it possible, we should like to persuade men of this stamp to try and read the report of Mr. Consul-General Oppenheimer for the Frankfort Consular District in Germany, recently issued by the Foreign Office. If the sentimentally inclined towards Protectionism would only assimilate the facts so carefully grouped and set forth in that report, they might possibly be cured of some of their delusions. We never like altogether to abandon hope. The writer begins by endeavouring to find the sources of the striking prosperity which Germany has enjoyed for the last few years, and comes to the conclusion that one powerful cause was the good or excellent harvests which the Empire has recently enjoyed. No better foundation for an expansion in industry could possibly be found, and in addition to this the impending additions to the Customs tariff and to other forms of taxes stimulated purchases abroad, so that goods might be hurried into the country before the new duties came into force. This stream of imports has lasted beyond the time when the additional Customs tariff came into force, and it, as well as the export trade, has been aided by the operations of the syndicates that now control most sources of German production. Ten or a dozen years ago these syndicates were scarcely known, but they now dominate the whole industrial world there, one may say, and can keep alive movements in trade long after the real forces that started them have exhausted their strength.

But is Germany perfectly happy under these changes? We cannot find any trace of this happiness in the facts before us. Bread is very dearer than it was in 1904, wheat having gone up from 174 marks per ton in the earlier year to 177 marks in 1907, with corresponding increases in the price of other cereals. Not only so, but every other article of consumption is sensibly dearer, and the cost of meat, which has gone up by nearly 17 per cent. since 1900, is now so great as to seriously diminish the consumption of it by the masses of the people. The immediate consequence of this greater cost of living has been a strenuous effort to get wages raised, and employers, from the

Government downwards, have had to concede sensible additions to the workmen's scales of pay. Even so, and in spite of the splendid development of German industrial production, in spite also of a decided scarcity of labour in a number of industries, the workmen are not well off, and although last year the number of applicants for every hundred vacant situations dropped in April to 100.3, they had risen by November to 135.1, and were in December 124.4. There is thus a sensible percentage of unemployed among the working classes in Germany at the present time, a proportion not anything like so great as in earlier years, but still important enough to warrant us in concluding that there must be a sensible amount of misery within the borders of that Empire.

Internal taxes are also pressing heavily upon the working men, and we should like to know how the same classes of people in this country would relish the payment of an income-tax upon weekly wages aggregating only £45 per annum. Incomes of that amount up to about £52 10s. pay 6 marks per annum, and between £135 and £150 per annum the tax is 52 marks—say 6s. and £2 12s. Some of these incomes, it is said, will have to be liberated from liability to the tax, because of the increased cost of living, but even then the burden borne will be onerous enough, and additional Excise duties are also playing havoc with the earnings of the working men and the lower middle-class generally. Both beer and tobacco have been subjected to higher duties in the late revision of imposts, and the breweries have been obliged to increase the price of their beer. They tried to get 1½ marks per hectolitre at the start, but had to knock off the half mark, as they could not get it from the beer seller. Even so, a litre of beer which cost the private consumer 17 pf. on January 1, 1906, now costs him 18 pf. Cigarettes have also been struck with an increased impost, the whole of which seems to be drawn from the poorer classes of consumers. Only £750,000 per annum was estimated as the yield of the increased cigarette tax, but it was sufficient to raise the price of the cigarette and of the cheap home-made cigar to the consumer, leaving the rich man's cigar untouched. If, says Mr. Oppenheimer, this measure "should in the long run lead to a reduced consumption, and in consequence to a reduced manufacture, the effects will fall heavily upon the tobacco workers, a class not likely to find occupation elsewhere, because the tobacco industry employs a great number of weak and crippled workmen."

Distress, a pinched life, naturally find their expression in strikes, and these during 1906 were particularly violent and numerous, extending as they did over the whole of Germany. Both the number of trades, says the Consul-General, the workmen engaged, and the period during which the strikes lasted "must have by far surpassed the average of former years." Thus all is not perfectly happy in the German Empire, and although it is as yet early to judge what the permanent consequences of increased taxation there are going to be on the country's competing power, we have already proof in the trade statistics that Protection is not such a magnificent stimulant to foreign trade as our Protectionist friends here strive to make out. In the first year of "the world's boom," as Mr. Oppenheimer calls it, that is in 1905, Germany participated to the same degree as the United Kingdom and the United States of North America in the rising tide, but it fell behind these in 1906, when the increase of German exports amounted to only 7 per cent., against 10 per cent in 1905; but in 1906, he goes on, the export trade of the United Kingdom rose by 14 per cent., and that of the United States by 11 per cent. He adds prudently enough that this rise in values does not necessarily imply increased quantities, but it may mean increased profit, and Germany, however we interpret the figures, has not expanded its business under Protection as we have done under Free trade. Our increase, in fact, was double that of the Empire in 1906.

How agriculture is going to fare under the drastic policy of excluding foreign cattle and foreign dead meat products it is likewise too early yet to determine, but, as has been stated above, the consumption of meat is falling off amongst the masses of the people, and will continue to fall off, simply because their burdens are so crushing that no increase of pay they can hope to get will enable them to live in the old style. But if the consumption of meat falls off, so will the consumption of bread. The working people will be driven towards the condition of the underfed, and in proportion as consumption diminishes, the situation of the ruthless agricultural Protectionist, the home farmer and landowner must tend to deteriorate. In recent years the prices of grain have gone up, partly because of the hindrance put in the way of imports. A continuation of good harvests, combined with lessened consuming power, would almost certainly cause a relapse on the market, and already a decline has taken place in the price of cattle and sheep, which is ominous of future trouble to the powerful agrarian interests which brought about the recent increase in the Customs tariff of the Empire. Already the Prussian Secretary of State for Agriculture has been impressed by the fact that "the advantages offered by the Customs legislation were being over-estimated." He has found that the increased cost of labour and increased cost of production resulting from a general rise in prices has had a neutralising effect, which is bound to tell presently upon the capital value of farming estates. These have been rising on the market for some time past, until the professional farmer is no longer able to make a profit upon land he has bought at the high quotations recently prevalent, and our Consul-General points out that if the new German agrarian duties have resulted in a rise of ground values, the farmer will be forced to pay, with the old yield, interest on an increased capital. Thus the disease originating in Protection, the child always of selfishness and corruption, works its way through all the strata of society, and, time given, the German people, vigorous though they be, industrious and thrifty though they are, ingenious too and highly educated, will find themselves pushed aside by countries less oppressed by taxation, and more free to develop their resources without State coddling or any other device adopted to try and hide the ravages of excessive taxation.

General Mining and Finance Corporation, Limited.

In some of its aspects the report of this controlling company for the past year will not be very encouraging to its shareholders. In spite of the success attending the operations of several of its subsidiaries the nett profit for the year was only £21,012, the gross having been £67,351, including £6,189 representing profit on stocks, shares, and other assets realised. This is a tiny product for a business whose share capital is now £1,875,000, it having been increased by 625,000 new shares issued in December, 1906, to the following underwriters:—Messrs. G. and L. Albu, the Dresdner Bank, the Direction der Disconto-Gesellschaft, and Herr A. Schaaffhausen'scher Bankverein, which is now a branch of the Dresdner Bank. These underwriters took the shares at 25s. each, and they were offered to the existing shareholders of the corporation at 30s. each, but we are not told how far the offer was accepted. From the underwriters, however, a premium of £156,250 was received which, added to the previous accumulations under this head, gave a total credit of £593,750 from share premiums. The whole of this was transferred to the appropriation account, and used to the extent of £368,474 to provide for losses. That is to say, what was really capital was to this extent employed to write down the possessions of the corporation, and naturally there could be no dividend to the shareholders out of the tiny revenue. Adding in the profit of the year together with the balance brought forward of £15,111 and the balance at credit of the share premium account, there was altogether £629,872 to be disposed of and £440,754 of this was used to write down the value of the securities held to the

making-up prices of the London Stock Exchange on December 31 last and to add to the reserve against further depreciation to the extent of £65,000. Sundry small debits were also wiped out, with the result that the balance left to be carried to the special reserve was £189,118. This special reserve has been provided to meet further depreciation, and we must say that the controllers of this company appear to be acting in a prudent and straightforward manner in dealing with the assets.

This is a good augury for the future, and although the vast mineral claims owned or controlled by the corporation appear to contain ore of but low grade, there is no reason to doubt that in course of time a large gross revenue at least will be secured from them. The company now possesses a controlling interest in the Meyer and Charlton, the Van Ryn, the Roodepoort United, and the New Goch Mines, all of which are in a position to yield good profits as our analyses of their separately issued reports have shown. The Roodepoort United Company, however, did not pay a dividend last year because out of its total profit of £159,639 no less than £72,426 was otherwise absorbed, over £64,000 of it in providing for depreciation and another £7,760 for interest on the company's loan. In spite, however, of the profitableness of the other two producing mines the total income of the General Mining Corporation for the year from dividends, interest, transfer fees, commissions, rent, &c., was only £61,162, and its subsidiaries will have to do much better in the coming years to warrant its heavy capitalisation. Happily it has no bonded debt outstanding, although it owes £630,610 to "depositors" and £254,857 to sundry creditors. Against this total of over £885,000 due by the company it has £315,472 advanced against securities, including stocks and shares "taken in," that is to say contangoed, and its subsidiaries and others owe it £872,306, or a total of £1,187,778. Thus its resources are even now fully committed, in spite of the late addition made to the company's capital, and at the date of the balance-sheet the total of cash, including bar gold in transit, was only £258,346, which is not enough by any means to meet the requirements of the company's many subsidiaries now in a more or less initial stage of development. It will therefore have to go slow.

An interesting speech was delivered by Mr. George Albu at the ordinary general meeting of shareholders held in Johannesburg on May 29 last, but that is all an old story now, and it will be more encouraging to note some of the information conveyed in the ably drawn up report relative to the work done and results obtained over the whole Witwatersrand goldfield for the past year. Apparently the gold yield was £24,579,987, which was £3,777,000 more than the yield in the preceding year, an increase of 18.15 per cent. The dividends paid also rose by over 18 per cent. to a total of £5,735,161, which, however, was not much more than 23.3 per cent. of the gross output, so great is the overburden of charges of all kinds. The more favourable result shown, however, was obtained with an increase of only 14.65 per cent. in the number of stamps dropping, no change having taken place in the number of companies at work producing gold.

The report goes on to say that the total gold yielded by the Transvaal from 1884 to the end of 1900 was £169,625,717, and that for 1906 alone the output was nearly 30 per cent. of the world's production. During the longer period £38,652,223 has been distributed to the shareholders in dividends, or an amount equal to 10s. 1d. for every ton of ore treated. It might have been added also "equal to less than 23 per cent. of the gross production." Even as it stands this result no doubt looks fine, but it has never at the best of times been good enough to support the inflated prices to which the shares of all the producing and many of the non-producing companies were hoisted during the mania, and from which they have been slowly falling. And the curious uniformity of the average nett product to shareholders is the reverse of encouraging to any renewal of the gamble for the rise. Deep Level mines, however, seem to promise well, in some instances at least, and should the results even approach anticipations it may be that we shall have seen the lowest depths of depression for some little time. That depends, though, on many things besides the productiveness of the mines.

Since 1905, the report goes on to say, the stocks of 110 companies working on the Rand, whose total issued capital was approximately £59,900,000, have depreciated to the extent of £132,000,000. This depreciation has unquestionably been disastrous, but not without good results in many ways. It has forced the controllers of the industry to put their house in order, driven them to search for more economical methods of working, and compelled them to fall back upon mechanical improvements so as to reduce the cost of mining. Capital accounts, too, have been closed in some instances, so far as individual mines are concerned. This Finance Corporation's Meyer and Charlton property, for example, is now worked upon the basis of paying out of current revenue for all improvements that formerly would have been charged to capital. Last year a great consolidation was carried through by the General Mining and Finance Corporation in virtue of which the West Rand Mines, Limited, and the Violet Consolidated Gold Mining Company were amalgamated with the West Rand Consolidated Mines, Limited, whose capital was increased from £1,525,000 in 1,500,000 ordinary and 25,000 deferred shares to £2,025,000 by the creation of 500,000 additional shares. The working capital in hand at the end of December was £387,000, so that the aggloneration, we are told in the report, starts under excellent auspices and in a strong financial position. It is finding ore, too, assaying 8 to 9 dwts. per ton, and by and by doubtless the producing stage will be reached. It is proposed eventually to erect a mill of a capacity of from 400 to 500 stamps, and, even though low grade ore, there ought to be profit in the industry thus vigorously conducted.

Altogether the General Mining and Financial Corporation is interested in ten subsidiaries four of which are mining at a profit, and two of which paid dividends last year, the Meyer 60 per cent. and the Van Ryn 20 per cent.—and six of which are in a more or less undeveloped condition. When all the companies are at work and yielding revenue the first job to be undertaken must be the liquidation of their debts, and then dividends may come years and years hence. But 30s. ore, of which "hundreds of millions of tons" exist all over the field, do not promise fat revenues to the shareholders after "general charges," interest on capital, fair allowances for depreciation, &c., &c., have been met. The best to be hoped for is a steady, moderately profitable industry, which may fairly pay well enough to support shares at a great premium.

Economic and Financial Notes.

Monday's Protectionist Debate.

There does not seem to be any particular reason why we should devote much of the crowded space in these columns to an analysis of the "vote of censure" protectionist debate in the House of Commons last Monday. If Cape wine and tobacco got a "preference" from us in taxation, we should neither drink nor smoke any more of the one or the other than we do now, and last year the colony sent us just £7,300 worth of manufactured tobacco. How much of her liquor she sent our "annual statement of trade" does not disclose. But the debate, although it does not seem to have gratified Mr. Lloyd-George, with the sight of Mr. Balfour at last fairly caught and "corralled" by the Protectionists, served several purposes which the Opposition doubtless thought good. It wasted an evening of precious time, allowed Mr. Alfred Lyttelton once more to display his best special pleader manner in a field where his ignorance of the economics and facts of trade left him untrammelled; gave Mr. Chaplin the chance to fire off one more Protectionist speech containing his Rip van Winkle

aspiration for a duty on imported corn—all in favour of the consumer, of course—and permitted that "dreffle smart man," Mr. Bonar Law, to be as perky as usual. Of course, the Protectionist opposition did not get the better of Mr. Balfour, who seems to have thoroughly enjoyed himself in expressing any number of contradictory views, and leaving his listeners to make their own selection.

One most grave side, however, this continual ringing the changes upon "slammed doors," colonial "offers," preference to the colonies and similar debased coin of the charlatan political agitator, presents to the eye of the thoughtful. A little more of this kind of insincere and anti-humane agitation and the people of this country may come to detest the very name "self-governing colony." Already the nation has asked itself what such colonies have done or are doing for it beyond borrowing its money, and it gave its first answer at the last election. Has Canada bestowed any valuable "preference" on the manufacturers of this country? Has Australia? Has New Zealand? Has the Cape? No, they have not, and they are not likely to either, as long as nearly one-half of their entire imports are drawn from foreign countries. Why, at this very hour the new provinces of the Canadian North-West are beginning to look to China and Japan as markets for a portion of their expected bumper crops of cereals, and there is not a country in the world where they will not be eager sellers of everything they can produce when the chance offers, and where they sell they will probably buy. We make no objection; on the contrary, the wider the range of their dealings the more delighted we shall be. All the people of this country object to is that the colonies should stoop to be the catspaw of a faction or party here, which is restlessly intriguing and agitating to bring our industries back under the shade of the deadly upas tree of Protectionism.

We occupy the "most favoured nation" position in regard to our trade with all the world, as Mr. Lloyd George pointed out on Monday night, and we are not going to abandon that position merely to gratify a diseased sentimentality, or to console Mr. Chaplin and such as he for the loss of their wealth. Under it, as Mr. George also said, "we are as free to enter all countries as any of our rivals, and in neutral markets we beat them all!" With all the advantage given by possessing the raw materials at home, the United States in the past five years has increased its export of cotton tissues by but three or four millions. The Germans, standing in the matter of raw materials on the same footing as we do, but clogged by their tariff, have enlarged their exports of cotton by two millions, and our exports have grown by 20 millions. That is the five years' record; but nothing will convince the sentimental Protectionists. They seem to cherish resentment against all nations which show anything like the smallest enlargement of their trade, talk and act as if growth abroad was an insult to England. Our navy is certainly too small if jaundiced patriotism of that sort is to shape our fiscal policy. It will not just yet.

The Budget Year of the United States.

There are dreamers we believe who imagine a world in which the test of a Government's success will be furnished by the smallness of the amount it requires from the taxpayer in order to carry on its business. We are not in sight of that millennial era as yet, and at present the bent of civilised nations rather seems to lie in the direction of a glorification of the way in which they can add to the public burdens and swell out correspondingly the revenue. We are just as bad in this respect as other countries, and find an excellent rival, quite capable of taking care of itself in the race, in the Government of Washington. Accordingly, papers from the United States are congratulating that Government and the nation it presides over upon the fact that the Federal revenue gathered in for the fiscal year ended on June 30 was £133,000,000, and that the surplus was about £17,500,000 after the tremendously increased expenditure had been met. The expansion indeed is dazzling, and we cannot be surprised, when figures of this kind are examined, that no North American politician, whether republican or democrat, publicist or separatist, ever ventures to utter a word against the robbery of the taxpayer implied in the enormous expenditure on fraudulent pensions. Just fancy what an embarrassment our Government would be in if it had a surplus of £17,500,000 to play with. We should have old age pensions on a higher scale than any country in the world could match, and by and bye, when a cycle of years of adversity came round, we should have to clap on a protective tariff to prevent the happy pensioners from feeling the pinch.

Last year's Imperial revenue, as we might call it, for the United States is now a great empire in several senses of the word, was the highest total ever seen, and beat the previous year, which itself was what is called a "record" one, by nearly £14,250,000. In dollars last fiscal year's aggregate "take" was $665,306,135. Up to the time of the outbreak of the Cuban war in 1898, the receipts of the Central Government had never been much more than £60,000,000 per annum, and in one very bare year fell short of that amount. The Customs receipts alone now reach a larger total than the entire revenue of that benighted earlier period. In the year just closed Customs gave £66,650,000, showing an increase of about £6,600,000 on the previous year. As recently as 1897-8 the total yield of this branch of revenue was barely £30,000,000, and it is contended that such magnificent development is proof of the wonderful progress of the country. Even the tariff cannot check its eagerness to buy abroad. The view that the country bursts with wealth is supported by the expansion in the internal revenue. In spite of the fact that the war taxes calculated to yield about £20,000,000 per annum have in the interval been knocked off, for the year just closed the internal revenue yielded £54,062,000, and in 1896-7, or ten years back, the total was only £29,340,000. Happily the Government of President Roosevelt seems able to cope with this embarrassing inflow of wealth, this suction of his substance out of the taxpayer, and contrived last year to spend nearly £116,000,000, or almost as much as the Government of Mr. McKinley managed to make away with at the height of the Spanish War, for the maximum outlay then attained was little more than £121,000,000.

And how or where does the money go? Mere administrative expenditure has not taken away so very much of it. In the year just closed the total spent in that direction was barely £25,000,000, against rather more than £18,000,000 in 1896-7, but £20,334,000 were absorbed last year by Mr. Roosevelt's Imperial war machinery, against a humble £10,000,000 a decade back, and the navy ran away with £19,522,000, compared with less than £7,000,000 at the same previous date. Sad to say, however, pensions show a slight decline, for in the past year the Government was apparently hardly able to make away with £28,000,000 on this score, the total being $139,290,910, which is below the standard of either of the previous two years, and less even than the total of 1896-7, which was $141,053,165. There is also no satisfactory increase in the interest paid on the debt; in fact, the total, although slightly higher than for 1905-6, is less by a few dollars than that for 1904-5, and materially less than the sum required 10 years ago. That is to say, in the past fiscal year £4,893,000 was devoted to debt interest, compared with £7,560,000 ten years back. Here the Yankees beat us all to fits, but they need not feel down-hearted. Success in the pursuit of imperialism will bring its debts. The Government even now has one splendid source of expenditure which will never fail it, no matter what comes of pensions or even of the expanding army and navy. It has the Panama Canal to dig, and if it does this out of revenue, instead of by issues of debt, there will be no occasion for anxiety lest a reduction in taxes should become imperative owing to the impossibility of spending the money in any legitimate way. Last July Mr. Secretary Shaw sold £6,000,000 of 10-30 year Panama Canal bonds, but his successor ought not to be under the necessity to do anything of the kind in the current year unless the digging has begun to grow fast and furious. The patient taxpayer should furnish all he requires.

Terminable Annuities Again.

We make no apology for returning to this really painful subject, and readers must bear with us because of the vital interests involved. Whatever professions politicians may make, whatever zeal they display in endeavouring to carry out the programmes they have formulated when face to face with the electorate, no good government is possible without sound finance, and unless the present Government is resolutely prepared to handle delicate subjects like that suggested by the position of the various terminable annuities and their history, we cannot expect to see the Consol market or any other branch of the Government's financial concerns really placed upon a stable foundation. The credit of the Government, in other words, will always be liable to be upset until false positions or usages are abandoned and a wise policy evolved and adhered to. Buy as it may, the Treasury will find the market ever and anon mysteriously against it.

The week before last Mr. Myer asked the Chancellor of the Exchequer "whether he would give particulars of all cases of terminable annuities created since 1861, the terms of years of which annuities as originally fixed have been subsequently extended and will state what amounts have from time to time been applied to the reduction of the deficiency in the trustee savings banks and friendly societies, how the fact of the deficiency was established, and what is its present amount?" This was a question which did not cover the whole ground, but it endeavoured to probe beneath the surface to a certain extent, and as far as the annuities relating to the savings bank and friendly society deficiencies went. Mr. Asquith answered as follows:—

"Particulars of annuities created since 1861, of which the terms of years as originally fixed have been subsequently extended.

"1. The following annuities which were to have expired in 1885 were, under Section 5 of the National Debt Act, 1883, converted into a 20 years' annuity of £684,022:—

Annuities Exchanged.

	£	s.	d.
1. Annuities created for fortifications under 23 and 24 Vic., c. 109, and subsequent Acts ...	588,003	11	6
2. Annuities created for localisation of the military forces under 35 and 36 Vic., c. 68	378,831	0	0
3. Annuities created in lieu of stock held on account of savings banks, under 29 Vic., c. 5, and 32 and 33 Vic., c. 59	3,617,845	0	0
4. Portion of annuities created under National Debt Act, 1880, 43 Vic., c. 15	550,583	0	0
	£5,135,262	11	6

"2. Annuities amounting to £3,600,000 created under Section 2 of the National Debt Act, 1883, and running for periods of 5, 10, and 15 years were, under Section 4 of the National Debt and Local Loans Act, 1887, exchanged for equivalent new annuities running for a period not exceeding 15 years from July 12, 1887.

"Under Section 17 of the Finance Act, 1889, these annuities were again exchanged for annuities of equivalent capital value terminating in the year ending March 31, 1912.

"The dates of expiry of the above annuities have been retarded owing to the suspension of the issues of sinking fund in the years 1885-6, 1900-1 and 1901-2.

"3. The annuity of £83,072 12s., created under Section 1 of the Savings Banks Act, 1880, for the purpose of making good the capital deficiency on the Trustee Savings Banks Account, computed at £3,573,405, was, by Section 10 of the Savings Bank Act, 1904, extended from 1908 to 1917.

"The annuity as originally set up was calculated to accumulate to the capital deficiency at November 20, 1880, by 1908. The accumulated fund at November 20, 1903, amounted to £2,408,301, and the payments from that date will [illegible] balance of £1,105,104, while [illegible] on the securities acquired [illegible] increasing the income account of the Savings Banks Fund.

"Besides the annuities mentioned above, the suspension during the war of the capital portion of the new terminable annuities created by the [illegible] 1869, rendered necessary the prolongation of the period of these annuities to the extent of the term of their suspension, but the arrangement involved no alteration in the amount of the [illegible]

"The capital deficiency on the Trustee Savings Banks Fund was calculated under Section 1 of the Savings Banks Act, 1880, which practically provided for the assets being valued on a [illegible] per cent. basis. The sum accumulated by the Savings Banks Deficiency Annuity set up to make good this deficiency amounted on November 20, 1903 to ... ... £[illegible]
and since that date the instalments of the annuity have provided ... ... [illegible]

Total amount applied to the reduction of the capital deficiency on the Trustee Savings Banks Fund ... ... £[illegible]

"The amounts applied to the reduction of the capital deficiency on the fund for friendly societies have been:—

1886-7.—Issue from the Consolidated Fund	£[illegible]
1887-8. Issued from the Consolidated Fund	10,000
Old sinking fund of 1886-7	[illegible]
1888-9. Part of old sinking fund of 1887-8	[illegible]
	£[illegible]

"The sum issued from the old sinking fund in 1889 was the amount required to make good the capital deficiency at November 20, 1888, on the basis of a market price valuation of the securities."

Here again we have a carefully drafted official reply which with no small skill—indeed, we admire it very much—effectually avoids telling the truth in a way that might be intelligible to anybody. It is to be gathered, however, even from this veiled statement, that there have been deficiencies on these annuities, and that they have had to be made good by drafts from the Consolidated Fund or upon the sinking funds. Now if this has been the fate of these comparatively small annuities, what has happened with regard to those large annuities created with the object of redeeming debt? Has there been a deficiency upon them or not? That is what must be disclosed, and we see no reason at all why Mr. Asquith should not direct the Commissioners of the National Debt to prepare a complete statement relating to the whole of the annuities that have been created and placed under their control. What was the original amount of the stock cancelled by each annuity? What did that stock originally yield to the Government? How much of it has been replaced by the operation of the annuity. Had all the terminable annuities to be extended in order to make good deficits due to the high prices at which the stock had been bought back, and what is the total amount of the loss that the taxpayer has had to bear in consequence of the mismanagement of these annuities or of the wrong principles upon which they were founded? These are simple, straightforward questions, and they must get a straightforward answer, because unless the system of dabbling in annuities and playing with debt redemption is root and branch altered, we shall always have the National Debt more or less prone to fall into confusion, always have unexpected demands made upon the public purse, as it is called. Why then cannot the Government act with resolution and speak out plainly on this matter? That there must be a more or less sizeable gap in the accounts we have long had no doubt whatever, but if we are wrong we shall be delighted to have our suspicions dispelled and to apologise for having entertained them.

The New Zealand Budget.

Sir Joseph Ward, the Premier and Treasurer of the Dominion of New Zealand, is promptly to the fore with his Budget for the current year ending June 30, 1908, It seems to be not a bad Budget either, although we cannot help marvelling how a population of about 1,000,000 is able to provide £8,200,000 by way of revenue. This is about £8 4s. per head, man, woman and child, and fine though the country is we do not believe it capable of performing this feat except by help of steady additions to its debt. However, the prosperity is there, according to the Right Hon. Treasurer, and he recommends various changes in taxation, some of which appear to be in the right direction. At any rate cotton piece goods, sugar and currants are to be put upon the free list, although these changes are to be balanced by increased duties, which the Reuter's message does not specify, upon other commodities so as to protect home industry. That is an illustration of "Colonial preference," we suppose, and the eagerness of the citizens of New Zealand to "offer" us something. The graduated land tax is also to be raised, commencing at the assessed value of £40,000. That does not seem to promise much addition to the public income, but the principle may not be unsound, and anyway, the option is to be given to ground tenants to acquire the freehold of their holdings. What is the State going to get in exchange for its surrender of the right to rents more or less prolific from these tenants? And 9,000,000 acres of the colony's territory are to be set aside for the endowment of education and old age pensions. We wish we had as many acres to devote to the close settlement of the soil in this country, for such a position might help to lessen the acuteness of not a few of our social difficulties. Altogether the reductions in New Zealand taxation are estimated to amount to £375,000 and the increases to £121,000, so that the nett reduction is £254,000, and another surplus is looked forward to, for the total estimated expenditure of the year is, at £7,987,347, about £213,000 less than the estimated income.

By how much the debt was increased last year in order to display a revenue of over £8,000,000 and a surplus of £700,000, we do not quite know, because Sir Joseph Ward did not send us the official Budget last year, and we were obliged to deal with it by the help of a newspaper summary. The gross State debt of the colony, however, has now risen to £64,000,000, the *Times* correspondent says, and a year back the "nett" debt was under £60,000,000. Allowing for sinking funds, which were mostly only matters of book-keeping, we estimate the debt increase to be about £3,000,000 for the past fiscal year, and in addition to this the people of the colony must now owe quite £12,000,000 in the form of local obligations, so that altogether the debt of a colony whose population is not much larger than that of Glasgow, is now round about £76,000,000, or say, to be generous, £75 per head, and no matter how splendid the natural advantages of a country may be, this load for such a handful of people is excessive. The usual loan of £1,000,000 is to be publicly put upon the market for the current financial year, but doubtless for a sufficient reason, the stock will not be offered directly on the London market. It will be smuggled through here we suppose in the customary fashion, and that does not represent one half the amount which will be required to make the Budget balance with the regulation "surplus" on June 30 next. Indeed, the summary of the *Times* correspondent informs us that a local tender of £590,000 has been accepted for the tunnel to be constructed for the confiscated Midland Railway, and the money to pay for this enterprise will not come out of the £1,000,000 loan any more than the money raised to facilitate the "close settlement" policy initiated by the late Mr. Seddon.

The Disappearance of the Caledonian Bank.

This old Highland bank was established originally in 1838, registered as an unlimited company in 1862, and as a limited one in 1882. It has never been a strong bank, and had to bend before the storm of 1878, going so far as to close its doors after the collapse of the City of Glasgow Bank. It was resuscitated and has struggled along ever since supported by the pride—and, shall we say esteem?—of its customers in the far north and west of Scotland. But it is now going to be merged in the Bank of Scotland, which has announced that it will take over the property of the Caledonian Bank by giving it £75,000 nominal of its own stock, which is a peculiar banking security paid up to the extent of two-thirds. This nominal value is arrived at by giving each Caledonian share £1 5s. in Bank of Scotland stock. The Caledonian has 60,000 shares in existence on which 50s. per share has been paid up, leaving a liability callable and reserve amounting to £10 per share. Under the new arrangement the liability will be much smaller, and the price would seem to be excellent, for the Caledonian business must have been growing less and less profitable for years past. It paid dividends of 8 per cent. per annum for the years 1900-1 and 1902-3, but in the succeeding year came down to 7 per cent., and in the last two years it has only been distributing 6 per cent., with the result that the prices of the shares have receded to a few shillings more than par. They were in the past year as high as £3 18s. per share, £2 10s. paid, but the latest quotation we have seen was under £3. On the basis of current prices for its stock the Bank of Scotland appears to be giving more than £4 per share for the Caledonian share. We have not seen this year's accounts, but at June 30 last year the liability on current and deposit accounts was £1,257,696 and on notes in circulation £144,131. There was a dwindled reserve fund of £43,000 and £13,000 was set aside for the year then ended to meet depreciation on securities of a total book value of £282,631, including the reserve. The bank had £230,074 invested in bills and £713,797 out on advances, cash credits, &c. The cash and notes of other banks stood at £119,878, so that the bank is quite a small one, perfectly respectable, and of good repute, but wholly without the means either to develop the business or to withstand the strain of any exceptional loss. Amalgamation was accordingly the best thing for it, and we should not be surprised to hear that others of the smaller Scotch banks had decided to follow the example now set. For good or for evil the day of the merely local bank would appear to have nearly come to an end.

Rather a Speculative Trust.

This description is indicated by the return shown upon an investment of less than £1,000; yet the securities composing the following example are all of a prosperous or substantial character, and a little money spread over them ought to be safer than if it were invested in National Debts, which are so prone to market fluctuations for political reasons.

Buenos Ayres and Rosario ordinary stock is now of a formidable amount, thanks to recent additions, the issue to date being upwards of £18,000,000, including the new shares emitted last year and not yet fully paid up. Partly in consequence of the speed at which this and other of the Argentine railway companies have been adding to their capital commitments, the price of this stock has gone down from about 121, the figure attained last year, to 103. A little of it ought, therefore, to be worth picking up.

The United Railways of the Havana Company has also been increasing its capital through the absorption of other roads, and we cannot yet be sure that its investments in these directions are going to be remunerative, although the general economic position of Cuba is promising enough. Still, it is possible that the dividend for the company's current financial year will only be made up to 5 per cent. Even so, at the price of 91 the stock should be worth buying to a small extent, and afford good prospects of improvement.

Foreign and Colonial Investment Trust deferred stock is, although unsecured in one sense, the stock of a carefully managed company, and the dividend has risen during the past ten years from 4¼ per cent. to

7 per cent. per annum. It seems reasonable to infer that this dividend will be maintained, if not increased, and although the stock looks high at 128 its yield is even at that figure excellent on the basis of the present price.

Rangoon Electric Tramways 6 per cent. cumulative preference shares should hardly be in the speculative group, but the conversion of the lines to electric power was only completed at the beginning of this year, and it is not possible, therefore, to speak with confidence as to what the result will be. The natives, however, seem to be taking to the cars with the utmost eagerness, and we see no reason why these shares should not be an excellent security. They can be picked up at about 5½ for the £5 share. Perhaps the price will rise after this notice, but they are still good and quoted in the official list.

Particulars have frequently been given in The Investors' Review about the Mexican Light and Power Company and its prospects, but there is perhaps a drawback to its debenture issue in the fact that it will require more capital, how much more nobody knows. For all that and in spite of the drawback, if it be a drawback, that the company is a Canadian one controlled from Montreal, the 5 per cent. debentures if obtainable at about the price here mentioned ought to be a good speculative investment, an investment with chances. Altogether about £2,400,000 of them is outstanding, the increase having been rapid since the company was incorporated in September, 1902. Being a new undertaking it must be classed as a speculation, but there ought to be remunerative business for it. Its concession, obtained from the Federal Government of Mexico, gives it the right until 2012 to construct transmission lines to any point in the Republic of Mexico from its water power centre in the State of Pueblo.

[There was, we regret to say, a mistake in our first Trust. Gold Coast is a 3 per cent., not a 3½ per cent. stock. Even so it is not dear for things of its class, but the miscalculation makes a difference of £1 in the total yield.]

	Price.	Cost]	Interest.

On the Track of Horatio.

We fear the City Editor of the *Morning Post* is a little too sanguine about the chances of bringing the glory of Mr. Horatio Bottomley, M.P., as a financier to light. Information has reached him from Messrs. Carter and Bell, solicitors, of 6, Idol Lane, that the Official Receiver, Mr. Harold de Vaux Brougham, has made a report alleging fraud in connection with the operations of Mr. Bottomley's Joint-Stock Trust and Finance Corporation, Limited. Sad, sad news, and in accordance with this report Mr. Justice Warrington made an order on Tuesday that Mr. Horatio Bottomley, M.P., should be publicly examined "as to the promotion and conduct of the company, and as to his conduct and dealings" as a director thereof. And Mr. Still actually thinks that in this way Mr. Bottomley is going to be exposed to an irreverent world, the great "conveyancer." We are inclined to back Bottomley against the lawyers, and shall be pleasantly surprised if much satisfaction is obtained from his cross-examination. However, it will be very pleasant should we prove to be wrong, for any facts that have reached us with reference to the operations of the Joint-Stock Trust have been of a description calculated to excite lively curiosity as to whence the money came and how it vanished.

Speaking of this report of Mr. Brougham's, we should like to ask publicly a question that we have more than once put in private to the officials of the Board of Trade. Why are reports of this description which are of great interest to the public now withheld from the Press? Formerly, at the time when Mr. C. J. Stewart was Senior Official Receiver, and even later, reports relating to joint-stock companies in liquidation were sent to the Press, and thanks to the action of the Board of Trade in thus providing the means of publicity the public obtained valuable educative information about many questionable proceedings. Suddenly an order was promulgated forbidding the transmission of these reports to any except creditors of the companies. The pretext for this sudden change of front was that were any actions for libel to be brought against the official receivers in consequence of Press notes founded upon the contents of reports made by them, their official position would not protect them from being cast in damages. That was a very adroit move to make, and the lawyers who devised this excuse for hiding things up ought to have got swift promotion. We hope they did, but none the less was the real reason for the resort to secrecy something very different. We have always held that the circulation of these public documents was stopped because some of them were letting in too much daylight upon the ongoings of persons highly placed in society who had allowed themselves to become entangled in the highwayman class of finance. We do not believe that there ever was any danger whatever of actions for libel attending the publication of documents of this description, whether through Press summaries and comments or through the contents of the documents themselves. Will Mr. Lloyd George look into this matter and put a stop to what might give rise to unsavoury scandal one of these days?

Electric Construction Co.

We are sorry to find this well-known undertaking still doing badly, because it has been responsible for many important and highly beneficial contracts in the past, and really deserves a better fate. Our fear is that the position is really more unsatisfactory than a superficial examination would appear to indicate. There is an item in the balance-sheet called "shares in other companies," which shows an increase on the year of £18,594 at £143,570, and we half suspect that these securities have been taken in part payment of work done, and an equivalent sum credited to profits over a series of years just as though they could be immediately turned into cash. Perhaps they could, and realise full value, but we have our doubts. The company has a reserve of £30,500; this is £1,500 down on the year, that amount having been set against sundry debtors, but the fund is not specifically allocated and merely exists for general purposes. Stock-in-trade and work in progress stand at £52,253, which is not a striking figure either way, and in speaking of the general operations the directors say that several important contracts have been completed at home and abroad, but very severe competition has continued to prevail throughout the year in the electrical industry. The increased price of copper and other materials has also been prejudicial, a corresponding increase in the price of electrical plant not having been obtainable, particularly during the first half of the financial year. The present volume of business, however, is greater than at this time last year, and includes important orders from the Admiralty, L.C.C., Wolverhampton Corporation, and others. Prices have also improved, and the directors take a hopeful view of the outlook, reasonable selling values being alone necessary, they say, to restore the company's prosperity. Sundry debtors, after deducting the £1,500 named, amount to £87,398, against creditors £51,518, and bills payable £802, while the cash balance is £12,341. Additions to property during the year were £7,015, making the total, including patents and goodwill, £307,447, and after adding the usual £5,000 to the depreciation account, bringing it to £68,000, the balance-sheet value is brought down to £329,447. Trading results are undoubtedly a great disappointment, and no part of the share capital receives a penny of dividend. Gross

profit is returned at £30,501, or about £4,000 down, and dividends on shares gave £4,694, compared with £3,951. Did the Madras Tramways make a better return this time? Transfer and registration fees produced a further sum of £15, and the entire income was £35,211, against £38,400. General charges of £17,499 show a reduction of £1,412, directors', trustees', and auditors' fees come to £1,755, and £7,148 is allowed for maintenance and depreciation. Debenture interest must be met with £10,250, and the result is a deficiency of £1,442, reducing the credit brought in to £209. Probably the most encouraging statement in the report is that Mr. W. S. B. McLaren has accepted a seat on the board, and has been appointed chairman.

Gold Mines Investment Co., Limited.

The first annual report of this holding and nursing company issued twelve months ago was bad enough, but the second one just out and made up to June 30 is simply pitiful. Who the sufferers are we could never quite make out, there being something characteristically mysterious about the thing, all in the high and mighty Chartered and Consolidated Goldfields style, the latter company being the managers and bosses in chief. Only one thing is absolutely certain and that is that, roughly speaking, 50 per cent. of the capital subscribed has been lost, the assets just now representing a value of £2 1s. 1d. per share of £4 fully paid. We may as well print what the directors have to say, because we should not like to be accused of suppressing anything about a company of this sort, and besides shareholders will be so delightfully richer for the directorial words of wisdom. The investments, so runs the report, are taken in the balance-sheet at cost price less depreciation, a valuation made at June 30 showing the quoted securities to have a value of £443,267; the unquoted securities are valued by the directors at £6,276, which together with the cash loans and sundry debtors amount to £545,424. From this must be deducted the liabilities, leaving the present value of the assets at £513,463, equivalent to £2 1s. 1d. per share. Is it not time shareholders were informed of the nature of their investments? Of the capital of £2,000,000 in 500,000 shares of £4 each, just one-half has been issued, and the cost price of the investments acquired was £944,995. On these the depreciation is the colossal sum of £495,451 or considerably more than 50 per cent., but the company has fixed loans £21,000, loans at short call £60,174, dividends and interest accrued £10,241, and cash £4,465, or a total of £95,880 against floating liabilities of £30,349, so that something less than half a million has been lost, providing always that their fixed and short loans are good for cash. All round the investments seem to produce under 3 per cent., as the dividends and interest received or accrued for the period under review were £27,969. Deduct losses realised on sale of investments £5,950 and add £41 for transfer fees and we arrive at a real revenue of £22,051. Assuming that no depreciation on investments had occurred and any money earned could be distributed how much of this would expectant shareholders have received? Just follow the figures carefully and you will see. General expenses —London, Paris, and South Africa—the shares were given a denomination of £4 so as to facilitate interbourse dealings, which gives such a free market, don't cher know—consisting of rent and technical services, stationery and printing, office expenses, audit fees and sundries, mopped up £10,785 and one-third of the preliminary expenses took £6,850 all but 3s. 4d., so that £4,425 was left for the shareholders, or roughly, a penny a share. We must not, however, omit to mention the £12,951 brought in making the net "credit" £17,376, while only £6,850 of the preliminary expenses remains to eat into future revenues. When is the situation going to be squarely faced? We cannot answer. When did the Kaffir crowd ever admit that losses were irretrievable while a brass farthing remained to hold a company together? And what kind of shares can have been taken over to show a 50 per cent. loss in 2½ years? To whose relief did the company come, and what was the precise reason for bringing it into existence? It is no doubt very useful to be able to spend that £10,000 or £11,000 on account of general expenses, employment being found for a good many, but surely the price paid is too heavy.

American Business Notes.

The exhibit of the New York Associated Banks for the past week was again curious because of the further decrease of £2,180,000 in the loans and advances, the total of which is now £220,960,000. Deposits fell back only £1,540,000 to £214,160,000, so that the position would not have been sensibly improved had it not been for an increase of £422,000 in the specie held, which now totals £40,364,000 and of £393,600 in the greenbacks, the amount of which in hand was £14,550,000. Owing to these changes the surplus reserve has risen by £1,200,600 to £1,374,000 against £2,566,000 at the same date last year. Financial reporters still continue to ascribe the decline in the loans and advances to the assumption of bank commitments by the trusts, and it is an explanation which we continue unable to understand. Last week the nett exports of gold amounted to £475,000, but the market has no doubt been assisted by the repayment of Government debt called in which has neutralised the withdrawal of £6,000,000 of Government deposits, and the money market has accordingly tended towards ease, which has become increasingly pronounced as the power of the exchange bankers to arrange further gold exports diminishes. We are by no means sure that these exports are at an end, but the reduction in the rates of interest charged is doubtless most welcome to those engaged in propping up the Wall Street market. They are now able to get command of call money at 4 per cent. or less, and every effort will be made to produce a semblance of great activity on the Stock Exchange. Thus far the efforts in that direction have not been attended with much success, but one never dare predict what the course of the Wall Street market may be, and although the public in the States is evidently just as apathetic as our own, it may be tempted one of these days to join in the gamble, and by sacrificing its means postpone the reckoning. Rogers and Lawson are declared to be working together to bring this about. Bad luck to them.

Probably, as the New York correspondent of the *Financial News* suggests, one reason why money has kept easier than was anticipated on the New York market is to be found in the failure of so many new issues to find a market. Apparently a syndicate had to be formed to take over $17,000,000 out of the total of $26,000,000 offered by the Atchison Company, while in some cases the notes could not be sold at all. The Milwaukee issue, he says, was a complete failure, and the Louisville apparently not much better. In some cases only 10 per cent. of the underwriting issues were sold to the public, and several underwriting syndicates, as we have mentioned, have lately been dissolved with three-quarters of the paper on their hands. Naturally the failure to dispose of these various emissions kept down the demand for money and helped to keep the market easy. Even the great Union Pacific Company was only able to dispose of about $4,000,000 out of its $75,000,000 in 4 per cent. convertible bonds offered to its stockholders. The reason for this failure though is plausibly suggested to lie in the identity of many of the underwriters with the big shareholders. Having got the bonds as underwriters at the lower price they naturally do not want to subscribe at the higher.

New issues have not been conspicuous on the part of the railroad and other corporations during the past week, but we may note that the Saulte Railway, as it is called, the Minneapolis, St. Paul and Saulte Ste. Marie line, is going to double its share capital of $14,000,000 and to divide the new stock into two-thirds preferred and one-third common. Doubtless this plan

emboldens the directors to offer the whole amount to the existing shareholders at par, a price they could not possibly have secured if it had all been put out as common stock, because the company only pays 4 per cent. on its common stock, whereas its preferred stock gets 7 per cent. On these terms there will probably be a nice little premium on the market to tempt purchasers. It is also stated that the Chesapeake and Ohio Railway Company has sold an issue of £1,000,000 in collateral trust 6 per cent. coupon notes dated the 1st inst. and due on July 1, 1910. These notes are to be secured by a deposit of £1,300,000 out of the total issue of £2,000,000 general improvement and equipment 5 per cent. bonds, and both will be a direct obligation of the railway company. The notes are offered at 98¼ plus interest, so that they yield almost 6½ per cent., and if they are paid back at 102, as they may be, the yield will exceed 8½ per cent. This transaction seems to partake of the nature of an emergency borrowing. And so does the latest reported transaction of the New York Municipality, which is said to have sold £400,000 "short-term revenue bonds" in France at a price which yields the purchaser 4¾ per cent. on his money. This seems very good business for the Frenchmen.

Thanks probably to the extent to which issues of short-term notes have been resorted to by the distressed corporations in need of money, the list of new securities introduced and officially recognised upon the New York Stock Exchange for the first half of the year does not look so formidable as it has frequently done in recent years. The total of new issues of all descriptions added to the Stock Exchange list, including issues previously made and first listed during that period as well as new issues made to replace old securities, was only £44,765,000, whereas in 1905 the total was £101,463,000, and even that higher total did not include the American portion of the Japanese Government loan of that period or the £7,000,000 issued by the Republic of Cuba, nor yet the £8,000,000 raised by the Government of Mexico. By the side of last half-year's total, therefore, the operations of the first half of this year look timid, but then between January 1 and June 30 railroad companies issued £47,142,000 in notes, probably more, indeed, for the table in the New York *Chronicle* from which we quote professes to set forth only the principal note issues, and in addition £10,100,000 in new securities of various kinds are set down as having been issued by industrial companies. Besides bonds the past six months showed an output of no less than £96,104,000 in stocks, but about one-third of this, or £31,616,000, was issues previously made, and only then listed, while another £16,408,000 represented new issues made to replace old securities. Among the railroad issues the principal ones are the Canadian Pacific stock to the amount of about £3,500,000, and the Chicago and North-Western which came for over £4,880,000, said to have been taken up by the stockholders at par. The New York, Newhaven and Hartford Co. was also issuing stock, but only in exchange for securities of its subsidiaries or of the Boston and Maine line, an operation which has now been suspended till this time twelve months by the action of the Massachusetts legislature. The total of such issues was about £3,000,000. The Erie Railroad Company also issued £2,200,000 of series "B" bonds, the Louisville and Nashville £2,000,000 of its Atlanta division 4 per cent. bonds, the Colorado and Southern a like amount in refunding and extension bonds, and still another £2,000,000 in bonds was required by the Washington "D.C." Terminal Company. It is difficult for one not in the market to figure out how much of the totals thus set forth were new, but the *Chronicle* says that the total of bonds created for new capital was about £21,000,000 last half-year against £10,400,000 in the corresponding half of the previous year, but the totals for the first half of 1905 and 1904 were from 90 to 100 per cent. greater than those of the past half-year. Its total, indeed, seems to have been made up mainly of several large outputs like the £7,000,000 raised on debentures by the Lake Shore Company, and the half-year is of only great[illegible] for the large amounts of old issues which were [illegible] placed on the official list of the Stock Exchange. Among these old issues are £10,400,000 [illegible] of what is called the "tar can" [illegible] and £20,200,000 of the Morgan Shipping Combine [illegible], while the Mackay Telegraph Company [illegible] for £10,400,000 besides apparently nearly £5,000,000 issued for recent acquisitions. Altogether the stock issued for new capital according to this authority has been £18,600,000 against nearly £20,000,000 in 1906, £6,000,000 in 1904, and almost £10,000,000 in 1903.

If an inference may be drawn from the telegraphic summaries of the report made by the Inter-State Commerce Commission upon what are known as the "Harriman lines," that gentleman's investment in the electioneering funds of the Republican party seems to be considered by his admirers to have turned out a good one after all. Why anybody should imagine that a criminal prosecution of Mr. Harriman could be recommended on any of the known facts is more than we can understand, but the chorus of jubilous delight set up by the capitalist Press on both sides of the ocean drives us to infer that the great man's friends had bail ready. That he gambled in railway securities of every kind, bought and sold and rigged and depressed, combined and separated and rearranged in pursuit of fortune and monopoly everybody knew. The result of his brilliant campaigns upon the Stock Exchange and in railway board-rooms was patent enough in the formidable monopoly which, backed by the unlimited wealth of the Standard Oil group, he did rapidly build up all over the south and west of the Union. But in his operations he has not, so far as we have ever heard or seen, committed a crime known to the criminal law, whatever civil actions he may stand exposed to by reason of infringements of laws against combinations to restrict competition or snags of that kind. Why, then, should there be such [illegible] amongst the friends of monopoly here and in the States that Mr. Harriman has not been forthwith recommended for a cell in Sing Sing? Is the man worse than we thought? There is enough, as far as can be judged, in the statements and suggestions made by the Inter-State Railroad Commissioners to initiate far-reaching reforms in the method of dealing with railway monopolies, if the people of the United States have the mind to set them going, but that is all. Will the people move? Not yet. Another presidential contest approaches when there will be plunder about, pensions to gain, a tariff to keep intact. The railway magnates will have to find funds again and the successful candidate will "hand over the goods" as usual.

Some interesting facts quoted in the money article of the *Times* are contained in the annual Blue-book issued by the Canadian Secretary of State, which has not yet come to our hands. They relate to the amount of new capital created, if not all issued, in the Dominion during recent years. In 1906 the total was £42,515,215, of which £30,034,615 represented the capital of entirely new companies, the gross total being nearly double that for the previous year. In the seven years ended with December 31 last no less than £115,125,177 of new capital has been called into existence by the activities of promoters and others in the Dominion. In 1900 the aggregate was only £2,582,000 and in the succeeding year it was nearly £400,000 less than this, but it sprang to £11,248,000 in 1902, and to £21,919,000 in 1905. We hope this means genuine progress, but have our doubts.

Passing Events.

It will be interesting to see whether any other among the companies doing industrial insurance will have the courage or the means to follow the admirable example set by the Prudential Company. According to the resolutions passed at its meeting held in the end of last week, a note relating to which is printed in another column, four-sixths of the profits of this branch of the

business will henceforth be distributed amongst the policyholders, as we stated a fortnight ago. How much this will amount to no one can say, but Mr. Thomas C. Dewey, the general manager—whose resignation of that position is about to take place, much to the regret of his colleagues, but who will still remain connected with the company as a member of the board—points out that already extended benefits have been granted to the Industrial policyholders at a cost exceeding £4,000,000. What is now to take place is merely an extension of this liberality, and that in turn has been possible only because the Prudential has worked its business on a more economical basis of expenditure than any one of its rivals. Henceforth only one-sixth part of the profits accruing to the Industrial branch will belong to the shareholders, another one-sixth will go to the participating outdoor staff, and four-sixths to the policyholders themselves; but policies must have been in force over five years before they can participate in these benefits, and the members of the staff must have been two years in the company's employment before they become eligible. These limitations are fair, and will without doubt result in a great increase of business.

We are sorry, but not surprised, that the Mutual Life Insurance Company of New York's Policyholders' Protection Association committee has failed in its praiseworthy effort to put a representative of British policyholders on the New York board. We never thought success possible, and every piece of news that reached us from the other side during the time the contest went on confirmed us in our view that there was no chance of anything like the establishment of independent control, whether domestic or foreign, over the affairs of this or any other American office professing to do life insurance business. When all other measures failed we may be quite sure that the plan adopted in dealing with the negro vote in the Southern States would have been without scruple fallen back upon. It is just as well, therefore, that the committee has decided to dissolve because continuation of its recent gallant efforts would only have brought fresh annoyance and disappointment. All that policyholders here can do now, those of them at any rate who have not transferred their contracts to home offices, is to complete their part of the bargain and take the money that may ultimately come to them. In all probability, unless some financial cataclysm upsets every calculation, these big offices will be able to at least fulfil the strict letter of their contract, and although the bonuses dangled before the eyes of the people they drew into their net will probably never be forthcoming, it is possible, as Mr. Lawson says, that a sense of shame or respect for common decency will prevent a recurrence of the robbery prevalent before the recent exposures took place. However this may be, we hope the British public will henceforth abandon the habit of committing any part of their means to the keeping of alien insurance offices over whose management they cannot possibly exercise any direct influence, and over whose accumulations they can have no real hold whatever.

Rhodesia is really coming to the front as a gold producer, and there is no knowing what will happen presently, last month's total of 54,918 ozs. being the largest ever attained, higher by 2,250 ozs. than the total for the previous month, and bigger by nearly 4,000 ozs. than the highest total for 1906. Already the aggregate output has reached 291,777 ozs. for this year, and it is not only gold that the country is producing, but almost enough silver to provide its thin population with small change, especially if notes of low denomination are plentiful, and there was actually 63 tons of lead put out last month, not to speak of 8,117 tons of coal, six tons of copper, and 1,026 carats of diamonds. Really the country is looking up, don't you think?

We must congratulate the General Accident, Fire and Life Assurance Corporation, Limited, of Perth, Scotland, upon its victory. It is, thanks to the Royal Assent having been given to a Bill promoted by it, placed in the same position as its greatest rival in the accident business, which hitherto alone had the power to protect its policyholders against meanness. Those insured in that company could prevent railway companies from deducting any sums paid by it from the amounts awarded to successful claimants against them. The General Accident Company is, thanks to the new Act it has obtained, now placed in the same position, and those who take out its policies will henceforth be protected from all deductions on the part of railway companies should they have the misfortune to have claims against them. Damages will have to be paid by the railways to the full amount assessed, and their victims will no longer be fined for having exercised forethought and thrift by taking out accident policies.

A very interesting article upon the position of Chilian nitrate companies appeared in the last issued "Financial and Commercial Supplement" of the *Times*. It is full of facts, but does not enable us to form any definite conception as to the true position of the Chilian nitrate companies. No definite information is obtainable regarding the life of the deposits, and the only thing we can say is to echo the opinion of the writer that, as a rule, the finance of the companies seems to be administered on sound lines. Most of them have accumulated reserves, and much of the improvement in their machinery has been provided for out of revenue. We are not sure, however, that the shares of even the old companies are good investments at present prices, because we cannot tell how long the deposits of these companies, or any of them, will last. Still less can we be sure that Chili is going to retain her practical monopoly in the production of nitrate of soda for many more years. Thanks to the existing monopoly, the companies have been able to arrange their output, and to sub-divide it in such a manner that competition between them is stopped, and prices regulated to the consumer; but were any other nitrate deposit, easy of access and of great extent, to become available for the world's markets, the Chilian Combination, must go to pieces at once, and a more or less strenuous competition, disastrous to profits, would be set up between Chili and the other producers. Is it not the case that deposits of nitrate of soda, vast in extent and not difficult to work, are to be found in Egypt, and in many other parts of the world? We should like to have information upon this point, because superficially the shares of many of these Chilian nitrate companies look quite attractive investments, measured by their yield.

The *Times* says that if the provisional agreement between the Phœnix Assurance Company and the British Empire Life is duly approved by the shareholders, and sanctioned by the Court, as it doubtless will be, Mr. G. H. Ryan will become general manager, and Mr. H. B. Guernsey the fire manager of the combined company. This news augurs well for its success. It should likewise contribute much to economy in working the business.

Speaking of the fusion, it must not be overlooked that none of the safeguards to life policy-holders now existing will be altered under the new arrangement. The mere fact that shareholders in the Pelican Company are to be relieved of their present liability of £9 per share by receiving one fully-paid Phœnix share of £5 for every seven of their present shares, does not expose holders of life policies to any new risk whatever. On the contrary, they will possess an additional security, inasmuch as they are guaranteed not only by the life and other funds in hand, but by the large uncalled capital of the Phœnix Company. It is further expressly provided that no part of the profits of participating policy-holders will in any circumstances be absorbed by the proprietors. The life business, in short, will be essentially a "mutual" one, conducted and guaranteed by a proprietary company. Thus a most excellent bargain has been made for both shareholders in and clients of the Pelican Company.

An interesting fact, illustrative of the effect of our export duty on coal, is mentioned by Mr. Consul-

General Turing, in his report on the trade of Rotterdam for 1906. He says that during that year a contract for the delivery of 90,000 tons of gas coal was made with German mine-owners. Hitherto about one-third of the requirements of the Rotterdam gas works have been supplied by the United Kingdom, but "notwithstanding that the lowest possible tenders were made from that country, they were not able to compete favourably with German offers." This failure must no doubt in a great measure be ascribed to the working of the coal tax.

It is not surprising that Lancashire should be deeply interested in the inquiries which have been going on in India regarding the position of labour in the textile factories of that dependency. Some particulars of the findings of the committee were published in the end of last week by the *Manchester Guardian*. We have not yet seen the report itself. The summary, however, is interesting from several points of view, but principally because the recommendations seem to point to a lamentable condition which could hardly, if at all, be distinguished from sweating in these factories. The hours of labour must have been excessive when it is recommended, seemingly as an improvement, that the factory hours shall be either between the hours of 5.30 a.m. and 6 p.m., or between 6 a.m. and 6.30 p.m. As half an hour only is to be allowed between the hours of noon and 2 p.m. for rest, this means a twelve-hour working day for the factory hand. The actual period of employment for male adults shall never exceed twelve hours in any one day, the committee recommends, and where from the nature of the work day and night shifts are necessary, the period of employment for adult males shall not exceed twelve hours in any twenty-four. There are other particulars of an equally suggestive kind. Half-time children, it is recommended, shall be employed only in sets either on the morning and afternoon set system, or the double-set system "largely adopted in Indian mills." Night work for women should be prohibited, and an arrangement is recommended which will prevent young children from accompanying their parents to rooms in which they incur risk from running machinery or from the inhalation of dust or impure vapours. Have the mill hands in India, then, been compelled to work longer than twelve hours? Have women there been employed on night shifts, and is the pay so miserable that, in order to work at all, those of the women who were mothers had to take their children with them, no matter what the risk?

As far back as October, 1904, a committee of shareholders of the Demerara Railway Company was appointed to prepare a scheme for dealing with the arrears of preference dividend, but decided to allow the matter to stand over until a more satisfactory forecast of the company's prospects could be made. The company has done better during recent years, and has so far improved its position that it was able to pay a dividend on the preference shares for the six months ended December 31 at the full rate of 7 per cent. per annum, making 6 per cent. for the year, and the committee considers that the time has now arrived when a fair settlement can be made. Accordingly they propose that the arrears, which amounted to £32,200 on December 31, should be funded by the creation of preferred ordinary stock, carrying a non-cumulative dividend at the rate of 3½ per cent., and that this new stock shall be convertible into original stock at any time at the holders' option. The creation of the new stock involves a prior annual charge of £1,127, but even so the position of the holders of the original stock will be more favourable, as the wiping out of the arrears in the ordinary way out of revenue will take years at the present rate of progress, and until they are paid off the ordinary stock cannot hope for any return.

From a Treasury return just issued we learn that during the fiscal year ended March 31 last debt to the amount of £8,945,025 was redeemed out of the proceeds of the old and new sinking funds, leaving £1,004,435 of these funds still unspent at the end of the year. Out of the large total actually bought over £51,907 consisted of Consols. That amount was purchased at £85 0s. 5d., so that the Treasury for once bought back debt of this description on terms not unfavourable to the taxpayer. Why, then, was not more of that kind of business transacted? Because the Government wisely, as we think, decided to reduce the amount of the floating debt. Under the arrangement made by his predecessor, Mr. Asquith was enabled to devote £1,000,000 to the redemption of Exchequer bonds issued upon a short-term annuity plan, and he also paid off £4,393,118 of 1907 Exchequer bonds which he obtained at £99 18s. 5d. per cent., making a little saving on that head likewise. Then he paid off £3,500,000 of Treasury Bills at par.

This last transaction may not have been debt-paying of a permanent character, for we are now to have an increase in the amount of these bills, and it would be interesting to know the reason why. The official announcement is that £2,500,000 in all of these bills will be offered for tender next Monday, and will be of the usual six months' currency, and that of this total £1,500,000 is to replace bills temporarily paid off on April 12 last. Why is a renewal of this description necessary now? Has the Chancellor no sinking fund money that he could utilise instead of burdening the money market with more floating debt at a time when it is by no means comfortable? Perhaps he hopes to get the necessary advances cheaper from foreign than from domestic borrowers, but why is the money wanted at all?

Those Canadians certainly know how to attract attention to their enterprises. Here is a report by Dr. Pearson to the shareholders of the Rio de Janeiro Tramway, Light and Power Company, Limited, of the most elaborate and sumptuous description, glowing, too, with descriptions of the capacities and resources of what is undoubtedly an undertaking of splendid possibilities, to wit the utilisation of water power for the generation of electric energy to be expended in working the tramways of Rio, three-fourths of which the company owns, in working railways also controlled by the company and for the telephone service which it owns, as well as for the electric lighting of the city whose inhabitants number nearly 1,000,000. Altogether a bold and grandly conceived scheme, which thoroughly deserves success. Accompanying the report is a series of maps, plans and photographs well calculated to give an easily grasped conception of the nature and magnitude of the enterprise. Copies of this report can be had on application to the British Empire Trust Company, Limited, 34, St. Nicholas Lane, Lombard Street.

Critical Index to New Investments.

South Manchurian Railway Company.

Parr's Bank, Limited, the Hong Kong and Shanghai Banking Corporation, and the Yokohama Specie Bank, Limited, as agents for the Industrial Bank of Japan, offer £4,000,000 5 per cent. sterling bonds of this enterprise at the price of 97 per cent. Payment of instalments is spread over the next six months, the final one of £22 being due on January 20, 1908. Principal and interest of the loan are guaranteed by the Imperial Japanese Government, but the railway itself ought to afford ample security, for the capacity of Manchuria to yield wealth in many forms is immeasurable. None the less is the market frowned upon, doubts, and the enemies of Japan are busy prophesying, as they did before the war, that she is undertaking too much, raising too much money. Doubtless this is why the terms are so liberal since, allowance made for the fact that a full six months' interest is payable on the scrip on February 5, 1908, the net price of the bond is only 90. The loan was well and readily underwritten, as all Japanese loans have been, and its issue may afford holders of the unexchanged Japanese 6 per cent. an opportunity to effect a profitable deal. They can sell the sixes, which will be paid off in Sep-

tember next, at a premium and invest in this new 5 per cent. loan at a much lower price. It may be added that the capital of the company is about £200,000,000, in one million 200 yen shares, of which the Japanese Government holds 500,000 as fully paid. Of the balance 100,000 shares were issued and subscribed in Tokio, and 10 per cent. has been called up on them. But the undertaking is entirely in the hands of the Imperial Government, and consists of various lines of railway, held under different concessions, as set forth in the prospectus. The rich coal mines of Fushun and Yentai form part of the property and security. When completed and connected with the Siberian Railway, it will be possible to go from London to Tokio in less than a fortnight.

Van den Berghs, Limited.

Formed in 1895, to acquire a business of margarine manufacturers, this company has since added to its products such things as creamery butter, condensed milk, bacon, and soap. This policy has proved so satisfactory that the directors wish to continue it, and in order to gratify their desires the capital has been increased to £1,275,000 by the creation of 125,000 ordinary shares of £1 each, which were offered for subscription at the price of £1 16s. per share. During the past five years the profits have averaged £151,930 per annum, compared with an average of £78,273 for the three years before the company's incorporation. The dividends on the ordinary shares have risen from 6½ per cent. to 16, the last named having been the rate for 1905 and 1906, while in addition to a reserve of £122,396 there was an undivided balance of £226,970 carried forward. Of the capital, however, no less than £656,463, or little more than the total of the ordinary shares, is represented by nothing more tangible than goodwill, and it was probably owing to this fact that the directors deemed it necessary to pay a commission of 6 per cent. for underwriting the present issue.

United Serdang (Sumatra) Rubber Plantations, Limited.

This company is to amalgamate two estates in Serdang, east coast of Sumatra, valued at £55,370 and £68,859 respectively, for which it pays to the original owners £35,000 in cash and £71,000 in shares, together with the right to apply, during the next three years, for 20,000 of the shares held in reserve. The promoter, in addition, takes £2,500 in cash and the right to purchase at par the remaining 10,000 reserved shares within the same period, the cash, apparently, being to reimburse him for the preliminary expenses. According to the prospectus there are at present about 2,748 acres planted with 266,000 pure rubber and 42,225 Rambourg trees, and it is estimated that, taking the nett profits at 3s. per lb. in Rambourg, and 3s. 6d. per lb. in Para, the profits from rubber and coffee for the current year will amount to £9,000, and gradually increase to £35,000 in 1910-11, after which a big jump is expected. Results recently published by other companies indicate that the industry is enjoying a prosperous time at present, but whether or not that will last till this concern reaches the stage of full production is a question we would not care to answer. In any case, the shares are a speculation suitable only for those who can afford to wait for a return.

Doeuillet, Limited.

A Paris business of costumiers, dressmakers, &c., established in 1899, is bought by this company for £70,000 in cash and £20,000 in ordinary shares, of which no less than £48,000 is for goodwill. The capital is £200,000, divided into 197,500 ordinary shares of £1 each and 50,000 1s. deferred shares, the latter being entitled to half the surplus profits after a cumulative preferential dividend of 6 per cent. has been paid on the ordinary shares. All of the deferred shares are taken by the vendors, and subscriptions are invited for 127,500 of the ordinary shares, which have been underwritten for a cash commission of 5 per cent. and an overriding commission of 2½ per cent. Profits for the five years ended December 31 last have increased from £10,299 to £33,593, and the directors calculate that, on the basis of the last two years, enough would be earned to pay an additional dividend of 5 per cent. on the ordinary shares. In a business like this, where goodwill forms more than half of the assets transferred, the returns must be good to make up for the risk, and in this connection it is ominous to find the vendor guaranteeing the regular payment of the fixed dividend for five years. That gentleman is not satisfied with securing for himself the lion's share of the profits if the business succeeds, and has appointed himself managing director for 10 years at a salary of £3,000 per annum, to be increased to £4,000 during the second five if the profits earned for the three preceding years have been sufficient to pay 10 per cent. on the ordinary shares.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Kaffir dealers hurried up to town on Monday with faces aglow with excitement because a wonderfully encouraging piece of news had come to hand. Mr. J. B. Robinson, who has been at loggerheads with the Rand magnates on the recruiting question, was said to have settled all differences with his erstwhile antagonists and rejoined the native labour association. Surely intelligence like that would bring the public back, even if the violent speech of Mr. Lionel Phillips at the Village Main Reef meeting could hardly be expected to have that effect. Of course dealers thought the abuse of the Home Government was very fine, but if they would only remember that the mere ordinary outsider, who used to exist for the sole purpose of being fleeced, is now, and has been for a long time, thinking for himself, it would become evident that this kind of thing defeats its own purpose. The investor has long taken the measure of the average Rand magnate, and regards his utterances at their true worth. However, the upshot was that no less than three shares went up half-a-crown and another one very nearly as much. As the week advanced an effort was made to improve upon this, General Botha's announcement that no Arbitration Bill would be introduced into the Transvaal Parliament this year and his advice to the strikers to resume work being taken to indicate that the agitation did not receive his support. With this pronouncement in mind the market was not at all disturbed by the decision of the miners' delegates to continue the strike. Many of the men who have not been reinstated are now asking to be taken back, and whatever the merits or demerits of the dispute we think the strike must be considered at an end. Prices, however, soon began to tail off, and there was mighty little in it one way or the other between this week's prices and last when business wound up last night. No doubt the fact that we are in the midst of a 19-day account helps to keep things quiet, members being afraid that in these disjointed times evil reputations will live. Two or three dividends have been declared. The Nourse Deep declares 2s. 6d. and the Glen Deep 1s. 6d. per share, both being the same as for the corresponding period, while the Jumpers proposes to pay 8s. compared with 6s.

A few things in the Land and Finance group were marked higher but Rhodesians were not very gay. Prodigious efforts, as things go nowadays, were made to puff out Tanganyikas, and the price was actually put up to 5, but the public resolutely refuses to be tempted, and as the game cannot be kept going by professional shouting alone the shares soon found 4¾ again. We have not said anything about Chartereds for a week or two because no dealer ever mentions them to us, or if he does it is in a shame-faced-half-apologetic-excuse-the-joke kind of way. Somebody bid 1½ for Bankets, got the shares, and was sorry immediately afterwards because they instantly dropped two or three shillings and were only restored by much hard work. Zambesias eased in sympathy with "Tanks," and after Northern Coppers, Eldorados, Explorations, and Lomagundas had flattered their supporters, as they say in racing parlance, they quickly dropped behind.

Diamonds have been weak, especially De Beers, and the persistent fall has given rise to some apprehension and many rumours. We believe it cannot be denied that a heavy falling off has occurred in the demand for the stones, especially in America, where the effects of the silent panic in March are doubtless being felt. Moreover, the English aristocracy can have mighty little money for such luxuries as diamonds, most of them being heavily in debt for their motor-cars, and wondering how the next instalment is to be found. A story went round that the De Beers was dismissing "boys" in consequence of a restricted output, but this is not strictly accurate. Up to the present we have not seen in print what we believe to be the real facts. It is, of course, well known that no matter who goes short, De Beers invariably commands plenty of labour. Now, while the Rand magnates were successfully running their Chinese plot and pretending the supply of natives was inadequate, De Beers are supposed to have taken far more Kaffirs than they could employ just to help the magnates with their job. These have all been worked half time, but now that the Chinese game is up a good many natives are being discharged. Pleasant story, eh?

West Africans rarely altered, but West Australians were declared to be dull. Perseverance were sold, and Kalgarlie fell away on a rumour that the company proposes to reduce the monthly output. This, however, may only mean that the average value of the ore is to be reduced by bringing in more of the lower grade, a now common practice on the Kalgoorlie field. Deep Leads showed dulness, and a story was about that a reconstruction of the Loddon Valley was near at hand. Broken Hills usually tended to go back, and Mt. Lyells were again comparatively weak. The market is full of adverse rumours, and although it is emphatically denied that anything is wrong at the mine, there is no doubt that in some quarters the reports are credited. Broken Hill Block 14 were maintained by the good dividend and bonus. Zincs recovered and fell back, and we shall soon hear of the scheme for providing the company with more money.

Copper shares were a very wild market and it is useless to attempt to follow the ups and downs. The metal has been attacked on the New York Exchange, and, judging by the movements on this side, the supposed July shortage has either been pretty well covered or never existed except in the fervid imagination of the "bulls." Both the metal and copper shares generally plunged about in most erratic fashion, the fluctuations in Tintos taking a £5 range. We should not care to have to forecast the immediate future of the markets, but in the long run the bear view must inevitably prevail. Tin shares were quiet.

In the Miscellaneous groups Esperanzas were given a lift on the good return for June, but Camp Birds were dull. Le Rois also fell away. New Zealand things were disposed to go back, and Indian mines generally closed at a trifling reduction. Siberians were distinctly easier again, and no wonder. We fail to see how these companies are to turn out profitable enterprises, and the manipulation and subsequent collapse of the shares effectually keeps away the public.

Pressure on our space last week was so severe that we were compelled to omit the Transvaal gold return for June. The expected decrease occurred, but it was precisely equal to the one working day less compared with May, the total yield being 507,559 ozs. valued at £2,155,976 as against 524,477 ozs. worth £2,227,836 **in the previous month. We must remember, however,** that May showed a decline compared with April of 12,542 ozs., notwithstanding in this case an additional working day. Comparing June with April, both 30-day months, there is a decrease of 29,460 ozs., **so that the effects of the strike were** plainly visible. The labour returns were rather discouraging. There was a loss of about 2,000 Chinese coolies and at the same time the native "boys" showed a reduction of 1,882, the number employed at the end of the month being 89,787, excluding the Robinson group.

The Rhodesian gold output for June again topped the previous best, the total being 54,918 ozs. against 52,668 ozs. in May, a longer month, and 49,772 ozs. in April, so that the improvement was fairly encouraging. For the first half of the year now completed the yield has amounted to 291,775 ozs. or 29,398 ozs. more than in the corresponding period. The output of other minerals for the past month was, silver 11,601 ozs., lead 63 tons, coal 8,117 tons, copper 6 tons, chrome ore 1,407 tons, antimony 14 **tons, diamonds 1,026 carats, and other precious stones** 14,099 carats.

Crown Reef Gold Mining.—This famous mine makes up its accounts to March 31, and in the year to that date 244,644 tons of ore were crushed yielding 75,357 fine ozs. or 6.160 dwts. per ton. At the cyanide works the tonnage treated was 277,110, producing 52,403 fine ozs., and it must not be overlooked that compared with the previous year there is a decrease in the yield per ton milled of 1.040 dwts., a serious drop for such a low-grade mine. Value of the yield from the mill was £317,428 or £1 5s. 11.403d. per ton, and from cyanide £220,830 or 18s. 0.637d. per ton, while the total working costs were £265,582 being at the rate of £1 1s. 8.541d per ton or 3s. 6.507d. less, so that the working profit comes to £272,676 or £1 2s. 3.459d. per ton, a decrease of 3s. 0.259d. per ton compared with the previous year. Including £70,045 brought in and other items, the total income is £360,424, and of this £264,000 has been absorbed in paying two dividends of 110 per cent. each. Government tax on profits came to £21,332 and £210 went in other ways leaving £74,882 still in hand. The company has a reserve fund of £102,884, increased during the year by £6,045, and the capital never having been watered, the financial position looks strong. The company has immense cash balances and high-class investments, the two together largely exceeding £400,000, and there is no doubt that the mine has been well managed. Ore reserves are estimated at 507,804 tons or 40,203 tons more, although the quantity developed in the year was only 111,565 tons, but in compiling the estimate 141,800 tons have been added for ore which, with reasonable certainty, will be recovered from the upper levels and lower level stope pillars not previously included in the calculation.

Treasury Gold Mines.—No doubt this company was unfortunate during the year which ended on March 31, 1907, but shareholders have to face the hard fact that only a trifling amount of profit was made, and the shares, which as recently as 1905 touched 4½, are now worth no more than ⅜. Regular work seems to have been much retarded by continual caving in of the ground to within a few feet of the 10th level and by a very heavy inflow of water. Costs have increased owing to the necessity of keeping the main shaft in a safe condition and keeping the drives open above the 10th level, where payable ore could be obtained. As [illegible] has been made, as [illegible] has been brought in at a [illegible] obtained by tapping [illegible] out, though of poor grade. [illegible] 224,020 tons of an average [illegible] hauled from the mine [illegible] 20,476 was sorted a [illegible] exclusive of 110 tons in the ore [illegible] or only 3.84 dwts. less per ton, and realised [illegible] to which 13,093 oz. obtained from [illegible] duced £54,821, a total of £177,041. The [illegible] was no less than £127,043 [illegible] profit. There was a balance brought forward of [illegible] one or two other small items, bringing up the available total to £14,223. Debenture interest and [illegible] Government tax on profits was £2,74[illegible] French fiscal duties required a further [illegible] and the directors allowed £5,[illegible] for redemption of debentures and £4,445 towards capital expenditure. The remaining £[illegible] swallowed up in interest and expenditure [illegible] with the subsidence at the mine. The debenture debt has now been reduced to £16,200 and the total funds transferred from appropriation account for capital purposes amount to £[illegible] but the financial position is poor and we see no prospect of the **early resumption of dividends.**

Wanderer (Selukwe) Gold Mines.—This Rhodesian company crushed 193,300 tons during the year ended April [illegible] an increase of 14,800 tons, but the average [illegible] fell off from 2.78 dwts. to 2.44 dwts., owing chiefly, the directors say, **to the heavy caves of ground during an exceptionally wet season** bringing down large quantities of overburden, which could not be properly sorted from the ore. The total output was, therefore, 1,370 ozs. less at 25,760 ozs., and the reverse from bullion sales dropped by £4,120 to £100,407. Other receipts brought the total income up to £100,628. Working costs were reduced **by another 1d. to 6s. 7½d. per ton, but, even so, the profits** in Rhodesia were £8,024 smaller at £36,414, and after setting **off £15,250 for depreciation and £6,072 for mine development** redemption and meeting London office charges the net profits were only £12,046 compared with £22,367. To this was added £5,749 from the previous account, making a total of £17,795, which is carried forward. Owing to the less satisfactory crushings and the increased amounts of capital and **development expenditure the directors were unable to pay off the fixed loan of £12,000 as they had anticipated, but £[illegible]** of it has since been paid off, and if the present rate of profits is continued the end of the current year should see this loan disappear. It is estimated that the ore reserves have been **increased by 69,675 tons to 512,191 tons, exclusive** of the ore below the 150 ft. level of the Ashton mine, which the manager thinks should add 50,000 tons at least to the above figures.

Penhalonga Proprietary Mines.—This Rhodesian venture again made a certain amount of progress during the year ended on December 31, 1906, and it is pleasant indeed to report [illegible] credit to revenue account standing in the balance-sheet. Ore mined from all sections totalled 110,370 tons, a [illegible] amount, but notwithstanding this a substantial increase has been **made in the ore** reserves during the twelve months. In view **of the immediate increase of the milling plant** [illegible] is now being increased and it is anticipated that by the time the additional stamps are ready for dropping, which should be about the end of the present year, the milling [illegible] amount to at least 500,000 tons. That [illegible] factory figure and it is a pity the ore is not of higher grade. Reliable values are difficult to obtain, but the [illegible] thinks that last year's milling average of 5.29 dwts. gold and 54.4 dwts. silver is likely to be maintained. In the period under review the average return per ton of ore milled was [illegible] pared with 24s. 8d., while the working costs were [illegible] giving an increased nett profit of just over 10 per ton. During the end of the year the working costs on the basis [illegible] dropped to the region of 15s. per ton, and this figure is [illegible] expected to be exceeded in 1907. The [illegible] was much as usual until near the close of the period, when it fell off, an unfortunate circumstance in view of the fact that the company was then in a position to substantially increase the milling. Shareholders have already been [illegible] proposed increase in the plant and while the [illegible] are in operation, which should be at the end of the present year, the company will have no heavy [illegible] necessary appurtenances. During [illegible] ozs. of gold and 1,362 tons of concentrates were [illegible] working expenses were £[illegible] leaving the profits at £[illegible] Various items charged against the [illegible] written off depreciation, aggregated £[illegible] off the debit brought in at £[illegible] be carried forward. The [illegible] the plant have been raised by an issue of debentures and the total debenture issue now amounts to £[illegible] any time prior to April 1, 1909, any holder of shares may have of one share for every £1 [illegible] of debentures.

Oroya-Brownhill.—For the year 1906 this West Australian mine paid dividends of 80 per cent., but it has [illegible] decided to reduce the output, which will [illegible] a saving in the dividend to 50 per cent. It is expected that [illegible] lower grade ore and we gather from the [illegible] report that the output under the new [illegible] be maintained for at least two years and possibly for many years longer

with reasonable good fortune. The total revenue for the twelve months to December 31 was £648,886 and after meeting expenses of ore extraction and reduction, general expenses in London and miscellaneous charges there is a balance over of £501,933. A sum of £46,822 is allowed for depreciation expenditure on main shaft and mine development amounts to £26,561 and income and colonial taxes take £33,554. The four dividends of 4s. each per share, or 80 per cent., absorb £360,000, directors' commission amounts to £13,500 and £21,496 is left exclusive of £36,975 brought in. The financial position is exceedingly strong and after providing for all liabilities the company has much more than half the capital in cash or gold in transit. Gold obtained was 148,203 ozs., valued at £630,318, the average yield being 23.12 dwts., valued at 98s. 4d. per ton, while the working cost was 21s. 11.92d. per ton, a reduction compared with 1905 of 3s. 2.12d. per ton, and a further saving has been made during the current year. Shareholders have already been advised of the arrangement made with the Central and West Boulder mines for working this lead on a profit-sharing basis and in accordance with the intention expressed in the last annual report 90,000 shares in the Oroya Black Range were offered for subscription at par to the shareholders of this company, the whole being applied for and allotted. Developments at the mine have continued to be satisfactory and it is hoped that the 20-stamp mill which should treat about 3,500 tons per month will commence regular crushing in August.

Great Boulder Proprietary Gold Mines.—During the year ended December 31 the output of bullion amounted to 150,712 ozs. and the gross proceeds were £554,798, or an increase of £9,711 over 1905. The mine manager performed better than he promised and reduced working costs from 29s. to 25s. 11d. per ton instead of the 26s. 6d. estimated, but the total expenses took £218,391, and, with £2,621 from interest and transfer fees, the nett revenue, after meeting London office charges, came to £329,495. Adding £5,148 or £5,284 less brought forward and deducting provision for income-tax and £35,000 transferred to reserve, the balance available came to £271,605 against £267,648, so the directors repeat last year's dividends of 3s. per 2s. share and increase the sum carried out to £9,105. Although in the twelve months 149,943 tons of ore were treated the ore reserves were increased by 94,841 tons to 548,490 tons, but the average assay value shows a further drop to 18.282 dwts. compared with 20.12 dwts. in 1905, 22.6 dwts. in 1904, and 26.4 dwts. in 1903. In spite of that, however, the value of the ore in sight is estimated at over £2,000,000 as against £1,894,000. Developments have been vigorously carried on and the directors state that, irrespective of the increase in reserves, the discoveries in the formation of the ore bodies are of great value and importance. The most important of these was that of the west or new lode in depth, which has been opened up at the 1,750 ft. level for a length of 692 ft., in ore having an average value of 14 dwts. At the 1,900 ft. level it has been opened up for a length of 869 ft. with an average of 13.7 dwts., and in both cases it is still being driven upon south without its full length having been disclosed, so that the position seems good.

South Kalgurli.—The chairman of this company has recently been on a visit to the property and now favours shareholders with his impressions. We cannot say that they seem particularly encouraging. Since September last the returns have been lower than formerly, but viewing the position as a whole and the possibilities contained in the ore bodies there is thought to be a reasonable prospect of an improvement later on. The management is striving to get 300,000 tons of ore developed and the directors might then consider the advisability of remodelling the plant at a cost of £25,000 to £30,000 by means of which it is estimated that 2s. per ton would be saved. It would require 300,000 tons to see this expenditure back, but benefit would accrue from anything in excess of that quantity, and moreover any material saving in costs per ton "might result in the company being able to contemplate the handling of a considerable tonnage of ore which at present has to be considered unpayable." That is most delightfully non-committal. To sum up the chairman thinks the company possesses a mine of possibilities which is being methodically opened up, is well equipped and managed and "as far as could be seen from the work done and having regard to the generally expressed opinions of experts on the field there should be years of profitable working ahead of our company." That sounds right enough, but there is much to be done before those 300,000 tons are in sight because the ore reserves on March 31 were estimated at 105,885 tons of an average value of 7.25 dwts. per ton. Tonnage opened up by development during the half-year then ended was 43,726 tons against 51,130 tons milled, so that on balance the reserves were a good deal reduced. Income for the six months was £73,612 against which expenditure on working account was £48,902 and on capital account £7,516, a total of £50,478, which is reduced to £55,660 by rebate on stores.

Broken Hill Proprietary Block 14 Company.—Nett profits for the half-year ended March 31, after paying preference dividend, were £53,247 or an increase of £29,934 over those of the preceding six months. Adding £44,355 brought in, the balance available was £97,601, of which £20,000 was absorbed by the two dividends paid during the half-year, and £4,333 was written off for depreciation of plant and machinery, leaving £73,269, out of which a reserve fund has been created by placing an additional £15,000 on fixed deposit. In the six months 37,974 tons of sulphide were extracted, but in spite of this development has demonstrated that there is in sight practically the same quantity as estimated in the previous report, and the manager expects that the reserves will be materially increased during the current six months, when the lode is reached in the 700 ft. level. Developments in the carbonate zone have been very good, and in spite of shipments having risen from 4,094 tons in the preceding six months to 7,200 tons, the manager estimates that there are now at least 5,000 tons in sight against 3,020 tons. Liquid assets, which include £21,796 in cash and £17,834 due for ore sold under contract, have increased by £13,848 to £55,035, and exceed the liabilities to sundry creditors by £46,766.

Broken Hill Proprietary Block 10 Company.—In the six months ended March 31, 70,770 tons of crude ore were treated, compared with 70,947 tons in the previous half-year and 72,365 tons in the corresponding half of 1905-6. Concentrates produced amounted to 9,993 tons containing 6,180 tons lead and 323,624 ozs. silver, against 10,315 tons containing 6,662 tons lead and 353,020 ozs. silver a year ago, the percentage of recovery being 37.06 silver and 65.54 lead, against 36.25 and 65.58 respectively. Working costs, including everything but capital expenditure, were £1 3s. 2⅝d. per ton of crude ore compared with £1 0s. 4⅝d. for the previous six months, the increase being mainly accounted for by the higher wages paid. Total receipts from all sources, including £3,041 for 60,820 tons of by-products produced, were £131,103, and after providing for expenses a profit of £48,964 was left, to which were added £12,381 for instalments received on by-products reserve account and £600 for interest, &c., giving, with £148,652 brought in, a total of £210,597 to be dealt with. Of this £55,000 has been absorbed by the payment of dividends and bonuses and £7,401 is written off for depreciation of plant, leaving £148,196 to be carried forward. During the half-year a considerable amount of development work was done at a cost of £6,814, and the directors state that the ore at the lower levels promises to add considerably to the quantity of ore in sight, while the manager estimates the ore reserves above the 1,215 ft. level at 702,000 tons. Floating liabilities are light at £7,828, and on the other hand £12,909 is due from sundry debtors, by-products in hand are valued at £14,165, or 1s. per ton, and the company has £54,863 in cash. Against the by-products reserve account of £108,333, there are debtors for £124,528, and the position altogether seems good.

Cerro Muriano Mines.—This mine, situated in Spain, is only in the development stage as yet, but during the year to March 31 ore dressing on a moderate scale was regularly carried on in the temporary plant, 16,671 tons of crude stuff being treated and yielding 842 tons of dressed ore containing on the average 19.1 per cent. of copper; 748 tons were shipped and realised on sale £12,049. About 10 tons of lead ore produced from the mine was also sold for £94, while other receipts from rent, interest, &c., amounting to £1,105, brought the total income up to £14,048. Expenditure on mining development, raising, dressing and shipping ore and other charges in Spain and London was £2,510, for depreciation on buildings, machinery and plant came to £43,519, leaving a balance of expenditure over revenue for the year of £29,471, and bringing up the total excess to £73,879. Rapid progress has been made with the developments underground and the results appear to be satisfactory. Reserves of ore at March 31 were estimated at 58,000 tons of an average assay value of 2.6 per cent. copper. Careful investigation of the various processes available for the treatment of copper ore has been made with a view of ascertaining the treatment calculated to obtain the best results from the Cerro Muriano ore, and occupied a considerable length of time. It was finally decided to adopt the process of magnetic separation after roasting, and an order has been placed for a plant capable of dealing with 100 tons of crude ore per day. This will form the first unit which will be so arranged as to readily admit of duplication. An arrangement has been made to borrow £20,000 at 6 per cent. per annum from the North Cerro Muriano Copper Mines, Limited, the loan to be repaid by monthly instalments of £2,000, commencing July 1, 1908, or earlier, at the borrowers' option. The company has a large holding, 116,000 £1 shares, in this North company, valued in the balance-sheet at the nominal sum of £500, but as it is not possible at the present time to place a value on these shares, the question of a distribution by way of dividend is deferred.

At an extraordinary general meeting of the Prudential Assurance Co., Limited, held at the office on Friday last, Sir Henry Harben, in recognition of his conspicuous services, was appointed president of the company during his life. This resolution, in accordance with the regulations of the company, requires confirmation at another general meeting, which will be held on Wednesday, July 31; when so confirmed it is the intention of the directors to elect Mr. Henry Andrade Harben as their chairman.

Certain further changes have been made in the executive staff—Mr. Thomas Charles Dewey, the general manager, has after fifty years' service to the company tendered his recognition as from August 1, 1907, and it is the intention of the directors to elect him to a seat at the board and appoint him deputy chairman. In consequence of Mr. Dewey's retirement, the directors have made the following appointments to take effect from the same date:—

Mr. Frederick Schooling and Mr. Alfred Corderoy Thompson to be joint managers, Mr. Schooling retaining his office as actuary. Mr. James Smart to be joint secretary with Mr. Daniel Wintringham Stable, the present secretary. Mr. Henry Blennerhassett and Mr. Walter Edwin Martin to be assistant managers with Mr. Frank Haycraft, the present assistant manager.

Letters to the Editor.

THE MUTUAL LIFE INSURANCE COMPANY OF NEW YORK POLICYHOLDERS' PROTECTION ASSOCIATION COMMITTEE.

Sir,—We now learn that as the result of the recent ballots for election of trustees and directors, the nominees of this committee were unsuccessful, and the management remains practically in the same hands as it did before the recent scandals. It must be a matter of profound regret to the large majority of policyholders in this country that no British representative has been elected on the board of either company to protect the British interests. This result is, of course, largely due to the strenuous efforts made by the present management of both companies to retain the management in their own hands.

Nevertheless, this committee feel that the action they have taken in endeavouring to secure proper representation on the board will have been useful if it tends, as is believed has been the case, to produce, for the time being at all events, greater economy in the working of the companies and more attention to the management and investment of their funds.

The contributions received by this branch of the Policyholders' International Committee and the Mutual Life Insurance Company of New York Policyholders' Protection Association Committee were not sufficient to pay the total expenditure, and the balance was provided by the International Committee Headquarters. The accounts of the British committees have been audited by Messrs. Price, Waterhouse and Co., C.A., who have certified to their correctness, and are open to the inspection of contributing policyholders at any time.

Under present conditions, as it does not appear probable that any advantage can be derived from a continuance of the committee, it is now being formally dissolved.

Yours faithfully,
Robertson Lawson, C.A.,
Hon. Secretary.

34, Old Broad Street, London, E.C.,
July 12, 1907.

OUR COAL TAX.

Sir,—In your article on the Half-year's Foreign Trade Returns in your issue of the 13th inst., you allude with satisfaction to our increased coal exports. Should you not qualify your approval by stating that owing to this, every man and woman in the British Isles has to pay some three shillings per ton more for this necessary of life, that Great Britain loses two millions a year by the remission of the export duty, and also that coal not being a manufactured article, we are simply exporting our native land? In other words, for the sake of the difference between cost and the price which the foreigner pays us, we have given up two millions of revenue, have taxed all our own people 3s. a ton on the coals they consume, not to mention the increased cost of everything in the manufacture of which coal enters, and have most seriously diminished our capital.

You will doubtless say that the increased price which the foreigner pays is to the benefit of our country, but if for this we are all to pay a corresponding increase to the colliery owners it means simply taxing the many for the benefit of the few. Had the duty of 1s. per ton been kept on, the foreign demand would have been just as great, for at the present time the foreigner is not only paying this, but also another two shillings per ton, i.e., three shillings in all, but this increase all goes into the pockets of the coalowners and colliers instead of part into the national treasury. In conclusion, I may say that with the present export the duty would amount to over three million pounds. Don't you think Mr. Asquith could do with this?

Yours truly,
J. P. H. Wood.

Mason's Wharf, Maidstone,
July 15, 1907.

Letters of allotment for the £600,000 4½ per cent. first mortgage debentures of the Buenos Ayres Central Railway (Ferro Carril Central de Buenos Aires Limitada) have been posted.

Tenders for the issue of 600 ordinary shares of £10 each of and in the East Surrey Water Company must be sent in to the company's office, Redhill, Surrey, not later than 12 o'clock noon on Friday next, July 20.

Bristol Tramways and Carriage.—Traffic receipts for week ending July 12, £5,459, decrease £342; aggregate from July 1, £10,581, decrease £1,032.

British Electric Traction.—Receipts of all the Associated Companies for the week ending July 12, £29,562; 419½ miles.

Burnley Corporation.—Traffic receipts for week ending July 13, £1,166, decrease £225; aggregate from July 1, £2,518, decrease £199.

Dublin and Blessington.—Traffic receipts for week ending July 10, £157, decrease £15; aggregate from July 1, £226, decrease £35.

Dublin and Lucan.—Traffic receipts for week ending July 12, £144, increase £11; aggregate from July 1, £220, decrease £11.

Dublin United.—Traffic receipts for week ending July 12, £7,768, increase £2,181; aggregate from July 1, £12,139, increase £2,907.

Edinburgh and District.—Traffic receipts for week ending July 13, £6,616, increase £829; aggregate from January 1, 1907, £137,144, increase £1,856.

Hastings and District.—Traffic receipts for week ending July 11, £1,174.

Isle of Thanet.—Traffic receipts for week ending July 13, £994, decrease £130; aggregate from October 1, £15,671, decrease £323.

London County Council.—Traffic receipts for week ending July 6, £32,210, increase £4,982; aggregate from April 1, £433,607, increase £63,886. Miles 116⅜, against 96½.

London General Omnibus.—Traffic receipts for week ending July 13, £22,614, decrease £3,260; aggregate from July 1, £45,086, decrease £7,630.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending July 13, £6,917.

London Road Car.—Traffic receipts for week ending July 13, £9,261, increase £265; aggregate from July 1, £17,375, increase £343.

London United.—Traffic receipts for week ending July 12, £7,857, increase £347; aggregate from January 1, £169,250, increase £2,729.

Provincial Trams.—Traffic receipts for week ending July 13, £2,182, decrease £241; aggregate from October 1, £64,707, increase £5,543.

Rossendale Valley.—Traffic receipts for week ending July 12, £200, decrease £7.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending July 14, £1,221, increase £429; aggregate from January 1, £31,226.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending July 15, £16,687, increase £2,260; aggregate from January 1, £461,427, increase £46,576.

Auckland Electric.—Traffic receipts for four weeks ending June 21, £10,157, decrease £98; aggregate from January 1, £63,538, increase £2,119.

Brisbane.—Traffic receipts for month of June, 1907, £12,500, increase £905.

British Columbia Electric.—Nett earnings for May, $49,958, increase $24,436. Nett earnings, including income from investments, from July 1 to May 31, $642,721, increase $189,090.

Buenos Ayres and Belgrano.—Traffic receipts for week ending April 14, £4,033, increase £227; aggregate from January 1, £52,452, increase £3,865.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for week ending July 15, £7,080.

Calcutta.—Traffic receipts for week ending July 13, Rs. 47,106, increase Rs. 2,847; aggregate from January 1, Rs. 13,60,919, increase Rs. 1,34,401.

Cape Electric.—Traffic revenue for month of May, Cape Town, £9,675; Port Elizabeth, £3,035.

Cartagena (Colombia).—Traffic receipts for September, £10,646.

Carthagena and Herrerias.—Traffic receipts for the month of June, £4,516, decrease £107; total from January 1, £31,191, increase £3,725.

Geneva Trams.—Earnings for June Fr. 208,491; increase Fr. 10,871.

Kalgoorlie Electric.—Traffic receipts for June, £2,537; aggregate from January 1, £23,752.

Lisbon Electric.—Earnings for June, milreis 137,213.

Madras Electric.—Traffic receipts for fortnight ended July 15, Rs. 17,694, increase 16 per cent.; aggregate from January 1, Rs. 2,21,596, increase 19 per cent.

Melbourne Tramways and Omnibus.—Traffic receipts for June, £39,500.

Mexico Electric.—Nett earnings for month of June, $187,135, increase $18,159; aggregate nett earnings from January 1, $947,583, increase $45,295.

Perth (W.A.) Electric.—Traffic receipts for week ended July 12, £1,291, decrease £95; aggregate from January 1, £40,181, decrease £1,362.

Rio de Janeiro.—Nett earnings for May, $155,192; aggregate from Jan. 1, $757,357.

Sao Paulo.—Traffic returns for May: nett earnings, $102,504, decrease $2,806; aggregate from Jan. 1 $572,496, increase, $27,855.

Twin City Rapid.—Traffic receipts for the month of May, $496,711, increase $48,607; aggregate from January 1, $2,317,873 increase $247,855. Nett traffic receipts, $260,724, increase $21,884; aggregate from January 1, $1,169,500, increase $98,320.

The List of Applications will be closed on or before 23rd July, 1907.

SOUTH MANCHURIAN RAILWAY COMPANY, LIMITED.

Registered in Tokyo on 7th December, 1906.

ISSUE OF £4,000,000 5 % STERLING BONDS.

Principal and Interest unconditionally guaranteed by the IMPERIAL JAPANESE GOVERNMENT.

In Bonds to Bearer of £20, £100 and £200, with half-yearly coupons attached for Interest at the rate of 5 per cent. per annum, payable 5th February and 5th August.

The Bonds are repayable within 25 years from the date of issue, but the Company has the right at any time after 10 years from the date of issue to redeem at par the whole, or part by drawings on giving six months' notice, or by purchase, if the price is below par.

A coupon for full six months' interest payable 5th February, 1908, will be attached to the Scrip.

SUBSCRIPTION PRICE £97 PER CENT.

Parr's Bank Limited, The Hongkong & Shanghai Banking Corporation, and The Yokohama Specie Bank, Limited, as agents for the Industrial Bank of Japan, Limited, which is duly authorised to make this issue, are prepared to receive subscriptions for the above **£4,000,000** of bonds, payable as follows:—**£5** per cent. on application; **£20** per cent. on allotment; **£20** per cent. on 17th September, 1907; **£15** per cent. on 21st October, 1907; **£15** per cent. on 19th December, 1907; **£22** per cent. on 20th January, 1908 – **£97** per cent.

Subscriptions must be for £100 nominal or any multiple thereof. Payment in full may be made on allotment or on any instalment date under discount at the rate of 3 per cent. per annum.

The South Manchurian Railway Company, Limited, is a Joint Stock Company created under Imperial Japanese Government Ordinance No. 142, promulgated on 8th June, 1906, to take over and operate the railway between Tairen (Dalny) and Changchun, including branch lines, also the line between Antung and Mukden, and the rich coal mines of Fushun and Yentai. The Company took over the railways and the mines from the Government on the 31st March of this year.

The Tairen (Dalny) and Changchun line and its branches (having an aggregate length of about 508 English miles) are held under a Concession from the Imperial Chinese Government for a term of about 75 years still to run, but the Chinese Government has an option to purchase these railways on payment of the outlay upon them. This option, however, cannot be exercised for a considerable time after the due date of the bonds.

The Antung-Mukden Railway (about 188 English miles) is held under treaty stipulations between Japan and China for a term of 18 years from 22nd December, 1905, after which this Railway may be sold to the Imperial Chinese Government at a price to be determined by arbitration.

The Capital of the Company is 200,000,000 Yen (about £20,000,000), divided into 1,000,000 Shares of 200 Yen (about £20) each. The Imperial Japanese Government received from the Company and retains 500,000 fully paid Shares.

Of the remaining half of the Share Capital, 100,000 Shares were issued and subscribed in Tokyo. On these Shares 10 per cent. has been called and paid up.

The President, Vice-President, and Directors of the Company are appointed by the Imperial Japanese Government. The Government supervises the business of the Company and appoints a Special Comptroller for this purpose.

The coal mines which are situated at Fushun and Yentai are considered to be extremely valuable. At Fushun seams of 50 and even over 100 feet of coal of excellent quality have been found. The output is expected to reach 4,000 tons a day, for which there is a ready market.

The proceeds of the bonds will be devoted to the following works, viz.:—

Converting the Tairen-Changchun line and branches from 3ft. 6in. gauge to 4ft. 8½in. gauge, which is identical with the gauge of the Chinese and Korean Railway systems.
Converting the light railway from Antung to Mukden into a permanent line identical with the other parts of the system.
Providing a new and complete equipment of locomotives and rolling stock.
Doubling the track between Tairen (Dalny) and Suchatun, a distance of about 236 English miles.
Harbour works at Tairen (Dalny).
Water transport and works connected with collieries and warehouses, etc.

The conversion of the whole system from narrow to broad gauge, similar to that of the Chinese and Korean Railways, is to be completed within three years.

An agreement has been concluded for the conveyance of through traffic over the Siberian Railways and the South Manchurian Railways, viâ Harbin, which will take effect at an early date.

The Imperial Japanese Government is of opinion that the Railways will be the means of developing the great resources of Manchuria, to the benefit of the trade of all nations on an equal footing, and that the return on all the Capital invested in the South Manchurian Railway Company, Limited, will be satisfactory.

The Bonds have the unconditional guarantee of the Imperial Japanese Government both as to interest and repayment of principal. This guarantee will be stated in each Bond, which will be countersigned on behalf of the Imperial Japanese Government.

The Bonds are repayable within 25 years from the date of issue, but the Company has the right at any time after 10 years from the date of issue to redeem at par the whole or part by drawings on giving six months' notice, or by purchase if the price is below par. Should the Antung-Mukden line be sold as above mentioned, the proceeds of sale will be applied towards redemption of all present and future issues of bonds of the Company which may then be outstanding.

The payment of the Coupons and repayment of the Bonds will be made in London, at the office of the Yokohama Specie Bank, Limited, 120, Bishopsgate Street Within, E.C. Partial redemption will be effected by drawings in the usual manner at the office of the said Bank.

Scrip Certificates to Bearer, with Coupon attached for a full half-year's interest payable 5th February, 1908, will be delivered as soon as possible in exchange for the Allotment Letters and Bankers' receipts, and Bonds will in due course be delivered in exchange for Scrip Certificates.

Application must be made on the enclosed form accompanied by the deposit of £5 per cent.

If no allotment be made the deposit will be returned in full, and if only a portion of the amount applied for be allotted the balance of the deposit will be appropriated towards payment of the amount due on allotment.

Failure to pay any of the instalments at due dates will render all previous payments liable to forfeiture.

An official settlement and quotation on the London Stock Exchange will be applied for in due course.

Certified translations of the Law and Ordinance creating the South Manchurian Railway Company, Limited, the Bye-laws of the Company, and of the Law and Ordinance authorising the issue of this Loan, with the guarantee as to principal and interest by the Imperial Japanese Government, also of the Treaty of December, 1905, and Additional Agreement between Japan and China, may be seen at the office of Messrs. Alfred Bright & Sons, Solicitors, 15, George Street, Mansion House, E.C.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Reduced from 4½ per cent. on April 25.)

Norfolk House, Friday Evening.

No great change has occurred in the position of the Money market during the past week, but it is getting poorer by the naturally brought about diminution of its resources through its repayment of money borrowed from the Bank of England. Other securities, for instance, show a decrease on the Bank week of £1,923,000, making a reduction in the past three weeks of almost £10,000,000. Probably, the market would have felt more sensibly the effect of a restriction in its resources such as this sum implies, had it not been that the Japanese Government agents with their usual astuteness let free an abundance of credit so as to keep the market quite comfortable until the South Manchurian Railway loan had been successfully placed. Thanks to this help money has never been in any sense scarce in the short credit market, and bankers have often been obliged to accept 2¼ per cent. for seven-day money, although they clung as long as possible to 2½ per cent. Call money has seldom been better than 2 per cent., and finished often, as this afternoon, at 1¾ to 2 per cent. For all that the India Council has been getting 2¾ per cent. on some renewals for about a month.

Will this ease last? Perhaps for some little time yet, although the Bank of England continues to hold the view that it will be in a position by the end of this month or very little later to dictate rates to the outside market. Unless, however, gold comes to hand in much larger amounts than hitherto the Bank return is by no means reassuring about the future. The reserve, it is true, has risen by £705,000 on the week to £25,118,000, but that is quite £5,000,000 below the total which seems necessary to secure us against an unpleasant stringency in rates towards the end of the year, and last week the Bank received from abroad only £358,000 nett in gold. A few sovereigns also came in from the internal circulation, and notes returned to the value of £314,000. Hence the increase in the reserve, but this rate of increase will have to be accelerated if the market is to be kept safe from disturbances. In other respects, however, the position is rather more comfortable. In New York the exchange has again hardened to a point that may force a renewal of gold shipments to Europe, while the Paris open market rate of discount has receded and the cheque exchange gone up a little, symptoms which we may accept as reassuring as far as any French demands for gold on our market are concerned.

In spite of easy money, discount rates have been kept well up, so that three months' bank bills have never been below 3½ per cent. and more often 3 9/16-5/8 per cent., to-night's quotation. The market has shown no disposition whatever to let rates down, particularly rates for long bills, so that although fine short bank paper can perhaps be discounted at 3¼ per cent., long usances are still quoted close up to Bank rate, and the market hardened for such bills when the Treasury announced that it was going to ask for a renewal of £1,500,000 in Treasury bills paid off last April. The brokers did not relish this unlooked for demand, and accordingly raised the six months' quotation to 4¼ per cent. So Mr. Asquith is not going to get his £1,500,000 extra at a fine rate, and it is a pity he came upon the market at all just now.

In spite of the firmness of discount rates, which is in some measure attributable to the uneasiness about the Egyptian position, there has been good business doing, and the supply of bills has been plentiful. Until the last day or two the joint stock banks have not been buyers of three months or longer dated bills from the brokers, but to-day they have been willing to work to a moderate extent at 3½ per cent. Bills have not been freely parted with at that figure.

Gold market prospects for next week are that the Bank of England will get the available supply, which, however, is not large. About £401,000 is due in from South Africa and £20,000 from other quarters. The price of bars has dropped back to 77s. 9½d. per oz. owing to the strong French exchange and the rise in the New York one.

Calls on new issues are of no importance for next week.

SILVER.

As dealers anticipated in the end of last week the inquiry for bars on Indian account was decidedly more active. Both the Government and the bazaars were ready takers of all the supplies offering, and the quotation for prompt delivery went went up to 31 ¼d. per oz., while forward was 1/16d. less. The bazaar demand, however, was then diverted to August and September metal, with the result that the difference in prices disappeared, and both positions were quoted at 31 ⅛d. per oz. To-day offerings of cash silver were moderate and a further advance of 1/16d. resulted, but future metal remained at 31 3/8d. per oz. Applications for Rs. 80,00,000 of India Council drafts on Wednesday amounted to Rs. 4,22,25,000 in bills and Rs. 1,68,00,000 in telegraphic transfers. Of these Rs. 54,87,000 were allotted in bills and Rs. 25,13,000 in transfers, tenders at 1s. 4 1-32d. and 1s. 4 1/16d. per rupee receiving about 18 per cent. The amount to be offered next week is reduced to Rs. 60,00,000.

The Stock Markets.

Markets began the week rather cheerfully, but the traditional fate of a nineteen-day account soon overtook them, and by the middle of the week everything was again as stagnant as before, with prices of home securities inclined to droop. Grumblings amongst the investment class of brokers are just as loud as ever, and the record furnished by the official list fully bears out the statement universally made that business is shockingly bad. We hardly see how it can be otherwise while markets remain in their present artificial state, and while a continuous stream of new issues embarrasses all dealers in stocks. Another fine effort has been made by the American market controllers to bring about an appearance of revived business there, but it has been without success. The daily aggregates of business done on the Wall Street Stock Exchange demonstrate that the dealing continues to be exclusively professional. Therefore, the advances secured in prices, the rally in Steel and Copper shares brought about, the fine firework display in Union Pacifics and such, have really no other meaning than that the masters of the gaming house are making noisy and sensational demonstrations in order to show their strength, and, if possible, to convince outsiders that now is the time to buy. The outsider pays no heed, and is wise.

At home the market has been disturbed by the non-success of such new emissions as the East Indian Railway debenture stock and the Buenos Ayres Central Railway bonds. It is stated by the City Editor of the *Times* that underwriters have had to take up 88 per cent. of the Indian issue and 75 per cent. of the Argentine one. This shows that not only is the public disinclined to invest even at the high rate of interest offered by the Buenos Ayres Central Company, but that it really has not the money to take up big issues just now. No wonder, therefore, that the news of another Japanese loan tended to increase the depression and to make the whole gilt-edged market sluggish, if not worse. And unhappily there are many other new issues waiting to come upon the market because spenders of capital of all qualities and sizes have been unable to put on the brake and have consequently found themselves with their bankers to an extent which forced them to make an appeal to the general investing for the means to extricate themselves from embarrassing commitments. Thus it is that markets remain in an unhealthy condition, and there can be no starting point in our opinion until some unwieldy positions have been liquidated.

That Egyptian collapse, for example, still presses not only upon the Stock Exchange but still more upon the Money market. Rumours fly around of meetings between the various houses interested in schemes put forward to prop this and tide over that, and such talks do not tend to restore confidence, especially when it becomes known that some at least of the firms whose stoppage it is sought to avert have nothing left to stand on. We cannot erect even a paper imitation of a mansion or fortress without the painted sheets and tags of bamboo, and the exhaustion of the Egyptian gamble has been so complete in some instances as to leave firms involved in it without a farthing. Hence nervousness is exhibited and deepens the feeling that there will be no real health in markets until the various diseased spots are brought to the surface and resolutely dealt with. The more they patch the more the patchers involve their own credit.

Look how little our Home Railways have been stimulated by the dividend declarations thus far made. To be sure, there are no surprises amongst them, but they have been quite up to market expectations, as foreshadowed in this article last week. That, however, has not caused any increase in business, has not brought the public in to buy, and the most that can be said is that prices have at no point materially receded. Even the traffic receipts are exercising no influence whatever, and there is not a single division of the Stock Exchange where speculation is at the present time so inert as in the Home Railway market.

Home Government and Trustee Securities.

On the week Consols have not moved much, but they are not a strong market, and we doubt very much whether they can become stronger until the Chancellor of the Exchequer faces his own banking troubles and deals with that yawning Post Office deficit. It is really distressing to find him apparently satisfied to be the mouthpiece of officialism in this matter. He actually had the nonchalance to declare, in answer to Mr. MacNeill, on Thursday afternoon, that he "was not prepared to ask Parliament to take the same steps for making good any deficiency which might appear upon an arbitrary valuation of the securities as were considered necessary when there had been a real inroad upon the assets of the Savings Bank fund." What does he mean by an "arbitrary valuation"? Is the market price arbitrary, or is it the natural consequence of profligate extravagance and excessive borrowing on the part of the last Government? When does Mr. Asquith expect the price of Consols to go back to a figure which will cause the book loss now shown in the Post Office accounts to disappear? Are not these book losses as real while they last as the depreciation in the securities held by any bank? What right has Mr. Asquith to assume that a shortage of from £15,000,000 to £18,000,000 is going to be thus conjured away, and why should the bank that he controls be put upon a different footing to other banks? Were it not that the people know the Government to be liable for any loss shown, the institution would have had to close its doors before now. And before the present credit wastage has ended the Government may have to create and sell many millions

of stock to avert that catastrophe, for an insolvent bank portends an insolvent Government.

No wonder, then, that the Consol market remains flabby, that dealers have no faith in the future, knowing the whole position to be unwholesome. Other influences of an adverse kind, as noticed above, have also been exercising a sinister influence upon the price of Consols, and they will continue to produce that effect. The non-success of the East Indian Railway debenture issue temporarily weakened the price of India Government stocks, but the market soon rallied. Home Corporation stocks have not been much affected by the general discomfort and want of support, but that is because in most of them business is quite at a standstill. Colonial inscribed stocks have been on the whole rather firm and unaffected, although the firmness is not the product of revived vigour in investment buying. A certain amount of money is flowing into these stocks, and as the colonies have not yet begun their conversion and other emissions this investing may go on, but it is not of a volume sufficient to raise quotations much.

Fossilised Foreign Government Bonds.

Foreign Government bonds are still a most uninteresting market, and we can only commiserate the jobbers who devote their energies thereto. Amongst the Russian group, for example, the business here is almost exclusively centred in the English portion of the last 5 per cent. loan, and the dealing in it does little more than to keep the price up. In Paris the other Russian bonds have been raised a little, probably in preparation for another foreshadowed appeal on behalf of the Tsar's Government to the Western usurer. Japanese bonds have suffered a little by the Manchurian Railway guaranteed issue. It is so much cheaper than the older stocks of Japan, although possessing the same security that people are tempted to sell these older loans and invest in the new. The decline, however, has been insignificant. The market is most skilfully supported. Chinese bonds have advanced, and most Argentine 4 per cent. have gained a fraction on the week. But Brazilian continue heavy on the reported borrowing designs of the Federal Government, and some of its favoured *concessionnaires*. How much of these reports are mere loanmonger's intimidation we have no means of knowing.

Home Railway Stocks.

About Home Railway stocks there is little more to be said than what the reader will find above, and we need only summarise here the dividends thus far made public. As expected, the Metropolitan Company came out on Tuesday with 5s. for the half-year on its ordinary stock, or ½ per cent. per annum against 1½ per cent. a year back. The City and South London on the same day announced an increase of ¼ per cent. at 2½ per cent. in its distribution, which was remarkably good, and the next day the Great Eastern notified a 1½ per cent. rate against 1¾ per cent. for the first half of 1906, with about £1,000 less at £25,000 carried forward. This is a good enough return in the circumstances, bearing in mind the enormous losses inflicted upon the company by the shipwreck of its steamer the *Berlin* and the inelasticity of its traffic receipts during the past half-year. We hope the board has not been pinching its upkeep expenditure anywhere. Then came the Brighton Company with a rather pitiful announcement of 2¾ per cent. for the half-year on its undivided ordinary stock, being at the rate of 5½ per cent. per annum against 6 per cent. a year ago. This is just ½ per cent. per annum short of the amount sufficient to give the full 6 per cent. dividend on the preferred ordinary stock, since the undivided ordinary stock must get 3 per cent. for the year in order that the preferred may get its 6 per cent. A year ago the distribution for the six months was 3¼ per cent., and even then £30,580 was carried forward against £18,150 this year. The deferred stock wobbled on the news, and has staggered up £1 on the week, but Metropolitan lost ground for a time in spite of the dividend being quite up to expectations, although it rallied later.

Indian, Colonial, American and Foreign Railways.

The market for all the East Indian Railway stocks was slightly upset by the non-success of the new loan, and East Indian annuities were quite flat. Many of the others lost a pound or two in sympathy; otherwise there is nothing to note in that section. Amongst the Colonial group, Canadian Pacific shares have been the favourite with the players, and the price has been hoisted a little more, but the players have been professional, and consequently, although the shares are firm, there is not much interest in the play. Montreal, too, exhibited signs of distress in the middle of the week which might have brought about a nasty slump but for the intervention of Wall Street. The Grand Trunk Company's published traffic return was a fine one, but did not revive the market for its securities, which remains sluggish to a degree, and in other Colonial Railway stocks next to no business has been done by the public. There appears to have been a little "pegging up" in Rhodesian Railway things of no interest to the public.

The same remark applies to the Yankee section, where professional play has been most demonstrative in Union Pacific shares, with occasional spurts in some of the others, but without sign of public interest. On the week, however, prices have risen more or less for the issues best known here, and the gain of $5½ in Union Pacifics has been quite a showy one, a tribute to Harriman, we suppose. That is really about the best we can say. "The man in the street" does not seem to be aware that such a market exists just now.

For Foreign Railway stocks also the market has been as near as might be lifeless with a certain speculative investment business in the leading Argentine groups, some few transactions in Brazilian, Cuban and Uruguay Railway stocks and a very mild gamble indeed in Mexican ordinary compared to what the players have often accustomed us to. In short, all railway markets are at present out of favour, or out of heart, and even the stocks most patronised as a rule by the gambler are let alone. Antofagasta deferred stock has been offered a little and promptly receded. Someone wanted to sell, we suppose, to raise money, and the market abstained from helping him out. Leopoldina debenture stock has also been offered.

Bank Shares, Industrial Securities, and Minor Stocks.

A moderate investment business has continued in Bank shares at steady prices, although National of Egypt and National of South Africa have both flinched. There are faint indications of some little revival of interest in the great Commercial and Industrial market, where prices have, on the whole, been steady. The only remarkable improvement, however, in that quarter has been in Nitrate shares, some of which have risen £1 or more, but the dealing is hardly visible on the London Stock Exchange, it is the work of provincial markets, principally of the Liverpool market, and for that very reason the movements excite little interest or remark in Throgmorton Street. Some Canal and Dock issues were put up and seem to be attracting attention in the small way now in fashion, and improvements of a more or less noticeable kind have been recorded in several Financial Trust issues. Electric securities, too, have been firm with a little demand at improved quotations for Canadian General Electric. That was accompanied by a rise in Mexican Light and Power, with, however, no business shown, and securities keep up well on the whole, although Egyptian things have no pith. Insurance shares are strong, especially those of the London Guarantee and Accident on definite reports of its approaching notification of an increased dividend. B.E.T. preference shares have been bought a little, and closed rather up on the week, as well as the company's debenture stocks. The Tram-

way securities of Buenos Ayres have also shown a tendency to improve, but London General Omnibus stock continues to recede, and we fear it will not immediately benefit by the effort now being made amongst the Omnibus companies to agree on a plan for raising their fares. Anglo-American Telegraph deferred stock has dropped back from the inflated price to which it was sent up last week on a misapprehension. Dunderland Iron Ore preference shares have been pushed up about 15s., although no satisfactory news, so far as the report shows, has come to hand about the progress of the business. The Iron, Coal, and Steel group of securities, however, has been steadier on the whole than might have been expected, and prices might improve in that direction were it not for the fear that the whole iron trade is on the brink of a recoil. This view is supported by the utterances of the steel monopolists in the United States, just as the manœuvres of the copper group over there and the necessity forced upon it to lower the price of the metal have persuaded people here that a crisis in the copper share gamble cannot be very far off. Lever Bros. preference shares promptly jumped up 5s. on the news of Mr. W. H. Lever, M.P.'s success in his action against the Harmsworth newspapers, mostly owned or under the control of the Associated Newspapers, Limited. Oddly enough, Associated Newspapers preference shares did not feel appreciably the effects of this verdict, people evidently thinking that the unprecedented damages accorded to Mr. Lever would come out of Messrs. Harmsworth's own pockets. Nothing was more remarkable, indeed, than the universal jubilation over the blow administered to these enterprising gentlemen, and in their delight with the verdict even the Associated Newspapers own shareholders forgot that after all they may have to pay the piper unless Lord Northcliffe and his partners decide to be generous and stand in the company's place. As we pointed out in dealing with the report of the company in the beginning of last month, it owns three *Daily Mails*, including an edition for the blind, bless it, the *Evening News*, the *Weekly Dispatch*, and the *Illustrated Mail*, but not apparently the *Daily Mirror*, so we do not know how the damages and costs will be distributed by the losers.

Friday Evening's Markets.

They require no description, business having been poor, so only two or three items need be mentioned.

De Beers shares are still played with between Bourses, and go up and down on contradictory stories.

The scrips of the new issues are at a discount, both the East Indian Railway debentures and Middlesex stock being about 1⅛ to 1¼ discount, showing that underwriters are sacrificing their commission to escape. The new Japanese loan for the South Manchurian Railway was quoted at par to ¼ premium, with no animation in the market. Underwriters talk of having to take up 40 per cent. of this loan likewise. This does not reflect on the quality of the securities, but only on the temper of the market.

The City of Durban is trying to get another loan sold, but has not yet succeeded, it being unprepared to pay the rate of interest the market demands. All borrowers will find that the day of easy loan raising is at an end. Durban, however, must probably secure an advance soon, cost what it may.

The Great Central this afternoon announced a dividend at the rate of 2 per cent. per annum on the 1889 preference, with £4,700 carried forward. This distribution is just double what the market looked for, and is at the same rate as a year ago, but the balance then carried out was £8,282.

The preliminary statement of the South-Eastern and Chatham joint committee states that the nett revenue divisible between the two companies in the proportion of 59 and 41 per cent. was £650,420 or a decrease of £7,423 compared with the corresponding half of 1906.

Company Reports and Balance Sheets.

**** ***The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the*** Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

London, Brighton and South Coast Railway.

Last half-year the gross receipts came to £1,525,227 and the working expenses to £965,404, these figures showing a decrease of £46,002 in the revenue and of £12,487 in the expenses. The proportion of expenses to receipts was 62.29 per cent. Of the decrease in the receipts over £39,000 came from passenger and £7,166 from goods traffic, and the directors attribute the loss of passenger revenue to the weather, the tramway and motor competition, and a reduction in the spending power of the community. Perhaps that "spending power" would expand if the board in its wisdom would devise a rational and reasonable system of fares. The free balance of revenue over expenditure, including the balance brought forward, was £607,481, and after meeting all prior charges, which were very slightly higher than those of a year ago, the balance available for stock dividends does not permit the directors to pay more than £1 7s. 6d. for the half-year on the undivided ordinary stock, or at the rate of 2¾ per cent. per annum, which means that the preferred stock gets only £2 15s. per cent. This distribution will leave £18,154 to be carried forward compared with £30,046 brought in. Capital expenditure in the half-year amounted to £131,606, of which £127,726 went into lines open for traffic, that is to say mainly into the enlargement of Victoria Station, and the widening of the line between Victoria and Battersea, as well as between Earlswood and Preston. Also £24,664 was spent on the new annexe to the Grosvenor Hotel, leased to the Gordon Hotels Company, and now partially in use. The balance-sheet indicates that capital account is overdrawn £925,989, but the balances of various insurance and saving bank funds aggregate about £1,111,000. Dividends are payable on August 8.

Great Eastern Railway.

In the June half-year this company's gross receipts from all sources fell off by £7,820 to £2,740,647, and working expenses went up by £28,070 to £1,809,233 or 66.01 per cent. of the gross income against 65.17 per cent. in the first half of 1906. From the total nett revenue of £1,027,006, including £88,250 brought forward, the various charges deducted, £527,550 is available for dividend compared with £547,372 a year back. Fixed charges are practically identical with the previous year, but after they are met the amount available for the ordinary stock is about £20,000 less, and accordingly the dividend has been reduced to 1½ per cent. per annum as compared with 1¾ per cent. in the corresponding half-year, and only £25,254 is left to carry forward against a corresponding balance of £26,144. The directors express their extreme regret over the loss of their steamer *Berlin* on February 21 last, and their deepest sympathy with the relatives and friends of those who suffered or lost their lives in that calamity. They announce that a turbine steamboat of increased speed and improved accommodation has been ordered to take the place of the lost boat. Probably in consequence of that calamity the amount paid in compensation is up fully £10,000 in the half-year to £18,621, otherwise working expenses seem to have been carefully looked after, locomotive power alone showing an increase of about £21,000, due no doubt to the higher price of coal. Capital expenditure in the half-year amounted to £157,268, of which £30,498 went into new working stock and £29,653 into Parkstone Quay and Lowestoft Harbour Works, the amount spent on lines open for traffic being £80,467. At the date of the balance-sheet the capital account was overdrawn by £1,089,470, but the various insurance funds in hand, sinking funds, superannuation, savings bank, pension and provident funds aggregated over £1,800,000, so that in spite of the various investments for this company is conspicuously praiseworthy for the large amount of its funds put away outside its business there should be no immediate necessity to make a further capital issue

Metropolitan Railway Company

Gross receipts for the [illegible] ended June 30 show declining the company's proportion of the receipts of the [illegible] and extensions, showed a further decrease of £21,627 at £345,819. This reduction is due partly to the fact that one less three months compared with a period when the [illegible] force of the agreement with the Great Central [illegible] diversion of that company's traffic to the Great Central and Great Western joint line, and partly to the [illegible] railways and motor omnibuses. The fact of there [illegible] no doubt responsible for the decrease of £3 [illegible] £15,800 in merchandise. Fast-line passengers fell off by 233,133 in numbers and £6,029 in amount, [illegible] owing to the changes in company's methods by [illegible] £7,598, while third-class, in spite of an increase of 317,[illegible] in numbers, yielded £570 less. Expenses were reduced by £ [illegible], but capital charges show an increase on the [illegible] years amounting to almost £9,000. It is stated, therefore, that the dividend must be brought down to the rate of 10s. per cent. per annum. It should be observed, however, that the Surplus Lands stock again gets a distribution at the rate of £2 15s. per cent., and it need surprise nobody if holders of the ordinary stock begin to inquire how far the board has the right to divert any portion of its free revenue so as to maintain the dividend upon that stock. Capital expenditure in the last half-year was only £58,614 nett, but the account is credited with £112,020 received for rolling stock disposed of, less cost of locomotives, motor, and trailer cars, &c., purchased. Rates and taxes show a slight decrease of rather more than £1,000 on the half-year, otherwise nothing in the working [illegible] special notice. **The directors, however, say that throughout the half-year the working of the electrical plant and machinery has given every satisfaction, and that the current is being produced** at a very low cost per unit. Under the new arrangements made with the District company and the Tube railways, the receipts have shown a satisfactory improvement. The capital account was overdrawn at the end of the half-year by £212,578. **The dividend warrants will be posted on 31st inst.**

Cordoba Central Buenos Ayres Extension Railway, Limited.

The object of this enterprise is to give the Cordoba Central Railway direct access into the capital of the Argentine, and formal notice to proceed with the railway and works was given to the contractors on July 5, 1906, in accordance with the provisions of the works contract under which the line is to be equipped fit for public traffic by January 5, 1909. Some delay was caused by the difficulty experienced in obtaining the [illegible] tions with other railway lines which were necessary to enable the movement of construction materials. These [illegible] have now been made, plate-laying is being rapidly proceeded with from both ends of the line, and in a general way the work of construction is progressing in a satisfactory manner. The contractors expect to be able provisionally to open to [illegible] 100 kilometres of the line from Rosario towards Buenos Ayres before the end of the present year, and it is expected that the first section of 237 kilometres from Rosario will be completed by the end of February, 1908. The project for the terminal station in Buenos Ayres and the approach thereto, which precludes reclaiming from the River Plate the necessary land, has now passed the Chamber of Deputies, and the promoters anticipate that approval by the Senate will shortly be obtained. Capital issued in shares and debentures is £2[illegible], and of this £575,000 was paid to the vendor company for purchase of the concession. Construction outlay to date is £[illegible], and underwriting and brokers' commission on issue of [illegible] debentures accounts for the heavy sum of £[illegible]. Sundry other items make up a total of £32,344, and £1,[illegible] is lent. Most of this is represented by loans against [illegible] but £217,000 is held in cash, there being a big excess of creditors over debtors, besides one or two other items on the debit side to account for the apparent difference.

Cordova and North-Western Railway Company.

Of all the lines operating in the Argentine, the position of this one is probably the worst. There has recently been some activity and an improvement in the market value of the company's 5 per cent debentures, but to [illegible] there are any signs the point when interest payments may be expected, but in connection with an offer made for the purchase of these securities. Efforts made to induce the province of Cordoba to honour its guarantee have met with no success, and [illegible] appear likely to, but a group already largely interested in the securities of the company think that [illegible] compensation might be obtained in some form [illegible] time extending and improving the [illegible] in this event, a new organisation of the [illegible] additional capital would be required. There is no [illegible] the present company being able to [illegible] but the parties mentioned seem willing to take [illegible] being able to do so, provided that [illegible] the whole of the outstanding debentures, which [illegible] to be necessary to enable them to carry out the [illegible] offer is therefore made to buy up the debentures of the [illegible] £40 per £100 on condition that a [illegible] seemed. The directors by no means approve the [illegible] of the other, but point out that the [illegible] to pay interest on the [illegible] of Cordoba make no offer whatever for a settlement of the

debt. If the suggested arrangement is not carried out the board can only take steps to re-lease the road, possibly on better terms, and seek the assent of the debenture-holders for the creation of further prior lien debentures for absolutely necessary renewals of permanent way and other capital expenditure. Truly a cheerless prospect. At present the line is worked by the Cordoba Central Company and the board holds the opinion that no new arrangement should be entered into except on more favourable conditions. The amount of guarantee owing by the province of Cordoba is £1,090,275. Business for the company was better last year, the gross receipts showing an increase of $87,478 to $384,559 against a rise of $46,336 to $246,589 in the working expenditure, leaving the nett revenue over $44,000 to the good at a total of $137,970. The proportion belonging to the company is $103,477 or in sterling £9,034, to which is added £317 for interest and transfer fees and £800 for London expenses under the working agreement, making £10,151 in all. But no less than £5,862 goes in directors' fees for four years and £605 for trustees' fees also covering several years, so that after providing administration charges, &c., only £3,177 is left. Interest on prior debentures takes a sum of £1,909 and the balance of £1,267 is placed to a reserve for renewal of permanent way and rolling stock.

Egyptian Delta Light Railways, Limited.

This company now ends its financial year on March 31, and the report just issued shows a steady increase in the business done. With an average mileage open of 571 against 556, gross earnings for the twelve months advanced £31,640 to £255,782 and the average receipts per mile per week from £7 15s. to £8 12s. 3d. Passenger receipts show an increase of 18.70 per cent. and goods about 9.50 over the previous year. Working expenses amounted to £146,687, an increase of £15,353, but the ratio is down 1.24 per cent. to 57.35, and the nett revenue is £16,287 up at £109,095. To this is added the balance of last year £6,250 and interest on investments, &c., £6,649, making a total of £121,994, of which interest on debenture issues absorbed £29,617, sinking fund, reserves and other charges £28,407, an interim dividend at the rate of 4 per cent. on the preference shares £20,816, leaving £43,153. A final dividend at the rate of 7 per cent. is recommended leaving £6,726 to be carried forward. This dividend gives shareholders for the first time the full interest on their 5½ per cent. preference shares. Satisfactory arrangements have been made with the Government, by which the company will obtain an extension of the concession for the Metropolitan and Cairo-Helouan Railroad. The new section, known as the Cairo Limestone Quarries, is nearly completed, some four kilometres only remaining to be built out of a total of 16. Under the head of investments the directors state that it has been deemed advisable to reacquire the Egyptian Delta Land shares previously sold. There is nothing to object to in this, as the company owns some good properties, which should prove profitable when the present land crisis is over. Generally the balance-sheet shows a satisfactory financial position.

Dorada Extension Railway, Limited.

At the exchange of $500 Colombian to the £1 sterling the revenue of the railway from Dorada to Honda for the year 1906 was £53,230, and the working expenses came to £26,122, leaving £27,108 nett. Interest and transfer fees gave £433, making £27,542, and after deducting debenture interest, income-tax, and sinking fund, there is a sum left of £15,901. Balance brought forward was the large amount of £19,423, making £35,325, and the directors propose to transfer £25,000 to reserve, carrying forward £10,325. No revenue was derived from the extension during the year, as no part of it was opened for traffic. According to the construction contract, the extension should have been completed in March last, but it is not anticipated that this will be effected before the end of September. The company has, however, recently taken over the operation of the lines as far as Guayabal, which is about 25 miles from Honda, and the centre of a large mining district. Total expenditure on the extension to Ambalema up to the end of the year was £230,215. Railway business other than goods is an almost negligible quantity, and during the twelve months the total paying freight hauled was 52,657 tons, of which 12,218 was construction materials, sleepers, and other stores carried for the extension of the railway, and for various railways and mines. For the first four months of the current year the revenue has collapsed badly from £15,500 to £7,400, due to a rate war between certain steamship lines, but the fighting has ended now and steps are being taken to protect the interests of the railway, and again secure the traffic. The right of the Colombian Government to purchase the railway 50 years after its completion has led the directors to create a sinking fund for the redemption of the debenture stock within this period. Already £1,500 of debentures has been purchased and cancelled. Revisions favourable to the company have been made in the contracts with the Colombian Government and the Department of Tolima, and arrangements have been made to place £30,000 of the unissued debenture stock to meet additional capital outlays.

Costa Rica Railway Co., Limited.

This company's report is not of supreme interest nowadays because the line has passed to the control of the Northern Railways of Costa Rica, a Yankee affair connected with the United Fruit Co. The Northern Railways paid a rental of £131,100 for the year to June 30 last, interest on investments gave £3,823, and transfer and registration fees £103 with an aggregate of £135,026. From that debenture interest and redemption require £97,973, administrative expenses come to £4,291, and income-tax to £1,809, leaving £30,593. From this balance the directors propose to distribute 1 per cent. on the capital stock and to carry £12,952 to reserve, increasing that fund to £64,458. Some shareholders are inclined to kick up a dust at the smallness of the dividend paid, but the directors doubtless have good reasons for their caution. The general agent in Costa Rica reports that the property is well maintained by the Northern Co., which is also taking steps to provide more rolling stock. Owing to the large increase in the banana traffic the stock has been taxed to its utmost capacity, and some complaints have been made as to the delay.

Union of London and Smiths Bank, Limited.

In the June half-year this bank's nett profits were £21,166 larger than in the first half of 1906 at £279,205. Adding in the £211,115 brought forward, the directors had altogether £490,319 to deal with, out of which the usual dividend of 15s. 6d. per share, and bonus of 1s. 6d. per share, together equivalent to a dividend of about 11 per cent. per annum, takes £194,940. Out of the balance the directors utilise £150,000 to write down the bank's investments to market value or under. Even then there remains £145,798 to be carried forward, or only £65,236 less than was brought in. The directors, with much regret, announce the loss of Mr. R. H. Nunn, the general manager, who retires after completing nearly 45 years' service. Balance-sheet changes augur an even current of business. Liabilities on deposits, &c., at £36,484,369 are £157,631 lower, and acceptances and guarantees are £1,403,668 lower at £2,689,428. In the assets cash in hand at £2,868,294 is £171,226 down, but cash in the Bank of England is larger by £320,000 at £3,398,019. Money at call and short notice is likewise £147,622 up at 7,255,836. Investments, including the reserve fund of £1,150,000, figure at £6,058,698, which is a decrease of £302,286. Bills discounted have declined £134,799 to £5,312,435, and loans and advances aggregating £15,673,574 are £79,583 down, but bank premises are £64,401 higher at £1,343,729. A small item described as "other assets including interest due on investments, &c." amounts to £139,832, and the total of the balance-sheet is £44,762,733, a decline of £1,568,720 on the total for the corresponding half-year, due mostly to the smaller cross entry "acceptances and guarantees." Expenses on the comparison of half-years have increased only £5,819 to £210,033, but interest paid to customers was £56,485 more at £302,737. It is in this direction chiefly that the increase of £88,564 in the gross profits went. Their total for the half-year was the fine one of £825,913.

Parr's Bank, Limited.

Nett profits for the June half-year, including £137,783 brought forward, amounted to £340,471 or £33,378 more than at the end of the corresponding half-year. A good proportion of this increase, however, comes from the addition to the balance forward, which has been steadily mounting for years back. Still the directors are easily able to pay the usual dividend at the rate of 19 per cent. per annum, and in addition set aside £15,000 to bank premises account and the same amount to the officers' pension and provident fund, making £30,000 altogether assigned out of the profits of the half-year. The pension fund got only £10,000 a year ago, and £5,000 two years ago. All this done there remains £148,163 left to carry forward. Working expenses show an increase of £6,234 at £178,980. Rebate on unexpired bills discounted is also larger at £18,601, the rate at which the rebate is allowed being again 5 per cent. In the balance-sheet the changes are favourable, the liability on deposits being up £320,000 at £28,975,683. Acceptances, however, are less by £183,415 at £1,851,136. An increase of about £121 has taken place in the note circulation of the Isle of Man, which is now £8,495. Drafts payable within 21 days, customers' acceptances advised, &c., are £15,887 up at £334,214. Against this amongst the assets we have cash on hand and at the Bank of England £280,367 up at £5,200,766, but money at call and short notice is down £200,890 at £5,325,855. As already intimated, the bank's £1,000,000 nominal of Consols has been written down to 83 out of profits, so that this item now figures in the balance-sheet at £830,000, and there are doubtless other securities held by it that have been subjected to writings off. Yet the total decrease in the book value of the investments held compared with a year back is only £129,425 at £3,403,556. We may, therefore, assume that some additional stocks have been bought during the twelve months. The total of bills discounted is larger by £211,892 at £2,908,004, while loans and advances are £237,022 up at £15,412,032. Bank premises and furniture show a decline of £9,321 at £825,649, and the balance-sheet foots up at £34,977,354.

The London Joint Stock Bank, Limited.

In the past half-year this bank, whose 140th report is now before us, made a nett profit of £139,736 after writing down all securities including Consols to market value and under, and after providing rebate on bills not due. The gross profit was £10,070 up at £282,427, but nearly one-half of this came from the augmented balance brought forward. Still the result is good considering the heavy drafts made by writings down. Current expenses were larger by only £2,087 at £117,029. Rebate on bills likewise shows an increase of £4,996 at £25,662. Out of the profits the usual dividend at the rate of 11 per cent. per annum has been declared absorbing £99,000, and three sums of £5,000 each have been assigned to premises account and the reserve fund, leaving £2,987 more to be carried forward at £25,736. The reserve fund will now amount to £1,165,000 or

£20,000 more than the figure it stood at a year ago. In the balance-sheet the liabilities on current accounts, deposits, circular notes, &c., amount to £18,326,542, which is £318,800 more than twelve months back. Acceptances are also higher by £411,690 at £1,471,613. Amongst the assets the only items which show important decreases are investments, which seem to have been written down during the twelve months by £314,730, as the total is now £3,266,687, including £2,263,844 of British Government securities, either actual or guaranteed. There is also a sharp decline of £892,637 in the money lent at call or short notice, the total of which is now £4,208,442. Cash in hand and at the Bank of England, however, is higher by £109,293 at £2,784,516, and there is an important increase of £1,454,576 in the bills discounted, loans and other securities, which are all taken into the balance-sheet in one item, the total being now £10,742,894. Premises show a reduction of £5,419 at £439,400, and the total of the balance-sheet is now £22,913,554 or an increase of £763,473 on the year.

Crompton and Evans' Union Bank, Limited.

The past year was a good one for this provincial bank, and nett profits, including £773 or £273 less brought forward, showed an improvement of £5,209 at £57,857. Of this the directors apply £10,000 towards writing down investments compared with £3,000 taken for that purpose, £1,000 written off bank premises and £1,000 transferred to provident reserve a year ago, and after paying dividends and a bonus aggregating 18¾ per cent., or the same rate as for each year since 1899-1900, £209 more at £982 is carried forward. Current, deposit and other accounts have fallen by £17,955 to £4,657,840, and on the other side of the balance-sheet an increase of £54,876 to £1,072,604 in cash in hand at London agents and short notice is accompanied by a reduction of £51,113 to £2,972,600 in loans and overdrafts, while investments are £11,695 down at £998,992 and bills receivable have dropped from £53,058 to £39,975.

Halifax Commercial Banking Co., Limited.

Nett profits for the year ended June 30 rose by £1,488 to £20,548, and as £530 more at £6,022 was brought in the disposable balance was £2,018 up at £26,570. Out of this the usual two dividends, making 8 per cent., have been paid, while an extra £1,000 at £3,000 is written off for depreciation of investments, and as income-tax took £77 less at £453, the directors add £1,095 to the sum carried out raising it to £7,117. Deposits, &c., have gone up by £161,252 to £1,810,582, against which cash in hand and money at call is £97,134 up at £261,795. Bills on hand and advances, loans, &c., are now stated in the balance-sheet as separate items at £182,471 and £1,389,832 respectively, the increase in the two being £127,627. Investments stand at £243,193, freehold properties yielding rents at £34,619 and bank premises, &c., at £30,633, the total of the balance-sheet, including £63,847 for acceptances, being £2,207,025.

Charles Hoare and Co.

The balance-sheet of this private bank shows that on July 8 its liabilities to the public on current accounts amounted to £1,934,296 or a small increase of £6,910, but liabilities on deposits were £418,549 higher at £904,306. Against these cash in hand and at bankers was £82,259 up at £483,020, call and notice money had risen by £160,075 to £561,854 and loans, overdrafts and bills discounted by £183,397 to £1,384,196. Investments were practically unaltered at £794,531, although the Consols held have been written down to 83 and National War Loan to 94, and bank premises remain at £100,000.

Bank of Ireland.

In its half-year ended June 30 the nett profits amounted to £178,086, including £18,746 brought forward. The directors are therefore able to recommend a dividend of 5¾ per cent., tax free, for the half-year, or at the rate of 11½ per cent. per annum, as usual. This paid, £19,755 will be left to carry forward. The changes in the balance-sheet are not in any way striking. On the liabilities side, however, deposits are up £370,447 at £10,258,772, and there is an increase of £129,484 in the notes and post bills in circulation, the total of which is £2,510,160. Government and other public accounts also show a larger total by £52,860 at £2,950,854. These changes are reflected on the assets side, cash in hand and at the Bank of England being larger by £445,510 at £1,458,989. Money at call and short notice has also increased by £72,491 to £1,062,323, and there is an increase of £123,966 in bills discounted, advances to customers, &c. Government securities held, however, which includes the invested "rest" or reserve of £1,034,000, show a decline of £19,032 at £4,231,553, and other securities, whose aggregate is £3,804,505, are also £70,033 down. These declines, however, are less than those shown at this time last year, when Government securities were down over £55,000 and other securities £134,000. Presumably they are in great measure the result of writings down, for the directors say in their report that the profit is arrived at after providing for bad and doubtful debts, interest on deposits, rebate of bills and depreciation of securities. They also write £6,000 off bank premises account out of last half-year's gross profits, and these premises now stand in the books at only £110,230 as against an original cost of £507,685, the additions during the year having apparently been £13,552, of which a considerable portion has already been written off. Altogether the exhibit is a good one, although gross profits are practically identical with those of the first half of 1906. The aggregate of the balance-sheet is £19,708,003.

National Bank, Limited.

Profits were not quite so good in the past half-year as in the first half of 1906, but the dividend was paid at £117,157. That total, however, includes the balance of £23,852 brought forward. All the difference made in the distribution of the profit is a reduction in the amount carried to the reserve, which is this time only £5,000 against £10,000 a year back. The shareholders get the same dividend at the rate of 10 per cent. per annum with a bonus at the rate of 1 per cent. per share, and £5,000 is again credited in reduction of the cost of bank premises, which done £23,781 will be left to carry forward. Changes in the balance-sheet are not very large, but the liability on deposits has risen by £253,804 to £11,[illegible], and the note circulation in Ireland has also gone up, to £41,[illegible] to £1,118,868. Consols are still taken into the balance-sheet at 85, and the amount of the "rest" or undivided profits invested in that security is accordingly brought out at £745,000. The report, however, says that the addition of the £5,000 now made will make this fund £550,000. An increase on the asset side of £117,157 is shown in the cash in the bank's own possession or at the Bank of England, and money at call and short notice is also larger by £169,031 at £1,777,347, while the total of Government securities, including the investments representing the reserve, is now £1,663,032. Advances to customers show a decline of nearly £72,000 at £5,040,318, and bills discounted are also less by £83,167 at £3,047,034. Bank premises have been brought down by about £3,200 during the twelve months, and now stand at £[illegible],204, by no means an excessive amount we should judge. The balance-sheet now totals £15,152,012 or an increase of £375,646 on the year.

Munster and Leinster Bank, Limited.

In the June half-year this company's nett profits were £[illegible]7 up at £21,560 and the balance brought forward was £[illegible]. Out of the sum of £27,706 available for distribution the directors pay a dividend at the rate of 13 per cent. per annum, tax free, against a 12 per cent. rate a year ago, and apply £1,000 to reduction of premises expenditure against £2,000 this time last year. But they also place £7,500 to reserve, against £6,000, and still have £6,267 to carry forward. The balance-sheet shows few changes of importance, although the liability on deposit and current account, which is mixed up with interest and rebate on bills and reserve for doubtful debts, shows an increase of £275,713 at £4,628,338. Among the assets cash in hand and with bankers is up £57,555 at £432,536, and money lent at call and short notice is also £205,153 larger at £[illegible], but bills discounted are down £17,371 at £951,647, a decline more than compensated by an increase of £42,232 in the advances to customers, which now total £1,996,394. Investments in Consols and other Government stocks stand at £744,815, and the aggregate of the investments of all descriptions is £2,111,[illegible]48. There is no mention in the accounts of any writing down, but presumably the directors are attending to this vital matter. The aggregate of the balance-sheet is £5,116,105.

The National Telephone Co., Limited.

Prosperity continues to dog the steps of this [illegible] business. Its income for the past six months showed an increase of £1,314,701, an increase of £119,632 compared with the figures for the corresponding half-year, and working expenses rose by only £61,470 to £753,208, so that the nett profits, after deducting £125,312 paid as royalty to the Post Office, were £[illegible] up at £436,271. This is arrived at after carrying forward £103,478 more on account of unexpired terms in [illegible] contracts, the total allowance for which is £1,210,[illegible]. The directors are accordingly able to meet all the preference [illegible] and to pay 6 per cent. upon both the preferred and deferred stocks besides adding £130,000 to the reserve fund. This [illegible] £9,662 is left to carry forward against £9,842 brought in. During the half-year capital expenditure came to £[illegible], and the total outlay on capital account is now £[illegible], which is £3,142,047 more than the amount of capital received. The company, however, is now getting in money on account of its latest share issue, and meanwhile is able to utilise a reserve fund of £2,287,107. It also has the use of the renewals fund for unexpired terms, so it is quite [illegible] in funds, and the total of these three items together is £[illegible]. Its cash at the date of the accounts amounted to £[illegible], its sundry credit balances to £915,526 and its debtor balances to £[illegible]. The board take the opportunity of expressing their high appreciation of the services rendered to the company by the late general manager, Mr. W. H. [illegible], as well as their truly say whose [illegible] ability and devoted service have been of the highest value. His duties will now be assumed by the president, Mr. George [illegible], who has been appointed managing director at the request of his colleagues, but will remain president of the company as well. Lord Rayleigh of Burleigh has been elected to the vacancy caused by the death of the late Sir James Fergusson.

English Sewing Cotton Co., Limited.

Another prosperous year ended for this company on March 31 last, the profit being, as we stated last week, after paying various provisions, £[illegible], or deducting £[illegible] for payment of directors' and auditors' fees and law charges, [illegible] more than in the preceding year. Accordingly the directors are able again to give 8 per cent. to the ordinary shareholders and to add the same amount [illegible] to the general reserve. They also write £22,[illegible] off the [illegible] works account, [illegible] it, and set aside £5,000 to the equalisation of dividend account, leaving £69,519 to be carried forward. The directors say that

the trade of the year was satisfactory, and again recommend that £5,000 should be added to the pension fund of the employees.. No other particulars are contained in the board's report, but there is a very full report by the auditors accompanying it which tells us that goodwill and trade marks stand at £431,546, and that depreciation at the rate of 2½ per cent. has been allowed on buildings, including "sprinklers," of 5 per cent. on fixed plant, 7½ per cent. on loose plant and machinery, and a sum exceeding 10 per cent. on office and warehouse furniture and fittings. Over and above all this "depreciation on the excess of the amount standing to the debit of closed works account over the present value thereof" has also been allowed at the rate of 10 per cent. Messrs. David Smith, Garnett and Co., the auditors, further state that the depreciation of £28,902 shown in the balance-sheet is in respect of the English plants only, an additional £10,429 having been written off for depreciation on the plants of R. F. and J. Alexander and Co., and Ermen and Roby (Armentières), Limited. The total depreciation for the year is therefore £39,331, including that allowed on these two businesses embraced in the combination. Capital expenditure during the past year, exclusive of £11,444 disbursed by subsidiaries, was £12,351, but thanks to the allowance for depreciation and deductions for properties sold, this last item coming to £59,662, the book value of the property has been brought down from £2,327,703, the figure at March 31, 1906, to £2,241,489. In the balance-sheet there is an amount of £209,601 set down as due from subsidiary companies, and the auditors explain that this comprises the dividends to be received from the American Thread Co. and balances owing by R. F. and J. Alexander and Co. and Ermen and Roby, less a credit balance of account with the English Thread Co., Limited. Cash and bills at bankers and on hand at March 31 amounted to £221,670, and stocks in trade, valued on a basis of cost or nett realisation, whichever is lower, are entered at £377,534. Reserves are still small and foot up to only £162,602 in the balance-sheet, exclusive of the small amount shown at credit of the employees pension fund. It is here in view of the great weight of capital borne by the company that the weak point still is, but the directors are plainly conscious of the danger, and by setting aside £100,000 out of the past year's profits, half to general reserve, half to a dividend equalisation reserve, they are taking steps to strengthen the company's position. Should profits be maintained the allowances for depreciation will doubtless also be augmented.

Gordon Hotels, Limited.

All things considered this company did not do so badly in the year ended May 31 last as might been feared. It owns or leases five hotels de luxe in London and seven in other parts of the country, besides three on the Continent, or fifteen in all, and its business was adversely affected last year by bad weather in winter, probably also by trade depression and the increased poverty of the gambling classes as well as by increased competition. But the loss in gross income was only £14,292 at £827,383, and the nett revenue shrank by no more than £1,365 to £81,370, exclusive of £5,893 brought forward. Was there a large saving in working expenses, then? No, less than £5,000 all told on the two items, drink and provisions, &c., £281,483, and working expenses £329,622. The saving comes in chiefly under the head of repairs, maintenance and depreciation, which is less by £7,878 for the past than for the previous year at £54,911. By keeping that charge down the board is again able to meet the heavy debenture interest together with all other charges and to give the ordinary shares 3 per cent. for the year leaving £5,239 to be carried forward. Slowly, too, the reserves are creeping up, thanks to the reinvestment of interest received on the stocks in which they have in part been placed. In all £262,000 has now been put aside, but the reserve fund and premiums received together amount to £409,529. Add in £95,251 of leasehold redemption funds, and it is found that barely half the accumulations are put outside the fortunes of the business. This is a pity, as although the next winter and spring may not be so bad as the past, prospects are not just now very favourable for gigantic undertakings of this kind. They may do a great volume of business and for all that make very little profit. The Gordon Hotels company, moreover, is again running short of ready cash. At the date of the balance-sheet it possessed only £55,107 and had more than that to disburse in dividends. Also against sundry debtors for £57,059 it owed sundry creditors £97,758. How is the renovation and extension of the Grosvenor Hotel being financed? The total cost of properties is given in the balance-sheet at £3,715,473 or "the same as per last balance-sheet."

Furness, Withy and Co., Limited.

The issue of this company's report for the year ended April 30 has led to a good deal of grumbling. Business has been good, exceedingly so, in fact, and a few months ago the directors went out of their way to tell the shareholders that the results exceeded those of the previous twelve months. In the circumstances, and as the directorial forecast is borne out by the actual figures, proprietors, perhaps, were justified in expecting a return at least as good as for 1905-6. Instead, the bonus added to the ordinary dividend of 5 per cent. is only an equal amount against 10 per cent., making the return for the year 10 per cent. compared with 15 per cent. The directors used a good deal of money from the revenue for the purpose of providing the premium on the debentures redeemed, and working off the cost of issue of preference shares. That, of course, is sound policy, but some shareholders want to know why the debentures have been paid off at a heavy premium and replaced by preference shares bearing a higher rate of interest. Another question asked is, whether the reserve fund investments of half-a-million have been written down to market value. So much for complaints, and now for actual results. The purchase of the Baltimore-Rotterdam trade mentioned last year has turned out satisfactory, and the shipbuilding yard, the dry docks, and the ship repairing and salvage departments, have all enjoyed profitable business. Profit at head office, shipyard and branch offices is returned at £187,232 or about £9,000 less, but a year ago the increase was the great one of £113,206. Against this dividends on investments went up £33,518 to £135,343, and from all sources the income was £332,450 compared with £311,336. Directors' fees, income-tax, interest on debentures to date, and preference dividend to October 31 last reduced this to £292,926, but £40,486 was brought forward, making a disposable sum of £333,411. From this the dividend and bonus on the ordinary shares requires £120,000, balance of preference dividend is £14,906, and £29,586 was provided for debenture premium of 10 per cent. and cost of issuing preference shares. These were offered exclusively to existing proprietors, and were oversubscribed. Other appropriations were £50,000 to depreciation account and £69,899 to insurance and repairs account. The latter will now amount to £200,000, and it is the directors' intention to allow the company to take some of its own insurance risks. At present the company is paying £120,000 a year in premiums, a considerable portion of which might be saved and added to future profits. Reserve fund remains at £500,000, and after deducting the £50,000 allowed for depreciation the main property item has a balance-sheet value of £2,568,472 or an increase on the year of just on half-a-million. Floating liabilities have also had a terrific rise, £602,801 being due on bills payable, chiefly for steamers building and delivered, and £254,212 to ordinary creditors. Liquid assets, although much below these figures, were fairly generous, loans at interest, cash and bills in hand being £292,610, sundry debtors, &c., £166,170, and bankers' balances £110,040. Prospects for the current year are described as very satisfactory, the return on investments up to date being in excess of any previous year, and the directors are considering a proposal for the conveyance of passengers and emigrants from the Continent and British ports in order to meet the growing expansion of this class of steamship business.

Apollinaris and Johannis, Limited.

With an increase in the sales of one million bottles and a "satisfactory increase" in the demand for Apenta water this company's profits are down £11,229 to £166,597. This result has been caused by increased charges for advertisements and a rise in the cost of bottles. Some of the advertising expenses were of a temporary character, and the board is endeavouring to improve the position of the company in obtaining supplies of bottles. Depreciation at the springs has been written off, but no amount is stated, the deduction being made before the balance of profit is brought into the account. Reserve fund is increased by £20,000 to £140,000, not a large figure for a company holding its tenth meeting with a capital of over three millions. After paying the debenture and preference interest 5 per cent. is distributed on the ordinary capital, leaving the balance carried out at £13,760, as against £20,164 brought in. Cash at bankers was £27,619, and investment in bills £20,115. Sundry creditors amounted to £9,964 and debtors to £179,079. Of this latter amount £175,223 was due from the Apollinaris Co. and the German companies the shares of which are held by this company. Over-capitalisation is the chief trouble of this concern.

Spies Petroleum Co., Limited.

Although this company's properties are not situated in the principal areas of disturbance in Russia it seems to have been bothered by many labour disturbances during 1906. These not only caused a loss of production but seriously interfered with bailing and drilling work for some time after the strikes terminated, and seriously increased the cost of working, thanks to a number of concessions granted to the workmen. Unhappily, the labour conditions at Grozny are still unsatisfactory, and there is a disposition on the part of the men to go out on strike upon the smallest pretext. The production of crude oil was 6,057,077 poods, or a rather considerable reduction compared with the previous twelve months, stocks on hand at the beginning of the year were 145,470 poods, and crude oil purchased was 7,000 poods, a total of 6,209,547. Sales and deliveries in the twelve months were 4,926,854 poods, and 1,168,607 poods were used as fuel, leaving 114,086 poods in stock at the end of the year. The oil sold realised Rs. 1,038,465, or an average of 21.077 copecks per pood, which in sterling produced £109,890. Other items brought the total up to £118,692, and after meeting all ordinary and some special outlays, such as expenditure on wells £24,325, royalties £13,415, loss on boiler houses and pipe lines removed £3,740, wages, oilfield outlay, and office expenses £36,853, there was a sum remaining of £35,941. Interest and transfer fees gave £787, making £36,728, from which further charges to the amount of £4,994 have to be provided. Another £19,000 is allowed for general depreciation of leases, buildings, plant, and machinery, and £2,000 is added to reserve against fire and employers' liability insurance. Even then the directors still have £17,082 in hand, less Russian taxes, but in view of the unsettled aspect of affairs at Grozny, and important commitments in connection with new properties acquired, it is proposed to carry forward this balance. During the year the directors arranged for the acquisition of 90 dessia-

tines of oil-land in various parts of the Grozny oilfields, the total sum due as purchase money, together with buildings and erections thereon, being £63,255, of which £32,140 has been paid to date. The remainder of the purchase money is due by instalments spread over one year and eight months. Equipment and development expenditure during the twelve months was £21,782, bringing up the total amount expended to date on the acquisition, equipment and development of the properties purchased last year to over £60,000, and further considerable amounts have since been laid out. After allowing for total depreciation to date of £51,799 property account stands in the balance-sheet at £377,826, against which there is no reserve worth speaking of. Creditors and bills payable are heavily in excess of debtors, but the cash balance of £41,674 is quite good.

The South Wales Electrical Power Distribution Company.

A most unhappy fate has overtaken this company and its shareholders and the managers deserve much sympathy. The enterprise was a perfectly sound one, in theory at any rate, and ought to have been moderately successful. Instead of that its history has been one of unrelieved disaster, and the report for the year ended December 31 last reveals a position which seems well-nigh hopeless. Only £19,081 in all was received by the sale of current, and the total income from every source came to only £20,549. This meant that the year closed with a deficiency of £22,150, after meeting all current charges, and the total deficiency to date is now £60,978. It follows that **the company has been unable to pay any dividend on its share** capital, and has had to default upon its £200,000 of debenture stock. Efforts have been made to raise £500,000 on prior lien **debenture stock, but naturally have been unsuccessful because** the directors failed to obtain agreements with various collieries to supply them with electricity, and without remunerative contracts of a binding character and for large quantities of power there was no security to offer to the lenders. What is to be done now we cannot surmise, but certain proposals are to be laid before the shareholders at an extraordinary general meeting, particulars of which are not contained in the report, and it may be that in these some hope of redemption is to be found. In the meantime all the directors are retiring, the present board disappears, and the shareholders have a number of names submitted to them, chiefly of South Wales gentlemen, to take their place. Perhaps when the business falls under the control of local men **it will begin to prosper. In the meantime the floating debt has mounted to a very considerable figure on one count or another, its total being upwards of £110,000.**

Buenos Ayres Grand National Tramways Co., Limited.

During the twelve months to March 31 the gross receipts of this undertaking, consisting of the original lines and those of the Buenos Ayres New Tramways, amounted to £321,250 compared with £252,597 in the previous twelve months. Working expenses being only £27,490 **higher at £220,389, the nett receipts** of £100,867 show an increase of £41,104. The Grand National Company's share of these receipts under the agreement has amounted to £68,405 compared with £45,550, and after payment of London administration expenses, interest on debentures, &c., there remained a balance of £27,230. Out of that £000 has been transferred to debenture reserve funds, and £3,720 to income bondholders' interest account, leaving £22,604, which provides the full dividend of 5 per cent. on the cumulative preference shares, with a credit of £104 to the contingency fund, making it £6,055. Further progress has been made with the work of electrification of the joint system, and at June 30 last 75¼ miles had been converted. The balance-sheet now shows the effect of the rearrangement of capital, but the details have already been given, and all we need now point out is that the outlay to date on the electric construction and equipment is £748,457, including £87,750 on conversion debenture stock. Floating liabilities are pretty heavy, and £58,383 is due to bankers.

Peel River Land and Mineral Co., Limited.

This company's business goes on improving, and the interim report just issued reveals a very encouraging condition of affairs. At one time a spell of dry weather caused some anxiety, but fine showers have since fallen both on the Peel River freehold and the Currawillinghi Station. Between them these properties will provide over 200,000 sheep for clipping, and the number of lambs is estimated at 42,000. Returns from Australia show live stock on the company's properties on December 31 at 215,023 sheep, 7,304 cattle and 531 horses. Sales of live stock to the same date realised £17,820, and further sales of cattle and sheep have been made during the second half-year, the proceeds of which will be included in the accounts for the financial year to June 30. The wool clip, including fellmongered wool, comprised 3,632 bales, and the entire amount has been sold at prices which the directors consider very satisfactory. Well they may, considering that the nett realisation will be about £77,300. It is proposed to distribute an interim dividend of 4 per cent. or ½ per cent. more than a year ago, and there is no doubt that the complete accounts will make a very satisfactory showing. A communication has been received from the Secretary for Lands for New South Wales giving notice that he has made an order under the "Closer Settlement Act, 1904," for the inspection of the Peel River Freehold Estate, with the object of asking Parliamentary authority for the resumption of the same. The work of inspection was commenced in May and is now being proceeded with.

Nicol Co., Limited.

The trans[illegible] well maintained during the [illegible] director state that the [illegible] tonnage **available, alth[illegible]** [illegible] amount paid for [illegible] at £85,545, but the [illegible] profitable as, after [illegible] interests, the working [illegible] Directors' fees and [illegible] £16,332 was written off [illegible] brought forward compared with £[illegible] available after meeting [illegible] £61,484, out of which the [illegible] cent. and another £20,000 [illegible] only £5,095, and as in addition to the [illegible] £3,158 was written off for [illegible] stroyed and material sold, the [illegible] of £12,551 at £148,530, against which there are the [illegible] serve of £80,000 and the debenture [illegible] £75,000. Expenditure on the [illegible] months was £11,528, making a total to date of £[illegible] no doubt to this that cash and bills [illegible] at £13,260. Floating liabilities are £[illegible] **while sundry debtors and** [illegible] at 80, have risen by £1,8[illegible] to £114,7[illegible] bills in transit, goods awaiting [illegible] in England and afloat came to £12,218 against £[illegible]. With reference to the mining [illegible] at Nanaimo, the directors say that operations were carried on [illegible], and that about 37 tons of the [illegible] shipped, while another [illegible] were awaiting shipment at the end of the year.

Backus and Johnston's Brewery Co., Limited.

This Peruvian brewery company has altered the date for closing its accounts from December 31 to March 31 for convenience in stocktaking, and the report just presented to the **shareholders therefore covers the operations for 15 months.** Exact comparison with previous results is not at the moment, but one thing stands out very clearly, and that is that the **change has not brought fortune in its train. Market** [illegible] were favourable throughout the period, the demand has been [illegible] ice having steadily increased, but unfortunately the company **was not in a position to meet it.** [illegible] tion of shipments of necessary materials from Valparaiso and San Francisco took place owing to the earthquakes in those ports, and the company had to curtail its output [illegible] be got from England. Gross profits for the 15 months consequently fell below those of the previous year by [illegible] £8,174, of which London office charges [illegible] £1,[illegible] directors' fees took £2,418. Interest on the 5 per cent. debenture stock, however, required considerably less, so that after paying income-tax a surplus of £1,18[illegible] was left. With £4[illegible] **brought in the disposable balance came to £[illegible]**, and out of this a distribution of 2 per cent. is made on the £[illegible] income debenture stock, leaving £[illegible] to be carried forward. An extra £23,000 was raised to [illegible] **during the 15 months to meet the** [illegible] ment, but in spite of this the advances from [illegible] risen by £4,072 to £10,000. Liabilities to [illegible] bills payable are heavy, too, at £[illegible], while [illegible] more than £7,821, and cash at bank and [illegible] £[illegible]. Capital account is £[illegible],052 up at £220,[illegible], [illegible] stocks and stores are valued at £[illegible] and the [illegible] to the correctness of the [illegible] to complete the depreciation of the plant and [illegible] Lima and to provision for doubtful debts. Reserve account has been increased by £800 to £[illegible], and [illegible] and expenses of issue of first debenture [illegible] £[illegible].

New Explosives Co., Limited.

Reconstruction has not done the [illegible] good. On the contrary, the report and accounts covering the first eight months' trading by the new company (from May 11, 1906, to February 28, 1907) reveals a condition of affairs if [illegible] disastrous than ever. In the period covered the gross profits appear to have reached £4,884, and other [illegible] making a total of £[illegible]. But to [illegible] £5,344 for trade expenses, salaries, rent, [illegible] and £1,941 was spent on repairs and renewals, making the total outgoings £7,285 and the loss on working £2,[illegible]. In addition £1,050 has to be [illegible] for debenture interest, £[illegible] for bank loans and £[illegible] for [illegible] expenses, bringing up the debit [illegible] £[illegible], to be [illegible] the new company, to be [illegible] to [illegible] date it is [illegible] to explosives. Of course [illegible] confident that when [illegible] the company will reap the benefit [illegible] created up, and we gather that the [illegible] powder has met with even more [illegible] reasonably have been expected. A very large [illegible] search work has been carried on with [illegible] three new powders were placed on the [illegible] but the sales were considerably in excess [illegible] plant has been increased. The [illegible] justified, the directors say, by the opening [illegible] 1907 season, and there is every reason to think the [illegible] will form a valuable addition to the business. We sincerely

trust so, and hope the company will build up a good business in sporting ammunition at the expense of the trade in cordite and man-slaying implements. The new capital introduced under the plan of reconstruction has been beneficial, and share and debenture holders have recently received and accepted an offer to purchase a substantial interest in the company. This not only secured to them a cash return, but has also appreciably lessened their liability, and it is expected that the company will materially benefit by the arrangement. Including £1,788 expended on property and plant during the eight months under review, the property purchase account amounts to £91,294, and what was left of the reserve disappeared in the reorganisation. Trading accounts are on the wrong side, and the cash balance of £2,777 is entirely due to a banker's loan of £4,000, but stocks and shares are valued at £15,786. At the general meeting the chairman, while not thinking it politic to divulge the names of the people who have interested themselves in the company, gave some details of the arrangements. Proprietors were able to sell half their shares at 10s. apiece, and can sell the other half in five years' time at 21s., while the debenture-holders were offered £96 17s. 6d. for their debentures, or could convert into 4 per cent. bonds with a cash payment of 5½ per cent. on account of 1906. These terms look amazingly generous, especially as no further calls will be made, and it is no wonder proprietors snapped them.

Raphael Tuck and Sons, Limited.

There was a very serious strike in the art printing trade last year, and its effects are plainly visible on the profits of this excellent company for the year to April 30 last. Apart from this upset business was of a satisfactory character. Including interest, rents, &c., the profit was £42,274 or £9,570 less than in the previous twelve months, and this was reduced to £38,773 by the payment of directors' remuneration. Balance brought in was £3,064, and after paying the preference dividend the dividend on the ordinary shares is maintained at 8 per cent. Special dividend reserve gets another £5,000, but the general reserve has to be passed over, and £3,088 is carried forward. Last year the general fund was credited with £10,000. Still the total accumulations reach £73,272, all separately invested, and while the copyrights, patents, and goodwill are necessarily heavy at £240,732, there was no need to make shareholders suffer for what we hope will prove a quite temporary setback. The general finances are in first-rate order, and the promotion was clean and straightforward.

Egyptian Estates, Limited.

This company's second balance-sheet is made up to April 6. During the year 68,079 ordinary shares and £60,000 in debentures have been issued, the former at premiums amounting to £63,757. This sum, less £2,796 expenses of issue, has been added to reserve, making it £163,052. After paying all expenses, debenture interest, directors' fees, and placing £15,000 to a special reserve, the balance to credit of profit and loss was £94,489. The balance brought in was £5,448, and deducting the interim dividend paid in November, £23,315, the amount left is £76,622, which the directors propose to carry forward "in view of the present financial position." Shareholders will no doubt be disappointed, but the board could hardly do otherwise. All the funds of the company are locked up in shares and properties. Cash in hand was only £1,519, debtors owed £297,520, but creditors amounted to £506,519, bills payable to £109,769, and the debt to bankers is £7,121. It is to be hoped the properties owned by the company will ultimately prove profitable, as some, if not all, of them must have been acquired at reasonable prices. Luckily trade is good in Egypt, and the effects of the recent crash in land values caused by over-speculation should pass away in time. We hope the next report will show a better state of things, and that we shall find an appreciable proportion of the assets in a more liquid state.

Lovell and Christmas, Limited.

A year ago this company absorbed the business of George Wall and Co., but the amalgamation has been hampered by the keen competition and by the vagaries of the butter trade; and profits of the combined undertakings for the twelve months ended June 30 were nearly £10,000 below those shown in the previous year. In the autumn, when colonial contracts were being made, the supply of butter was not equal to the demand and high prices were paid in New Zealand and Australia, but a rapid increase in the output followed, and with the New Year selling prices dropped heavily, landing nearly all importers with heavy loss. Under the circumstances, the fact that trading profits reached a total of £68,562 cannot be regarded as unsatisfactory. Debenture interest and preference dividend required a considerable extra amount, owing to the issue of fresh capital, and after providing for directors' remuneration and income-tax and giving the staff a bonus of £3,000 the surplus was £24,625. With £27,551 brought forward, the disposable total came to £52,176, out of which the usual dividend of 10 per cent. is paid, and £22,926 is carried to the new account. Freehold and leasehold premises and goodwill have been increased through the amalgamation by £132,131 to £473,739, and new buildings, cold air stores, &c., are £6,072 up at £25,559, but the reserves now amount to £127,500, of which £120,972 is separately invested. Sundry creditors are only £4,541 higher at £69,389, while on the other hand debtors have risen by £255,501 to £422,558, stocks are £73,691 larger at £92,107, and cash comes to £60,064 or £24,617 more.

Gilroy, Sons and Co., Limited.

This company got it in two ways during the year to May 31, 1907. Business was quite amazingly good, the company's record taken into account, and profits shot up from £15,076 to £29,344—that is, nearly £13,700 to the good. Evidently someone must have had wind of the improvement, as there was a kind of rush for the shares and transfer fees yielded just £5 instead of £3; which only shows how money makes money. Balance from last account was £2,679, bringing up the total to £32,029, and after providing a sum of £6,392 for interest on debentures, &c., £25,637 is left. A year's dividend to May 31, 1904, has already been paid on the preference shares, and the directors now propose to pay the dividend for the past twelve months, as well as for the other year still in arrear, being that to May 31, 1905, absorbing £22,500 in all and leaving £3,137 to be carried forward. The payment has therefore been brought right up to date, and next year, if business continues good, the directors may be able to do something towards strengthening the financial position. The reserve is only £20,000, and the property, machinery, &c., has never been written down from the original figure of £325,000. Creditors are light enough at £1,685 against debtors £27,927, and stocks-in-trade are valued at £116,347, but £37,181 has been borrowed from bankers. Investments held on account of reserve have a book value of £10,188, and the cash on hand is £2 3s. 4d.

Chili Telephone Co., Limited.

Considering that the plant suffered severely in the earthquake last August, it is pleasant to find that the total number of subscribers at all centres fell off by 155 only to 7,115. In spite of this decrease the gross revenue in Chili for the year ended March 31 was $78,919 larger at $1,169,488, but the necessary repairs and reconstruction after the disaster involved a considerable outlay, and expenses rose by $147,512 to $648,549. Nett income was consequently $68,598 less at $520,938, and as the average rate of exchange for the year showed a further drop of 1.23d. to 14.01d. the revenue in sterling was £30,414, compared with £37,435. Liquid assets and liabilities in Chili, on March 31, were valued at 12¾d., the current rate of exchange on that day, against 15¼d. a year ago; the difference of £1,565 being written off out of reserve. Including £838 from interest and transfer fees, the total revenue was £31,252, or a decrease of £6,914, but debenture interest required £450 less at £720, and after providing London office charges and income-tax £27,239 was left against £33,905. To this was added £2,653 from the previous account, making a total of £29,892 against £36,373, and in order to maintain the dividend at the regular rate of 8 per cent., the appropriation to reserve is cut down by £6,554 to £9,565, leaving £2,727 to be carried forward. During the twelve months another 305 miles of line were added to the system at a cost of £4,012, and the capital expenditure now stands at £307,984, but the reserve shows a nett addition of £8,000 at £103,000 or nearly 33½ per cent., of which £19,480 is invested in good-class securities, so that the position seems very sound. Floating liabilities are moderate at £2,966, while debtors owe £3,965 and cash is £3,598 up at £11,380.

S. Hoffnung and Co., Limited.

The conditions prevailing in Australia during the year ended March 31 were all in this company's favour, and profits, including £664 from interest and transfer fees, showed a further improvement of £13,961 at £75,658. A small increase in administration expenses and interest was counterbalanced by the larger sum brought forward, and the total available was consequently £13,969 up at £57,317. Out of this the directors pay a dividend of 7½ per cent. or 1¼ more on the participating preference shares, being the maximum distribution possible under the articles of association, and give the ordinary shares a dividend of 14 per cent. compared with 9½ per cent. for the preceding year. Then £7,500 or £2,500 more is put to reserve, making it £20,000, and £2,567 is carried forward. Freehold and leasehold properties stand at their old valuation of £153,170 and goodwill is also unaltered at £150,000, while the nett reduction in plant, machinery, &c., is no more than £100 at £13,754, so that a good deal yet remains to be done in the way of accumulating reserves. Of the mortgage of £75,000 on the Sydney leaseholds £5,000 was paid off during the year, but sundry creditors have risen by £19,844 to £157,786 and deposits are £1,325 up at £13,244. The position, however, is satisfactory enough, as against these, stocks are valued at £285,478 or an increase of £23,799, debtors owe £4,349 more at £151,488, and cash and bills receivable show an increase of £7,104 at £47,373. Apparently the prosperity in Australia seems likely to last for some time yet, and the directors are again able to announce that the reports which have reached them since the figures were made up are sufficiently good to encourage the hope of a still further increase in the operations and profits of the company.

The Assam Oil Co., Limited.

Last calendar year this company made progress, and is able to show a profit of £24,652. None of this, however, is distributed to the shareholders, because the directors write £17,500 off for depreciation, so that only £7,152 is left to carry forward. This, added to the balance of £6,710 at hand, gives £13,862 in all at the credit of profit and loss. How long it may be before the company gives any return to its shareholders we cannot guess, either from the report or the balance-sheet before us, but we notice that capital expenditure continues heavy, no less than £28,095 having been added during the year

to the cost of the properties, bringing the total up to £382,462, and in spite of the fact that the depreciation account now amounts to £35,000 the company owes £30,000 to the Assam Railways and Trading Company and £15,737 to its bankers, besides which outstanding accounts amounting to £12,194 remained due at the end of the year. Its cash was barely £550, and the sundry outstanding accounts to be received came to only £9,549, but products on hand and stores amounted to £26,044.

New River Co., Limited.

Gross receipts from all sources for the year ended March 31 showed an improvement of £3,325 at £10,338, and administration charges were a trifle lower at £1,810. The company, however, had to find no less than £2,345 for repairs to premises, and after providing a few pounds for depreciation of furniture the nett profits were £1,052 up at £6,173. Against this the amount brought forward was £4,204 smaller at £2,973, giving a total of £9,146 compared with £12,298 a year ago, and the dividend of 5 per cent. then paid is only repeated by neglecting the reserve altogether and reducing the sum carried out by £652 to £2,321. During the twelve months £339 was spent on the freehold property, but another £3,409 was received from sales, and this item now stands at £85,913. Investments at cost have risen by £6,000 to £49,074, but cash is down £4,717 to £4,898. Creditors have been reduced by £792 to £1,563, while debtors for rent, &c., owe £3,064 or £285 more.

Electricity Supply Company for Spain, Limited.

This company derives practically the whole of its revenue from the Cia. General Madrileña de Electricidad, which pays it a fixed amount of 1,100,000 pesetas per annum. Owing, however, to the marked improvement in exchange during 1906 that sum yielded £37,830, compared with £32,908 in 1905 and £32,053 in the preceding twelve months. Of this £23,133 was remitted to London and the balance retained abroad, part being used for the service of the debt and the remainder placed on deposit in Berlin, where a favourable rate of interest was obtained. With interest and other receipts the gross income was £38,533, and after meeting debenture and loan interest and other charges the nett balance was £19,802, of which £15,247 was applied in redemption of debentures and £4,555 was added to the sum brought forward, making a total of £12,034 to be carried to the new account. The directors explain that of the sum used to redeem debentures £13,000 used to pay off the first and "B" mortgage debentures need not have been taken from revenue, but the shareholders again consented to forego their right to a dividend in order to strengthen the position of the company by paying off the debt as rapidly as possible. Included in the charges mentioned above is one of £3,960 for loss in exchange on the debt due to the Cia. Madrileña. This was reduced from 850,591 pesetas to 749,019 pesetas, but being converted at 27.44 pesetas to the £ instead of 31.70, as in 1905, the sterling equivalent has risen from £26,832 to £27,297.

Dumont Coffee Co., Limited.

Although the crop for the past year exceeded the estimate by over 30,000 cwts. at 131,122 cwts., it fell short of the previous season's heavy yield by 16,000 cwts., and at the same time the gross average price realised dropped by 3s. 4d. to 38s. Thanks to a decrease in the exchange, the laying down cost in London was 10¼d. smaller at 28s. 6d., but gross profits, including £12,301 or £2,812 less from railway, stores and miscellaneous receipts, showed a decrease of £30,670 at £75,786. A smaller balance of £41,618 was brought forward, and after providing London charges the balance available was £113,846 compared with £148,687, out of which 11¼ per cent. or the same as a year ago is paid on account of arrears of preference dividend. Nothing is put to reserve this time against £40,000 transferred to that fund in 1905, but the balance carried forward is raised by £5,699 to £47,317. Estates remain at £1,200,000, against which the reserve consists of the above-mentioned £40,000, but the investment of £16,700 in the company's new debentures has been wiped out, and a corresponding amount deducted from the debenture debt outstanding, leaving it at £383,100. Sundry creditors and bills payable show an increase of £27,911 at £54,028, but, on the other hand, cash is £24,028 higher at £43,397 and the amount owing to the company on Tazenda current account has risen by £7,824 to £131,230. The directors have come to the conclusion that the district is not suitable for the successful cultivation of Para rubber, and although the Ceara species promises better results, they seem doubtful if it can be cultivated at a profit. So the company has to rely upon its coffee and the outlook for the ordinary shareholder is miserable in the extreme. A smaller crop is expected for the current season, and if this is to be the case throughout the district, some help may be obtained from a recovery in prices, but the preference dividends from 1903 are still in arrears, and at the present rate of progress will take six or seven years to clear off.

Jokai (Assam) Tea Company, Limited.

The outturn of tea in 1906 proved to be larger than expected and exceeded that of the previous season by 203,113 lbs. at 4,593,919 lbs., while the average price, allowing for charges saved on 593,542 lbs. sold in Calcutta, showed an improvement of 0.48d. at 8.98d. Costs of production, however, increased from 6.97d. to 7.39d., partly owing to extensions charged to revenue, and partly to the loss in rice, about which all these companies have had so much to say. Nett profits were therefore only £3,102 up at £25,302, and as the balance brought forward was £319 smaller at £1,580, the increase in the surplus, including £2,938 from interest, was £2,800 at £26,882. Of this another £20,000 is transferred to reserve, and the ordinary shares then receive a dividend of 8 per cent. compared with 7 per cent and 4½ per cent in the two preceding years, leaving £1,880 or £300 more to be carried forward. Debenture and reserve remain unaltered at £333,642 and £20,000 respectively, while all but £344 of the special reserve set aside a year ago has been expended on the estates. Bills payable show a further increase of £15,000 at £70,000, but sundry creditors have been reduced by £476 to £7,824, and on the other hand, cash and sundry debtors are £18,832 higher at £92,262, and cash is about the same at £4,765. Investments, taken at cost, are valued at £59,420, or practically the amount of the reserve fund.

Pathini Tea Co., Limited.

For the year ended December 31 a crop of 1,542,127 lbs. was harvested compared with an estimate of 1,500,000 lbs. and an actual output in 1905 of 1,525,850 lbs. Of the total 1,157,314 lbs. were sold in London, realising an average of 5.21d. per lb., and the average for the whole crop was 4.8d. against 4.14d., while the cost was 3.31d. against 3.29d. Gross receipts were £30,836, and after meeting all charges and writing off £441 for cost of new machinery the nett profits were £9,282. Adding £5,676 from the previous account and deducting £100 for directors' commission the disposable balance was £14,858, out of which the preference dividend is paid, and the ordinary shares receive 10 per cent., leaving £6,520 to be carried forward. With a share capital of £93,000, the company has spent £92,030 on block account, and has as yet done nothing in the way of accumulating a reserve, although it has been in existence since 1901. Bills payable and other liabilities amount to £8,626, but the stocks are valued at £15,881, debtors owe £3,636, and cash comes to £1,450.

Nedeem Tea Co., Limited.

The cautious estimates of this company's board were again considerably exceeded by the actual output for the year ended December 31, and the total crop showed an improvement of 184,655 lbs. over that of 1905 at 5,271,542 lbs. Of this only 2,990,772 lbs. were sent to London compared with 4,267,085 lbs. in the previous year, although the average price was 0.04d better at 6.96d. against an increase of no more than 2 pies at 5 annas 7 pies on the quantity disposed of in Calcutta, the result being an advance of 0.62d. to 6.69d. in the average for the whole crop. Nett revenue amounted to £38,974 or £10,650 more, and with £1,286 brought in the disposable total came to £40,260 against £24,444, out of which £1,070 is written off for loss on investment in the British Tea Growers' Co., Limited, now in liquidation. Then £14,000 or £9,000 more is put to reserve, and the dividend is increased from 2½ per cent. to 6, and after paying £2,450 for managers' commission and directors' additional remuneration against £1,176 to managers, the sum carried forward is reduced by £586 to £700. Block account is valued at £482,629 or nearly £53 10s. per acre, and machinery at £2,743 against which the reserve will now amount to £44,000, but the company nevertheless is far from being strong. Advances against tea have been reduced by £40,283 to a trifle of £1,027, bills payable are £14,432 down at £40,000 and other liabilities £1,306 down at £15,457, but loans in Calcutta and London have increased by £19,715 to £33,101, making total liabilities outstanding £90,345. On the other hand, tea in transit is £10,943 smaller at £61,775, debtors owe £2,814 less at £1,220 and cash has shrunk from £3,108 to £817, while £8,100 has to be found for the ordinary dividend on the 22nd of this month. Expenditure on account of the current year is £1,885 larger at £3,635, and advances to coolies show a slight reduction at £3,178.

Lankapara Tea Co., Limited.

The output of tea for 1906 showed a further shrinkage of 28,568 lbs. at 1,031,400 lbs., owing to the interruptions at work and unsettling of labour caused by floods and difficulty in obtaining food supplies for the coolies. Quality, however, was maintained, and as better market conditions prevailed the average realised was 1.02d. better at 7.27d., with the result that the gross income, including £132 from tea seed sold, rose by £3,789 to £31,412. At the same time a substantial saving was effected in expenses, and after paying managers' commission the nett profits showed an improvement of £1,050 at £11,230. Adding £947 from the previous account and £50 from miscellaneous receipts, the balance to be dealt with was £12,347 compared with £7,232, out of which another £1,500 is transferred to debenture reserve and a dividend of 20 per cent., as last divided that for 1905 is paid, leaving £1,632 or £115 more to be carried to the new account. Block account remains at £30,255, but the company has paid off its debenture debt of £3,000 and has a reserve of £6,750, which brings the cost per acre of the estate up to about £28, a fair enough figure seeing that the yield is about 675 lbs. Liabilities to sundry creditors and on bills payable are £1,005 down at £5,800, and in addition the company has a small overdraft of £83 at its bankers, but against these there are stocks valued at £1,086 or £1,324 more, debtors owe £1,008 and cash amounts to £242.

Maieli Tea Co., Limited.

All three of this company's estates again yielded larger crops in the year ended December 31, the total outturn being 1,351,281 lbs. up at 1,520,054, and in spite of a small reduction to 8.39d. in the average price realised the gross income rose by £3,013 to £53,270. Including £1,232 brought forward and £210 from sundry receipts, the nett revenue after paying expenses in London was £8,681 better at £28,068, and by putting £1,000 to re-

serve against £1,500 a year ago the directors are able to add another 1 per cent. to the dividend making 6 per cent., and to increase the balance carried out by £618 to £1,850. Estates account is unaltered at £107,500, but buildings and machinery have been written down to £2,759, while the reserve now amounts to £10,000. Bills payable have been reduced by £2,400 to £7,400, but creditors are £881 higher at £4,847, and in addition £578 is due on drafts in transit and £1,235 on wages deposit. On the other hand, stocks show an increase of £3,363 at £21,474 against a small decrease to £4,174 in sundry debtors, and cash, owing no doubt to the new capital brought into the undertaking a year ago, is £4,890 larger at £6,936. At present the capital of the company is in £10 shares, but the directors propose that these shall now be subdivided into £1 shares, presumably with the idea of rendering them more marketable.

Anglo-Ceylon and General Estates Co., Limited.

Although the crop of tea from this company's Ceylon estates for the year ended March 31 fell short of the previous season's by 97,739 lbs. at 2,769,821 lbs. an increase of 0.82d. to 8.12d. per lb. in the price realised made the season the most remunerative ever experienced. A drop of 278 cwts. to 3,641 cwts. also took place in the cocoa yield, but here likewise the value showed a considerable improvement at 78s. 7d. per cwt. against 58s. 8d. in 1905-6, but in Mauritius the opposite occurred, a large crop being offset by a decline in prices to the lowest level yet touched owing to markets being overstocked by imports from Java and Europe. Gross receipts from all sources, including £31,021 brought in, were £257,543, of which expenses took £177,320, debenture interest £6,157 and depreciation of machinery and investments £8,157. The surplus remaining was £65,909, and out of this £20,000 is absorbed by the payment of a dividend of 8 per cent. on the consolidated stock, and £5,000 is set aside for the purchase of surplus certificates, leaving £40,909 to be carried forward. Purchases of these surplus certificates were made by tender during the twelve months at an average of a little under 60 per cent. of their face value, and the amount now outstanding is £24,962. Ceylon tea and cocoa estates stand in the balance-sheet at £240,583, and the Mauritius sugar estates, thanks to the purchase of a property lying inside the company's plantations, are valued at £110,768, against which the capital is £250,000, the debentures and other borrowings to £151,367 and the reserve to £20,000, the last-named being represented by £21,616 invested in good-class securities. Floating liabilities, including £3,018 for accrued interest, come to £31,034, but debtors owe £16,311, stocks of sugar amount to £29,473 and stocks of tea, cocoa, &c., to £24,483, while, in addition to £26,029 in cash, there are investments in other companies taken at £30,875.

Langkon North Borneo Rubber, Limited.

During the period from the incorporation of the company in March, 1906, to March 31, 1907, about 600 acres were felled and cleared, of which 462 acres were planted with 85,500 Para rubber trees at a cost of £4,407. Adding £6,299 for preliminary expenses, cost of underwriting, &c., and £1,256 for directors' fees and London office charges, the total outlay under the head of development and maintenance was £11,963, against which £128 was received from interest and transfer fees. Of the 85,000 shares offered for subscription only the 60,000 which were underwritten were issued, and on these 10s. per share has been called up, giving a paid-up capital, less calls in arrears, of £29,680. In addition £6,000 is due to the British North Borneo Company for balance of the purchase price of land, and £938 has been advanced by that company for the payment of the 4 per cent. guaranteed dividend, the latter sum being repayable only out of future profits in excess of the amount required to pay 6 per cent. on the shares. Sundry creditors are trifling at £266, while advances in Borneo come to £347, and the company still has £5,795 cash in hand for further development.

Vallambrosa Rubber Co., Limited.

This company has now emerged from the slow and unremunerative years of development, and is producing rubber on a fairly large scale, with gratifying results to the shareholders. In the year ended March 31, 156,922 lbs. were harvested at a cost of about 1s. per lb. compared with £30,113 for 1s. 1½d. in the previous twelve months, and although the price obtained dropped from 5s. 6½d. to 5s. 1½d. the gross proceeds were naturally considerably increased. The total realised was £40,255, and as miscellaneous receipts gave £5,679 more at £6,742, while £4,338 was brought in, the revenue came to £51,435 against £11,808. Expenses and interest required an extra £9,815 at £16,856, but even so the sum to be dealt with was £29,812 up at £4,767. The directors either believe that shareholders ought to accumulate their own reserve fund or feel that they must pay a big dividend now to compensate them for their long wait for a return, and consequently announce a distribution of no less than 55 per cent., carrying forward £6,749 or £2,411 more. Expenditure on the Bukit Kraiong estate during the twelve months was £2,922, making the total capital outlay £55,533, and temporary loans in consequence are a trifle up at £3,000, while creditors show an increase of £3,358 at £4,697. These increases in floating liabilities, however, are of no consequence, as the maturing of the estates has put the company in possession of ample funds, its cash balances being £12,099 larger at £12,546, in addition to stocks of rubber valued at £12,137 and £3,831 due from sundry debtors. For the current year it is estimated that the crop of rubber will reach 215,000 lbs., while sales of seeds, stumps, coffee, and cocoanuts are expected to yield £4,709, and if anything like these figures is realised the company will not be satisfied with a 55 per cent. dividend.

Bukit Rajah Rubber Co., Limited.

Formed in the end of 1903, this company produced 6,811 lbs. of rubber in the year ended March 31, 1905, on which a gross price of 5s. 5.94d. was realised, and nett profits including sales of coffee and cocoanuts amounted to £95. In the following year the crop was 33,203 lbs. and the price 5s. 4.48d., with the result that profits rose to £5,169, but the number of trees on the estate in a condition to tap is steadily increasing. The company now has 2,012 acres planted with 243,580 trees, and during the past twelve months 88,341 of these were tapped for a yield of 118,982 lbs., on which the average price was 5s. 3.62d. Gross proceeds were £18,293, and with £4,465 from sales of rubber seed, £2,425 from coffee and £1,344 from cocoanuts and sundries, the total revenue was £26,527. Credit is taken in the profit and loss account for £11,914, value of produce on hand, and after adding £1,511 brought forward and £217 for interest and transfer fees the income from all sources came to £40,169. Of this expenditure on estate took £16,172 and London office charges and difference in exchange £1,351, leaving £22,646, out of which a dividend of 30 per cent. is paid, £500 is allowed for depreciation, £1,500 is put to reserve and £888 carried forward. Another 1,998 acres of jungle land have been acquired for £4,523 in cash and £1,291 in shares, and altogether the capital expenditure for the year amounted to £9,042, making a total of £78,519, but from this the directors have deducted £12,481 received as premiums on shares issued. Liabilities on bills payable and to sundry creditors are fairly light at £8,197, against £15,077 to come in from sundry debtors, and in addition to the above-mentioned produce on hand the company has £1,099 in cash.

Federated (Selangor) Rubber Company, Limited.

On March 31 this company had 932½ acres planted with 112,213 trees, and another 80 acres are being planted this year, leaving 35 acres unopened, exclusive of the forest block recently purchased, which the directors have arranged to dispose of. In the 12 months the crops from the estate were 7,325 lbs. of rubber and 5,718 piculs of coffee, against estimates of 1,945 lbs. and 6,000 piculs, and the receipts amounted to £2,507. This sum has been deducted from the expenditure in Selangor, leaving a nett balance of £5,043 to be added to cost of estates, together with £192 for London office charges and directors' fees, making a total of £20,781. The paid-up capital is only £18,278, and in addition, liabilities on bills payable and to sundry creditors come to £4,212, while on the other hand stocks of produce are valued at £943, cash comes to £476, and coolie advances to £290. The company is consequently short of liquid assets for the time being, but the final call of 5s. per share on 7,000 shares, which has been made since the close of the year, may give it sufficient funds to go on with, seeing that the estates are now opened up and that the yield of rubber should increase rapidly.

Perak Rubber Plantations, Limited.

Work on this property during the period from January 1, 1906, to March 31, 1907, was seriously handicapped by sickness among the labour force, but 12,600 trees, or about one-sixth of the total, were tapped for a yield of 16,327 lbs. This was sold at an average of 4s. 10d. per lb., producing £3,706, and with sales of seeds and miscellaneous receipts the total revenue was £4,166. Estates expenditure took £1,877, and administration charges and directors' fees £890, and after writing £555 off preliminary expenses £1,014 is carried forward. Out of a total capital of £75,000 the company paid £65,000 for its estates, and has since spent £4,240 on developments. Creditors amount to £3,490, but against these rubber in hand is valued at £1,025, sundry debtors, including labour advances of £937, come to £1,276, and cash, less an overdraft of £590 on current account, is £6,848.

TRADE AND PRODUCE.

Wheat.—The more favourable weather enjoyed this week had little effect on English wheats, supplies of which have been small, and prices in consequence well maintained. Farmers' deliveries last week were 19,209 qrs., and realised an average of 32s. compared with 8,242 qrs. at 30s. 5d. a year ago, but the totals for the 45 weeks were still below those of the corresponding period of 1906 at 2,594,084 qrs., and 27s. 1½d. against 2,872,681 qrs. and 28s. 7½d. Imports into the United Kingdom for the week amounted to 591,873 qrs., against 523,367 qrs., but Dornbusch estimated the quantity on passage as 2,755,000 qrs. to the United Kingdom, and 1,400,000 qrs. to the Continent, compared with 2,920,000 qrs. and 1,705,000 qrs. respectively in the previous week. Spot business in foreign wheats has been slow, and prices fluctuated in sympathy with American and Continental advices. A loss of about ½d. was recorded early in the week, but sellers were scarce, and a rally followed. Future positions began well with an advance of 58d. to ½d., but support was small, and the improvement gradually disappeared. Better news from the United States, however, caused the market to harden again on Thursday, and quotations on balance show a small gain. In America the "bears" had things largely their own way, owing to reports of heavy arrivals of spring wheat, and of larger offerings of new winter wheat, but a recovery was brought about later by advices of rains in the South-West interfering with the harvests and less favourable news from the North-West.

Wool.—Competition at the colonial sales was again very keen, and considerable eagerness was shown by both home and Continental buyers to secure the large supplies of Australian greasy merinos brought forward. America, too, secured many of the best parcels of both merino and crossbred wools, and prices, as

a rule, went against the buyer. The offerings of New Zealand greasy merinos contained a rather large proportion of heavy grease which it was difficult to dispose of, but all light conditioned lots were readily taken by home buyers at extreme quotations, while Cape wools went at rather above recent figures. Arrivals up to the end of last week for the fifth series of auctions, commencing on September 24, amount to 15,922 bales, of which 5,532 are from New Zealand and 7,842 from the Cape and Natal. Manufacturers have for weeks past been following a hand-to-mouth policy in the hope that a reduction in values would come with the present sales, but they have now made up their minds to the inevitable and are buying rather more freely in order to replenish their stocks. Spinners continue fully occupied, and prospects for new business seem to be improving. Woollen manufacturers are still busy for the present, but look for a falling off in the autumn demand, and tweed makers are beginning to feel the usual slackening off between seasons, while the demand for winter fabrics is not expected to be large owing to the unsatisfactory business experienced by retailers.

COTTON (from our Manchester correspondent).—In some quarters of our market during the week under review a rather more hopeful feeling has prevailed, and the outlook seems to be a little more encouraging. The actual business transacted has not been important by any means, but buyers and sellers of piece goods seem to be getting nearer together, and we appear to be within reasonable bounds of a more active turnover for certain markets. The business arranged may easily be exaggerated, as after a quiet period such as we have experienced, a few orders are a good deal talked about. The outlook for the American crop continues to improve, the weather recently in the States being more favourable to the plant. The market has been without news of any importance, and at a time when telegrams are scarce, it is generally considered that good progress is being made. Should any damage occur, we are not long in hearing about it on this side. Prices, however, for the raw material still keep on a high level, and after rather easier rates at the beginning of the week, quotations have hardened towards the close. Many of the offers from India for cloth have been too low to be put through, and rather discouraging advices have been received from Calcutta. Light fabrics have been in request for Madras, and small lots of shirtings have also been sold for that outlet. Private telegrams just received state that beneficial rains have fallen in several districts needed, and the outlook for the crops is now distinctly encouraging. China buyers have shown rather more activity, and although the total sales have not been important, in one or two quarters some fair lines have been booked in shirtings and Mexicans. The propects for this market are improving from week to week, and it is thought that on a rather lower level of values, operations could be carried on on a larger scale. Most of the Mediterranean markets are under a cloud, supplies being heavy in merchants' hands on the other side. It is reported that some arrangement has been come to whereby the Egyptian shipping houses, which have been in financial difficulties, may continue without actual breakdown. This news has been very welcome to traders generally. South American markets have not shown much activity; here and there orders for printing cloths have been entered. A rather better business has transpired in the home trade houses, repeat orders coming in from retailers more quickly. T-cloths and Mexicans are a little more firmly held than a short time ago. Printing cloths in the commoner kinds still move off slowly, the business offering being very poor. Home trade American yarns have met with a quiet demand, the production of the spindles has not been sold. Users are not in the mood to place orders of any weight, and prefer to work off old contracts. Ring beams are easier in price when tested, and there is not now quite so much pressure for delivery. In export bundles a healthy demand has come through from India in two-fold yarns. Continental demand appears to have fallen off somewhat. Egyptian yarns have been well held, with a quiet, steady demand from home users, but few sales of weight have occurred.

According to Sir Jacob Behrens and Sons, the American cotton markets have fluctuated wildly during the past week, but the lateness of the plant and the uncertainty as to the ultimate result have prevented any decided break in prices, which remain pretty much on the same level as before. Generally speaking, reports are favourable, and whilst a large short interest has been created of late, any adverse news would certainly bring about an advance, so much so that conservative houses are operating with great caution. Egyptian cotton continues in fair demand, and prices are rather dearer.

COAL.—Considerable activity has been displayed in gas coal, owing to the fact that several of the London companies are now entering upon their new contracts, and sellers find difficulty in meeting all requirements. Steam coal, too, is in strong request for the shipping trade, as well as for many of the railway companies which are still buying their supplies in the open market, pending the arrangement of the usual half-yearly contracts. The demand for house coal has slackened off appreciably with the advent of fine weather, but sellers are not yet prepared to make any concessions in prices.

IRON AND STEEL.—Not only has the American demand for pig-iron died down completely, but dumping of pig-iron from there is talked in some quarters of as a possibility. Makers in some districts were said to be more willing to make concessions for both prompt and forward metal, but generally the disposition seemed to be rather to hold back. Business in Barrow hematite was smaller, but the market continued firm as warrant stocks are now down to [illegible] tons, and makers are not in a position to quote for [illegible] manufactured iron at any [illegible] one for bars on Japanese account, and there has been an advance in prices, especially of [illegible] makers, too, continue well supplied with [illegible] competition from either the United States or Germany. Quotations are firmly held.

COPPER.—The copper market showed a good deal of resistance to enter into fresh business, [illegible] assurances by the agents of the American Companies that there would be no further drop in the price of [illegible] business in refined was still [illegible] the part of consumers. Their hesitation was justified, as the New York Metal Exchange announced a [illegible] Monday, and the "bears" promptly [illegible] hammering the quotation for three months' [illegible] £85 10s. Rumours of sales by the American [illegible] 22 cents then brought in strong support, and a recovery to £89 took place, but buyers still held back, and the price, after fluctuating between that figure and £88, jumped again to £89 2s. 6d., closing firm. Prompt metal felt heavily, owing to the liquidation of stale bull accounts, and at one time touched £89 10s., but the market is in the strong hands at present, and the price was once more [illegible] up to £94 15s. According to Messrs. H. R. Merton and Co.'s circular, the supplies for the first half of the current month were 16,361 tons, and the deliveries 15,050 tons, but the stocks in England and France showed a decrease of 873 tons at 1,315 tons. Including the quantities on passage from Chili and Australia, the visible supplies amounted to 12,700 tons, against 12,298 tons at the end of June.

TIN.—Early advices from the East were rather firmer, and business was reported to have taken place on the basis of £184 10s. c.i.f. London, but the position was affected by the weakness in America, and prices gradually declined to £181 15s. Dealings on this side were small, and [illegible] by the bulls caused spot metal to drop to £184 5s., while the forward quotation receded to £180 15s. Talk of an increase of 2,000 tons in the Dutch sales for next year accentuated the weakness, and a further fall to £183 and £181 respectively was recorded. A determined effort was then made to steady the market, and although professional support was small and inquiries from consumers unimportant, closing values were well above the worst at £184 for cash and £181 5s. for three months forward.

TEA.—Very little change took place in the conditions ruling in the Indian market, but the common qualities were perhaps rather dearer, and less was to be had at 6½d. than was the case last week. Messrs. Gow, Wilson and Stanton report that all kinds met with good competition, the grades up to 7½d. being most sought after, and the average realised was about 7¾d. against 6d. in 1906. Exports from Calcutta and Chittagong for the first half of the current month were 6,400,000 lbs. compared with 7,423,000 lbs. a year ago, and the total from April 1 to July 15 amounts to 17,869,000 lbs. against 20,283,000 lbs. Exports from Southern India for June and from April 1 respectively were 1,031,869 lbs. and 2,708,571 lbs. against 753,642 lbs. and 2,127,341 lbs. in 1906. Bidding for Ceylon teas was also brisk for all descriptions, especially for common and lower medium grades, which occasionally fetched ½d. more per lb. The average price was 7½d. compared with 6¾d. a year ago. Exports to the United Kingdom for the first half of the current month were 5,500,000 lbs. against 5,750,000 lbs.

SUGAR.—Mr. Czarnikow, in his weekly report, states that the depression existing at the close of last week continued until the early part of the present one, when a slight improvement set in, caused by a better demand for refined and covering orders for August beet. Prices varied but slightly until yesterday, since when some anxiety has been shown by "bears" to [illegible] their August engagements, which had the effect of raising prices for that delivery to 9s. 9d. Next crop did not participate in the rise to a corresponding extent, but no pressure to sell from the Continent is experienced. Refiners were able to put up their prices 1½d. and even 3d., owing to the better inquiry, and whilst they bought last week fair quantities of 88 per cent. beet at 9s. 5¼d. f.o.b., the moderate offerings during the last few days at from 9s. 7½d. to 9s. 9d. f.o.b. were easily placed. In the face of the small holdings of raw and refined by primary sources and the trade, there is no doubt that the actual requirements will materially help the final liquidations of the remainder of the August "bull" account and render covering by "bears" less easy. The expectation of American buying old crop has practically been given up, but hopes are still entertained that orders for new crop may come from that quarter later on to supplement the purchases of Java. Meltings in the States are on a satisfactory scale, and with a continuation of it a further considerable quantity of non-preferential sugars will have to be [illegible]. A feature is the ordering to New Orleans of a Java cargo arrived at Port Said. The June figures are now complete, showing a European consumption fully equal to last year's; but exports elsewhere show a deficiency of about 50,000 tons.

Last week's improvement in New York has been well maintained, and although official quotations were unchanged, forward business was done at a slight advance. Offerings from Cuba are now much reduced, and sellers are paying more attention to non-preferential sugars, though prices had not [illegible] holders' ideas. Receipts were again small at 20,000 tons against meltings 47,000 tons, and stocks are now down to [illegible] tons.

Answers to Correspondents.

**** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

J. S. H. S.—(1) We do not see why you should sell out just now, probably at the bottom. (2) No, these shares seem about as high now as they deserve to be, and would hardly be likely to give you the opportunity you want. On the whole, you had better wait a little. We still hold 1s. to your credit.

Fletcher.—(1) Yes, it is soundly managed and safe. (2) The company is making some headway, but its progress is very slow, and we should not like to recommend averaging. Rather sell if you can without too great a loss. (3) This is still a good business, and on the whole you might do worse than average your holding. (4) We see no reason at present why you should be in a hurry to sell. (5) The bonds seem all right for the present, although the country is leaning too much on credit to be really strong. Thanks for pointing out the error, which we correct this week.

H. R.—We did not telegraph you regarding this, as the price is not likely to rise much yet. The new properties ought to help the revenue, not reduce it, and a small purchase of the stock might be recommended now.

G. H. W.—The stock you name should suit your purpose very well.

Cross.—Not good for either speculation or investment just now, when the company's trade is showing symptoms of decline.

J. J. W.—(1) The position has been improved by the working agreement now in force, and the shares should be kept if possible. (2) You might begin by selling these. (3) This company is in good hands, and doing very well. Its shares stand at a high figure, but are not likely to go back much. (4) This, on the other hand, is not a very strong company, and we should be inclined to place the shares after No. 2 as things to sell.

R. R. R.—(1) The company has only reached the profit-earning stage within the last year or two; previously to that its record is very poor. It has recently acquired a new property, but even so the outlook is by no means assured, and even as a speculative investment the shares do not seem attractive. (2) A very risky speculation at the present price. (3) This company is pulling up its business wonderfully, and if you are prepared to hold them for some time, you might buy a few shares.

W. H. E.—The position is still speculative, as the company has to rely upon its subsidy funds to meet deficits in revenue, and that is nearly exhausted. Still, the probability is that the company will come out all right, and you should be pretty safe in adding to your holding.

T. W. L.—(1) Might be worth buying now. (2) Good enough, but liable to be drawn for redemption. (3) Will be paid off in less than three months. (4) Hardly worth touching at present price. (5) Dear, but has a chance. (6) Good of its class, but the bonds better for pure investment. (7) Rather speculative, but might be risked. (8) Life of mine too short. (9) Decidedly dear; prospects looked to. (10) Also quite too speculative to put money away in. We can only recommend stocks by private letter.

W. G.—No. 1. Do not like it much; the increase is poor, and the country also. (2) Yes, but will they go up again? It is a pure gamble, and we cannot advise. (3) The answer to No. 1 applies here also. The company has little between it and misery except a kind of guarantee. Its debenture debt may be increased again, and of the ones you indicate we should prefer the chances of No. 1.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Belfast and County Down.—Six per cent. per annum, carrying forward £2,600.

City and South London.—On the consolidated ordinary stock at the rate of 2½ per cent. per annum, carrying forward £1,857.

Dublin and South-Eastern.—On the consolidated preference stock for the half-year ended June 30, 1907, carrying forward £2,708.

Great Eastern.—On the ordinary stock at the rate of 1½ per cent. per annum, carrying forward £25,000.

Great Northern (U.S.A.).—Quarterly of 1¾ per cent. on the preferred capital stock, payable Aug. 1.

London, Brighton and South Coast.—For half-year of £1 7s. 6d. per cent. on the undivided ordinary stock and £2 15s. per cent. on the preferred ordinary stock, carrying forward £18,150.

London, Tilbury and Southend.—On the ordinary stock for the past half-year at the rate of £3 10s. per cent. per annum, carrying forward £4,106.

Metropolitan.—On the ordinary stock for past half-year at the rate of ½ per cent. per annum, carrying forward £3,009.

Midland Great Western of Ireland.—Three per cent. per annum on the consolidated stock for half-year ended June 30, carrying forward £5,900.

Rhymney Railway.—At the rate of 7 per cent., carrying £6,608 forward.

BANKS.

Bank of Victoria.—On the ordinary shares at the rate of 5 per cent. per annum, carrying forward £12,490.

Commercial of Australia.—At the rate of 3 per cent. per annum on the preference shares, carrying £15,000 to special assets trust reserve account, £27,980 transferred to the Special Assets Trust Co., £5,000 written off the bank premises account, and £8,480 carried forward.

Hibernian.—Six per cent. per annum, placing £7,500 to reserve, £1,000 to reduction of bank premises, £2,830 forward, and £25,000 from reserve for depreciation in bank investments.

Isle of Man.—Interim at the rate of 15 per cent. per annum for half-year ended 30th ult.

Manchester, Liverpool and District.—21s. per share for the half-year ended June 30.

North-Eastern.—7s. 3d. per share, carrying forward £2,602.

MINES.

Alaska Mexican.—30c. per share, payable 28th inst.

Alaska Treadwell.—$1 per share, payable 28th inst.

Broken Hill Proprietary.—For quarter ending Aug., 1907, of 1s. 6d. per share and bonus of 1s. 6d. per share, payable Aug. 21.

Broken Hill Proprietary Block 14.—1s. and a bonus of 1s. 6d. per share on the ordinary and preference shares, payable Aug. 14.

Glen Deep.—Interim of 7½ per cent. for half-year ending 31st inst.

Glynn's Lydenburg.—15 per cent., payable Sept. 5.

Golden Horse Shoe Estates.—Second interim for 1907 of 5s. per share, payable Aug. 14.

"Jumpers" Gold.—Interim of 40 per cent., payable Sept. 4.

New Gopeng.—Bonus dividend of 2s. per share for year ended April 30.

Newhouse Mines and Smelters.—50c. per share.

Nourse.—Interim of 12½ per cent. for half-year ending July 31, payable Sept. 4.

Tingha Consolidated Tin.—Quarterly at the rate of 10 per cent. per annum (3d. per share) on the preference shares, payable on the 8th prox.

MISCELLANEOUS.

Anglo-American Telegraph.—Interim for quarter ended June 30 of 15s. per cent. on the ordinary stock and £1 10s. per cent. on the preferred stock, payable Aug. 1, carrying £24,143 forward.

Belgravia Dairy.—Final of 3 per cent., making 6 per cent. for year ended May 25, 1907.

British Investment Trust.—Interim at the rate of 9 per cent. per annum on the deferred stock for half-year ended July 1.

British North Borneo.—3 per cent., carrying forward £111,624.

Burnell and Co.—Interim of 1s. 6d. per share on the ordinary shares.

Cagliari Gas and Water.—Interim of 3 per cent. on account 1907.

Cap Martin Hotel.—At the rate of 7½ per cent. per annum on the ordinary shares for year ended 30th ult., carrying forward £26,331, subject to directors' fees.

Colonial Securities Trust.—Interim of 2 per cent. on account 1907.

County of London Electric Supply.—Interim on the ordinary shares for half-year ended June 20 at the rate of 4 per cent. per annum.

Crompton and Company.—For year ended March 31 at the rate of 5 per cent. per annum, placing £10,712 to reserve, and carrying forward £5,840.

Dundee Fishing Company.—At the rate of 5 per cent. per annum.

Freeman, Hardy and Willis.—Interim on the ordinary shares at the rate of 12½ per cent. per annum for six months ended June 30.

George Ingham and Co.—5 per cent. per annum on the ordinary shares.

Guaranty Trust of New York.—For half-year ended June 29 at the rate of 20 per cent. per annum, carrying £180,556 forward.

Hackney and Shepherd's Bush Empire Palaces.—Interim for half-year to the 30th ult. at the rate of 10 per cent. per annum.

Henry Bessemer and Co.—Interim of 6d. per share on the £1 ordinary shares.

Hobart Electric Tramway.—5 per cent.

John Knight.—On the ordinary shares at the rate of 6 per cent. per annum on the capital as called up for period ended May 31.

Kensington and Knightsbridge Electric Lighting.—Interim on the ordinary shares for half-year ended 31st ult. of 5 per cent.

Leicester Palace Theatre.—Interim for half-year to 30th ult. at the rate of 10 per cent. per annum.

London Street Tramways.—Interim of 2s. per share on account of 1907.

Madame Val Smith.—At the rate of 6 per cent. per annum on the ordinary shares for the half-year ended 30th ult.

Marbella Iron Ore.—Interim at the rate of 3s. per share.

Metropolitan Trust.—Interim on the ordinary stock at the rate of 7 per cent. per annum for six months ended the 1st inst.

Milner's Safe.—At the rate of 10 per cent. per annum for year ended May 31.

Montreal Light, Heat and Power.—For three months ending the 31st inst. at the rate of 6 per cent. per annum, payable Aug. 15.

Mortgage of the River Plate.—Interim of 12 per cent. per annum for half-year ended June 30 on the ordinary shares.

Nelson Brothers.—Interim of 3 per cent. (at the rate of 6 per cent. per annum) on the ordinary shares, payable Aug. 15.

Newcastle-upon-Tyne Electric Supply.—Interim of 2½ per cent.

Richard Lunt and Co.—Interim for past six month on the ordinary shares at the rate of 10 per cent.

Robert Addie and Sons' Collieries.—6 per cent. on the preference and the ordinary shares, and in addition, 2 per cent. on each class of share, making 8 per cent. on both preference and ordinary shares for the year.

Robert Campbell and Sons.—Interim at the rate of 10 per cent. per annum for half-year ended June 30.

Royal Brewery, Brentford.—Final on the ordinary shares at the rate of 16 per cent. per annum for six months ended June 30, making for the year 12 per cent.

Scott, Son and Co.—Interim at the rate of 5 per cent. per annum on the ordinary shares for half-year ended 30th ult.

Shanghai Water Works.—Interim for 1907 of 15s. per old share, and 11s. 3d. per new share, payable July 26.

Short's.—First interim for year ending March 31, 1908, of 4s. per share on the deferred ordinary shares.

Telegraph Construction and Maintenance.—Interim of 12s. per share.

Wilkinson and Riddell.—Interim for half-year ended June 30 on the ordinary shares at the rate of 10 per cent. per annum.

Weardale and Consett Water.—Interim of 2½ per cent. on account 1907.

Welford's Surrey Dairies.—Interim of 3 per cent.

MINING RETURNS.

Alaska Mexican.—Crushed 22,397 tons ore; value $31,039; saved 425 tons sulphurets; value $24,767.

Antenior (Matabele).—Crushed 585 tons, 213 ozs.; cyanide 375 tons, 28 ozs.

Battlefields (Rhodesia).—Crushed 1,600 tons, 1,100 ozs.; cyanide 1,200 tons, 635 ozs.; slimes 400 tons, 131 ozs.

Boston Copper.—Produced 880,000 lbs. copper, 2,100 ozs. gold, 11,000 ozs. silver.

Brilliant Gold.—Stockholm.—760 tons yielded £2,013; 240 tons yielded £3 10s. per ton.

British Broken Hill Proprietary.—2,576 tons crude ore produced 337 tons concentrates containing 206 tons lead and 9,069 ozs. silver; also raised 105 tons carbonate ore, making 2,681 tons.

Broken Hill Proprietary, Block 10.—Treated 12,037 tons crude ore, producing 1,979 tons concentrates, containing 1,227 tons lead and 63,328 ozs. silver.

Broken Hill Proprietary, Block 14.—7,106 tons crude ore, producing 875 tons concentrates, containing 538 tons lead and 25,629 ozs. silver. Lead carbonates despatched, 1,529 tons.

Carrington's United.—Crushed 420 tons, £575; 124 tons concentrates.

Chinese Engineering.—Output of coal, 26,500 tons; sales, 20,000 tons; consumption, 1,400 tons

Consolidated Gold Fields of New Zealand.—Progress: Crushed 4,773 tons ore, value £8,577. Golden Fleece: Crushed 1,181 tons ore, value £1,936. Wealth of Nations: Crushed 1,110 tons ore, value £1,817.

De Lamar.—Crushed 2,600 dry tons, yielding $31,000; surplus, $2,300; miscellaneous, $500; total, $33,800.

Duff Development.—Prospecting dredge 38 ozs., No. 1 dredge 141 ozs., No. 3 dredge 63 ozs.

Durban-Roodepoort.—Quartz milled 11,025 tons, 3,007 ozs.; tailings 7,215 tons, 900 ozs.; slimes 3,395 tons, 205 ozs.; total, 4,112 ozs.

El Oro.—Crushed 22,096 tons ore, producing $202,793.

Esperanza.—Mill crushed 13,328 tons dry ore; concentrates shipped 506 tons dry ore, value $151,385; value of concentrates $122,881.

Forbes (Rhodesia).—Veracity: Crushed 566 tons, 429 ozs.; cyanide 500 tons, 116 ozs. Dumbleton: Crushed 473 tons, 172 ozs.; cyanide 450 tons, 39 ozs.

Indarama.—Butterfly: Milled 1,350 tons, 369 ozs.; cyanided 950 tons, 125 ozs.; total, 494 ozs.

Jumbo Gold.—Crushed 1,621 tons, 881 ozs.; concentrates 933 tons, 331 ozs.; slimes 688 tons, 138 ozs.; total, 1,350 ozs.

Mills' Day Dawn United.—Crushed 1,903 tons, value, including residues, £5,900.

Newhouse.—932,000 lbs. copper produced.

North Broken Hill.—2,233 tons crude ore, producing 385 tons concentrates, containing 263 tons 3 cwts. lead and 6,930 ozs. silver.

Oroville Dredging.—Gross returns, $16,175.

Palmarejo and Mexican.—Zapote: Crushed 1,587 tons, treated 1,600 tons, producing $7,710 gold, $24,420 silver.

Pfeiffer's Day Dawn.—Crushed 1,639 tons quartz, value £5,971.

Phillips River Gold and Copper.—Shipped 62 tons copper matte.

Raub Australian Gold.—Bukit Koman (1): Crushed 2,752 tons, 601 ozs. Bubit Koman (2): Crushed 2,023 tons, 200 ozs.

Rhodesia Matabeleland Development.—Crushed 1,304 tons, 363 ozs.

Rice Hamilton.—Sabiwa: Crushed 3,194 tons, 568 ozs.; 1,400 tons by cyanide, 401 ozs.; 2,999 tons slimes, 339 ozs.

St. John Del Rey.—Gold produce, £8,000; yield per ton ·55 of an ounce troy.

Salisbury.—Crushed 5,250 tons, 1,760 ozs.

Spassky Copper.—Production of bar copper, 6,000 poods equals 96·43 tons.

Sulphide Corporation.—18,779 tons ore, producing 3,059 tons leady concentrates; also 33,530 tons tailings treated, producing 9,711 tons zinc concentrates and 80 tons leady concentrates. Cockle Creek 2,029 tons leady concentrates, 351 tons residues, and 4,348 tons purchased ores smelted, yielding 1,872 tons lead, containing 245,232 ozs. silver and 12,524 ozs. gold; also treated 431 tons zinc concentrate, producing 142 tons spelter.

Tasmanian Copper.—Treated 4,000 tons ore (and 6,000 tons of purchased ores), producing 191 tons matte and metallics, containing 61 per cent.

Trotzk Goldfields.—Output May, 909 ozs.

Tyee Copper.—1,104 tons Tyee ore, value, after [illegible] charges, $13,990; 3,967 tons customs ore; 5,071 tons, producing 387 tons matte

Westralia Mount Morgans.—Crushed 4,275 tons, 735 ozs., cyanided 2,600 tons, 511 ozs., slimes, 1,675 tons, 342 ozs.

Willoughby's Consolidated.—Queen's: Crushed 1,338 tons 659 ozs.; cyanide 1,545 tons, 305 ozs.

Zinc Corp.—586 tons concentrates shipped, our assays, 46¼ per cent. zinc.

NEXT WEEK'S MEETINGS.

MONDAY, JULY 22.

Anglo-Swiss Asbestos.—Salisbury House, noon.
Credit Foncier of Mauritius.—Winchester House, noon.
Crompton and Evans' Union Bank.—Derby, 2.30 p.m.
London and Provincial Bank.—Cannon Street Hotel, 12.30 p.m.
Metropolitan Coal.—Cannon Street Hotel, noon.
Murrayfield Real Estates.—Edinburgh, noon.
Pahang Corporation.—Winchester House, 11.30 a.m.
Pahang Kabang.—Winchester House, noon.
Paringa Mines.—Salisbury House, noon
Raphael Tuck and Sons.—Salisbury House, noon.
Union Bank of Australia.—71, Cornhill, E.C., 1 p.m.
Victoria Consolidated Goldfields.—Salisbury House, 12.30 p.m.

TUESDAY, JULY 23.

Anantapur Goldfield.—6, Queen Street Place, E.C., 12.30 p.m.
Australian Agricultural.—Winchester House, 1 p.m.
East London Railway.—Cannon Street Hotel, 2 p.m.
Egyptian Delta Light Railways.—Winchester House, 3 p.m.
Frederick Sage and Company.—Holborn Restaurant, 2.30 p.m.
Imperial Colonial Finance and Agency.—Winchester House, 1 p.m.
National Telephone.—Hamilton House, noon.
United Reefs (Sheba).—Winchester House, 2 p.m.
United River Plate Telephone.—Winchester House, noon.
Williamsons, Limited.—Cannon Street Hotel, noon.

WEDNESDAY, JULY 24.

Backus and Johnston's Brewery.—Winchester House, noon.
Bombay Electric Supply and Tramways.—Winchester House, 11.30 a.m.
Buenos Ayres Grand National Tramways.—Winchester House, noon.
Crompton and Co.—Salisbury House, 3 p.m
East India and Ceylon Tea.—61, Gracechurch Street, E.C., noon.
Forestal Land, Timber and Railways.—Winchester House, 2.30 p.m.
Halifax Commercial Banking.—Halifax, noon.
London and Westminster Bank.—41, Lothbury, E.C., 1 p.m.
Provincial Bank of Ireland.—Dublin, 11 a.m.
Tasmanian Copper.—Winchester House, noon.
Transvaal Gold Mining Estates.—Salisbury House, noon.
Transvaal Lands.—Winchester House, noon.
Union Assurance.—81, Cornhill, E.C., 11.30 a.m.
Union of London and Smiths Bank.—Cannon Street Hotel, noon.

THURSDAY, JULY 25

Argentine North-Eastern Railway.—Salisbury House, 2.30 p.m.
Bechuanaland Exploration.—Salisbury House, noon.
Cerro Muriano Mines.—Cannon Street Hotel, 3 p.m.
Colonists' Land and Loan.—Dashwood House, E.C., 2.15 p.m.
English Sewing Cotton.—Manchester, 11.30 a.m.
Gold Coast Amalgamated Mines.—Winchester House, 2.30 p.m.
Gordon Hotels.—Hotel Métropole, noon.
Hancock and Co. (N.Z.).—Winchester House, noon.
J.P. Restaurants.—Salisbury House, 2.30 p.m.
Keevil and Best.—Salisbury House, 3.30 p.m.
London and South-Western Bank.—Liverpool Street Hotel, 1 p.m.
Metropolitan Railway.—Cannon Street Hotel, noon.
Milner's Safe.—Winchester House, 2.30 p.m.
National Bank.—Dublin, 12.30 p.m.
Niger Company.—Surrey House, W.C., noon.
Nile Valley.—Winchester House, 12.30 p.m.
Pacific Phosphate.—27, Leadenhall Street, E.C., 3 p.m.
Parr's Bank.—Warrington, noon.
Pilot Insurance.—Winchester House, 11 a.m.
Wassau Gold Coast Mining.—Winchester House, noon.
Woolley, Sanders and Co.—129, Wood Street, E.C., 3 p.m.

FRIDAY, JULY 26

Anglo-American Telegraph.—Winchester House, 2 p.m.
Anglo-Argentine Tramways.—Winchester House, noon.
Demerara Railway.—Cannon Street Hotel, noon.
Direct United States Cable.—Winchester House, 3 p.m.
Edmundson's Electricity.—Salisbury House, noon.
Egyptian Estates.—Winchester House, 12.30 p.m.
Hutchinson.—Winchester House, noon.
North Eastern Banking.—Newcastle-on-Tyne, noon.
Rhymney Iron.—Cannon Street Hotel, noon.
Transvaal Gold Mining Estates.—Salisbury House, noon.
United Railways of Havana.—Winchester House, noon

COMPANY MEETINGS.

BANK OF LIVERPOOL, LIMITED.

The 76th annual general meeting of the proprietors of the Bank of Liverpool, Limited, was held, on 18th inst., at the Law Association Rooms, Cook Street. Mr. John Rankin, chairman of the board, presided, and amongst those present were:—Sir T. Brocklebank, Bart., Sir W. B. Forwood, Messrs. J. W. Alsop, G. H. Ashworth, W. C. Atkinson, A. A. T. Barbosa, G. W. Bedbrook, A. Bicket, J. Birch, T. E. Blenkarn, F. Bowden, A. Buckley, F. W. Calloway, G. Carlyle, W. Carruthers, G. A. Cassady, S. Catlow, R. A. Clark, L. S. Cohen, T. W. Cook, H. Cunningham, W. Cunningham, C. S. Davies, E. T. Davies, R. Davies, S. S. Dawson, A. Dobell, G. C. Dobell, A. F. Dodd, G. Downie, A. Earle, T. C. Edmondson, G. E. Fairbairn, B. H. Fennell, J. Finlayson, J. Finney, R. C. Fletcher, J. Forrester, G. W. Fox, H. Frame, T. R. Gee, Chas. Goodwin, J. Gradwell, J. P. Hargreaves, W. S. Harris, E. H. Harrison, E. J. Harrison, S. C. Harrison, T. F. Harrison, R. D. Holt, I. Honeyford, P. H. Hope, J. Horn, H. H. Hornby, J. C. M. Jacobs, P. Jones, R. S. Jones, R. W. Jones, T. Jones, C. H. Keet, A. Klipsch, J. Kitchen, J. J. Langley, J. Leece, T. A. Leigh, W. Little, C. Lumgair, R. Lytham, D. M'Lellan, J. Mackee, R. L. M'Glashen, R. B. Miller, S. M'Millin, A. Milliken, J. Morton, F. D. Muir, A. T. Neilson, J. S. Nicholson, H. H. Nicholson, W. M. P. O'Dwyer, J. E. Parker, E. Parker, J. F. Parle, F. Pearce, T. L. Pelling, J. L. Pemberton, R. B. Pickering, W. E. Pollit, J. Powell, J. P. Preston, T. Purdy, F. P. Pyemont, F. A. Rennie, H. E. Rennie, J. P. Reynolds, J. J. Ritchie, H. R. Robertson, W. F. Robinson, W. P. Robinson, T. Rush, A. Scott, John H. Simpson, S. G. Sinclair, J. A. Slingsby, H. B. Smith, J. Smith, W. J. Smith, T. Stainton, G. R. Stansfeld, R. Steel, A. N. Talbot, W. R. Taylor, E. Tebay, G. A. Tessimond, J. Thorburn, T. Thwaites, N. Topp, S. Turner, E. Tyson, R. Unwin, F. G. Walker, W. Walker, J. Webster, J. B. Widdows, G. S. Wild, A. S. Williams, Jasper M. Wood, H. C. Woodward, H. Worrall.

The annual report of the directors to the proprietors showed that:—

	£	s.	d.
The net profits for the year, after payment of current expenses and provision for all bad and doubtful debts, amount to	245,465	16	3
To this has to be added the balance of profits brought forward from last account	24,161	2	9
Making a total sum of	269,626	19	0

This sum the directors have appropriated as follows:—

	£	s.	d.
Reserved for income-tax	10,000	0	0
To the payment of two half-yearly dividends of 5 per cent. each, free of income-tax	131,250	0	0
To the payment of a bonus of 10s. per share, also free of income-tax	52,500	0	0
To investment reserve account	30,000	0	0
To reserve fund	15,000	0	0
Balance carried forward to next account	30,876	19	0
Total	£269,626	19	0
By the above transfer of £15,000, the reserve fund is raised to	£820,000	0	0

The notice convening the meeting was read by Mr. Alsop, solicitor to the board, and the general manager read the auditors' certificate.

The report and balance-sheet were taken as read.

The Chairman: Gentlemen,—I beg to move: "That the report of the directors now submitted, and already printed and distributed amongst the proprietors, be adopted." It gives the directors much pleasure to present to you so favourable a result of the working of the year. The increase in the profits is due mainly to the more favourable margin of profit on the funds enployed by the bank, the great activity of trade throughout the bank's area, the amalgamation of the Craven Bank (which has entirely justified the expectation of your directors), and the interest earned on the increased capital of the bank, for which there has been ample employment. (Hear, hear.) I am also able to assure you that the profits shown in the report have been arrived at after making the most ample provision for all bad and doubtful debts and after writing down our investments and premises on a more liberal scale than usual. In the appropriation of the profits as set forth in the report, you will notice that the dividend and bonus of 14 per cent. in all absorbed £183,750. We have passed £15,000 to the reserve fund, raising it to £820,000, and have added £6,700 to the balance of profit carried forward, of which, I am sure, you will approve. The feature, however, which is new so far as this bank is concerned, is the transfer of £30,000 to the investment reserve account. This is the first time that we have had to make an appropriation in this way, and, in view of the abnormal shrinkage in the market value of all first-class investments in recent years, I think the shareholders are to be congratulated that, as a consequence of the policy that we have for many years pursued of systematically writing down investments, we do not require a larger sum to bring them well below the present market value. (Applause.) Turning to the balance-sheet, you will notice that the bank's acceptances stand at £300,000 higher than the corresponding figure of last year. This is due to the season's cotton shipments, against which our acceptances are given, having extended over a longer period than usual, and also to the high price of cotton itself. Our investments have been reduced in the year by £600,000 by the maturing of Government and other bonds. The other fluctuations in the balance-sheet are of minor importance, but I should like to make a reference in passing to our premises account, which is larger by £19,000 than it was at this time last year. This increase is more than accounted for by the cost of new sites acquired and new premises erected or in course of erection. The chief item in the increase is the cost of a building in Oldhall Street, Liverpool, in close proximity to the new Cotton Exchange. This we are reserving for use as branch premises in case of need. The bank premises, generally, are being steadily written down on a very liberal scale. (Hear, hear.) You will have noticed in the report that we propose in future to distribute the dividend and bonus in more nearly equal half-yearly payments than hitherto. For some years we have been paying in January a dividend of 5 per cent. and in July a dividend of 5 per cent. and a bonus of 4 per cent., making 14 per cent. per annum in all. You will not, of course, expect me to prophesy what future dividends will be, but I may say that supposing we still have to deal with a total distribution of 14 per cent. we propose to do away with the bonus and make the distribution in the form of two dividends—one of 6 per cent. in January and the other of 8 per cent. in July. We have no doubt that you will approve this alteration in our practice. (Applause.) With reference to business conditions generally, the chief feature of the year has been the marked activity of trade throughout the whole area in which this bank operates. The turnover in customers' accounts exhibits a considerable increase on that of previous years, and the number of accounts in each of our districts shows a marked growth. The demand for accommodation for *bonâ fide* trading purposes shows no abatement, and in connection particularly with the financing of cotton, with which we have a good deal to do, the high price of that commodity throughout the season has naturally led to an increase in the demands made upon the bank by the cotton market. We are glad to observe also that the reports from our managers testify to the general soundness of business, not only in Liverpool, but in the Craven and Northern districts. In view of this we trust that the results of the new year will be as satisfactory as those of the year just closed; but it is well for us to remember that we cannot always hope to establish a new record. I am sure you will join with me in expressing the pleasure with which we see our old friend Mr. John Hope Simpson present at this meeting. (Applause.) It is with the greatest satisfaction that we see him here to-day and think of the many years that he devoted to the service of the bank unsparingly to himself. We trust that he may have many years of long life, and that happiness may attend him still. (Applause.) I can not close without referring to the absence from our meeting to-day of Mr. James Marke Wood, who has for some time been laid aside by serious illness. Mr. Marke Wood joined the board of this bank in the year 1875, and became a member of the committee of management in the year 1883. He has always taken the deepest interest in the bank, and, by his sound judgment and wide business experience, has contributed in no small degree to the successful conduct of its affairs. The loss of his active co-operation is a matter of deep regret to the directors. (Hear, hear.)

Mr. S. Gibson Sinclair (deputy-chairman) seconded. After the lucid explanation by the chairman, no other words, he said, were required.

The resolution was carried unanimously.

Mr. Hugh Nicholson moved: "That Sir Thomas Brocklebank, Bart., Mr. Hugh Lyle Smyth, Mr. S. Gibson Sinclair, and Sir W. H. Tate, Bart., be appointed directors of the bank." Anyone, he said, would consider it an honour to have such a resolution placed in his hands to move. It is the re-election of three directors and the election of one director. They are all right men in the right place, and he thought it would be very difficult to find a better list.

Mr. W. Little seconded the resolution, which was passed unanimously.

The Chairman: On behalf of Sir William Tate, I have to say that he is extremely sorry that he could not be present here to-day owing to the duties attached to the office of High Sheriff. He has been called away to Manchester.

Mr. G. C. Dobell moved: "That Messrs. Harmood Banner and Son be appointed auditors of the company for the current year, and that their remuneration be fixed at the sum of 600 guineas." We are all agreed that we are well served by these gentlemen.

Mr. F. D. Muir seconded, and the resolution was passed unanimously.

Mr. G. R. Stansfeld moved: "That the thanks of the proprietors be accorded to the board of directors for their valuable services during the year." I feel quite certain that every one of you will be willing to carry that vote in a most cordial manner. We have listened to the remarks of our chairman and the report he has put before us with feelings of the very greatest satisfaction, and I particularly was gratified with regard to the careful manner in which the bank's investments have been handled, which is one of the most difficult matters to be dealt with in view of the large depreciation of the present time. As an old proprietor and an old director of the Craven Bank, I was particularly pleased to hear from our chairman that the amalgamation of last year has been in every way successful. I am glad, indeed, on behalf of the Old Craven Bank to hear that, and we are not only much indebted

to the directors for the careful carrying out of the business affairs but for their intention of making the half-yearly dividends more nearly equal in future. (Applause.)

Mr. T. L. Pelling seconded, and the resolution was passed unanimously.

Mr. L. S. Cohen proposed: "That the thanks of the meeting be also given to the committee of management and the general manager and other officers of the bank." His firm had been a client of the bank for the past forty years, but he was always sorry that he was not a shareholder many years before he became one. When he looked back upon his various investments he felt sorry that all his investments were not in the Bank of Liverpool. (Laughter.) He had been a borrower from and a lender to the bank; in both conditions he had not felt the least anxiety. (Laughter.) Sometimes in trying to borrow from the bank he had been treated a little bit hard, because he had not always got the conditions he thought he ought to get. (Laughter.) If the general manager treated everybody as he treated him, Mr. Simpson was the right man to be general manager. (Laughter and applause.) They heard a great outcry in the country in connection with the House of Lords that the peers should not be hereditary. That should not apply to bank managers. They had Mr. Simpson, jun., as general manager, and, happily, they also had with them that day Mr. Simpson, sen. (Applause.) They all honoured the general manager and the committee, and wished them long days. They all regretted the cause of Mr. Marke Wood's absence, and he hoped he might be soon restored to health to continue to give the bank the benefit of his advice as he had done for many years. (Applause.)

Mr. S. S. Bacon, in seconding, said that he was one of the oldest, if not the oldest customer and shareholder of the bank. His firm opened an account with the bank on the day it opened, and their dealings had always been pleasant and satisfactory. The bank was now as well managed as it ever was, and while they thanked the directors for their supervision, they realised that the detail fell principally upon the managers, who had to look after all matters that arose day after day. They might tender to them their best thanks. He had great pleasure in seconding Mr. Cohen's resolution. (Applause.)

The Chairman, in putting the resolution, said the board had the greatest pleasure in re-echoing everything that had fallen from the two speakers. (Applause.)

Mr. James Hope Simpson (general manager), who was warmly received, in reply, said: I have been asked by the committee of management to discharge my usual duty of thanking you in their name for your very kind resolution of thanks. I can bear my testimony to what has already been said as to the assiduity with which the committee have discharged their duties. The balance-sheet and the profit and loss account which we are able to show you to-day are sufficient evidence that the results have been eminently satisfactory. With regard to the management and officers of the bank, I feel that thanks to myself are really to be shared in a very ample degree by my colleagues in the management and by all the officers of the bank. We in the management could do nothing for you and for the customers unless we were well supported by the whole staff, from top to bottom, throughout the year, and I may say we have every evidence of the care and attention which the staff bestows upon the business of the bank. (Applause.) I would like particularly myself to thank my colleagues in the general management in the Northern district, the Craven district, and here, and the managers of our large city offices, including the head office manager, and also our chief inspector and his staff, and then all the managers of the branches. We have a good many branches in many important towns where the managers, being alone, have to exercise a great deal of responsibility, which they do remarkably well; and I feel that you are not doing wrong, but doing right, in passing a vote to the whole management and staff of the bank. (Hear, hear.) I only hope that we may also be supported by your interest in the bank and by your introduction of new business. (Applause.)

Mr. Arthur Earle moved: "That the thanks of the meeting be presented to the chairman." He presumed that, as one of the oldest directors and one of the oldest shareholders he had had opportunities of knowing how well the chairman had discharged his functions, and how regular was his attendance at the board; in fact, he did not know what they would have done without him on a great many occasions. (Applause.)

Mr. James Lister, with great pleasure, seconded the resolution, which was carried.

The Chairman: Mr. Earle, Mr. Lister, and gentlemen, I thank you. (Applause.)

The meeting then closed.

JULY MAGAZINES.—The *Strand* is packed with holiday fiction, and has also quite a number of special articles to recommend it, amongst others being one on ambidexterity and another on the goat moth. Its 100 picture gallery will give good ideas to some who are hesitating where to go, and the Chronicles of the Strand Club are more amusing than ever. "All the Sports," from fishing to fighting, are expounded in *C. B. Fry's*. It is a most versatile magazine, and so is the *Wide World*, with "all the adventures." The *Captain* announces its 100th number, which is a sufficient recommendation in itself. It seems to us to have improved of late, and exhibits less of the foolishly sensational element. Lastly, there is the *Grand*, in which Mr. H. G. Wells holds forth on Socialism under the title of "New Worlds for Old," and Mr. Arthur Grimes discloses the relationship between butter and soap.

NOTICES.

INTERNATIONAL POLICYHOLDERS' COMMITTEE.

THE MUTUAL LIFE INSURANCE COMPANY OF NEW YORK POLICYHOLDERS' PROTECTION ASSOCIATION COMMITTEE.

British Committee—

LORD ST OSWALD
J. S. HARMOOD BANNER, M.P.
ROBERTSON LAWSON, *Hon. Sec.*

Offices for the United Kingdom—

PALMERSTON HOUSE,
34, OLD BROAD STREET,
LONDON, E.C., 12th July, 1907.

We now learn that, as the result of the recent ballots for election of Trustees and Directors of the Mutual Life Insurance Company of New York and the New York Life Insurance Company, the nominees of this Committee were unsuccessful, and the Management remains practically in the same hands as at the time of the recent scandals. It must be a matter of profound regret to the large majority of Policyholders in this country that no British representative has been elected on the Board of either Company to protect the British interests. This result is of course largely due to the strenuous efforts made by the present Management of both Companies to retain the management at their own hands. Nevertheless, this Committee feel that the action they have taken in endeavouring to secure proper representation on the Board will have been useful if it tends, as is believed has been the case, to produce, for the time being at all events, greater economy in the working of the Companies and more attention to the management and investment of their funds.

The contributions received by this branch of the Policyholders' International Committee and the Mutual Life Insurance Company of New York Policyholders' Protection Association Committee were not sufficient to pay the total expenditure, and the balance was provided by the International Committee Headquarters. The Accounts of the British Committees have been audited by Messrs. Price, Waterhouse & Co., C.A., who have certified to the correctness, and are open to the inspection of contributing Policyholders at any time.

Under present conditions, as it does not appear probable that any advantage can be derived from a continuance of the Committee, it is now being formally dissolved.

On behalf of the Committee,
ROBERTSON LAWSON, C.A.,
Hon. Secretary.

THE STOCK EXCHANGE. NOTICE

NO MEMBER OF THE STOCK EXCHANGE IS ALLOWED to ADVERTISE for business purposes, or to issue circulars to persons other than his own principals.

Persons who advertise as Brokers or Share Dealers are not Members of The Stock Exchange or under the Control of the Committee.

ONE HUNDRED AND SECOND REPORT, *submitted to the Shareholders at the Ordinary Half-Yearly General Meeting, on Wednesday, the 17th July,* 1907, *at Cannon Street Hotel.*

The Directors have to report that, after making provision for bad and doubtful debts, the Gross Profits of the half-year ending 30th June last, as shown by the annexed statements, amount to £158,200 4s 7d, which, with the balance of £10,723 9s 9d brought forward from the previous account, gives a total of £168,923 14s 4d.

After providing for all charges, and reserving £100,843 1s 9d for Rebate of interest on bills not matured, there remains a net profit of £55,084 8s 4d for appropriation. It is proposed to apply £42,333 5s 0d to the payment of a Dividend at the rate of Ten per cent. per annum, free of Income Tax, leaving a balance of £12,751 3s 4d to be carried forward to next account.

Your Directors also report that an opportunity having occurred for the purchase of adjoining Freehold Premises, they have availed themselves of it, feeling assured that this acquisition will materially enhance the value of the property as a whole.

*** The Dividend will be payable on and after the 19th July instant.

The Secretary, having read the Advertisement convening the Meeting, and the Auditors' Report, presented the Directors' Report and the Half-Yearly Accounts, which were taken as read. It was then—

Moved by THE CHAIRMAN, seconded by MR MURRAY GUTHRIE, and resolved unanimously—

That the Report and Accounts now read be received, adopted, and entered on the Minutes.

Moved by THE CHAIRMAN, seconded by MR CHALMERS, and resolved unanimously—

That a Dividend be declared on the paid-up Capital of £846,665, at the rate of Ten per cent. per annum, free of Income Tax, payable on and after the 19th July, and that the balance of £12,751 3s 4d be carried forward to next account.

Moved by MR MILLAR WILKINSON, seconded by MR E. HENDERSON SMITH, and resolved unanimously—

That the cordial thanks of this Meeting be given to Mr DOXAT, the Chairman for his able conduct in the Chair to-day, and also to all the Directors for the highly satisfactory result shown for the half-year.

Moved by MR GEORGE C. DUNN, seconded by MR EDMUND BARNES, and resolved unanimously—

That on behalf of all the Shareholders thanks be given to Mr WADE, the Manager, and to all the Staff, for their able work and its gratifying result during the past half-year.

(Signed) EDMUND THEODORE DOXAT, Chairman.

Extracted from the Minutes,
17th July, 1907.
CHARLES WOOLLEY, Secretary.

BALANCE-SHEET, 30th June, 1907.

In accordance with the provisions of the Companies Act, 1900, we certify that all our requirements as Auditors have been complied with.

We have examined the Securities representing Investments of the Company, those held against Loans at call, short and fixed dates, and all Bills discounted in hand. We have also proved the Cash Balances, and verified the Securities and Bills in the hands of Depositors. The foregoing accounts agree with the books, and we are of opinion that the Balance-sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs as shown by the Books of the Company, except that it does not state the amount of Investments and Bills placed as security against Deposits.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 499. New Series. SATURDAY, JULY 27, 1907. (Registered as Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Anglo-Argentine Tramways.

The board of this prosperous but over-ambitious company has failed to send us the documents issued in connection with its latest scheme of absorption, and we have not managed to lay our hands upon them outside. Therefore anything we have to say on the subject must be based upon such summaries and criticisms as may have found their way into the daily Press. A perusal of these has not made us fall in love with the scheme devised for the purchase of the Buenos Ayres and Belgrano Electric Tramways Company's system. As far as we can make out at its initial stage the proposals add £40,000 per annum to the fixed charges of the leasing company, the Anglo-Argentine, whose existing £1,300,035 5½ per cent. cumulative preference shares are to get an extra half per cent. from the first of this month onward, while the £1,600,000 of ordinary shares will get their dividend raised from 8 per cent., the recent rate of distribution, to 10 per cent. as a fixed non-cumulative second preference security. Then new ordinary shares to the amount of £1,600,000 are to be handed over to buy up the undertaking of the Belgrano Company, and shareholders are asked to sanction the creation of £5,000,000 in all of this new ordinary capital, so that the directors of the Anglo-Argentine Company may have £3,400,000 in hand with which to carry on the projected further absorptions and consolidations, a great ambition. If it proceeds with the remaining companies on the same lines the directors have adopted in dealing with the Belgrano Company, it will need all the money, for a shareholder points out that the price to be paid for that Belgrano system involves a profit of £250,000 to the Belgian Compagnie Générale de Tramways de Buenos Ayres all made within a brief space of three months, that company having been first in the field as rival absorber. There is also apparently a debenture issue contemplated, the amount of which is not yet fixed, but may be between £3,000,000 and £3,500,000, the only limit to this amount being the stipulation that the interest charge imposed by such stock shall not exceed £180,000 per annum. Whether that is a wise limitation or not it is impossible to say until the terms of purchase for other lines are given. There are plenty of these besides the Buenos Ayres and Belgrano and the Buenos Ayres City, which is already leased to the Anglo-Argentine at a cost of an annuity of £71,060. There are, for example, the Buenos Ayres Port and City Tramways, the Buenos Ayres Electric Tramways, the Buenos Ayres Grand National Tramways, the Buenos Ayres Lacroze Tramways, and the Buenos Ayres New Tramways companies, all of which are doubtless purchasable at a price.

Probably the Anglo-Argentine, on annexing bent, could not avoid paying a handsome profit to the Belgian company for the transfer of its acquisition; but was it absolutely necessary to give that company control over the Anglo-Argentine Company's policy by allowing it to vote on the whole immediate proposed issue of new ordinary capital, in virtue of a mere payment down of £200,000 by it? The Belgian company takes 40,000 of the 320,000 new shares to be issued, and is to exercise the powers conferred upon the entire issue until such time as the whole amount is paid up, by substitution presumably, two years hence. This at least is the statement made by a shareholder who has been looking

into the subject, and we have not seen it challenged anywhere. The Belgian company has not only the voting power, but a right to dividends, and in the distribution of assets in a winding-up "equivalent to that which would be conferred by the whole of the 320,000 shares if issued." A hard bargain truly, and one that shareholders ought to scrutinise with jealousy, although it may mean nothing more than the lien of the Belgian company over the asset it is parting with until the exchange of shares has been completed.

But the main objection to the transaction after all seems to us to lie in the profuse mortgaging of revenue which the scheme, as thus far developed, involves, and in the swelling out of capital totals. None of these companies have more than a limited concession, and in the end the whole of their properties falls back into the hands of the municipality. Sinking funds are, no doubt, being provided by most, if not all, of them, but these sinking funds will only make good at the end of the lease the par value of the capital sunk in the various undertakings. Meantime the high, the enhanced dividends payable upon the new preference shares will probably send these to a more or less fancy premium, the whole or part of which holders may have to sacrifice when the business is ultimately transferred. Not only so, but to assume continued prosperity, through monopoly or otherwise, for the remaining term of the leases is to invite disaster, or, at least, financial embarrassment. Affairs are quiet enough now in Buenos Ayres, and the Republic as a whole is unquestionably progressing in material wealth, but beneath the surface much discontent exists, and one of these days we believe another explosion of that discontent is certain to occur, because the old rivalry between the rich province of Buenos Ayres and the other provinces, all poor and all spongers upon it, is by no means diminishing. A revolt may not be successful; the Radicals, or inhabitants of the province of Buenos Ayres, may not be able to drive out the up-country provincials, who have for so many years held the Government of the country in their hands and battened on the spoil; but they are powerful enough to create infinite disorder and to demoralise for an indefinite period the traffic of all tramway lines radiating from that city into the country. To load up undertakings like these tramways with excessive preferential charges, swollen-out share capitals, and heavy debts is therefore to invite trouble, which will be certain to come suddenly one of these days and result in enormous loss.

Economic and Financial Notes.

The Savings Bank Deficiency.

How it occurred we do not know, but we missed the answer to that interesting question put the other day by young Mr. Bowles to the Chancellor of the Exchequer. He asked whether it was the case that on the £156,142,564 to which the total deposits of the Post-Office amounted on December 31 last, the loss at that date was £13,083,738, these assets, representing money all payable at call or on a few days' notice, being worth at the market price of the day only £143,058,808? Where did he get the exact figures of that deficiency, and how did he work it out? He probably had the help of his clever father in making the calculation, but we should really like to know the arithmetical process by which the sum was reached because the balance-sheet as published does not enable outsiders like ourselves to make more than a guess. Mr. Bowles went on to ask whether at the same date the debt of the Government to trustee savings banks exceeded the value of the assets in hand by £3,142,593, and whether its liability to friendly societies exceeded the value of the securities held by £247,635, so that the total excess of Government liability over the value of the securities held was in these three cases taken together no less than £16,473,966, while the total cash balances held towards meeting the whole liabilities of these various credit-handling institutions amounted to no more than £252,757.

Mr. Bowles went on to point out that the value of all the securities in question has fallen by from 1 to 2 per cent. since the date of the balance-sheet, so that the deficiency of the Post Office and trustee savings banks and of the friendly societies is considerably more now than it was on December 31 last, and he then inquired, in view of the fact that the Consolidated Fund is liable to make good all these and any other and greater deficiencies that may arise, whether the Chancellor of the Exchequer would take some measures to ensure the holding by the savings banks of at any rate a gold reserve such as bankers in similar circumstances are accustomed to hold. Also he wanted to know why Mr. Asquith did not take measures to reduce this total deficit of over £16,000,000 by charging a portion thereof from time to time upon, and paying it out of the Consolidated Fund to the various insolvent banks. These are very acute and penetrating inquiries, and we are particularly delighted over the blow got in at the Chancellor of the Exchequer on the gold reserve. That gentlemen has been bold enough to lecture bankers in general in a rather supercilious way upon their duties in this respect. He has even a committee, we believe, sitting to inquire into the best methods of compelling the joint-stock banks to hold larger reserves in gold, while he himself, the biggest banker of them all in virtue of his position, keeps no reserve at all. Without the general cash balances of the Post Office to fall back upon he often could not conduct the current business of his savings bank. Can there be any position more calculated to excite ridicule or anxiety? What tends to exasperate us is that Mr. Asquith's handling of the dangerous state of affairs, known and more or less admitted, differs in no respect from that of his predecessors. He is as contemptuously *laisser faire* as the most careless and ignorant Tory could be.

South African Option Syndicate.

Who would imagine that a company bearing this very ordinary sort of title possessed untold riches in diamonds, sapphires, rubies, chrysoberyls, and Somabula blues and whites? We do not know what Somabula blues and whites are, but maybe the secret will leak out at the meeting next Monday, when shareholders will gather together to wax enthusiastic over the report for the 18 months to December 31, 1906, issued with remarkable celerity for a Rhodesian venture. As a rule these things are not even thought of until they have been out of date for a couple of years or so. Perhaps at this point we may explain that the company was formed to exploit Sir John Willoughby's famous diamond discovery, or was the discovery made by somebody else?—and Sir John, the managing director, sailed for Rhodesia soon after the general meeting held in February, 1906. He has been personally in charge of the operations in South Africa since that time, and his chief efforts have been devoted to the Somabula area. Except that the man who supplied some of the working plant apparently ought to be hung, nearly all of it having to be chucked away or altered, and that for a long time the water supply caused no end of trouble, things have been going on pretty well. We gather these facts from Sir John's detailed reports, the directors being merely pleased to state that after many delays inseparable from operations so far distant from any large centre, the steam plant ordered in December has been erected, the water difficulty has been overcome, and the company is now on the eve of a regular production of diamonds from the Somabula area.

We do hope the market will not be flooded with "Somabulas," because De Beers and Premiers have been most disgustingly weak lately, and they do say that the Yankee market silent panic last March has quite upset the American demand for brilliants. It may even have brought a few heirlooms on the market. Besides, just take note of this, one carat of Somabula equals in value three to four carats of the Premier, and say nearly 1¾ carats of De Beers, while the expenses of treatment at Somabula should be one-third of the Premier and one-seventh to one-eighth of those in Kimberley. Now, a simple arithmetical cal-

culation will show that if De Beers made two million odd in profits last year, Somabula ought to do something quite decent in the sweet by-and-by with expenses only about 12 per cent. and value just on twice as good. Six or seven millions a year ought to be easily managed, and the capital being nice and light now, the Premier ought to be knocked into a cocked hat. Strikes are or are expected to be of almost everyday occurrence, and the only way to keep a record is to number them. Nos. 1, 2, 3, and 4 so far discovered and thoroughly tested contain a very large amount of ground available for washing by the present plant, and already 3,814 carats valued at £15,118 have been produced. Other precious stones found total 29,500 carats.

But one discovery made during the exploration of the Eastern side of the Somabula Valley fairly licks creation, and Sir John is probably prepared to eat his sombrero if the deposit does not contain 24 million loads of diamondiferous gravel. Moreover, the actual existence of diamonds has been proved. When the general meeting was held in February, 1906, the company owned a 25 per cent. interest in the Somabula area, and during last year a further 15 per cent. was purchased from the prospector, increasing the holding to 40 per cent. In all the circumstances it is most unfortunate that a misunderstanding has arisen between Sir John Willoughby and the company of which he is chairman and managing director with respect to the terms of his agreement, and the board seeks authority from the shareholders to adjust the matter with the raider. The balance-sheet is a most bewildering production, and beats us all ends up. There are options on shares renewed without consideration and finally exercised, options renewed and not yet exercised, others dropped altogether, transfers from premiums to profit and loss, and the payment of a dividend from the money, some wonderful entries connected with premiums paid or not paid, we are bothered if we know which, transfers from this account and that, debits charged to reserve, and so on until the mind is in a perfect maze and we feel as though we have had a first-class Yankee brain storm. We can therefore only take the directors' word for it that the resources of the company, after providing for all liabilities at the end of the year, were approximately £22,000, and are not going to damp the enthusiasm by asking anything about the numerous gold "mines" and other Rhodesian calamities whose interests Sir John protects.

Frederick Sage and Co. (1905), Limited.

Whatever may be the extenuating circumstances, the fact cannot be hidden that the operations of this important business of shop fitters, &c., since it was converted into a limited liability company little more than two years ago, have been attended with far-reaching disaster. We are not quite sure of all that happened at the annual meeting held in March last year when the first report was presented, but remember quite well that a movement for a committee of investigation and threats of legal proceedings were warded off by the chairman by means of sundry promises. One of these took the form of giving the ordinary shares held by the public a prior claim to a 6 per cent. dividend for five years over the portion still remaining with the vendors. It was further suggested that a reserve of £10,000 should be built up for the protection of the preference shareholders before the vendors participated, and the chairman offered to personally arrange for the payment of the preference dividend for the year then current. In exchange for these not very valuable concessions, seeing that the dividends on the ordinary shares were still to be contingent on profits, the chairman was to be secured in absolute control of the business, and the demand for investigation was to be withdrawn. If memory serves us these proposals were not accepted, but apparently the directors were given a chance to retrieve the position. What has been the shareholders' reward? A report and accounts appearing a good nine months after the close of the financial year, disclosing a state of affairs little if any better than that submitted in March, 1906. But on this occasion a certain amount of excuse may be said to exist. It is well known that the company received the contract for fitting out the Mazawattee provision shops, the terms being—again we rely upon memory—actual cost plus 10 per cent. for establishment charges and profits, and it was probably inevitable that the disastrous outcome of that shop policy should react on the company which had undertaken the work. After the crash came a lawsuit, some very ugly charges being levelled, charges which could not be substantiated, and the outcome of the proceedings has resulted in recovery of the company's claim against the Mazawattee for work done, less allowances amounting to under 3 per cent. On the other hand the claim in respect of damages for breach of contract, interest, &c., was disallowed by the official referee on technical grounds. This remains to be dealt with on appeal, and on the decision depends the question of costs of the reference which are not included in the accounts now under review. There is probably no doubt that business was seriously disturbed by the breach of contract which appears to have been committed by the Mazawattee Tea Company. It left the works badly congested with undelivered goods especially made for that concern, and is said to have produced a severe temporary check to the business of the year, it being impossible to replace at once the work involved in a contract of such magnitude.

Shareholders may be inclined to accept the directors' version and give them another chance, although it cannot be forgotten that the previous year's results, without any extenuating circumstances, were just as bad, but at the meeting this week there was a renewed demand for investigation, and the gathering has been adjourned for three months to see what can be arranged. Trading profit, it appears, came to £23,950, and transfer fees yielded £40 or £23,990 in all, against £12,159; but by the time all expenses had been met and provision made for maintenance, depreciation, and bad debts, this profit was reduced to £5,125. That is bad enough, but what can be said of the staggering charge of £4,277 for directors' fees and management? The directors and others concerned are, of course, quite entitled to draw this money, but surely the position calls for a little generosity on the part of those who sold the business at such a handsome price. Income-tax accounts for £249, and the balance of profit is just £598. At the end of the company's first year there was a profit and loss deficiency of £4,345, and as the preference dividend for the year to date has been paid with £7,073, mainly by the aid of £7,201 advanced by Mr. F. G. Sage, the chairman, the debit to date is £11,421 after crediting the profit for the year of £598. It's a terrible state of affairs. Preliminary expenses figure for £10,327 and goodwill account at £104,886. Premises at home and at Cape Town, together with machinery, plant, and fittings are valued at £33,332, and the directors talk of transferring to the premises a large portion of the company's works in order to cheapen the cost of production and escape the increasing burdens inseparable from London manufacture. The company owes £67,905 to sundry creditors, including £25,000 on loan, and possesses such assets as stock-in-trade £85,242, work in progress £33,518, sundry debtors £45,803, and cash £7,958. Economies are being made wherever practicable to diminish working expenses, and the directors pray that the depression in the building trades may soon pass away. How managed the company to earn the profits disclosed in the prospectus, in face of this depression, which is certainly no more acute than it was three or four years ago?

National Railways of Mexico.

Particulars are still withheld about the terms on which the stock and bond holders of the Mexican Com-

tral Railway and Mexican National Railroad companies will be taken into the new company bearing the above name, but the amount of the various stocks with which the new corporation will start business is now published, and adds up in Mexican dollars to $1,294,000,000, or say £130,000,000, a formidable figure enough in appearance. The total will be split thus: in ordinary shares $150,000,000, in 4 per cent. first preference shares, non-cumulative, $60,000,000, second preference shares entitled to 5 per cent. non-cumulative out of profits remaining after all charges ranking above have been met, $250,000,000; preferred mortgage 4½ per cent. bonds for $462,000,000, to be redeemed by a sinking fund, beginning in 1917, and all to be "retired" on or before 1957, refunding being governed by the proviso that no more than 5 per cent. premium must be given for them; and finally come the general mortgage 4 per cent. bonds, which are unconditionally guaranteed, principal and interest, by the Mexican Government, and begin to become redeemable at par in 1937, redemption to be ended 40 years later. Between now and then a few things will happn, including, perhaps, other absorptions and reorganisations, but the meaning of this one is that the two great Mexican railways running north to the United States border will now become, for all practical purposes, the property of the Federal Government. Rumour says that holders of Mexican National preferred shares will get par in the new first preferred stock in exchange for it, plus $10 a share in cash, and that for Mexican Central first income bonds the exchange price will be 110 in common stock of the new company, while the same company's second income bonds will get 85 per cent. in new common and Mexican Central common par in new common. Whether this is a guess or the truth we know not, but Messrs. Speyer will probably soon enlighten the public. We see no reason for doubting that the consolidation will be beneficial, but everything will depend upon the people in control. Will these be Mexicans or Yankees, or a mixture? The properties it is proposed to combine have a length, it may be added, of about 5,000 miles, but part of the National system is still narrow gauge, the company's lines having been originally all built on that scale. Both companies were originally Yankee, and the domicile of the Central company is still in New York. It is an "American" railroad, in short, and will become Mexican only when the present fusion has been carried to completion. The past history of both systems has been full of disappointments, and there was no small turpitude attaching to the conception and building of the National line. None the less were prospects or possibilities always good, we see no reason worth discussing likely to prevent the promises of the past from being made good under the new organisation.

American Business Notes.

Last week the averages of the New York Associated Banks were actually allowed to show an increase of £100,000 in the loans and advances, but that was nothing to the increase of £590,000 in the specie, an increase hardly affected by the small drop of £36,200 in the greenbacks. Had not the liability on deposits also gone up, and by £440,000, the surplus reserve might have made quite a brave show, and even as it is the increase is £443,800, making the total £1,817,600 as compared with £3,878,200 at the same date in 1906. But the banks are, all the same, ill able to cope with the burdensome and multiplying demands made upon them, and in no sense can the New York money market be considered strong, relieved though it now is from the strain imposed by exports of gold to Europe. To Paris alone the total outflow of the metal has been £4,100,000, but the exchange no longer favours shipments. If, then, trade expansion on credit pauses in the Union, the money market may pull round. But there must be an enormous amount of American finance paper afloat on European money markets at the present time.

Given a good average crop and good average markets for the grain, and this perhaps might not matter so very much, but crops and markets both are still in doubt. The latest news and estimates about the harvest are rather unpromising, the average condition of maize being put at 80.2 against a ten-year mean of 85.9 and an estimate last year of 87.5. Wheat, however, though not expected to be much more than a three-fourths crop, is showing better, in the States at least, and the Missouri Board of Agriculture puts the expected yield in that State at 13½ bushels to the acre, or very little less than last year. In another week or two facts should begin to correct guesses, but at the best the harvest in all cereals seems likely to be short of an average one. No universal failure, however, is to be looked for such as would send up prices on foreign markets, and if American middlemen arrange to hold the crops against the consumer they may bring about just that breaking strain upon the financial structure which now sustains Wall Street necessary to bring it down and give realities a chance.

Savings banks in Massachusetts, it may interest the Chancellor of the Exchequer to know, are now authorised to do industrial insurance business, and the lawmakers there seem to think that they can offer better terms by doing the business much cheaper than the companies specially devoted to the burial policy demands of the poor. Yet industrial insurance cannot be deemed excessively dear in that part of the world if only 37.21 per cent. of the premiums goes in expenses, and the banks cannot hope to conduct insurance of any kind as cheaply as they handle deposits, for unless they employ canvassers to bring the people to the scratch they will get little of the business. What a nice mode, though, of filling up deficits and getting rid of "arbitrary" shortages of assets a big industrial branch would be to our Post Office Savings Bank. Mr. Asquith might turn his brilliant talents in that direction instead of sacrificing them in helpless imitative initiation of old-age pension schemes.

Business is beginning to slide back all over the Union. The copper dictators knocked 3 cents per lb. off the price of copper, and thought consumers would tumble over each other in their haste to load up. Nothing happened, and the copper mostly remains unsold. In the iron trade business is also falling away, and although the output of pig-iron for the first half of this year is said to have been over 800,000 tons in excess of that for the same half of last year at 13,500,000 tons, sales are poor. This must be the case since it has become well-nigh impossible for the joint-stock consumers of any degree of credit to obtain the necessary capital on any terms.

The stock of money in the United States on the 1st of this month is officially returned at £650,260,000, of which £37,400,000 is in the Federal Treasury and the balance in circulation. Comparing circulations alone the respective totals for July 1 this year and last are, in round aggregates, £583,000,000 and £550,000,000, showing an increase of £33,000,000 on the twelve months. To this increase notes of the National banks contributed £8,200,000, gold coin and bullion rather more than £5,000,000, and gold certificates no less than £17,000,000. Apart, therefore, from the expansion in the paper-secured note issues, the increase could not be deemed to be brought about in any unwholesome way. Between greenbacks and banknotes, however, the merely fiduciary money in circulation was on July 1 last £187,000,000, and in addition £94,500,000 in silver certificates was in the hands of the people, this being paper money secured upon depreciated silver and passing current on a gold basis.

New issues have not been conspicuous this week or last, for the simple reason that they cannot be marketed. They are created, though, and will be sold on the first chance. Just at the moment the underwriters cannot take them. They are stuffed up, even like our own, and yet they dare not suspend business. All they can do is to demand ever hardening terms

so as to be able to pawn still what they take and cannot sell. The Fort Dodge, Des Moines, &c., Railroad wants £500,000 on a new issue of 5 per cent. bonds, the United Railways Investment Company requires £600,000 on 6 per cent. 3-year notes, the Natchez and Eastern Company £340,000, and the St. Louis, Brownsville and Mexico Railway has the whole or a portion of £280,000 in 5 per cent. notes to sell at 96½ and interest. The notes are redeemable in three years' time. These are samples among the railways, and among industrial companies we note that a Portland cement company in Pennsylvania has increased its bonded debt from nothing to £800,000 at a stroke, and that the Pittsburg Steel Company wants to place, at 102½, £800,000 in 6 per cent. 15-year bonds, of which £600,000 is new capital; the bonds may be redeemed at 110 after seven years. The Pocahontas Consolidated Collieries Company is also about to offer £1,200,000 in new first mortgage 5 per cent. bonds, part of a total of £4,000,000, but that may be, in part at least, to pay for the assets of the companies taken over, and there is no new money in the £1,200,000 of new 6 per cent. collateral notes sold to Kühn, Loeb and Co. by the Westinghouse Electric and Manufacturing Company. The money is required to provide for the 5 per cent. notes of the like amount falling due.

The threatened suit against the American Tobacco Company has been begun in New York by the United States Government. Besides the American company, the British-American Tobacco Company, the Imperial Tobacco Company, and others to the number of 59 corporations and 29 individuals are indicted for violations of the Sherman Anti-trust law. It is set forth in the indictment that the defendants control 75 per cent. of the output of crude tobacco in the States, 80 per cent. of the manufactured tobacco, 95 per cent. of the snuff, 80 per cent. of the cigarette production, and 90 per cent. of the small cigar trade. The petition further alleges that "through the Imperial Tobacco Company, in which the American company is a large stockholder, more than 50,000,000 lbs. of leaf tobacco are annually purchased in the United States and shipped to the Imperial Tobacco Company in England, of whose stock the American company owns two-thirds and the Imperial company one-third; also, that at the plants of the American company in the United States about one-half of such tobacco is converted into cigarettes and other articles for consumers, which are sent abroad and constitute more than 90 per cent. of exported tobacco products. The remainder is exported in crude condition." This seems an awful crime, doesn't it? "No?" But the suit may be good Presidential Election tactics.

Shareholders in the United States railways who have been disturbed a little by the fear that the various States would combine to make a dead set against the liberty of each system to make its own charges, will be reassured by the news that the State of North Carolina has been beaten in its attempt to enforce its law limiting the railway passenger fares to a maximum of 2¼ cents per mile. The railways in the State resisted this, and two of their employees were accordingly imprisoned for charging fares in excess of the legal maximum fixed by the State law. Their case was taken into the Federal Court, by which they were promptly liberated, and the whole law declared to be unconstitutional. Appeal will lie to the Supreme Court, but that august body is not likely to reverse the decision. Much as we dislike American railroad methods, we can have no sympathy with sectional legislation of this description. It can do no good and is bound to produce friction, not only between the railroad corporations and the States, but between these States and the Supreme Government.

No Commissioner the Canadian Dominion has ever had worked with such industry to make its progress known as Lord Strathcona. Hardly a day passes, certainly never a week, without some cheering message coming along illustrative of the manner in which the country is growing in wealth and population. In the end of last week, for instance, we were told by him that in the month of May 45,077 immigrants reached Canada, being an increase of 5,450 or 23 per cent. on the total for the same month of last year. This brings the aggregate for the first five months of 1907 up to 131,777, or 25,643 more than in the corresponding period, and in order to cheer these arrivals up as well as the people left in the old country he goes on to say that the latest crop reports are good for the Canadian Northern Railway Company's main line and elsewhere, so that the droughts apparently are not known to this zealous official. The *Times* correspondent in Ottawa supplemented this information by telling us that in five years the number of employees in Canadian manufactures has increased by 47,452 persons, and the amount earned by them by £10,229,000. What is to be interpreted by means of this we do not quite know, but it implies a plentiful expenditure of new capital and lots of other good things.

Whatever may be said about Mr. Harriman's moral position in relation to the Standard Oil monopolists and the railway combinations he has effected in the south-west of the United States, he manages to make a grand show of results. Hardly was the fiscal year of the Union Pacific and Southern Pacific companies completed when out he came with a preliminary statement of earnings and expenditure quite dazzling in their magnificence. The Union Pacific Company earned in the twelve months $75,781,000 or $8,500,000 more than in the preceding year, and the balance available for distribution on the common stock is sufficient to give it 20 per cent., although probably Mr. Harriman and his associates will only pay 10 per cent. In actual fact the nett revenue went up $6,732,000 to $31,952,000, which was an increase of $2,734,000. How these increases are reached we have no means of knowing, but the finance of these companies resembles that of the colony of New Zealand, which borrows a few millions and ends its year with a triumphant budget surplus of £600,000 or £700,000.

Equally brilliant are the figures for the Southern Pacific Company, which, although the larger undertaking, is controlled through the Oregon dependency by the Union Pacific group. Its gross earnings for the year are put at $124,887,000 or $19,245,000 more, of which $7,253,000 are made to appear as the increase in nett receipts, whose total is given at $42,301,000. After meeting all charges there is $23,757,000 left, which the common stock might have, or $4,966,000 more, and the final surplus is $20,000 up in spite of the fact that the ordinary stock dividend has been doubled, raised to 5 per cent. When is the Southern Pacific Company going to come for another $100,000,000 of capital?

Passing Events.

Shareholders in the Scottish and New Zealand Investment Company, now in liquidation, have no small cause to congratulate themselves on their good fortune. A circular issued by the liquidators tells them that a final distribution of 9¾d. per share has now been paid, and in January last the shareholders got 3s. per share, while in previous years 15s. 0d. was given back to them. Thus altogether they have received back 19s. 3¾d. in the £. We have known other New Zealand companies do much worse than this.

Particulars regarding the agreements entered into by the Leopoldina Railway Company with the Federal Government of the United States of Brazil, with the Government of the State of Espirito Santo and that of the State of Minas Geraes, have been issued to the shareholders, who are summoned to an extraordinary general meeting to be held on Tuesday next in order to ratify these compacts and to sanction an addition to the company's capital. Various advantages accrue to the Leopoldina company through these agreements, and it also assumes sundry obligations, including the construction of branch lines and extensions so as to enlarge the traffic capacity and local utilities of the

company's lines. It is owing to these agreements to construct and extend that much extra capital will be required, the agreement now submitted covering some 570 kilometres of line, the building of which it is calculated will ultimately involve an expenditure of £2,000,000, of which, however, only £500,000 will be required during the next twelve months. Among the gains to be set against this outlay is an exemption from import duty on all materials, &c., calculated to yield an immediate economy in working expenses of £35,000 per annum. The extension of tenure of the lines in Minas Geraes is also calculated to relieve the sinking fund to the extent of £25,000 per annum, and an income from the new lines of £120,000 a year is also looked for, so that the new capital ought to be amply secured. For the present the shareholders are to be asked to sanction an increase in the company's capital to the amount of £1,200,000 in £10 shares, of which 12,000 shares will be ordinary and the other 100,000 preference bearing a dividend of 5½ per cent. per annum and ranking in priority to the ordinary capital, but without further participation in the profits. It may be added that the concession of the State of Minas Geraes is extended for 49 years to 1999, but the company undertakes to spend £125,000 in the course of the next two years towards the cost of establishing colonists on the land to be opened up.

Japan has a very troublesome piece of business on hand in Korea. Her Government has struggled for many years to secure and maintain the ascendancy in that God-forsaken peninsula, and has hitherto been thwarted first by the Chinese and then by the Russians. Having swept away both these antagonists it is now face to face with the native population, which is one of the most helpless, shiftless, and at the same time refractory to be found in all the Asiatic continent. That the Japanese, however, will succeed is probable enough, and recent events in Seoul are an indication of the resolution with which the Imperial Government is setting about its task. The helpless but obstructive Emperor has been deposed and his son set up in his place, as a puppet maintained in an honorary position in order that the letter of the compact between Japan and Korea may be kept. With the old Emperor has gone his *entourage*, and in spite of the disturbances which broke out in the capital when it became known that the Emperor had been sent about his business it is to be expected that the grip of Japan over the country will now be assured. Whether, however, its Government will be able to do anything with the Korean natives is more than doubtful, and we fear that if Korea is to be opened up and converted into a remunerative portion of the Japanese dominions it will have to be repeopled from one end of the peninsula to the other. That is a long and formidable undertaking.

Natal has had its budget, like other self-governing colonies, and in introducing it the Treasurer rather boasted that imports for the year ended June 30 last amounted to £11,131,000, against exports, exclusive of specie, of only £9,601,000. How this extraordinary feat was performed the Treasurer does not seem to have explained, but it is doubtless to some extent the product of the splendid borrowing capacity of this colony, which has raised more money per head of its white population than any other two British self-governing colonies in existence, and which wants more. It can only live by loans, in fact. Much of its import trade, however, is probably transit trade going into the Transvaal, so that the balance of account may not be really so adverse for the colony as the totals just quoted make it appear to be. At any rate, the revenue for the current year is estimated at £3,791,000, which is a very good figure for so small a country. This is including £150,000 expected to be produced by new taxes. Expenditure, however, is estimated to come within £4,000 of this handsome total. It is mentioned that there was a nett loss of £17,000 on the railways last year, and that, small though the figure is, reminds us of the problem besetting South Africa. The railways of that great territory will either bring the various States together or rend them completely asunder before all is over.

The Sultan has broken out in a new place as a borrower, so far as we can recollect. Having got all he could out of the German banks and from the Imperial Ottoman Bank he has now betaken himself to the Lighthouse Administration, from which he has succeeded in obtaining an advance of £300,000 at 7 per cent. interest, with a promise that a supplementary £150,000 will be handed over at a future date. Really, the ingenuity of Abdul Hamid in finding creditors ready to answer his appeal is worthy of all admiration.

A member of the Stock Exchange has sent us the enclosed effusion, which is apparently being circulated broadcast through the post by the land-jobbing agency, and we print it as written, suppressing, however, the name and address of the company. The friend who sent it to us describes the circular, which is written like a private letter, as "a specimen of impudent advertisement," and wants to know why the Post Office allowed the thing to pass with a halfpenny stamp. Even more interesting is the question what the Stock Exchange will think of the use of its address in this peculiar effusion, and if its Committee wants to make inquiries the name and address of the company are at its disposal.

Dear Old Chap,—I promised you some time ago that when I came across anything specially good in the market that I would give you the tip.

I have just been spending the week-end by the sea, and have come across a little investment by the way which has tempted me, and I don't think it is an opportunity to let slip.

I went to Minster-on-Sea on Saturday, and had a most delightful surprise. I had no idea that there was anything like it so near London—the air is invigorating, the land high, and the panoramic views over the North Sea and inland over the Medway and the Kentish Hills are most glorious. I feel a different man after my short holiday.

I found that there is land to be had there which is just being laid out for building purposes, with roads, water, &c., and being so handy for town I think there is a great future before the place, and as it becomes known there must be a great rush for the plots as they are put on the market. Any one securing an early choice of sites should do well.

I have already taken up some, and think I shall go down again soon. If you think anything of it drop a line (p.c. will do) to The Blank Land Company, 00, Moonraker-street, London, E.C., and they will send you full particulars and dates of sales. They run a special down for their sales, and for about 3s. 6d. I think it is they give you a good lunch and a few hours by the sea, so that you can get an idea of what the place is like.

Yours ever,

In the Know.

P.S.—Don't say anything about this until you have bought all you can do with, *then* boom it for all you are worth!

London Stock Exchange, Monday Afternoon, 190....

Apparently the Germans are a good deal exercised about the future of their sugar trade with the United Kingdom, and it is reasonable that they should be so, because they are our greatest source of supply, beating France, Austria and our own Crown Colonies by many thousands of tons per annum. Our Government has wisely intimated that it will denounce the Brussels Sugar Convention and resume its freedom of action. In all probability Germany will follow suit, and that fantastic arrangement will come to an end, leaving every country at liberty to go its own way. German producers are therefore anxious that we shall pledge ourselves not to grant bounties to our own colonies, but be prepared to treat colonial cane sugar and beet sugar on an equal footing, and to admit German sugar at the lowest scale of duty bestowed on any country. We do not think they need have much anxiety upon this point, at any rate so long as the present Government is in power. Our Colonies have gained nothing by the elaborate system of obstruction brought into being in their favour, and will lose nothing at all, if they are energetic, by fair and equitable terms, as against their rivals.

So the Government of New Zealand is not going to confiscate the estates of large landowners there in the high-handed manner originally proposed. Those who own real property in land to the amount of £40,000 capital value and upwards are not to be pounced on without warning and forced to sell at an arbitrary

Government valuation whether they like it or not. That method was found to be altogether too drastic, and Sir Joseph "Oats" Ward and his Ministry have found a better way. They are going to graduate the taxation upon land in such a manner as may enable them to bleed the large proprietor to death. He will thus dwindle away and fade out of sight without making too much disturbance in the social fabric.

It has long been thought in City circles that the wonderful process acquired by the Dunderland Iron Ore Company was a failure from the commercial point of view, and the directors now confess as much in an interim report. In September last it was stated that the plant was turning out about 100 tons of briquettes daily, and this was regarded as a very satisfactory beginning, although much more was required if the large capital sunk was to receive any return. Instead, however, of being able to increase the output as they expected the directors found serious defects had developed in the fine-grinding machinery, and considerable alterations had to be effected which necessitated the closing down of the plant during the latter half of April. The magnetic separation plant has also given trouble through the magnets becoming choked by particles of ore, and the percentage of iron recovered has not been up to expectations. Considerable difficulty, too, was experienced with the briquetting presses, and the company altogether appears to have paid a very high price for a process which had not been properly tested. The directors, however, are hopeful that their troubles have now been surmounted, as the briquettes turned out are giving satisfaction to those who have used them in both blast and steel melting furnaces, and are realising prices very much above that originally estimated. At present the works are producing about 1,500 tons per week, but it is anticipated that when the altered grinding rolls have settled down and the adjustments in the magnets are completed the output will rise to 3,000 tons, and that a production of that quantity will yield a surplus after providing for debenture interest.

The London County Council is to be congratulated upon its "deals" with a French syndicate represented by M. Ernest Gerard and with the Dominion Government. The syndicate has taken a lease for 99 years of that portion of the inner rim of the Aldwych Crescent facing Kingsway at a rent of £55,000 per annum, and is going to erect buildings after designs provided by M. Gerard at a cost of approximately £300,000. Behind them on the Strand side, hidden by the church of St. Mary-le-Strand, the Canadian Government is going to put up a magnificent building where all the Canadian interests will be centralised, and the chief building whereof is to be dutifully named Strathcona Hall. Upon this portion of the property, which we presume has also been leased for 99 years, although we have not seen any mention of the rent to be paid, a block of buildings estimated to cost £400,000 is to be put up. Thus both sides of the inner portion of land left by the crescent which sweeps round from the Strand at the Law Courts past Kingsway and back to the *Morning Post* new office, will have been filled up when these projects are completed, and only the portion at the opposite corner to the Gaiety building is now left to be disposed of. The whole area thus leased away amounts to nearly three acres, and the buildings to be put up upon it taken together will, the *Times* says, represent a property value exceeding £1,250,000. None of us will be alive when that fine property falls in to the citizens, but it may reduce our rates a little in course of time.

A suggestive publication has been issued by the Government illustrative of the distribution of the Imperial revenue, and exhibiting the balance left for Imperial purposes after all local charges have been met. It covers the past fiscal year, and shows us that out of the total income of £151,019,000 no less than £56,592,000 was spent locally. What this means, though, we are unable to say. Does it include the local expenditure upon police, the upkeep of barracks in various parts of the country, the outlay upon war material furnished by private directors, or what? We can quite understand that all salaries of civil servants employed throughout the country are embraced in the total, as well as the entire cost of education as borne by the Imperial Exchequer, the upkeep of the revenue service, their buildings and so on, as also the cost of the administration of justice, but how much else do the figures embrace?

Leaving that aside, it is interesting to observe the different proportions of money levied in each of the three kingdoms for Imperial purposes after local demands have been satisfied. England, for example, provided last year £125,692,000 of revenue, and spent £42,951,000 of it locally, leaving £82,741,000 for Imperial purposes. Scotland's contribution to the revenue was £15,837,000, of which it kept £5,[illegible]2,500 for local purposes, leaving £9,874,500 to be used Imperially. Poor Ireland, on the other hand, was able to furnish only £9,490,000 altogether, of which no less than £7,[illegible]78,500 was spent within the island, so that its contribution to the Imperial wants was only £1,511,500. There ought to be room for economy here, even allowing for the cost of the Royal Irish Constabulary, unless, of course, the cost of the Irish garrison of regular troops is included in the sum kept back. Putting it in percentages England's contribution to what may be called the Imperial revenue was 83·23 per cent. of the whole, Scotland's 10·49, and Ireland's 1·28 per cent.

Shareholders appear to have expressed themselves very freely at the extraordinary meeting of the London Power Omnibus Company. Ever since the commencement of its career the concern has worked at a loss; at one time the expenses were 1s. 9d. per car mile and the receipts 11d. At June 30 the debit balance amounted to nearly £43,000, so liquidation is inevitable. We are afraid those connected with the company will not get much sympathy, for they have rushed into a business they knew nothing about, and indulged in high falutin' estimates of wonderful traffics, giving no heed to those who warned them that working expenses might prove more wonderful still. Now there is heart-burning, disgust, and bad language, but no remedy. Pioneers seldom meet with much commiseration, and yet these suffering ones meant well.

We beg respectfully to observe that Judge Rentoul, K.C., talked mischievously in sentencing that unfortunate man Soanes for misappropriating clients' securities. His Honour seems to have been told by some wag or ignorant person or persons that it was "the habit of stockbrokers to deposit the securities of their clients with their bankers in order to get money for their own use," or words to that effect; and he went on to make the sagacious observation that no amount of usage could make that kind of thing legal. We agree, but then the custom that evoked this unhappy deliverance does not exist. Mr. Rentoul was dealing with a case which itself proved that no such usage prevails, for Soanes was in the dock just because he violated the established rule that holds the property of clients sacred. Any violation of that rule, if detected, would involve the instant expulsion of the guilty member. The Stock Exchange has had buffets enough lately, and it has also perhaps sins enough to answer for, but of this particular turpitude it is not guilty. Its membership as a body is composed of honest and honourable men, who do not steal, and it really is too bad that a charge so unfounded should be laid at their doors.

Sir James Reid, Bart., M.D., G.C.V.O., K.C.B., has been appointed a director of the Clerical, Medical and General Life Assurance Society, in the place of Sir John Williams, Bart., resigned, and Mr. William J. H. Whittall, the former manager of the Society, a director in the place of the Rev. Prebendary Kemble, deceased.

The Furness Railway has just issued an additional series of six picture post cards, illustrating the coast scenery served by its line. The cards are produced from drawings specially made for Mr. Horace Cooper by the well-known firm of Raphael Tuck and Sons, Limited, which is sufficient guarantee of their excellence from an artistic point of view. They are issued in packets of six cards in a packet.

Critical Index to New Investments.

Sumatra-Deli Rubber Estates, Limited.

This company has a decided advantage over many of the recently formed undertakings, as it acquires an estate on which development work was begun in 1895. Some 1,500 acres have been planted with rubber and tapioca, and there are now over 350,000 trees of a species indigenous to the country, of which 132,000 being six years old and upwards are being tapped, while the estate when fully planted will carry over 1,500,000 trees. Altogether, about £100,000 in cash has been expended on the property to bring it to its present stage, and the vendors ask £190,000 in shares, or shares and cash, at the company's option. In addition the promoting syndicate is to get £25,000 in shares for services rendered, and the remaining 85,000 shares, out of a total capital of £240,000 in £1 shares, were offered for subscription. It is estimated that, with a nett profit of 3s. per lb., the income, including £6,691 per annum from tapioca, should amount to £26,615 in 1907-8, and increase thereafter until in 1910-11 a revenue of £111,424 is expected, and if results come anywhere near these figures the company should do well enough. A good deal, however, depends on whether current prices for rubber can be maintained in face of the ever-growing competition, and the shares therefore are at best a speculative investment.

Bahia Blanca Gas Company.

The Bahia Blanca Gas Works (Construction) Syndicate, in which the Buenos Ayres (New) Gas Company is largely interested, has so far carried out the work that the undertaking is reported to be practically in order for the supply of gas within a month of the present time. For the lands, works, and permit from the municipality the company pays £70,000 in ordinary "B" shares, £70,000 in cash or ordinary "A" shares, and £44,350 in cash, the last two amounts being the estimated expenditure of the syndicate. The total capital is £300,000, divided into 46,000 ordinary "A" shares of £5 each, and 70,000 ordinary "B" shares of £1 each, and 30,000 of the first-named were offered for subscription. These "A" shares will be entitled to a non-cumulative dividend of 6 per cent. per annum, and to half the surplus profits after the "B" shares have received a like distribution, the other half going to the "B" shares, which are all issued to the vendors. The new company will have a powerful competitor in the electric light already established there, but as Bahia Blanca is a rising city and likely to become the most important shipping centre for the southern portion of the Republic, there should be plenty of scope for the development of the industry.

Western Canada Timber Company, Limited.

This company takes over the undertaking and assets of the Canadian Pacific Timber Company, Limited, consisting of a mill at Gerrard, Trent Lake, British Columbia, 40 limits of about one square mile each, and a leasehold area of 2,560 acres, together estimated to contain about 260 million feet of timber. The timber is valued at £80,247 and the mill at £20,165, or a total of £100,402, exclusive of new machinery now on the ground, and were bought by the Anglo-Canadian Finance Company, subject to liabilities of about £10,474 for £30,000 in cash and £33,000 in shares. In the transfer to this company, however, the purchase price is expanded to £32,500 in cash and £99,693 in shares, so that the promoters are not very modest in their ideas of a fair profit. The total capital of the company is £175,000, in £1 shares, but 75,000 of these are held in reserve, to be issued if required for the purpose of conversion of debentures, and the offer to the public consisted of £75,000 6 per cent. first mortgage debentures at par. These debentures may be converted at the holders' option at the rate of one share for every £1 surrendered up to December 31, 1909, and any outstanding after that date will be redeemed at 105 by annual drawings within a period of 12 years. The prospectus is silent on the results obtained by the original company, and Mr. Leslie Hill's estimates of an average annual profit for the next 19 years of £29,630 makes a rather unsatisfactory substitute for this lack of information.

Carlton Hotel, Limited.

This company commenced business in July, 1899, and has issued altogether £200,000 in 5½ per cent. preference shares, £150,000 in ordinary shares, and £875,000 in debenture stocks and debentures, the bulk of the latter having been created to provide funds in connection with the Ritz Hotel. More money is required owing to the extension of the company's operations, and in order to pay off the indebtedness on loans 50,000 ordinary shares of £1 each were offered for subscription at £1 1s. 3d. per share. Profits for the seven years of the company's existence are stated separately, and show that after rising from £46,000 for the year ended August 31, 1900, to £63,762 in 1903, they dropped to £56,419, £56,798, and £57,886 for the three succeeding years, while the dividends since 1902 have been at the rate of 10 per cent. per annum, and the shares, therefore, seem fairly good as a speculative purchase at the price asked. They were underwritten by the company's brokers for a commission of 6½ per cent. and a fee of £625.

Selsey-on-Sea, Limited.

An estate of upwards of four square miles on the peninsula of Selsey Bill, Sussex, is acquired by this company for the purpose of developing it as a seaside resort—with the present day attractions of a golf course and motor track. For this the price paid is £89,860, of which £29,860 is satisfied by a mortgage to the vendors, ranking after certain other mortgages and £60,000 by the issue of ordinary shares, and in addition mortgages for £60,140 are taken over. The total capital is £180,000, in £1 shares, of which 119,993 were offered for subscription, together with £60,000 in 5 per cent. first mortgage debentures of £20 each, and 60,000 of the shares and all the debentures were unwritten for commissions of 7½ per cent., and £1,800 respectively. No estimate of profits is ventured upon, which is, perhaps, wise, but the directors state that the Selsey Development Company, Limited, owning a few acres of land, formerly part of the estate now purchased, recently paid a dividend of 20 per cent. A bald statement of this kind, however, tells nothing, and even when it is backed up by a list of seaside resorts which have prospered is of no use as a guide in estimating the success of the new venture. That will depend so much on the skill with which the business is handled, that neither the shares nor the debentures can be regarded as anything but speculative.

National General Insurance Company, Limited.

The undertaking of the National Burglary and Fire Office is taken over by this company, which intends to extend the operations by including the various classes of business comprised under the general head of accident insurance. Established 15 years ago for burglary insurance only, the original company built up a very good connection, and during the past ten years its nett premium income increased from £12,808 to £40,973, while its accumulated funds increased from £3,005 to £28,183. Its nominal capital was £100,000, and the amount paid up on December 31 last was £10,000, on which a dividend of 5 per cent. was paid, but the new company is a much bigger thing, with a nominal capital of £1,000,000 in £1 shares. The manager estimates that with half this capital paid up, the trading profits and income from investments for 1908 should be sufficient to pay a dividend of 15 per cent, and on the strength of this a premium of 5s. per share was asked for the 500,000 shares offered this week. Apparently this calculation is based on the opportunities afforded by the Workmen's Compensation Act, but that is such an unknown field that calculations are pure guesswork, and the directors would have been better advised if they had counted on a smaller dividend, and issued the shares at par.

Borough of Durban Municipal Loan, 1907.

The Standard Bank of South Africa invites applications for £300,000 4 per cent. registered stock of this borough at the price of 95. At present the debt of the municipality amounts to £2,240,000, of which £490,000 was raised locally and £1,750,000 in Lon-

don, secured upon assets valued at £4,098,460, of which £1,384,375 represents lands unalienated, £449,936 water works, £279,576 electric light, and £1,049,149 municipal buildings, telephones, &c. The objects of the present loan are the extension of the electric tramways, lighting and motive power, water supply, sewerage, town hall buildings, &c. During the five years to 1905-6 the revenue from rates and remunerative undertakings has increased from £262,865 to £385,620, while the profits from these undertakings last year amounted to £78,621 or within £15,311 of the sum required to meet the interest on all borrowed money.

El Progreso Mexican Mines, Limited.

Several mining properties in the State of Sinaloa, Mexico, which cost the African and Australian Company $60,000 Mexican, or £6,000, are resold to this company for £16,500 in cash, an increase in value it would be difficult to explain. The capital is £50,000 in 5s. shares, and subscriptions are invited for 120,000 shares, the remaining 80,000 being held in reserve. Nowhere in the prospectus is any mention made of the metals to be found, and the results of assays made are given in dollars, but a reference to Mr. Ralph Nichols' report shows that it is a mixed mine with silver predominating. Mr. Nichols speaks hopefully of the prospects, but without some knowledge of the basis of his calculations it is impossible to say whether his views are justified or not.

Champion and Slee, Limited.

Messrs. Champion, the oldest vinegar brewers in London, are giving up business and selling the site of their works. The opportunity has accordingly been take to sell the business to Messrs. Slee and Slee, also vinegar brewers, and out of the amalgamation thus brought about this company emerges with a share capital of £140,000, half in 6 per cent. cumulative preference and half in ordinary shares of £1 each, 15,000 of each class of share being taken by the vendors in part payment of the purchase price of £110,000. The balance, consisting of 55,000 of each, is offered for subscription at par, and the £30,000 remaining after paying for the businesses will be utilised as additional working capital. Accordingly £5,977 is set down for the goodwill, trade marks, &c., of both businesses, but the premises of Messrs. Slee and Slee at Tower Bridge, with all the plant and machinery therein, as well as the fixed and loose plant, machinery, &c., taken over from Messrs. Champion are bought by the company, the one at £47,888 and the other at £24,225, which look full prices. Estimates, however, on the basis of a certificate of profits show enough to pay 10 per cent. on the ordinary shares with £8,144 left for depreciation, directors' fees, reserve fund, or further dividends. Profits, though, are not shown further back than for the year ended December 31, 1904, and then alone in the case of the Champion business. For Messrs. Slee's business the exhibit does not go back beyond the year ending March 31, 1906.

Books Received.

Collectivism and Industrial Evolution, by Emile Vandervelde—Socialist Library, No. 5. (London: Independent Labour Party, 23, Bride Lane, E.C.) Price 1s. 6d. nett.

Accounting and Banking, by Alfred Nixon and J. H. Stagg. Longmans' Commercial Series. (London: Longmans, Green and Co., 39, Paternoster Row, E.C.) Price 10s. 6d.

Anglo-African Who's Who, 1907. Edited by W. H. Wills. (London: L. Upcott Gill, Bazaar Buildings, Drury Lane, W.C.) Price 10s. 6d.

New branches of the London and County Banking Company will be opened on the 29th inst. at Post Office Corner, Bournemouth (under the management of Mr. William Ellis), and at 16, Hill Road, Wimbledon (under the management of Mr. G. Cull), which will be named "Wimbledon," while the present one will be known as "Wimbledon Common."

The Sheffield correspondent of the *Financial Times* states that the directors of John Brown and Co., Limited, intend to issue to the shareholders in proportion to their holding 150,000 £1 ordinary shares at 32s. 6d. per share. These shares form part of the increase in capital rendered necessary by the fusion with Harland and Wolff, Limited.

Letters to the Editor.

THE MORALE OF THE GERMANS.

Sir,—I have read the article "Industrial Germany" in yesterday's Investors' Review with much interest. It is indeed a most damnable fallacy to argue that Protection is the cause of German prosperity, such as it is.

The fact is, that education, during the last 100 years, and discipline of life generally among both sexes, have gradually eliminated the parasite, loafing, wastrel element in Germany, which is still England's curse, and imbued the whole German race with a capacity for work and its corollaries: economic discipline and efficiency. This in itself explains a deal. It is no longer possible to live in Germany by working three days a week, as is done by many thousands in England. If you read the evidence collected some years back by the Royal Commission appointed to inquire into the causes of physical degeneration in the Staffordshire Potteries, you will not require any elucidation from me on this matter. In other words, there are still millions of people in England to-day, who, if they were transplanted to the leading countries of the Continent, and did not at once fit themselves into the strenuous conditions prevailing there, would simply die of starvation. You will hear on all sides that the English emigrants who go to the United States either have to work there as hard as people are obliged to work in America in order to live, or they disappear—*i.e.*, are pitilessly engulfed. How long the advantages which Free Trade confers on England (not to mention other conditions favourable to the unfit, such as our Poor Laws) will enable her untrained masses who decline to work to feed on beef and mutton, it is difficult to say. Old Age Pensions, in the form in which they are likely to be introduced in England, will probably do their share to further degrade those who are already an incubus on the community.

There are two points in German labour conditions with regard to which there exists wide misconception in England. The one is the nature and extent of taxation and the other the so-called "standard of life."

You say in your article that the price of a litre of beer, which hitherto cost the German consumer 17pf., now costs him 18pf. (equal to 2d.); but you do not add that this price is about half that which the English working man pays for an inferior, adulterated article. It is less, in fact, than a penny a pint. You say, further, that the tax on cigarettes—noxious stuff at the best, either here or in Germany—has been increased, but you do not add that tobacco taxation still leaves tobacco generally (cigarettes, as well as cigars and loose tobacco) less than half the price they are in England. Neither do you mention the fact that German laws largely prevent that devilish adulteration of food which G. B. Shaw tells us results in England in "the wholesale poisoning of the proletariate."

The German income-tax as it affects the working classes is almost a nominal affair, and has besides an excellent disciplinary effect. It forces the working man to keep a few marks ready, handy in his pocket for an emergency, and is thus a measure which would greatly benefit the English working classes, many of whom spend more money in one evening over a public-house bar than a German working man has to pay for income-tax in the whole year. Protection furnishes the largest item the German working man pays in the way of taxation. It is a tax on food, and there is no doubt that it is as onerous as it is unpopular among the German masses. For it is generally asserted and believed that Protection principally benefits the industrial capitalist—the trust-monger of the near future—and the agricultural landlord far less than those it is really, in the first instance, intended to benefit: the agricultural masses—as distinct from those engaged in industries. But even Protection at its worst at least as far as Germany is concerned, does not, as far as my observation goes, burden the masses to the extent it is usually believed; for the simple reason that they are much more frugally economical and their wives incomparably better housekeepers than their English cousins. And this matter brings me to the so-called higher standard of life which the English working classes are supposed to enjoy. But

it seems to me that this can only be substantiated if we take the eating of large quantities of badly cooked beef and mutton as implying a high standard of living. According to my experience of the world a high standard of life is not to be measured by the consumption of butchers' meat and adulterated alcoholic drinks, but is identical with a clean, well-ordered life. For as regards food alone, "man wants but little here below nor wants that little long." Judged by this standard, the bulk of the German working classes of both sexes live according to a higher standard of life than the same classes in England. And as long as they do I venture to prophesy that they will remain strong competitors, notwithstanding their handicap of Protection and our advantage of Free Trade.

One of the most highly principled and refined friends I ever possessed was a German working man who, beside a freehold cottage, never drew a higher wage in his life than 15s. a week. And yet he was in every essential a gentleman, who lived according to a very high standard of life. As a testimony of the type of man he was I may mention that when the proprietor of the factory died in which he was one among 600 workmen, it was discovered that his employer had designated him to be one of the executors of his will.

Yours &c.,

Sidney Whitman.

July 21st, 1907.

MINING NEWS AND NOTES.

****Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

If we made a long story of the position of the Kaffir Circus during this week it would only be to tell again what has been said a hundred, if not a thousand, times already, and since no one seems to be in the slightest degree interested in the movements the less space occupied the better, especially in these times when subjects of far greater interest crowd upon us. It is no uncommon thing for a day to pass and not 500 shares change hands, and the market has fallen into a condition of torpor from which it is absolutely impossible to rouse it. Occasionally one of the big-priced shares, like Crown Deep or Ferreira, moves up or down, usually down, to the extent of 5s., but otherwise it has become quite an event for a half-crown change to emerge at the end of the day. One day Paris wanted to sell 1,000 Knight's Deep shares, a little lot which in active times would have been taken without a wink, and the price probably not move sixpence, but the mere offer of these shares rolled the quotation back ¼, and even then they could not be disposed of. The market is in a thoroughly helpless and demoralised condition, and there for the moment we propose to leave it. It is said that every man comes by his own at some time in this world, and surely the magnates are now reaping the reward of their folly.

What is related of Kaffirs applies equally to Land and Finance things, and we may usefully move on to the Diamond group, where a little excitement has certainly been worked up. We have already mentioned most of the stories circulated about the De Beers mine, but there was another to the effect that this company and the Premier had had a deuce of a row, and that the Kimberley magnates had deliberately reduced the price of diamonds by 20 per cent., just to teach the Transvaal upstart a lesson. We fancy it would not be in the power of De Beers to do this except with the consent of the selling ring, but anyhow the usual denial soon came along, and an effort was made to recover a portion of the recent heavy fall. The "shop" supported with some vigour, and as soon as the market looked a bit brighter those who had strenuously denied the existence of differences between the two big mines asserted that the said squabble had been made up. So quotations steadily picked up throughout the week, and all other Diamond things followed the lead, especially Premiers and Jagersfontein. No one paid much attention to New Vaals, and South African Options, Willoughby's diamond thing, which are mentioned about once a month, were put down about 25s. on the report, making the price 4 middle compared with the last making-up of 5½. Roberts Victor were put 10s. better for no reason that anyone could discover. Rhodesians failed to hold up their heads, and a rumour got about that the Tanganyika Company was contemplating a new issue of shares. The price only went down half-a-crown on the day the story was denied, and dealers were positively jealous of the company's announcement that it had a cool million to go on with. It seemed such a pity to spend the money.

Passing by West Africans, in order not to say anything offensive to believers, there is a word or two necessary about West Australians, because it appears that the fears recently prevailing of possible labour troubles on the Kalgoorlie field can be dismissed, the old agreement between the mines and the men having been renewed for a period of two years, an increase in the pay for certain work having been conceded. A few shares benefited a little when the news came through, and while the tendency at the close was inclined to be heavy again this section keeps up pretty well. Oroya Black Ranges came into demand on the commencement of crushing. Deep Leads showed a bolder front, owing to the cablegram that the Victorian Government has agreed to lend the Loddon Valley £8,000 for special development work, on the understanding that a similar amount is spent by the company. Zincs collapsed on the circular outlining the proposal for raising fresh capital. The latest price is about 3s., and, as a prominent dealer remarked, with a little patience they ought to be easily picked up at threepence, if anyone wants them at all.

Copper shares commenced in good style, but the metal soon began to display weakness, and most of the leading descriptions fell back again. A rapid recovery followed, the metal going up at a great rate, and Rio Tintos, which had been as low as 81, after touching 83, came close to the best figure again. Other leading shares followed in a mechanical kind of way, Amalgamated being assisted in the middle of the week by the rally in Yankees. Great Cobars were in favour, and the market talked of a directors' meeting during the week, at which a dividend would be declared, but it was subsequently stated that nothing would be announced for some days. Mount Lyells advanced on colonial buying, and kept up rather well. Tins were somewhat neglected, but, on the whole, good.

Miscellaneous Mines have not been entirely without interest, the Indian group in particular attracting notice. Champion Reefs, which have recently shown rather pronounced dulness, spurted sharply, and the market now thinks that the next dividend will not show a reduction, and that, moreover, there is no probability of the company asking for more capital in the immediate future. We should think the last named is in accordance with the facts, because from a circular just issued by the Ooregum Company it appears that that concern has met with a rebuff in its latest attempt to issue more shares. Out of 137,000 offered only 38,544 have been applied for, and the directors are therefore under the necessity of using revenue for necessary expenditure. That means no dividend just now either for ordinary or preference shares, and it is impossible to congratulate the management on the manner in which the company's finances have been handled. These Indian mines have been far too lavish in the matter of capital outlay, the inevitable result of unduly high dividends during the most prosperous times, and now that things are not so flourishing shareholders have to suffer. There is need for going slow, and we hope the lesson will be taken to heart. Ooregums naturally relapsed, New Zealand things were irregular, and there was nothing very grand about the American group, Esperanzas being notably flat; but Siberian descriptions picked up a trifle, although it can hardly have been on the Troitzk return for June.

Rezende.—Since its reconstruction this company seems to have worked to rather better purpose and during the period from the restarting of the mill on March 1, 1906, to December 31 of the same year there was a revenue from gold and concentrates of £43,403. As the directors quite fairly point out the shutting down of the mill for the first two months of the year and the restricted monthly output owing to the shortage of water power have unfavourably affected the financial results as some of the expenditure which goes to make up the working costs remains nearly constant whether 20 or 30 stamps are working. Happily in the later months of the year the Penhalonga's Odzani power installation was completed and power rented from that company has supplemented the force obtained from the Umtali River, so the directors do not look for any further trouble from this cause. When the 30 stamps can be regularly employed the monthly output should be not less than 4,500 tons, or 50 per cent. over the average of the period under review, and in addition to the increased revenue which should naturally result a reduction in cost per ton milled may be looked for. Total working expenses for the period now under review were £37,516 and administration London expenses, depreciation, &c., took a further amount of £4,912, so that the balance of profit is reduced to the trifle of £1,021 bringing down the debt balance to £2,025. We shall look for something better next year. Development has been pushed forward throughout the year and the work in the western section has been very encouraging, practically opening up a new mine. There has been developed an ore body of considerable length along the line of reef which compares very well in length with the main ore shoot from which the ore has been drawn in former years. The consulting engineer estimates the value of the ore in this section as fully equal to that in the rest of the mine. Quartz developed and exposed aggregates 85,083 tons and the directors explain that while the ore developed shows an increase of 16,000 tons over the previous year's figures there is a decrease of 30,500 tons on ore exposed or a nett decrease of about 14,500 tons due to the engineer having struck out of his calculations this year a block of ore previously included but which is now considered to be of doubtful value. Steps have been taken to apportion the reduction in the valuation of assets under the reconstruction between the mining claims and the buildings, plant, &c., instead of throwing the entire amount on the first-named.

Wassau (Gold Coast) Mining Company.—Whatever may be its achievements in the future this concern will go down to immortal fame as having once paid a dividend of 1s. per share, a thing it had not the slightest intention of doing, and no one knows to this day how the thing came about. The only point we can be sure about is that it is not likely to repeat the performance in the proximate future. The latest report covers the year to December 31, 1906, but in accordance with the policy already approved crushing at the Adjah Bippo mine, which has

received all the attention during the period, was deferred until September 1, 1906. In the four months to the end of the year the gold recovered was valued at £28,718 while the treatment of old tailings produced £12,720 and interest and transfer fees £404 or an aggregate of £41,842. Expenditure in West Africa for the full year was £31,371 and the London outlay reached £3,487, while debenture interest accounted for £2,177 and stamp duties, discount on debentures and expenses of issue came to £1,574 leaving £3,239 nett. This has been written off development account, which was first increased by £39,503 to £61,448. From the point of view of quantity the development work of the year was satisfactory, the ore reserves at April 30 last being 106,450 tons, having a gross value of 11.3 dwts. fine gold per ton, say 40s., as compared with 34,000 tons with an extractable value of 44s. per ton at the end of February, 1906. This quantity would keep the present plant going for nearly two years, but if the improvement lately noticeable in the lower levels continues some increase in the milling plant might be discussed. A satisfactory point is the steady reduction of working costs, the average for the five months to May 31 last being 22s. 7 14d. compared with 23s. 9.67d. in the four months to December 31, 1906, and 48s. 5.28d. in 1904, in all cases exclusive of development. The supply of native labour is ample, and a fact that has largely contributed to the reduction in costs has been the greatly increased efficiency of both European and native labour. Natives are being employed with highly satisfactory results in many positions where in the past it was found necessary to employ highly paid skilled Europeans. In order that the development work mentioned might be proceeded with arrangements were made for a loan of £10,000, the lender receiving rather tempting terms, and the directors seem hopeful that the money will be repaid before the due date. Nothing has been done with regard to the Cinnamon Bippo property during the past year, but if working expenses can be kept down maybe the time is approaching when the directors of this company may consider some scheme for commencing operations on the property. The investment of £13,940 in West African companies shows heavy depreciation, and the company, of course, is not too well off in the matter of cash.

Gold Coast Amalgamated Mines.—This company is interested in three producing mines—the Abbontiakoon Block 1, the Prestea Block A, and the Wassau (Gold Coast) Mining, dealt with above. For the 15 months to December 31 last the Abbontiakoon crushed 83,840 tons, realising £166,376, or 39s. 8.26d. per ton, but the cost, including development and London expenses, were £378. 7.17d. per ton, so that the margin of profit was not exactly lavish. With a view of reducing working costs, arrangements were made to increase the original plant to a capacity of 400 tons per day, and the erection is practically completed, but it is not proposed to increase the tonnage treated until the development of the mine is well ahead of milling requirements. Total tonnage exposed on December 31 last was estimated at 145,537 tons, of which 78,625 tons were of an average value of 13.6 dwts. over a stoping width of 47 inches, and 47,352 tons of an average of 5.3 dwts. over a width of 61 inches. On May 1, 1907, the Prestea Block A had ore reserves of 306,320 tons in the mine and 25,990 tons on the dump. The mine is equipped with a battery of 50 head of stamps, five Wilfley concentrating tables and cyanide plant. Regular crushing was commenced on November 1 last, and during November and December 11,216 long tons were put through, realising £31,717 or £2 16s. 6d. per ton against working casts, everything included, of £1 13s. 10.7d. per ton. During the past five months of the current year the value per ton milled has ranged between 52s. 4.66d. and 83s. 4.04d., but some of the ore was taken from the richer portions of the mine and the returns are, therefore, above the average value of the whole of the mine. Apart from those mentioned, the Amalgamated company is interested in 19 other companies, the loans and debentures and shares taken at or under cost being entered at £172,093, while vendors' shares to the nominal amount of £341,053 are taken at nil which may, or may not, approximate to their true worth. A few Consols look most conservatively valued at 83 until we find on the same side an asset called "realisation and depreciation of Consols £2,250." The cash balance is £511 and £2,975 has been lent on the Stock Exchange. During the two years to March 31 last the company has done nothing except watch the progress or decline of the properties in which it is interested, and the operation has not been very profitable except to the directors, who have pocketed £2,000 in fees. With this included, the outgo has amounted to £4,970, against a revenue of £4,632 almost entirely from interest, meaning a loss in London of £337. On the property the outlay was £7,935 nett, depreciation and loss on buildings, stores, &c., being £5,734, and salaries, administration, &c., £1,820. The company has a capital of £100,000 and a reserve of £150,000, the latter being a sort of book entry.

Broomassie Mines.—Practically the whole of the report for the year to December 31, 1906, is used by the directors to growl and grumble at the slow progress of development made by the successive managers at the mine and the steps that have been taken to expedite matters. Let us hope that the plans laid out by Mr. Ernst Lichtenburg, who has been appointed consulting engineer, will be more successful. However, plenty of money was spent, the outlay on development, plant, machinery and general expenditure being £60,030, of which the mine itself contributed over £55,000, the mill having crushed 12,124 tons for 13,928 ozs., equivalent to 22.97 dwts. per ton, which realised £53,041, concentrates giving a further amount of £2,031. Prospecting work has been carried on at various points outside the main workings with results which seem to warrant further exploration at depth with the view, if possible, of [illegible] but Mr. Lichtenburg [illegible] in regard to the [illegible] rate of development can be [illegible] timbering of the [illegible] hauling of ore and [illegible] in hand and the [illegible] from the mine may not be sufficient to [illegible] regular crushing is resumed. [illegible] been made by which the [illegible] £15,000, the lenders having the right to [illegible] portion of the unissued shares.

United Exploration Company.—The [illegible] miserable concern talk loudly of [illegible] congratulation in the remarkable way the [illegible] leading West African mines are [illegible] have consistently expressed regarding them. We [illegible] must say something, but the results [illegible] March 31 hardly afford [illegible] that the nett profits before providing [illegible] a mere £332 up at £4,504. No less than £10,124, however, had to be provided for depreciation of [illegible] profit into a loss of £5,250, and the [illegible] to £157,488, a total which would damp the spirits of any but the most confirmed optimist.

Abbontiakoon Block 1.—Regular crushing was [illegible] by this company on September 1, 1905, but in October a serious fire in the main shaft retarded operations and for three months a very large proportion of the ore treated came from the dumps. In the period from September 1, 1905, to December 31, 1906, 83,840 tons were treated at a cost of £157,612 or 37s. 7.17d. per ton, and yielded 39,183 ozs. valued at £166,376 or 39s 8.26d. per ton, so that the nett profits, including £2,932 from sundry revenue," were only £11,698. No allowance is made out of revenue in reduction of the item of mine development amounting to £157,488, but £10,118 received as premiums on shares issued is written off. The company has been financing the Abbontiakoon Milling Company to the extent of £12,214 besides taking shares to the tune of £17,502, and has had to borrow pretty heavily in consequence. On December 31 it had raised £53,000 on loan, but this has since been increased to £60,000 and another £21,100 borrowed as well, while it owed £15,439 to sundry creditors. The total tonnage of ore exposed at the end of last year was estimated at 145,537 tons, of which 78,565 tons were of an average value of 13.6 dwts. and 47,352 tons of an average value of 5.3 dwts. Yet this is one of the undertakings to which our friends of the United Exploration Company look for their salvation!

Prestea Block A.—This is another of the crutches upon which the United Exploration Company depends, but it only reached the crushing stage in November last, and the results obtained afford no real clue as to prospects. The company has certainly done better than its neighbour, as in the two months it produced 7,461 ozs. valued at £31,717 from 11,216 tons or £2 16s. 6.0d. per ton, while working costs were £10,[illegible] or £1 13s. 10.7d. per ton. The whole of the cost of mine development up to the productive stage has been charged to capital account, and after providing for depreciation on buildings and machinery this item reaches a total of £[illegible] in addition to the £108,892 spent in the purchase of the property. Creditors are heavy at £51,528 as the company has gone in for financing other companies and has advanced £35,018 to these, while sundry debtors at £11,678 include a sum of £[illegible] due by the Prestea Railways on current account. Ore reserves on May 1 were 306,320 tons in mine and 25,000 tons on dump, but no mention is made of the assay value.

Akrokerri (Ashanti) Mines.—Matters did not proceed too smoothly for this company during the year 1906, and [illegible] has given the directors a considerable [illegible] with a good many mining companies but is [illegible] will with a far greater number in the future. The [illegible] obligation to redeem a certain amount of [illegible] the money for further capital expenditure [illegible] the provision of the 20 additional stamps and a [illegible] tain arrangements were then made under which the date of redemption of the whole series was extended for about four years, the consideration for one portion being the right to subscribe until December 31, 1911, for 25,000 shares at par and for the remainder the option to exchange £[illegible] debentures for 100 fully-paid shares instead of 80 as previously agreed. Work carried out during the past year has been principally the sinking of the main shaft at both sections of the mine, the completion of the driving of the fourth level at the south and the [illegible] of development of the northern workings. Now that the main shafts have been sunk ahead of the workings at both sections a much greater tonnage of ore reserves can be opened up each year than has been possible in the past and at less cost. There has been some falling off in the grade of ore along the fourth level, but the low grade zone is believed to be only local. Ore crushed was 22,798 tons producing bullion which realised £98,405, registration fees gave £57 and interest, discount and allowances £170, an aggregate of £98,632. Mine working expenses came to £41,251, depreciation of £15,934 was written off and £23,308 allowed for mine development, redemption being at the rate of 20s 0d per ton. Other charges [illegible] the balance of nett profit was the slender sum of £[illegible] subject to Government royalty and income-tax. This is added to the amount brought forward, making £13,942 in all. The company is suffering from severe scarcity of labour, and although the

additional 20 stamps were available for a trial run at the end of May sufficient labour was not procurable during June to enable the necessary ore to be raised to keep the mill going to its full capacity. The manager, however, looks for some improvement in this respect, and the directors say that provided the mill can be run to its full capacity even the exceptionally low grade ore crushed during June will yield a profit, especially in view of certain economies effected since the condition of the mine has been improved.

Associated Gold Mines of Western Australia.—This mine has long since fallen from its high estate, and its shares now stand at barely par, compared with we don't know how many pounds premium in days gone by. Last 12 months to March 31 it treated 109,730 tons at the sulphide mill and 45,502 tons of slimes were re-treated for a production of 61,067 ozs. of bullion, valued at £228,694. The nett profit is £98,658, or a little more than in the previous year, and after deducting £45,322 for development and shaft sinking, £940 for diamond drilling in the year, and £25,734 for depreciation on plant, machinery, buildings and furniture, the balance over is no more than £26,661. But last August the company paid a dividend of 10 per cent., absorbing £49,536, and entitling the directors to extra remuneration of £991. Another £2,477 went in dividend duty and the balance of £43,039 brought forward was therefore reduced to £16,697. This can hardly be considered a great result, but we are glad to note that all the development and shaft sinking outlay for the year has been written off, besides 20 per cent. of the outstanding balance. Depreciations in other directions seem fair, and the company has a good lump of Consols taken at market value. A vigorous policy of development and shaft sinking has been continued, and substantial additions have been made to the ore reserves. A year ago these were estimated at 263,696 tons, containing 150,388 ozs. of fine gold, or an average of 11.4 dwts. per ton, but on March 31 last, notwithstanding the year's extraction of 109,730 tons, there was a developed tonnage of 330,278, containing 170,864 ozs., or 10.34 dwts. per tons. These figures are exclusive of the ore bodies in the Iron Duke workings, concerning which so much has been said, and though the grade of ore has fallen off, this has been partly offset by reduced working costs. Mr. W. R. Feldtmann has made an exhaustive report on the whole property, directing attention more particularly to a scheme of exploration and development for the discovery of the continuation of the rich Iron Duke lode, which, when complete, should give a decisive result. In the opinion of Mr. Feldtmann "the possibilities of picking up the true continuation of the rich Iron Duke chute are, as yet, so far from being exhausted, still to be considered distinctly favourable."

Day Dawn Block and Wyndham Gold Mining.—Owing to the somewhat disappointing nature of the development of the reef entering the company's lease on its south-western boundary and to the falling off generally in the quality of the stone throughout the workings the returns from the mine have been less profitable than anticipated. But as on previous occasions when the workings have run into poor ore and the output has been reduced the greater part of the company's mill of 60 stamps has been employed on public crushing, so that the cost of development, necessarily heavy at such times, has been well provided for. Revenue from all sources during 1906 was £74,647, of which £41,076 came from sales of gold and bullion and £24,994 from outside treatment, crushing, &c. Mine and mill outlay was £59,642, London expenditure £1,232 and income-tax £1,011, leaving £12,941 nett. Including balance brought in there is £22,390 for disposal from which the directors propose a dividend of 6d. per share, carrying forward £9,233.

Tyee Copper.—Developments in this company's property during the year ended April 30 were not of a kind calculated to raise the drooping spirits of the shareholders, but the manager, worthy man, will not yet confess to being discouraged. Prospecting and developing were carried on persistently throughout the twelve months both at the Tyee and "X.L." mines without any new ore bodies being disclosed, but the manager regards the work as not altogether lost, as it "has shown us what formation is necessary for the deposition of a similar body of ore, and so should aid us in our future search." In the meantime, the Tyee mine has been practically worked out, while in the "X.L." mine no pay ore has yet been met with. The production from the Tyee mine last year amounted to 21,567 tons, with an average assay value of copper 3.471 per cent., silver 2.504 ozs., and gold 0.127 ozs., while the total ore received at the smelter was 21,092 tons dry weight, exclusive of 11,401 tons of customs ore. During the year 30,972 tons of ore were smelted and 2,815 tons of copper matte containing 2,237,276 lbs. fine copper, 73,128 ozs. fine silver, and 3,701 ozs. fine gold, were shipped. Nett proceeds, less £31,218 paid for customs ores, were £78,150, of which £22,506 was retained as profit, and with £5,870 brought in and £3,073 from interest, gave a total of £31,449 to be dealt with. Of this £6,255 was written off properties and concessions, and £3,222 off plant, buildings, &c., for additions made during the year, and after providing for income-tax it is proposed to pay a dividend at the rate of 7½ per cent. per annum. The directors find cause for congratulation in the increasing business done in customs ores, and state that they look forward to considerable improvement in this department for the future. That, however, is small consolation, as the properties and concessions, less the sums written off from time to time, stand at £56,294, while the plant, buildings, &c., at the mine are valued at £6,784, and both these items are to all intents and purposes dead assets. The smelter plant, &c., less depreciation at 10 per cent., is valued at £8,413, and the aerial tramway at £3,646, and in addition to investments of £56,148 representing the amount written off properties, the company holds £50,379 in high-class securities. Creditors come to £7,379 against debtors £3,763 and £5,696 in cash.

De Lamar Company.—This company makes a pretty poor display for the year to March 31 last, but maybe shareholders did not expect anything better. It has been explained in the monthly circulars that pending the installation of the filter press and during the early days of its working the mill would only treat a reduced tonnage. The quantity put through was 13,897 dry tons of the value of $13.70 per ton and the revenue at the mine was £34,381. Charges however, were £40,702 and the operations resulted in a loss of £6,533, which has to be added to the previous deficiency, making up a total of £9,383. The mine manager estimates the ore reserves actually developed as sufficient for not less than three years' working and this has been confirmed by independent investigation. Expenditure on new plant for the year was £2,011 and the total on new machinery and plant since August, 1905, has reached £13,713, which has been charged to capital account. The values saved increased even before the full installation of the filter press plant, both in gold and silver, but especially the latter, and special attention is drawn to the accumulation of mineralised clay of a gross estimated value of $77,000. Supplies of timber within reasonable distance of the mine have become exhausted and the price of coal is exorbitant, so the directors have arranged for a supply of electric energy. The cost of the installation will be £3,000 to £4,000, which the manager estimates will be saved in two years.

The Zinc Fiasco.—We are sorry for Mr. F. A. Govett, the chairman of this unhappy enterprise, because he believed in the process and all those connected with it. But we can hardly congratulate him on the scheme devised for providing the company with further funds and making what must be a last effort to convert failure into success. That something very serious was amiss was apparent months ago when those mysterious management changes took place, and there was no stemming the tide of disaster and loss to the shareholders, despite the vigorous protests of one of the yellow halfpenny morning sheets that everything was well. What is now said is that although the directors are informed that the results of the process itself on the plant of the Sulphide Corporation has been considerably improved, far greater difficulties have been met in the conversion and adjustment of the Potter plant than was anticipated, and it is not possible to postpone the steps which are necessary to set straight the financial position of the company. Mr. Govett speaks with truth when he says that the heavy fall in the price of the shares renders him powerless to raise the money by debentures on reasonable terms—not a very attractive plan in any case—and the necessary resources can only be obtained by reconstruction or some issue of shares which will be practically indistinguishable therefrom. As a matter of fact, the suggested scheme leaves the present holders of shares with far less chance of ever seeing a penny of their money again than any ordinary reconstruction we have ever encountered, unless they take the risk of putting up more money by subscribing for the new shares which it is proposed to issue. A meeting is to be called in due course, at which the position of the company will be fully explained, and the shareholders will be invited to sanction an issue of £182,000 preference shares to be offered to present shareholders *pro rata* in the proportion of two new shares for each five now held. These new shares will take the whole of the profits until they have received 100 per cent. in dividends, that is, a complete return of capital; they will then become 20 per cent. preference shares, and are to share *pro rata* with the ordinary shares in all surplus profits. This means practically the annihilation of the present capital, and it is a significant fact that the price of Zincs is maintained at about 3s. 6d. solely on account of the right they carry to subscribe for the new shares. The moral is obvious. If shareholders think it worth while to risk some more money on the chance of retrieving the position, well and good, but those who do not should sell their shares, great though the sacrifice must be, because when they are quoted "ex rights" their value must be as nearly as possible nothing. Maybe, of course, the scheme will not go through, shareholders preferring a straight assessment, but the fact is worth noting that arrangements have been made for the guarantee free of charge of 100,000 of the 182,000 proposed new preference shares.

The Tubes as Roads to Pleasure.—Few people look upon the tubes of London as quick roads to pleasure spots, but rather as a means of getting to business, to the shops, or the theatres. The London underground electric railways, however, are placing tube travel in a new light, and have issued a dainty, illustrated booklet showing the way to the numerous pleasure resorts of London by the tubes, or by the District Railway and the London United Trams, working in conjunction with the tubes. Such places as Hampstead Heath, Highgate Woods, and picturesque spots on the northern heights are served by the Hampstead tube, whilst charming resorts in the Thames Valley, such as Kew, Twickenham, Hampton Court, Richmond, &c., are now brought into close connection with all parts of London, through tickets being issued from stations on the tubes, either *viâ* the London United Tramways or the District Railway. Individuals or parties (substantial reductions being given the latter) will receive a copy of the booklet on dropping a post-card to the Passenger Agent (Tube Railways), 75, London Road, S.E.

NEXT WEEK'S MEETINGS.

MONDAY, JULY 29.

Copper Company.—Winchester House, 12.30 p.m.
Hibernian Bank, Dublin, 1 p.m.
Mexican Mining and Industrial.—3, Princes Street, E.C., 3.45 p.m.
Mexican Southern Railway.—Winchester House, 12.30 p.m.
Sapong Rubber and Tobacco Estates.—Salisbury House, 2.30 p.m.
Shell Transport and Trading.—Winchester House, 11 a.m.
South African Option Syndicate.—Salisbury House, 3 p.m.

TUESDAY, JULY 30.

Associated Gold Mines of Western Australia.—Salisbury House, noon.
Dublin United Tramways.—Dublin, 2 p.m.
East Gwanda Mines.—Salisbury House, 2.30 p.m.
Great Eastern Railway.—Liverpool Street Hotel, noon.
Leopoldina Railway.—River Plate House, 12.30 p.m.
North Metropolitan Electric Power.—101, Finsbury Pavement, E.C., 11.30 a.m.
Parker's Burslem Brewery.—Stoke-on-Trent, 10.30 a.m.
Rhodesia Consolidated.—Salisbury House, 12.30 p.m.
Robt. Campbell and Sons, Limited.—Winchester House, noon.
South-Eastern Railway.—Cannon Street Hotel, noon.
W. and C. T. Jones Steamship Company.—Cardiff, 3 p.m.

WEDNESDAY, JULY 31.

Akrokerri (Ashanti) Mines.—Salisbury House, noon.
British Steamship Investment.—Cannon Street Hotel, 3 p.m.
City and South London Railway.—71, Finsbury Pavement, E.C., 3.15 p.m.
Coghlan Steel and Iron.—Leeds, 3 p.m.
Electric Supply Corp.—Salisbury House, 2 p.m.
Great Boulder Main Reef.—Salisbury House, 2.15 p.m.
Kent Coal Concessions.—Cannon Street Hotel, 3 p.m.
Lake Copais.—15, Copthall Avenue, E.C., 2.15 p.m.
London, Brighton, and South Coast Railway.—London Bridge, noon.
London Trading Bank.—Cannon Street Hotel, 2 p.m.
Pelican and British Empire Life.—70, Lombard Street, E.C., 2.30 p.m.
Phœnix Assurance.—19, Lombard Street, E.C., 2 p.m.
Star of the East (1903).—Salisbury House, 2 p.m.
Taff Vale Railway.—Bristol, 2 p.m.
Trustees', Executors', and Securities Insurance. — Winchester House, noon.
Union Bank of Manchester.—Manchester, 11 a.m.
Weldons.—Savoy Hotel, noon.

THURSDAY, AUGUST 1.

International Tea Company's Stores.—Winchester House, 2 p.m.
London and County Banking.—Cannon Street Hotel, 1 p.m.
London and India Docks.—138, Leadenhall Street, E.C., 2 p.m.
London, Tilbury, and Southend Railway.—41, Trinity Square, E.C., noon.
Millars' Karri and Jarrah (1902).—Winchester House, noon.
New Zealand Agricultural.—5, London Wall Buildings, E.C., 2 p.m.
Threlfall's Brewery.—Cannon Street Hotel, noon.
Warner and Co.—Middlesbro', 11.30 a.m.

FRIDAY, AUGUST 2.

Barry Railway.—Barry Docks, 2.30 p.m.
Brentford Gas.—Westminster Palace Hotel, 2.30 p.m.
Brush Electrical Engineering.—Salisbury House, 11.30 a.m.
Charter Trust and Agency.—Winchester House, noon.
Colne Valley Water.—New Bushey, 3.30 p.m.
Gas Light and Coke.—Horseferry Road, S.W., noon.
Great Central Railway.—Manchester, noon.
Great Southern of Spain Railway.—Winchester House, noon.
London, Chatham, and Dover Railway.—Cannon Street Hotel, noon.
North Staffordshire Railway.—Cannon Street Hotel, 2 p.m.
Regent's Canal and Dock.—5, Lloyd's Avenue, E.C., noon.
Rhymney Railway.—Cardiff, noon.
Royal Brewery, Brentford.—Worcester House, E.C., 11.30 a.m.
Salter and Salter.—Pudsley, 2.30 p.m.
Vale of Glamorgan Railway.—Barry Docks, 3 p.m.

Notes on Books.

Forms and Precedents for the Use of Accountants, 20s. nett (Edinburgh and London, Wm. Green and Sons).—The second volume of this work has now been issued, and carries us from *Landlord and Tenant* to *Writings in re Mercatoria*. Under the first-named head Mr. George Lisle, C.A., F.F.A., gives specimens of all forms of leases and agreements, notices of removal, &c. Following on these come ledgers, ledger adjustment accounts, life assurance office accounts, liquidators' accounts, local authorities' loans in England and Scotland, parish council accounting, partnership, probate accountants' reports of many kinds, revenue accounts and balance-sheets, savings banks, single entry accounting, stamp duty, and tabular bookkeeping. These are the principal items dealt with, and show the wide scope of the book. Each subject is so fully and clearly set forth by specialists that the student of any particular one selected will obtain a good knowledge of it with a minimum of trouble.

Mr. Harold E. Farnol, who has been in the service of the Central Insurance Company, Limited, for the past five years, and was formerly with the Alliance Assurance Company, has been appointed Assistant Resident Manager at the "Central's" Birmingham office.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and July 20, 1907 :—

LLOYDS BANK.—The balance sheet for June 30 shows liabilities consisting of current and deposit accounts £ , and bills accepted or endorsed £1,709,933, and assets of cash in hand and at Bank of England £10,788,829, cash at call and short notice £4,205,648, bills of exchange £6,854,004, Consols and other investments £5,070,407, and advances to customers and other securities £37,592,260.

Mr. Norman Aldred Cooper, who for the past three years has been in the service of the Central Insurance Company, Limited, latterly as Assistant Local Manager at the Liverpool branch, has been promoted to the Head Office in London with the title of Assistant Secretary.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.— Earnings for week ended July 21, $4,773, increase $2,439; aggregate from July 1, $13,782.

Argentine North Eastern.—Traffic receipts for week ended June 21, £2,431, increase £252; aggregate from January 1, £50,225, increase £8,366.

Assam Bengal.—Traffic receipts for week ended June 22, Rs. 98,865, increase Rs. 14,908; aggregate from Jan. 1, Rs.22,37,600, increase Rs. 4,65,255

Bilbao River and Cantabrian.—Traffic returns for June £7,533, decrease £2,837; aggregate from January 1, £55,115, decrease £8,197.

Canadian Northern Railway.—Traffic receipts for week ended July 21, $218,200, increase $76,800; total from July 1, $642,600, increase $227,300.

Egyptian Delta.—Traffic receipts for week ended July 6, £4,632, increase £605; aggregate from January 1, £66,172, increase £11,861.

Lucknow Bareilly Railway.—Traffic receipts for week ended June 22, Rs. 27,232, increase Rs. 828; aggregate from July 1, Rs. 9,15,243, increase Rs, 13,905.

Midland Uruguay.—Receipts for month of June, £5,958, increase £958; aggregate from July 1, £74,664, increase £15,151.

North Western of Uruguay.—Traffic receipts for June, $23,100, decrease $2,100; aggregate from July 1, $259,459, increase $42,460.

Quebec Central Railway.—Traffic receipts for the 3rd week of July, $26,818, increase $5,342; aggregate from January 1, $510,225, increase $23,378.

Quebec and Lake St. John.—Earnings for June, $55,049; increase $565.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended June 22, Rs. 22,629, increase Rs. 5,001; aggregate from July 1, Rs. 5,94,079, increase Rs. 1,63,132.

Uruguay Northern.—Gross receipts for month of April, £1,866, increase £330; aggregate from July 1, £18,095, increase £2,271.

White Pass and Yukon Railway.—Traffic receipts for week ended July 7 amounted to $46,155.

English.

Cleator and Workington Junction.—Receipts for week ending July 20, £1,297, increase £63; aggregate from July 1, £3,807, increase £354.

Cockermouth and Keswick Railway.—Receipts for week ending July 20, £1,087, increase £6; aggregate from July 1, £3,148, increase £85.

East London Railway.—Traffic receipts for May, £3,850, decrease £316.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending July 20, £414, increase £141; aggregate from July 1, £1,335, increase £473.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Bath Electric.—Traffic receipts for week ending July 17, £935; decrease £72; aggregate from January 1, £21,774, decrease £422.

Blessington and Poulaphouca.—Traffic receipts for week ending July 17, £23, decrease £2; aggregate from July 1, £47, decrease £17.

Bristol Tramways and Carriage.—Traffic receipts for week ending July 19, £5,573, increase £173; aggregate from July 1, £16,154, decrease £659.

British Electric Traction.—Receipts of all the Associated Companies for the week ending July 19, £32,310; 410½ miles.

Burnley Corporation.—Traffic receipts for week ending July 20, £1,282, increase £203; aggregate from July 1, £3,800, increase £4.

Dublin and Blessington.—Traffic receipts for week ending July 17, £180, increase £9; aggregate from July 1, £407, decrease £26.

Dublin and Lucan.—Traffic receipts for week ending July 19, £172, increase £12; aggregate from July 1, £392, increase £2.

Dublin United.—Traffic receipts for week ending July 19, £8,122, increase £2,321; aggregate from July 1, £20,261, increase £5,261.

Edinburgh and District.—Traffic receipts for week ending July 20, £7,211, increase £845; aggregate from January 1, 1907, £144,355, increase £2,701.

Hastings and District.—Traffic receipts for week ending July 18, £1,350.

Isle of Thanet.—Traffic receipts for week ending July 20, £1,188, increase £45; aggregate from October 1, £16,859, decrease £278.

London County Council.—Traffic receipts for week ending July 13, £32,160, increase £5,800; aggregate from April 1, £465,767, increase £69,686. Miles 116⅜, against 94.

London General Omnibus.—Traffic receipts for week ending July 20, £23,871, decrease £1,127; aggregate from July 1, £68,957, decrease £8,758.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Reduced from 4½ per cent. on April 25.)

Norfolk House, Friday Evening.

A quiet week has been spent by the Money market and rates both for short loans and discounts betrayed a disposition to recede now and then. It never came to anything more than a weakening of ⅛ or so in discounts, and the market firmed up a little towards Thursday, so that instead of the fine working rate for three months remitted bills being 3½ to 3 7/16 it became 3 9/16 to 3⅝ per cent. At least, the bill brokers asked the higher of these figures, and sometimes got it. To-day, however, the market became easier again and business in threes was possible, though not usual, at 3½ per cent. Call money has been below 2 per cent. sometimes during the week, but not so often as to much affect the average rate, which has been 2 to 2½ per cent., the higher rate being easier to secure as the week neared its end. Seven-day or longer loans are mostly 2½ per cent., but stiffened to 2¾ this morning, with lenders asking 3 per cent.

Long-dated bank paper has also been firm at 4 per cent. as a minimum, and some houses have quoted 4⅛, others 4¼ per cent. There is still a difficulty in placing these long usances, and bankers have persevered in their policy of taking only short paper. Yesterday, for instance, they were buying only August bills, and the longer this restriction is maintained the less difficulty does the market have in keeping up its rates. Nevertheless buyers who wanted three months bills yesterday and to-day had to concede ¼ per cent., and if the position of the Money market continues to improve it is probable enough that weakness will further develop in it after the new month comes in.

On the whole the market is improving in strength, and the Bank return published on Thursday afternoon was sensibly better than that of the previous week. The reserve, however, at £25,549,000, is not quite up to the vigour of twelve months back, and its proportion to the Bank's liabilities is 1 per cent. worse, because other deposits at £46,607,000 shows an increase of £2,432,000 upon the total for the same week in 1906. The market, in other words, continues to be more indebted to the Bank now than it was then, and were it not that gold is now coming in, the Bank having received £409,000 nett from abroad during its week, we should doubt very much whether anything like ease could be relied upon for longer than the end of next month. As it is, we cannot yet see any reduction in the Bank rate, partly because the home demands for banking credit and currency are heavier this year than last, and also because foreign markets have not yet attained to any such position of strength as would relieve us from the fear of revived demands from abroad upon our gold.

The Bank of France is no doubt much better off than it was some time ago, its note circulation having in the past week alone fallen off by £3,500,000, while it still gathers in a little gold, but the position of the Paris Money market is none the less some way removed from comfortableness, and in Germany likewise the amelioration, although distinct, has not yet gone far enough to render it probable that no return of dear money will occur in Berlin and throughout the Empire towards the close of the year. The Reichsbank has been adding to its cash, so that it now holds £46,182,000 against a note circulation of £71,880,000, the cash, presumably gold, having gone up by £2,311,000 in the past week, while the note circulation has fallen off by £3,410,000. This is an immense improvement, and yet it does not ensure Germany against dear money later on. The only change which will bring that about is a decline in the industrial demand for credit and cash, a contraction in speculative commitments of all descriptions. This is said to be in progress throughout the Empire, just as some say it has begun here and in the United States. It will have, however, to make further progress before the great Money markets can settle down into a period of calm where apprehensions will not continually disturb their equanimity and during which rates may be expected to remain moderately low.

Money here may stiffen up for a few days next week, because, for one thing, the Treasury will sweep away £1,500,000 to-morrow on that amount of extra Treasury bills to be then paid for. The Stock Exchange settlement, whose pay day is on Wednesday next, will likewise cause some little temporary absorption of balances, although the demands from that quarter are now much less than they were earlier in the year. Add to these influences the usual end of the month withdrawal of balances by the joint-stock banks for various reasons, and it is probable enough that call money may rise quite 1 per cent. above the present quotation. If it should do so the firmness can hardly last long enough to give bill brokers the opportunity to stiffen their rates further. They seem more likely to give way, and as far as can be seen neither the money nor discount rates will keep firm beyond the end of the month. So undisturbed, indeed, is the present outlook and so small the immediate prospect of gold with-

drawals of importance by any foreign market that the Stock Exchange ought to be able to get its requirements arranged at 3½ per cent. as a maximum, and unless the dreary "long" account it has gone through discloses some unexpected complication all should go smoothly enough.

Bullion prospects are meantime favourable enough. The price of bars has fallen back to 77s. 9½d. per oz., and the Bank of England had no effective competitor for the supply available last Monday. Next week about £1,000,000 will be available including sundry consignments from West Africa, &c., and the bullion brokers expect that about £800,000 of it will be secured by the Bank.

The first three days of next week completing the month bring calls amounting to £3,242,500, the heaviest of which is due on Monday on the Japanese conversion loan. It amounts to £2,242,500, and on the same day the new debenture stock of the United Railways of the Havana will absorb £200,000. Next day £750,000 becomes payable on East Indian Railway debenture stock, and £50,000 is due on the 31st upon Great Western of Brazil ordinary shares. These calls are not likely to cause any particular inconvenience beyond a little increased pressure for short loans.

SILVER.

A considerable business was done in spot metal on Monday, mainly on account of the bazaars for shipment by next week's steamer, and prices jumped to 31 13/16d. per oz. for both cash and forward delivery. The demand, however, ended with that day's purchases, and as other inquiries were small quotations gradually relapsed to 31⅝d. per oz. To-day, however, they recovered to 31¾d. per oz. for spot and 31 11/16d. per oz. for delivery two months forward, but the rise was due to supplies being restricted rather than to any increase in business. Tenders on Wednesday for the Rs. 60,00,000 of Council drafts on India reached a total of Rs. 5,64,70,000 in bills and Rs. 32,00,000 in telegraphic transfers. The amounts allotted were Rs. 49,43,000 in bills and Rs. 10,57,000 in transfers, applications at 1s. 4 1-32d. and 1s. 4 1/16d. per rupee receiving about 95 per cent. Next week the amount to be offered is reduced to Rs. 40,00,000.

The Stock Markets.

It is devoutly to be wished that the Stock Exchange were less emotional. The recent Socialistic victories at the poll, although of an accidental character, have fairly scared the majority of members out of what wits their long depression has left them. They see visions of a coming revolution, which will destroy property and bring the Government into the grasp of men bent upon subverting all our institutions, especially bent upon confiscation. Slander, indeed, is the basis upon which this fanciful structure rests. If members of the Stock Exchange and others who allow themselves to be terrified in this fashion would take the trouble to reflect, they could not fail to see that, instead of being an evil, an event bodeful of social overturn, these triumphs of the Socialistic party are the very best thing that could happen, seeing that Socialism exists among us. Nothing brings an enthusiast to his senses more quickly than the test of experience, and these new members, who come up brimming over, let us suppose, with all manner of revolutionary projects, will soon find their level in the House of Commons, soon learn what is practicable and what visionary in their schemes. The safety of our constitution lies just in this, that every faddist, enthusiast, or political crank gets a chance to express his views and to try and put them to the test of actual working. If these extreme politicians were suppressed and denied a hearing, if the Socialist was ostracised and forbidden to air his grievances and remedies, no matter how imaginary or fanciful, the disease of class discontent would be certain to spread beneath the surface, and might possibly develop a force strong enough to threaten the upheaval now talked of in tones of such horror. By being free

to air his nostrums the most extreme politician is really made harmless among us, and we cannot see any, the slightest danger to property, liberty of the subject or anything else in the recent Socialist triumphs at the polls. Ripples of this kind come to the surface always in the political life of the country. Enthusiasms are generated for new social panaceas, run their brief hour, and pass away leaving the institutions of the country just as solidly based and secure as ever they were. So it will be with Socialism.

The truth, however, is that the Stock Exchange is so out of heart, so dispirited through the persistent abstention of the investing and speculative public from markets, so cruelly stricken by the losses inflicted upon it, that calmness of mind is hardly to be looked for amongst its members. They fly to scares, one might say, for consolation, and by conjuring up dreadful spectres of impending woe seek to hide from themselves the true causes which have been at work to bring markets into their present helpless state of depression. These causes, however, are plain and on the surface; so plain that we are heartily tired of stating them. We suffer from over-indulgence of all descriptions, from waste of capital, not only in wars but in dishonest capitalisations of many kinds. Disease bred of striving after ostentatious and hurried up "prosperity," to be brought to realisation through a plentiful and unceasing appeal to the moneylender, to the investor in all classes of securities, has brought about such an *impasse* as it will take years and years to remove. We see plainly why markets are so helpless and prone to take fright in such incidents as the comparative failure of the Japanese Manchurian Railway loan. Attractive though it seemed to be, well secured as the loan ought to be by the mere railway property to be developed by it, the underwriters had to take up 52 per cent. of the issue, and, alarmed at this result, some of them hurried to sell with such eagerness that the scrip was depressed to 1¾ discount. It recovered yesterday to ¼ discount and left off at ½ discount, but the result was none the less damping. Would a British Government loan have fared any better? The answer to that question is found in the postponement of the Transvaal guaranteed loan of £5,000,000. Mr. Asquith simply dared not put that loan on the market. The Japanese Gomvernment may therefore console itself with the reflection that its treatment has really been rather better than our own Government would have experienced had it come just now for money. Other failures of the same description were mentioned last week, and all enforce our contention that the markets are still crippled and overcharged to a degree that makes it impossible for them to handle new issues in the old way. Underwriters may bravely subscribe such quotas as seem within their power to carry, but the public does not come to relieve them, because the public itself is mostly tied up with stocks and shares upon which the depreciation is so severe as either to render them helpless or to disincline them to undertake further investments or capital placements of any description.

Recognising this, the agents of the Brazilian Federal Government here are understood to have put off the issue of that loan of £3,000,000 which was, we believe, about to be offered in 5 per cent. ten-year bonds at the price of 95. It was a wise decision, and one skilfully led up to by the attacks upon Brazilian finance and financial policy in a portion of the City Press. Without these attacks the market would have looked askance on any loan of the kind, simply because it does not know in the least how to dispose of the new securities poured in upon it. Good will come out of this deadlock in time, if it last long enough to permit markets to recover tone and investors, speculative and other, to surmount their individual difficulties, to accumulate capital which must find lodgment in one security or another. To give all classes the necessary chance, however, there must be for many months to come a material abatement, if not a complete cessation, of the appeals for British money, whether in the shape of Government and Municipal debts or in the form of new share issues. We are in no condition to handle these, and all markets are just as helpless as ours is, stuffed to the chin with securities that are depreciated and unmarketable.

Consols on a Three per Cent. Basis.

This week's price is not the lowest touched during the current year, for that was 83⅛, but last night's close was only 5s. above that figure, and this means that British Government stock has reached a figure at which it yields the buyer about 3 per cent. As the *Times* City editor wisely observes, "that this point should only just have been reached after this long period of depression and dwindling is a handsome testimony to British credit." That is true enough, but the fact also enforces the warning just given that markets are unwholesomely overburdened, and we fear the continued weakness of the stocks indicates hidden miseries amongst great wielders of credit who are forced by their circumstances to pour out stock whenever the market seems to harden up a little. No particular reason can be assigned for the recent weakness in Consols. At the end of the half-year the market looked stronger, and the price rose well above 84. Directly it did so, however, selling was resumed, and as the stock slipped back the stamp of its weakness was given to all markets, especially to markets for Home securities. Consols could not have shrunk £3 from the highest quotation of the year had there not been something behind, which the City cannot discover or fathom, working to bring about this abiding proneness to slide back. One of the proximate causes of the depression no doubt is the fear of impending further issues. It is known that many of our Home municipalities want money, Home Railways are also in need of more capital, the colonies will soon be in the market with conversion and other loans, having no resources within themselves out of which to redeem debts, having used up, as every one of them has done, in the approved English manner, every farthing of their Savings Bank and other trust funds. The Consol market and all the dependencies thereof are therefore in a permanent state of nervous apprehension, which finds its expression in this continued weakness, a weakness that keeps Home Corporation stocks down in the dumps, Colonial stocks apathetic in spite of an occasional application of the galvanic battery of manipulative buying, and that prevented the East Indian Railway from triumphantly floating its loan ten days ago.

Foreign Government Stocks.

And the bonds of Foreign Governments are equally without support here. We have already described the fate of the Manchurian Railway loan, which is really a Japanese Government issue, and Brazilian bonds have likewise been more or less weak owing to the fears about that coming loan. The Japanese list went back, as might have been expected, and at times it looked as if the much objurgated Russian market was the only one in which life or strength was to be found. But there has been no life in business throughout the week, and dealings between bourses remain insignificant and unprofitable. One has only to look at the state of Continental markets to understand this, to remember that every bourse in Europe has to wrestle with its own troubles and to be content if able to stave off a crisis. On our market Chinese bonds were steady, though forgotten, like other things, so that everybody is in a way thankful this dreary "long" account is about at an end.

Home Railway Stocks.

There is no revival in this market either, partly because of the Socialist scare mentioned above, but also because the small stream of investment buying is quite too insignificant to sustain quotations. Neither dividend declarations nor anything else have the slightest effect in steadying prices. Traffic receipts continue remarkably good on the whole, and show, as the *Railway News* tells us, an increase of £49,057 for

the past week, making the total increase for the three weeks ended with Saturday last about £166,000. It might have been a decrease of twice as much so far as the influence it exercises on the markets seems to indicate, and the fact that the dividends noted elsewhere have been well up to expectations has been equally impotent to rally the market. Unsecured preferences, like those of the Great Central, have been prominently flat, Brighton "A" is still a football, and Rhymney stock slumped on the report. Clients and correspondents keep asking us whether the time has not now come to buy these stocks, and we welcome the question as an indication that everybody in the country is not terrified by the Socialist bogey, while regretting the impossibility of giving a satisfactory answer. Our opinion continues to be that, looking to the immediate future, several of these Railway stocks ought to be fairly remunerative purchases both as to dividends and chances of recovery in prices. But while the general aspect of markets remains what it is, while they are clogged not only by the masses of undigested and depreciated securities with which they are loaded up, but haunted by the fear that something serious is wrong with the credit fabric as a whole, what is the use of telling people to buy? The probability is that they would lose a portion of their money, or at least see further depreciation occur before the bottom of the market had been reached. And, as we have said, most of these railways are in want of more capital. They have devoured their trust funds in the business, and some of them are pretty heavily indebted to their bankers. At the same time they go on spending capital, not, it is true, at the rates of past years, but still to amounts that foot up to serious totals in the course of a year, and involve fresh appeals to the investor. Therefore the Home Railway market is an arid place, useless to linger over, with nothing prominent in it to note or analyse.

Other Railway Stocks.

We have had a good deal of amusement this week in watching the play of the Wall Street market. Its "Northern Lights" sort of pyrochnics happily do not much interest the bulk of the speculatively inclined in this country just now, but they are all the more amusing for that. The great sensation of the week has been the preliminary statements of the Union Pacific and Southern Pacific Railroads, particulars of which will be found in our "American Business Notes." These exhibited such glowing prosperity that Wall Street was industriously "tipped" to expect higher dividends on the common stocks of both companies, and this view was supported by a dashing campaign for the rise organised by Harriman and his Standard Oilers. Southern Pacific common shares flew up some $5 in one day's dealing and Union Pacific scrambled after them. But the whole display was a mere professional feat of gas generation and fireworks, and the theory upon which the advance was based—doubtless carefully framed and spread about by those who were working the show in the hope of ensnaring outsiders—was that Harriman was just the man to repeat his stroke of last summer, when he caught the Wall Street market napping, and by jumping the dividend on the Union Pacific shares up to 10 per cent., drove the bears in with such a stampede that the prices of Union and Southern Pacifics seemed about to vanish in the empyrean, so rapidly did they soar. For the first time in its existence Southern Pacific common stock then got a 5 per cent. dividend. It had never got anything at all before. Harriman is going to repeat this trick, the market was industriously told, but apparently the Yankee speculator has been taught caution by many buffets received, and towards the end of the week another story began to get about sending prices hurtling back. Shrewd beholders suspect that the trick to be played by Harriman this year will be something quite different from last year's, and that, although he and his fellow underwriters of the $75,000,000 Union Pacific bonds which the public would not buy might like very much to market them now, they may see their way first to damp enthusiasm and bring about a fall to their profit. Anyway the great man is understood to have intimated that at any rate Southern Pacific common will not get more than 6 per cent., and although he could pay 20 per cent. upon Union Pacific common, there is nothing to hinder him from blandly explaining to the anxious market that in the circumstances, and in view of the great capital requirements of the system imposed by its enormous traffic, it may not be prudent to give Union Pacific common stock more than 6 per cent. this year. One device is just as likely as the other, and it is somewhat ominous that the board of the company separated yesterday without announcing the dividend. Perhaps it found the market not quite ripe for the stroke it purposes to play, or it may not have made up its mind which shoal of flats would pay best to net.

Nothing else of any interest has occurred this week in the Yankee Railroad market, and it is so purely an affair of the habit and repute gambler that we need not dwell upon it. Nor is there much to be said about Canadian Railway securities beyond just noting the disquieting rumours beginning to circulate as to the harvest prospects in that golden North-West. It will be a disastrous thing should the crop prophesied turn out in these regions to be much less than we were besought to expect. For the market is so wound up by its commitments in all manner of Canadian Railroad securities, Grand Trunk stocks, Canadian Pacific shares, the bonds of North-Western Extensions, and so on, that it would be almost impossible to prevent a complete smash up were the harvest to be blighted or even reduced by half from the estimates so diligently circulated.

Foreign Railway stocks also demand little notice from us at present. They have shown some tendency to recover in the latter part of the week, San Paulo stock, for instance, recovering along with other Brazilian securities when the fear of the new Brazilian loan was removed, but the market is not strong even for these, and Argentine Railway stocks are still casually dealt in, though firm, while Cuban continue out of favour, we know not why. Indeed, the only spot where galvanic activity is spasmodically visible is the Mexican Railway market, and there rushes take place every few days, which send up the stocks of the old Mexican Railway Company and as it were tack them to the wall at the points to which they are hoisted, but they have not gained on the week. The public is languid even in that quarter, and the bulls have to stop a bit and take their breath before having another try. We distrust the Mexican market as much as any, and think that people who value their peace of mind and their money had better keep clear of it. Antofagasta stocks have been flat with the rest, but the shares of the Egyptian Delta Light Railways have hardened.

Banks, Breweries, Industrial and Miscellaneous Securities.

Bank shares keep firm, with a small business going on every day of purely investment kind, and among others London and County and National of Egypt have both risen as well as Hongkong and Shanghai and the shares of one or two Australian banks. Brewery securities, too, look as if they might perk up a little in spite of weakness in Barclays and Cannon Brewery debenture stocks, and there has been quite a cheering advance this week in the issues of the Watney, Combe Company, for no special reason whatever, but the jobbers must do something or perish. Nothing much has taken place amongst Dock securities beyond a rally in London Docks ordinary and deferred on the report, but there is a certain amount of investment going on in the better class of Industrial bonds and in some of the shares that look cheap in the better-known combinations and big companies. The securities of Motor companies, however, have been weak, and a recoil has taken place in Nitrate shares, which were much too rapidly and unreasonably pushed

up last week. This merely implies that those who see a profit are endeavouring to take it before contango day arrives on Monday next. Many debenture issues have lost ground, with next to no business done, but Lewis and Allenby's debenture issue has risen 8.

Electric securities have kept their prices rather well on the whole, although the shares of some of the London companies continue heavy. They are lifeless. Also nothing of importance has occurred amongst Financial, Land and Investment things beyond the decline in Hudson's Bays. Pekin shares have improved, as also Peruvian stocks. Financial Trust stocks have attracted a certain amount of buying, which keeps them on the whole firm; in fact, there is hardly a setback in all the list.

Gas stocks have been unaffected beyond a slight recoil in Gas Light ordinary; the Insurance market is quiet, with prices often better; nothing particular goes on amongst Iron and Steel stocks, which, however, are firm as a group, and the only animated spot remaining to notice is that for Tramway and Omnibus securities, which have been spotty and inclined to be flat. London General Omnibus stock, however, has rallied bravely in spite of the mess it is in.

Friday Evening's Markets.

Heartily tired as it is of the nineteen-day account, the Stock Exchange has settled down to wait for its liquidation next week. This was contango day in Mines, but the account there has developed no further characteristic, and rates were little altered from last time. Mount Lyall shares, however, were scarce. Paris was inclined to buy a few Kaffir shares this morning, perhaps owing to the approach of option day there, but when that stopped prices ceased to move. Most days this week the French have come in as buyers of De Beers shares in the afternoon. To-day they failed to do so and prices accordingly stagnated.

Not only was this the case in the Kaffir Circus, but throughout the market an indescribable feeling of tiredness seems to haunt the Stock Exchange.

As for reecnt new issues, they are all at a nice discount, looking at the matter from the point of view of investors. The latest of them, that South Manchurian Railway loan, closed this afternoon rather weaker at ¾ discount, the new Middlesex loan hangs fire at 1¼ discount, and India new 3½ per cents. and East Indian Railway 3½ per cent. debentures were both quoted at 1 discount.

THE WEEK'S PRICE MOVEMENTS.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

South-Eastern and Chatham Railway Companies' Managing Committee.

We wonder how long it will be before these two railways are brought so completely together as to permit of the disappearance of this managing committee and two separate boards of directors, and their replacement by a single governing body. The members of the managing committee divide amongst themselves £2,000 per annum, and they also as members of the board of the South-Eastern Railway Company receive £2,000 per annum. That is a small extravagance which might well be dispensed with in the present circumstances of these lines. Certainly this managing committee's account is not a cheerful one. It deals with the traffic results of both the South-Eastern and the Chatham lines, and the figures show a decrease of £1,258 in the traffic receipts, while working expenses went up £8,052. The nett revenue available for division between the two companies is thus £9,310 down, and as other charges keep creeping up it follows, as already announced, that the divisible amount of £659,420, of which the South-Eastern Railway gets £389,058 and the Chatham Company £270,362, is not enough to allow the South-Eastern Company to give its undivided ordinary stock more than 10s. per cent. for the half-year, the preferred, of course, getting £1. Passenger receipts alone gave any increase in business during the half-year, and that branch of the carrying trade did so in spite of bad weather and the competition of electric tramways, with other untoward influences, so that there must be vitality in the districts served by these railways if only something like business capacity and enlightened liberality were displayed in the management. Unfortunately the southern lines are all of them miserable sinners in the matter of the conduct of their business, great only in the invention of obstructions. There was an increase during the half-year of nearly 10,000 passengers carried *vid* Dover and Folkestone, and it might easily be made 100,000. The capital expenditure of the half-year was £62,575, and had the merit of being £1,751 less than in the corresponding half of 1906, but the whole of it went into lines open for traffic, including £9,654 spent on new working stock. During the six months, the directors say, the fleet has been increased by two new passenger turbine steamers, the *Victoria* and *Empress*, so that it now possesses five vessels of this class "which have proved so popular with the travelling public." How are these steamers paid for? We get an abstract of steamboat expenses in the accounts, showing £20,000 set aside for depreciation as usual. Is it out of the depreciation fund that the new steamers are paid for? If so, where does it appear? It is not in the general balance-sheet. Another question is suggested by the mention of that balance-sheet. What are the items composing the stores transferred by the South-Eastern and Chatham Companies to the managing committee? They are lumped up with the cash balances transferred, and come up every half-year in the balance-sheet like the monster gooseberry in the newspaper paragraphs. Have the stores been used up, or where are they? The total thus figuring is £371,775. The statement of current income and outgo indicates that most departments of current expenditure have gone up a little, although nothing very serious, the greatest increase being in locomotive power, which rose by rather more than £12,000 owing, the committee explains, to the greater cost of coal and materials. General charges are also a little higher, but Parliamentary expenses were only £390 against £609. This item, however, was, as usual, supplemented by £921 debited to capital. Rates and taxes, it should be noted, are nearly £6,000 down for the half-year at £140,692, and but for that welcome decrease the working expenses would have made a much uglier appearance. This notice may be closed by mentioning the fact that since the committee took control of the lines it has contrived to lay out upon them £2,887,301 of fresh capital. That is not a bad feat to perform with two more or less derelict undertakings to handle, and the individual companies have likewise done their best in the same line, so that bankruptcy is writ large over the entire enterprise.

South-Eastern Railway Company.

This company's separate report is really in great measure a superfluity, but apparently £36,597 has been spent by the board on capital account on its lines, altogether irrespective of the expenditure mentioned above made by the managing committee of the two lines, and the directors are pleased to mention that they have created and issued at par 3 per cent. debenture stock to the amount of £470,400, interest upon which will be provided by the managing committee. This stock, however, does not impose any additional obligation upon the South-Eastern Company or the managing committee; it merely extinguishes the share and debenture capital of the Crowhurst Company, doubtless on terms highly advantageous to the proprietors thereof. The South-Eastern Company's capital account is only £124,055 to the bad, but as now conducted this small adverse balance may easily swell again to the proportions it stood at at the end of last year, £470,400 in debenture stock having been issued during the six months. The company owes about £120,000 on temporary loan, and has very little cash indeed in its possession. However, it has trust moneys of all descriptions aggregating £865,000, which are apparently separately invested to the extent of £623,782. We should like to know what securities this money has been placed in.

North Staffordshire Railway.

Gross receipts for the past half-year improved by £20,782 to £497,242, of which £320,361 or £17,494 more came from merchandise and mineral traffic and only £1,067 from passengers. A heavy outlay of £26,658, however, was incurred on carriage and wagon repairs compared with £15,995 a year ago, and with increases of from £2,000 to £5,000 in all other sections working charges rose by £24,270 to £306,120 or 61.56 per cent. of the receipts against 59.16 per cent. a year ago. Nett revenue was consequently £3,488 lower at £191,122, but £576 was received for general interest against £634 paid out in 1906, and the company's share of profit on the Macclesfield, Bollington, and Marple Railway was £564 larger at £2,215, so that with £10,465 or £3,117 more brought in the available balance after providing for fixed charges was £157,936 against £157,165. Of this dividends on the preference shares and stock take £75,487, leaving £82,448, out of which a dividend at the rate of 4 per cent. per annum or the same as a year ago is paid on the ordinary stock and £10,555 is carried forward. Capital expenditure was £44,159, mostly for the purchase of the Cheadle Railway Company, while £39,150 was received from stocks and shares issued, and the debit balance is now £25,964.

City and South London Railway Company.

The extension of this company's system to King's Cross, St. Pancras, and Euston was opened on May 11 and has brought in a considerable amount of new traffic, while the business of the old line and the old connections showed a satisfactory increase during the half-year. In the six months the number of passengers carried increased by 1,003,660 to 10,048,780 and the gross receipts from all sources were £5,061 better at £82,456. Expenses only rose by £1,811 to £36,592, leaving a nett revenue of £45,864 compared with £42,614 a year ago, to which were added £2,521 brought in and £4,131 from general interest against £1,367 and £1,731 respectively, so that the disposable total was £6,804 up at £52,516. Of this the usual £1,500 is transferred to renewal fund, and after providing debenture interest and the full dividend on the preference stocks, the consolidated ordinary stock receives a dividend at the rate of 2¼ per cent. per annum or ¼ per cent. per annum more, and £1,857 is carried forward. Receipts on capital account for the six months were £40,355, of which £1,332 represented premiums on 4 per cent. debenture stock issued, but expenditure amounted to £87,518 and the debit balance now stands at £111,274. Of this £45,000 has been met out of temporary loans, as the capital authorised at the special meeting on April 16 has not yet been issued, but the directors state that they will take the first favourable opportunity of doing so with a view to adjusting the capital account and of providing the small amount required for other purposes.

East London Railway Company.

The first to be issued, this company's report is one of the least important. In the six months to April 30 the gross earnings of the line in accordance with the Railway Clearing House settlements were £23,640 or just on £1,000 less than in the corresponding period, the coaching traffic showing a decrease of £858 and the goods of £98. For the full year to the end of December last the income was £50,279, but in order that the minimum guaranteed rent of £30,000 may be augmented the annual gross receipts must yield £53,571. When this amount has been arrived at the receipts, less 44 per cent. for working expenses, belong to the company. It may be worth pointing out that the heavy decrease in passenger traffic was due to the withdrawal of the Metropolitan company's trains from the system, following upon the previous withdrawal of the District company. It is, of course, well known that the Metropolitan Railway has always been the chief contributor to the through booked passenger receipts, but the directors are not without hope that the question of the electrification of the line may soon be entertained by the joint committee. Receipts of the company for the half-year were £14,825 and the general charges, rates, &c., something under £1,000, leaving £13,801. Balance from previous half-year was £9,920, and after paying the interest on the 3½ per cent. first debenture stock and second charge 4 per cent. debenture stock class "A," there is a sum of £10,502 to be carried forward.

Taff Vale Railway Company.

Receipts from passenger traffic during the six months ended June increased by £5,552 to £100,787, of which £4,821 was in third-class passengers. Merchandise and live stock also showed small advances, minerals yielded £6,100, shipping receipts £2,385, and dock and harbour receipts £3,958 more, the total revenue from all sources being £19,156 up at £522,950. On the other hand, expenses rose by £20,322, locomotive power costing £9,388, traffic expenses £2,659, and shipping expenses £5,065 more, and the ratio of expenditure to receipts was 1.85 per cent. heavier at 57.40 per cent. Nett income consequently showed a small decrease of £1,165 at £222,787, but the balance brought in was £7,063 larger at £17,219, and with £523 from general interest the disposable balance amounted to £240,528 compared with £234,532. Debenture interest, rents of leased lines, and other fixed charges having been met, £184,525 or £5,391 more remained to be dealt with, out of which the dividends on the preference stocks are paid and the ordinary stock receives a dividend at the rate of 4 per cent. per annum,

equivalent to 10 per cent. per annum on the old ordinary stock, and £5,000 is transferred to reserve, leaving £21,620 to be carried forward. Expenditure on capital account, after deducting £4,445 for sundry credits, was £30,477, raising the total to £9,874,100, and the company now has a debit balance of £396,978 under this head, against which the reserves, savings bank funds, &c., amount to no more than £66,400, and the indebtedness on outstanding and suspense accounts seems unpleasantly large at £208,905.

Rhymney Railway.

A dividend at the rate of 7 per cent. per annum has been declared by the board of this company out of the revenue balance of £34,609 left over after meeting the past half-year's preference dividend. In all the gross receipts were £173,900 and the expenses £112,194 or 64.52 per cent. against 63.71 per cent. for the first half of 1906. This left £61,706 as nett income, out of which £12,461 or nearly £400 goes in meeting interest, rents, &c. When the preference and ordinary dividends are paid, £6,609 will be left to carry forward against £5,226 brought in. Capital expenditure in the half-year came to £2,631 and the capital account is now overdrawn £130,147, necessitating a loan of £91,640 from the company's bankers.

London and County Banking Co., Limited.

In the June half-year the nett profits, after allowing £28,053 for rebate, amounted to £303,226 from which the directors have deducted £100,000 to be transferred to an investment depreciation account, leaving with the balance of £97,371 brought forward, £300,597 available for distribution. Out of this the usual dividend at the rate of 20 per cent. per annum, or £2 per share, will be paid taking £200,000 of this, so that the balance left to carry to the new half-year is £100,597. A year ago at the same date £25,000 was credited in reduction of cost of premises and £50,000 carried to the reserve, so that for the past half-year £25,000 more has been set aside and still the balance left for the new half-year is £3,226 larger. Changes in the balance-sheet are indicative of an increasing business, the liabilities on deposits, &c., being higher by £1,580,235 at £45,028,135. Acceptances are also £112,603 higher at £1,892,963. Amongst the assets, cash in hand and at the Bank of England is £844,768 down at £6,736,051, but loans at call and short notice are £668,891 higher at £3,661,560. There is likewise an important increase of £800,313 in the amount of bills held which is now £8,223,388, and advances to customers have gone up by £1,205,894 to £20,363,691. Investments aggregate £9,185,676, which is £171,935 less than at the end of June, 1906. Bank premises show an increase of £24,410 at £836,419, and the aggregate of the balance-sheet is now £50,899,748, which is £1,795,408 up. Amongst the details of the investments the changes are comparatively slight so far as Consols and British debenture and guaranteed stocks are concerned, the total of £6,651,260 being little over £6,000 down, but investments in India Government and guaranteed securities were £138,118 less at £848,161. Metropolitan and other Corporation stocks, debenture bonds, colonial stocks and English railway debenture stocks are also about £27,000 lower at £1,666,569. The gross profits show an increase of £115,255 at £938,464, and expenses took only £6,348 more at £339,824, but no less than £100,371 more was paid to customers as interest on their deposits. This amounted in the half-year to £267,362, and reminds us that high rates for money do not mean for the banks correspondingly great opportunities to make profits.

London and Westminster Bank, Limited.

Nett profits for the past half-year showed an increase of £36,938 at £260,091, this total including £24,703 brought forward. It is arrived at after setting aside as usual £3,000 towards reducing the cost of the bank's buildings and making provision for the pension and life insurance funds. Had it not been for the depreciation in securities the bank might therefore have been able to pay an increased dividend. As it is the directors again distribute 6½ per cent. for the half-year, or at the rate of 13 per cent. per annum, and transfer £50,000 to the rest or surplus fund, besides setting aside £10,000 to cover depreciation in investments other than Government securities. This will leave £18,091 to be carried forward. In addition to this setting aside, however, the directors have decided in view of the fluctuations in price of Government securities to transfer £100,000 from the surplus fund to a Government securities depreciation account, leaving their Consols in the books at the price of 85. Altogether the bank holds £4,000,000 nominal of 2½ per cent. Consols together with £500,000 of local loans stock taken at 97, and thanks to the writings down of past years, apart altogether from this £100,000 put aside now, the book value of this £4,500,000 is down to £3,885,000. Some large changes are shown in the balance-sheet, the liability on current and deposit accounts having gone up by £5,841,437 to £32,479,084, but the greater portion of this increase is probably due to the accumulation of £4,000,000 of Victorian Government money in order to provide for £4,000,000 of that Colony's debt due for redemption on July 1st. This large increase in the liabilities to the public is in great measure balanced by an increase of £5,085,442 in the bills discounted, loans and other credit accounts which now aggregate £19,893,186. Other changes are therefore much less imposing though sometimes important. Cash at hand and in the Bank of England has gone up by £151,160 to £3,781,254, and there is an increase of £1,342,050 in the amount lent at call and short notice which now stands at £9,345,500. An increase of £333,716 has also taken place in the [illegible] other than British Government [illegible] by the bank whose total is now £[illegible]. Liabilities of the bank on current [illegible] acceptances, confirmation loans, rebate and [illegible] debts show an increase of £[illegible] at £[illegible]. Assets are also up by £[illegible] to £[illegible], and [illegible] show an increase of £[illegible]. The [illegible] is that the aggregate of the balance sheet [illegible] £7,293,749 more. The gross profits, it may be added, were £43,300 more at £[illegible], working expenses at £[illegible] an increase of only £1,435.

Barclay and Co., Limited.

This company's report and balance-sheet cover the [illegible] June 30 last, and the directors state that in the [illegible] the nett profits were £652,603. A year ago they were £[illegible] so that the increase was £38,539. Adding £61,[illegible] ward, the available balance came to £[illegible] directors have written off £[illegible] bank purchase account, applied £[illegible] of premises and in payment for buildings and [illegible] £40,000 from the price at which the bank's [illegible] Government securities are held. All this is [illegible] transfer of £250,000 from the reserve to an investment [illegible] account which brings the total of the reserve [illegible] £1,250,000. Apart from this reserve the [illegible] enables the bank to write down Consols to 83 and [illegible] ment stock to 95 as compared respectively with 85 and 97 twelve months back. Then the usual dividend of 15 per cent. per annum, or 12s. per share each half-year, takes £480,000 leaving £101,757 to be carried forward. Changes in the balance-sheet are in no way sensational, but in a quiet way progressive. The liability of the bank on deposit and other accounts, including the profit and loss balance, shows an increase of £[illegible] at £45,546,602. Acceptances are always a big item with this bank, but they also are £80,148 up at £[illegible]. In the [illegible] cash in hand, at the Bank of England and with other banks £873,386 up at £6,547,566, but money lent at call and short notice is £446,500 down at £4,567,500. In bills discounted there is also an increase of £655,054, the total being now £5,[illegible], and the bank holds £352,691 more in British Government securities and bank stock, the aggregate of which was on June 30 £3,172,761. Its holdings of British Corporation securities and bonds, however, are £76,319 lower at £865,795 and its investments in Indian and Colonial Government securities also show a decrease of £230,342 at £1,579,047. In like manner the bank's possessions in British railway debenture, guaranteed and preference stocks have fallen off £100,300 to £1,47[illegible] and other securities at £2,097,174 are less by £51,930. Thus the aggregate book value of the investments is now—including the rest fund, which has been reduced by £250,000, the reduction probably explaining to a great extent the increase shown in the British Government securities and Bank stock held under another account—£10,439,370 as compared with £10,801,000 one thereby a year ago. Advances to customers are £[illegible] at £21,759,572, but bank premises show a decrease of £[illegible] at £1,338,510. The gross profit for the year, at £[illegible], was £1,240,722 as against £1,098,892 twelve months back. This was an increase of £150,830 on the previous year, and current expenses at £583,018 show an increase of only £34,620. Directors' remuneration shows an increase of £[illegible] at £14,7[illegible].

Capital and Counties Bank, Limited.

In the twelve months ended June 30 last this old bank made a gross profit of £800,188 after providing for bad and doubtful debts, paying income-tax and deducting rebate on current [illegible]. Working expenses took £423,135, leaving a nett profit of £377,053, to which £52,291 brought forward had to be added, so that the divisible sum was £429,344. Out of this the directors are able to complete the usual dividend of 18 per cent. for the year and to appropriate £100,000 towards reduction of the cost of investments. This will leave £46,744 to carry forward or £5,547 less than was brought in. A year back £[illegible] from profits and £100,000 from the reserve was used to write the bank's investments down, Consols being then placed at 85. Thus within two years the bank has been called upon to write off £230,000, but that it should have done this without any impairing of its strength is a valuable testimony to the excellence of its business. A year ago £15,000 was written off the cost of premises and £10,000 added to the superannuation fund, but this year neither of these assignments have been provided for, thanks to the further depreciation in the market prices of investments. The aggregate of such investments, it may be stated, is now £4,687,441, which is £130,378 less than the total of a year back. In two years, however, the decrease in investments has been £543,338. The directors recall the fact that they have bought up the old established business of Messrs. Eyton, Burton, Lloyd and Company, at Shrewsbury and other places, and perhaps the business of this bank has had some influence on the aggregate of the balance-sheet, which is £1,050,564 up at £30,683,652. The liability on deposit and current accounts alone has risen by £1,[illegible] to £[illegible]. Acceptances are not an important item with this bank, but their total of £506,752 may be mentioned. Cash in hand and at the Bank of England has risen by £175,941 to £3,[illegible], but money lent at call and short notice is £1,[illegible] more at £3,[illegible]. Bills discounted, loans and other credit accounts all put on [illegible] item show, on the other hand, a decline of £[illegible] at £19,558,680, and there is an increase of £21,470 in the case of the bank's premises which is now £[illegible]. Two years ago it was £61,306 less than it is now. Gross profits, it may be

added, were £60,251 greater last year than in the previous year, and are about £117,000 up on a two years' comparison. The reserve fund is now £800,000.

Union Bank of Manchester, Limited.

For the past half-year ended June 30 this company's gross profits were £8,823 up at £80,323, while expenses rose by only £2,270 to £34,622. Including £12,064 brought forward there is altogether £92,387 to divide, and the directors are accordingly able to pay the usual dividend of 12s. per share and to set aside as before £2,000 to bank premises and furniture account, to place £5,000 to reserve against £3,000 a year back, and to again give £2,500 to the pension fund. Also £7,500 has been utilised to write down the price of the bank's Consols from 85 to 83½, and even then £10,765 is left to be carried forward. During the half-year the bank has acquired the business of Messrs. Downes and Company, of Nantwich and Audlem, which they regard as a valuable acquistion in Cheshire. The balance-sheet shows that, thanks in part to this absorption, the liabilities on deposit, current and other accounts has risen by £424,910 to £4,671,194. Acceptances are also £82,846 up at £521,084. Cash in hand and money lent at call and short notice taken together are £123,325 larger at £644,337, and there is an increase of £79,269 in the bank's investments which now aggregate £695,571. Bills of exchange held are greater by £95,329 at £717,140 and loans and advances to customers at £3,276,464 are £131,867 up. Premises, too, show an increase of £10,028 at £265,446, many of these changes being doubtless the effect of the recent acquisition. The aggregate of the balance-sheet is now £6,120,042.

"Shell" Transport and Trading Co., Limited.

We are quite unable to follow the ramifications of this curiously mixed up business but it will be a satisfaction to shareholders to learn from the report for the year 1906, which appears at a much earlier date than hitherto, that the profits showed an increase of £74,406 on the previous year at £342,371 after paying the preference dividend which took away £50,000. Out of this almost the whole of the increase or £70,000 is appropriated as provision to cover such expenditure as may be required to make the company's steamers and installations comply with the agreements with the Royal Dutch Company. The dividend already paid on the preference shares is the maximum permitted for 1906 under the company's agreements with the said Royal Dutch Company. By arrangements with that company the agreement between the "Shell" Company and Messrs. M. Samuel and Co. for the management of the "Shell" Company's affairs was cancelled as from January 1 last, and proposals for the future mangement will be laid before the shareholders. No particulars regarding them are given in the report but shareholders are told that two companies have been registered one in Holland and the other in England according to the terms of the agreement with the Dutch company. On May 15 last at a special general meeting of the shareholders, authority was given to the board to issue 500,000 further ordinary shares, and of these 300,000 have been sold at a premium of 10s. per share. The balance will be issued only when necessary. From the balance-sheet we see that the company owes almost £500,000 to various creditors and its reserve fund of £400,000 is all in the business. The cost of the company's property, however, has been reduced by about £256,462, being the cost of steamers, &c., sold in 1906, and now stands at £2,782,927. This is further reduced to £2,176,945 by the provision made for the depreciation of steamers to the end of 1905, and the amount received for steamers, &c., sold during 1906, different steamers evidently from those mentioned above, brought £95,245, against which, however, £100,529 was added to this account as new outlay during the year, so that the nett deduction is £605,983. Advances to the Nederlandsch Indische Industrie en Handel Maatschappij represented by "an undertaking to issue 5 per cent. bonds" remains at £840,000, the figure of a year ago, and the balance-sheet is made up to £4,256,594 by various investments including shares in the above-mentioned Nederlandsch Indische Company and in the Asiatic Petroleum Company taken at cost of an aggregate value of £483,622. Cash figures for £211,709 and stocks of petroleum, &c., for £31,599. Accounts with the two companies mentioned also come in as assets to the amount of £293,828, and the company owes £22,728 entered as the value of its share in the Baku Syndicate, while debtors on current accounts owe it £86,738 and bills receivable amount to £74,844. From the profit and loss account we learn that the final cost of the European oil business has been written off and amounted to £41,796.

London and India Docks Company.

In the past six months the tonnage of shipping entering this company's docks from foreign ports was 60,599 tons larger and the coastwise tonnage 34,005 tons smaller than in the first half of 1906, the aggregate of both kinds being 2,927,218 tons or 26,594 tons more. Goods landed weighed 517,503 tons, a decline of 7,195 tons, but goods in warehouse were 7,144 tons up at 203,963 tons. These figures hardly point perhaps to the substantial increase of £47,947 which took place in the gross receipts of £936,489 for the half-year, but import and export rates together came to £571,969 against £536,470 twelve months back, and no material decline took place under any other heading of income, while rates and charges on shipping, including rents of fixed berths, at £310,347, gave £9,454 more. Working charges rose by £23,115 to £613,944, wages alone having risen by £12,867 and carriage of goods by land by £10,397. Lighterage has also cost fully £3,000 more, but there was a minute saving on salaries and superannuation allowances as well as in rates and taxes and fire insurance. Including £1,000 spent in connection with Port of London bills, law and Parliamentary charges came to £2,978 in the past half-year as against £2,121 in the June half of 1906. Nett revenue came to £322,544 or £24,831 more, and after meeting all fixed capital charges together with the half-year's dividend on the "A" and "B" preference and preferred stocks £75,570 is left to go towards the ordinary stock dividend, which can only be paid when the year has been completed. This is a good £25,000 better than last year, and represents an extra ½ per cent. on the deferred. The half-year closed with a balance of £72,595 at the debit of capital account, and the money continues to dribble out under various heads, £5,011 having been spent last half-year on the docks, town warehouses, &c. The company's Port and Docks Bill has been withdrawn pending the action of the President of the Board of Trade next year.

Anglo-American Telegraph Co., Limited.

When this company's dividend announcement was posted in the House the other day market speculators received a dreadful shock. The figures were all right and about as expected, but the directors thought it right to point out that the securities held on account of the renewal fund had further depreciated during the past half-year. "What does the board intend to convey by this intimation?" dealers asked. It is difficult to answer the question, but the addendum probably means that unless prices recover in the meantime the loss must be made up from the revenue at the end of the year, and that is certain to lead to a reduction in the deferred dividends. Traffic receipts for the six months to June 30 showed an increase of £2,200 at a total of £197,482, interest improved by £640 to £1,121 and transfer fees were less by £58 at £157. Charter of the s.s. *Minia* produced only £4,000 compared with £8,094, and the total income was therefore smaller by about £1,000 at £203,906 including the rather larger sum brought in. Most of the expenditure items were smaller and only £1,700 or £4,400 less had to be paid for the charter of cable repairing ships, so that the balance of nett revenue was larger by £4,448 at £129,143. Two quarterly dividends of 15s. per cent. on the ordinary and 30s. per cent. on the preferred stock have been paid absorbing £105,000 and leaving £24,142 or £4,447 more to be carried forward. The renewal fund was credited with £15,454 for interest and £3,618 for adjustment of income-tax and for depreciation of plant making it £1,028,906, cost of cable, &c., used in repairs was £2,902 leaving the fund at £1,026,004, of which £978,179 is invested in 54 separate securities, but what the depreciation upon them amounts to the directors do not say.

Bombay Electric Supply and Tramways Co., Limited.

All the excitement that prevailed at one time about this concern has died away, and really it seems as if the results were going to justify its promoters. At any rate, in the report for the year ended December 31 last we are told that the business is promising at many points and that the gross receipts were £102,192, of which £41,900 remained after paying for all charges including repairs and maintenance, not yet heavy burdens. Interest on loans and debentures took £28,057 of this, leaving £13,843 out of which the preference shareholders get their dividend of 6 per cent. for the entire year. That will take £15,643, but as £3,163 was brought forward this really leaves a balance of £1,363 to be carried out, and the company has by no means reached anything like its full earning power. The tramways are being electrified, but while that work is going on traffic is necessarily interrupted. Where the electric cars are running, however, as they are doing on one portion of the system, the earnings per car mile have gone up from 8.31d. to 13.85d. The electricity supply business is also developing, and at no point does the monopoly seem to be threatened except by the licence given to Messrs. J. J. and R. J. Tata in respect of the city and island of Bombay. The Bombay Electric Supply Company, however, claims that its interests are protected by a clause in Messrs. Tata's licence. We have read this clause and confess to be unable to grasp where the protection comes in, except that Messrs. Tata can only supply electricity in bulk. There seems, however, to be nothing to hinder that firm from organising retailers, as it were, to distribute its current.

Edmundson's Electricity Corporation, Limited.

This company's report for the past year is quite frank but the reverse of pleasant. In fact the directors disclose a position of considerable ticklishness, and the accounts illustrate the dangers attending a method of business which consists in taking payment for work done in securities of companies ordering the business, which companies are often created at the instigation of the manufacturer. For some years after its formation the Edmundson Corporation paid 7 per cent. on its ordinary shares, and even in the year ended March 31, 1906, 4 per cent. was squeezed out, but for the past year the ordinary shares get nothing at all, and only half the dividend on the preference shares can be furnished. They got their interim payment in October last, and will receive nothing more now, for after meeting the debenture interest and paying that interim preference dividend there is only £17,807 left to carry forward, none of which the directors see their way to distribute owing to the uncertain prospects of business. They hold out the hope that economies will be effected and that trade will recover, but it cannot be a very strong hope in present circumstances, for the

profit on the mere trading account last year was only £4,059 as against £27,710 in the previous year. The company's subsidiaries, however, may give it a chance in time, although the income they yielded was slightly down at £31,136 against £32,182. Particulars are very fully set forth of the interest of the Edmundson Corporation in these various companies the number of which is 16, most of them being situated in districts of a character that does not promise great scope for development. The best thing perhaps in the report is the small increase in the capital expenditure during the year which is represented by investments and advances of £37,599 as against £160,132 in the previous year, but the total of these investments less reserves amounting to £182,073 is £1,268,627, and the Corporation is heavily handicapped by its commitments.

City of London Electric Lighting Co., Limited.

An interim report recently issued states that the number of 8 c.p. lamps connected with this company's system on June 26 amounted to 946,986 or an increase of 46,708 during the six months, most of which came from the additional demands for motive power. For the same reason the sale of current rose from 11,143,662 units in the first half of 1906 to 11,856,427 units, although the earlier figures included 662,210 units given as a temporary supply to the L.C.C. Tramways. Nett revenue after providing for debenture and other interest was £5,013 up at £6,033 and with £20,621 brought forward the surplus available is estimated to be about £80,952 compared with £77,553 a year ago, and out of this an interim dividend of 5s. per share is paid on the ordinary shares.

Gas Light and Coke Company.

Again an increase is shown in this company's business, its sales of gas having risen by 3¼ per cent. compared with the first half of last year, which was in its turn nearly 4 per cent. better than the total for January to June, 1905. The consumers have increased by 12,678, and the number of gas-stoves sold or let by 14,203. Against this pleasant story we have to set the fact that contracts for the supply of coal and oil for the next twelve months have been made at prices "seriously higher than those of last year." Some of the money will be got back on coke—and on "Carbo," eh?—but, as was recently intimated, the consumer will also have to pay more. The shareholders meanwhile are all right, and including £229,953 brought forward from December the available free revenue is £641,159, out of which a dividend at the rate of £4 8s. per annum is to be paid on the ordinary stock, leaving £334,017 to go to the new half-year. Gross revenue from gas was £1,589,368, stove and stove fittings rents yielded together £97,871, and £429,060 came from residual products. Adding in rents £4,568 and transfer fees £315, the gross revenue from all sources was £2,121,181, of which working charges of all kinds swept away £1,492,189, leaving the free income at £628,993. Interest on the debt required £69,410, and the dividends on the preference and 3½ per cent. maximum stocks absorbed £121,498, while £9,209 was taken to write down the company's holding in Consols to 85, besides £2,500 additional credited to the insurance fund. The company is in credit on capital account to the amount of £437,808, and its reserve, insurance, and depreciation funds aggregate £222,000, of which £143,538 is invested in Consols and India 3 per cents.

United River Plate Telephone Co., Limited.

This company's progress continues excellent, the gross receipts for the year to March 31 being £216,204 compared with £181,085 in the previous twelve months. Maintenance and general expenses in the River Plate were £120,805 or £21,654 more, London charges reached £3,907, income-tax £1,906 and interest on debenture stock £8,016. An allowance was also made for depreciation of office furniture, and £22,000 has been already provided for dividends, being the preference dividend for the year and an interim payment on the ordinary shares. Sum still left is £61,993, and £2,076 was brought in, increasing the disposable balance to £64,070. Of that the directors allow £25,000 or £10,000 more for renewal of plant, &c., but add only £10,000 against £15,000 to the reserve fund. The ordinary dividend is then made up to 8 per cent. or the same as before, and the carry forward is substantially increased to £4,070. Capital outlay in the period under review was heavy at £116,484, making the total to date £885,664, but the business done seems to fully justify the expansion, and this is the kind of enterprise that can never stand still. Besides, the directors are safeguarding the future by the substantial additions to reserves, the renewal fund now being £60,000 and the general reserve £150,000. A good part of these accumulations are represented by real estate in South Africa entered at £125,568, while securities at cost stand at £58,304. The directors have found it advisable to avail themselves of the powers for increasing the debenture debt, and as this necessitated the redemption of the 5 per cent. debenture stock, it was paid off on the 1st inst. under the terms of the issue.

Denny, Mott and Dickson, Limited.

It was in January, 1906, that this well-known timber business was converted into a public company, the preferred ordinary shares to the amount of £200,000 being alone offered to investors. So far they have every reason to be satisfied with their investment, and judging by the prudent and businesslike policy which is evidently to be pursued by the board, the shareholders ought not to have many anxieties to face in the future. In the year which ended on March 30 last the trading profit reached the highly satisfactory figure of £[illegible], and £[illegible] came in from transfer fees, making £[illegible]. Directors' and auditors' fees were £1,157, leaving £[illegible], a sum which provides the 8 per cent dividend on the preferred ordinary shares and 10 per cent on the £100,000 of ordinary capital, leaving [illegible] a substantial contribution to reserve. This [illegible] £25,000, making it £45,313, the managers and staff of [illegible] year's service and upwards receive a bonus of [illegible] per cent on their salaries, and £1,332 is carried forward. [illegible] in the company's career the directors are [illegible] to strengthen it against the possibility of [illegible] almost certain to be encountered by a business of this nature, and the addition to reserve of practically [illegible] when the vendor directors might have [illegible] their own ordinary shares speaks for itself. Some of the shareholders seem to have misunderstood the reasons for the apparent delay in declaring the final dividend, but as the directors point out, the company has foreign and colonial connections, and the accounts of these have to be [illegible]. A small interim payment will be made on the preference shares when the conditions warrant that course, but the ordinary dividend can be paid only once a year. The company owes £137,609 to sundry creditors, depositors and bankers, and £77,902 on bills payable, but debtors owe £107,352, bills receivable amount to £63,636 and stocks-in-trade is valued at £200,864, these items always being large in a business of the kind. Cash balances come to £23,445, and the property and plant stand at £14,581 only.

TRADE AND PRODUCE.

Wheat.—Supplies of English wheat continue small, farmers' deliveries last week amounting to 15,015 qrs. compared with 19,200 qrs. in the previous week and 8,000 qrs. a year ago, and prices tended to harden. The average obtained was 32s. 6d. against 32s. and 30s. 3d. respectively, but the average realised to date is still well below that of last season at 27s. 2½d. compared with 28s. 8d. Business was also quiet in foreign wheat, as buyers showed little inclination to deal in the face of the heavy shipments advised from India and Argentina, while holders were not prepared to make concessions. Imports into the United Kingdom were 353,087 qrs. compared with 501,800 qrs. a week ago and 432,110 qrs. in 1906, the totals to date being 19,130,831 qrs. and 19,472,510 qrs., while Deliveries exceed the quantities on passage to the United Kingdom at 2,[illegible] qrs. and to the Continent at 1,230,000 qrs. against 2,[illegible] qrs. and 1,400,000 qrs. respectively. An improved demand for spot American parcels sent quotations up about 1s. in the early part of last week, and although the market relapsed into a quiet state almost immediately after, those values were well maintained. Speculative positions rose on unfavourable reports of the growing wheat crop and higher Berlin advices, but America did not respond, and the improvement was lost. Covering orders caused a temporary rally, but dealings were throughout on a very small scale and the fluctuations from day to day unimportant.

Wool.—The closing sales of the present series of [illegible] wool auctions which ended on Wednesday resulted in [illegible] off in the competition, and all clips of good quality were readily taken. Continental demands were chiefly for medium grease merinos, while American houses paid most attention to fine qualities, and the home trade bought the medium and lower grades freely. Scoureds were also in request for the home trade, although Germany bought some choice class from [illegible] and Victoria, and crossbreds also went chiefly to the Bradford district. Prices consequently remained firm at the advance established at the beginning of the auctions, the only exceptions being faulty descriptions and sliped crossbreds, which were generally in poor condition. Of the total of 108,000 bales available it is estimated that 84,000 were taken for the home trade, 55,000 for the Continent, and 5,000 for America, leaving 24,000 to be carried forward to the next series. The fourth series of East India wool sales opened in Liverpool on the 22nd with 31,437 bales available compared with 27,826 at the previous sales and 10,868 in March. There was a good attendance of both home and Continental buyers, but bidding was rather slow, and withdrawals of wasty lots were plentiful. Prices fell off by 5 to 7½ per cent on the first day, and brisker competition for the better grades on the following days failed to bring about any recovery. The high values ruling for wool have been followed by an advance in quotations for cloth. As an export [illegible] has been felt for shipping purposes, particularly for the Colonies and South America, and although orders from the Continent have been smaller, the export trade generally is in a satisfactory position. Domestic business, however, continues rather quiet, in spite of the demand for light clothing brought about by the finer weather.

Cotton (from our Manchester correspondent).—We have to report this week a comparatively small amount of business in both cloth and yarn. Buyers have [illegible] as to operating in large lines for distant delivery. The general inquiry has been encouraging, the lists presented by [illegible] seldom led to transactions of weight. The [illegible] in India is now settled [illegible] as to the crops, for the Madras [illegible] been widespread. There is [illegible] on that score. China buyers have bought a [illegible] but there are rumours as often as the [illegible] which cannot be [illegible]. The [illegible] appears to that order are [illegible] turbed by [illegible] a week ago. It is feared that there will be, after all, a serious

crisis affecting Manchester. Burnley goods are dragging, and close somewhat depressed. Home trade cloths are pretty much as they were. Buyers in the distributing houses are not giving out many orders to make. Yarns made from American cotton for home consumption are dull, especially in weft. Cop-twist seems to be in a better position. Ring beams are showing themselves in stock, and coarse weft is flat. It is thought that the Federation Spinners of American yarns will not stop an extra week before the end of September, as proposed, though yarns are slow of sale. Shipping descriptions have been in good demand for India in double 40's, some spinners being now engaged to the end of the year in these counts. Extra hard yarns for the Levant are moving slowly, as the bids coming round are quite out. Bolton spinnings of carded and combed yarns are steady, and seem to be about the best things in the market. Producers of these numbers are so well held that they are not seeking new business. Raw cotton has fluctuated in price from day to day. On Thursday prices were easier owing, it is said, to better telegrams relating to the crop. The Egyptian cotton crop is said to be doing fairly well. There are rumours of failures among cotton brokers in Alexandria.

Sir Jacob Behrens and Sons, in their weekly circular, state that unfavourable weather reports, the steadiness of the Liverpool market, covering by shorts, absorption by trade interests, and a general absence of sellers brought about a further rise in American cotton yesterday, which has, however, been checked by better reports from America, and the nett result is a slight decline on the week. A drop of 1/16d. per lb. has taken place in Egyptian staples, the demand for which continues dull.

Coal.—The railway companies are still holding back their contracts for the half-year, and are contenting themselves with buying for their immediate requirements rather than give the high prices asked. On the other hand, coalowners are busy, and even with the pits working full time are hard put to it to keep pace with the demands made upon them by shippers, and so long as this continues there is little prospect of any reduction in values. Less is doing in house coal than was recently the case, but the business passing is still above the average for the time of year, and prices are firmly held.

Copper.—Dealers have hardly known what to make of the American position, and a good deal of hesitation was shown in the early dealings. Spot metal fluctuated in a languid fashion between £94 and £96 most of the week, according to whether holders were inclined to sell or not; but on Thursday realisations predominated, sending the price down to the lower of these figures, and to-day a further drop to £92 15s. was recorded. The quotation for forward delivery was lifted 10s. on Monday morning, but the bears sold rather freely, and the improvement was quickly wiped out. Further declines followed, with occasional rallies, until the price was down to £86 15s.

Tin.—A rally in the East induced speculators here to cover their commitments for near and August delivery, and quotations improved to £184 for cash and £181 for three months. Apart from this the market has been for the most part exceedingly quiet, with buyers and sellers alike indisposed to work. Spot metal dropped back to £183 5s. on a little realisation, and the price for three months at one time fell to £180 15s., but dealings later in the week became much more active, and prices recovered to £183 17s. 6d. and £182 15s. respectively.

Iron.—The American demand for Cleveland has come to an end for the time being, but the loss of that outlet has been compensated by an increase in purchases for Germany, and the decrease in public stocks continues on a large scale. Stocks in Connal's Stores on the 24th amounted to 230,136 tons or a reduction of 41,622 since the end of June. According to the "Engineer," the "bears" of Cleveland warrants have been badly caught, and their efforts to cover have sent the price up from 56s. 3d. to 59s., with the result that traders are inclined to hold off the market. Much the same story of an active demand on home and Continental account comes from Barrow, where warrant stocks are steadily shrinking, and makers are delivering all their output as fast as they produce it. Finished iron is quieter, owing to the holiday season; but prices are firmly held, as manufacturers are hopeful of an early revival of activity. A steady inquiry is experienced for railway material from both foreign and colonial markets, and our own railways are also buying freely for maintenance purposes. Business in steel remains fairly good, and although there was again talk of supplies coming from Germany, prices are not favourable to any such movement, and the market is inclined to think the competition from that quarter will not amount to much.

Tea.—A good general demand was experienced at this week's Indian auctions, when 10,205 packages were offered, but Messrs. Gow, Wilson and Stanton report that the strongest inquiry was for common teas, both leaf and broken, and these were again fractionally dearer, while no clean whole leaf was obtainable under 6¾d. per lb. Medium and better kinds showed little change, and the average realised was 8d. against 7.25d. a year ago. Ceylon teas were again in large supply, 33,764 packages being offered; but the demand continues good, and the same conditions prevailed here as in the Indian section. Common grades met with very strong support, and there was also some good buying of the higher grades from 9d. upwards, but medium qualities were rather neglected. The average price was 7.48d. against 6.55d. last year. Only 1,632 packages of Java tea were brought forward, and these were sold at about last week's rates.

Sugar.—In his weekly report Mr. Czarnikow states that the covering of August "bear" sales has encouraged the trade to continue buying more freely, and a healthier tone prevailed, but later became quiet again. Fluctuations have been small, and on balance prices are almost unchanged since Thursday of last week; at no time has there been any pressure to sell actual 88 per cent. beet, as the moderate quantities offered were easily absorbed by speculators, as well as by refiners here and on the Continent. The liquidation of the August account is still in progress, and this delivery moved from 9s. 9d. to 9s. 8½d. to 9s. 9d., whilst refiners paid 9s. 9¾d. to 9s. 10½d. and 9s. 10d. for moderate quantities. New crop remains practically unaltered, but a fairly large business was done up to 9s. 6¼d. October-December and 9s. 9d. May, which figures were slightly above those at the close of last week, and though we are fractionally easier it is difficult to buy quantities at the reduction. Refiners bought some 88 per cent. at 9s. 9¾d. to 9s. 10½d. to 9s. 10d., and seconds at 8s. 1½d. to 8s. 4½d. Tate's cubes are unchanged at 19s. 9d., standard granulated 17s. 9d., Lyle's No. 2 17s. 3d. Hamburg granulated, prompt, moved from 11s. 3d. to 11s. 3¾d., August from 11s. 3¾d. to 11s. 4⅛d., October-December from 11s. 2¼d. to 11s. 3d.; Paris, July, from fcs. 26.37 to fcs. 26.62 to fcs. 26.37 (10s. 11¼d. f.o.b.), October-January from fcs. 26.37 to fcs. 27.50 to fcs. 27.25 (11s. 3¾d. f.o.b.); Hamburg beet, July, from 9s. 8½d. to 9s. 9d., August from 9s. 9d. to 9s. 9½d. to 9s. 9d., October-December from 9s. 5¾d. to 9s. 6¼d. to 9s. 6d., January-March from 9s. 6½d. to 9s. 7d., May from 9s. 8¾d. to 9s. 9d. In New York more business has been done in preferential sugars on the spot and to arrive at advancing rates, refiners apparently fearing a further hardening of values, as supplies from Cuba are now within a very small compass. Landed Cuban sugars sold at 3.93¾ cents, equal to 10s. 4½d. c.i.f. for 96 per cent. non-preferential, equal to 9s. 3d. f.o.b. Hamburg for 88 per cent. nett beet, while the same grade to arrive found buyers at 2⅞ cents. c.i.f. basis 95 per cent. The stocks in U.S. have again declined, and with only 14,000 tons receipts and 47,000 tons meltings, they are now only 326,000 tons, and are likely to be further reduced as the summer goes on.

D. H. C.—(1) There is nothing alarming in the shrinkage in value in itself, but the company is not particularly strong. Its reserve now stands at £23,000, but it is all sunk in the business; creditors figure for an important amount, and the free resources are small. When the renewal of track is completed, the company may improve its receipts, but the report is so meagre that it is difficult to say. If there is little scope for expansion, then the debenture stock is high enough at its present price. The corporation has the option to purchase the concern about 1930; if it does so, the debentures would no doubt be paid off. Apart from this, if you can sell even at a loss you might find a better secured stock to take its place. (2) This company is in a much stronger position. Cost of track is heavy, but includes cost of concession, and the £12,684 at head of balance-sheet is practically goodwill, which should be written off. Depreciation allowance appears to be fair, but a good deal depends on nature of track and equipment, and on the terms of the lease of one. Debentures are repayable after 1912 at company's option, but a sinking fund must be commenced next year, and be applied to their redemption by drawings at 105. (3) These are preferable to No. 1 and as good as No. 2. This is a much bigger undertaking, and its financial position appears good, with prospects of expansion increasing the security for the debentures.

W. A. P. (1st letter).—This stock is purely a speculation. As a gambling counter it may rise when the market is in a healthier condition, but a dividend is most improbable. The company's finances are in a bad way, working expenses at a very high rate, and even if these are reduced there is so much capital before the ordinary that its position is pitiful. (2nd letter) A. and B. These are counters also, but have a speculative chance perhaps. We do not think you should sell now, although we see no signs of any substantial improvement for a long time. C. is in much the same position, working expenses must be reduced before it can hope to rise. It is so low that it can hardly shrink further, and might be kept in the hope that an improvement will come in time.

Arch (Glasgow).—Under present conditions the shares seem a fair speculative investment, but you must not overlook the fact that the company is heavily overweighted with capital, and, therefore, sensitive to adverse circumstances. Dividends will, no doubt, be promptly paid, but the shares will require watching, and should be sold on a rise.

Anon.—We cannot make up our minds ourselves about these shares, but think you should hold, at least until the report is out.

G. R.—(1) We fear these will go down rather than up in the present state of the market, and although the recent attack by the bears might cause a temporary rally, it might be as well to sell now. (2) The company is rather a speculative undertaking for which we do not care much. We do not like to say sell, but you will probably lose less by doing so. (3) Not at all a likely speculation. Company is too heavily weighted with capital. (4) Certainly not. The company is badly in need of funds, and is meeting expenditure on the property out of current revenue, so that dividend payments seem unlikely for the time being.

H. R.—We hardly think it would be advisable to make the change at present into either of the stocks you mention, or at all indeed.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Barry.—At the rate of 8½ per cent., carrying £1,080 forward.

Central London.—At the rate of 3 per cent. per annum on the undivided ordinary stock and 4 per cent. per annum on the preferred ordinary stock for the half-year ended June 30, providing also for a dividend at the rate of 2 per cent. per annum on the deferred stock, this latter dividend only being payable when the result of the year's working has been ascertained, carrying £25,890 forward.

Furness.—For half-year ending June 30 at the rate of 3 per cent. per annum on the ordinary stock, carrying forward £7,068.

Great Central.—At the rate of 2 per cent. per annum on the 4 per cent. preference stock, 1889, carrying forward £4,700.

Great Northern.—At the rate of 3 per cent. per annum on the old ordinary, with £61,646 forward. The dividend is 2 per cent. on the preferred, and 3 per cent. on the "B" stock.

Great Northern (Ireland).—On the ordinary stock, for half-year ended June 30, at the rate of 6¼ per cent. per annum, carrying forward £39,000.

Lancashire and Yorkshire.—Past half-year at the rate of 4 per cent. per annum, carrying forward £21,600.

Liverpool Overhead.—At the rate of 5 per cent. per annum on the preference shares, carrying forward £4,452.

London and Blackwall.—At the usual rate of £4 10s. per cent. per annum.

London and South-Western.—For half-year ended June 30 at the rate of 4 per cent. per annum on the ordinary stock, carrying forward £24,972. Dividend on the preferred converted ordinary stock will be at the full rate of 4 per cent. per annum.

London, Chatham, and Dover.—£1 5s. per cent. for half-year on the arbitration preference stock, making £3 10s. per cent. for the financial year, carrying forward £4,326.

National of Mexico.—Semi-annual of 1 per cent. on the preferred capital stock, payable Aug. 12.

North-Eastern.—At the rate of 5½ per cent. per annum, with £101,000 forward.

North Staffordshire.—For past half-year upon the ordinary stock at the rate of 4 per cent. per annum, carrying forward £10,555.

South-Eastern.—Half-year ended June 30 at the rate of £1 per cent. per annum on the ordinary stock, carrying £7,000 forward. Upon the preferred ordinary stock an interim of £1 per cent. for half-year.

Taff Vale.—At the rate of 4 per cent. per annum, with £5,000 to reserve and £21,261 forward.

Vale of Glamorgan.—4 1/16 per cent. per annum for last half-year on the ordinary stock, carrying £545 forward.

BANKS.

Canadian of Commerce.—At the rate of 8 per cent. per annum for three months to Aug. 31.

Martin's.—At the rate of 8 per cent. per annum, placing £10,000 to reserve fund, and carrying forward £22,247.

TRAMWAYS.

Bristol Tramways and Carriage.—Interim at the rate of 8½ per cent. per annum for half-year ended June 30.

City of Buenos Ayres.—1s. 3d. per share for three months ended 30th ult.

Imperial.—Interim at the rate of 8 per cent. per annum for half-year ended June 30.

MINES.

Champion Reef Gold of India.—Interim of 4d. per share, payable Sept. 3, making 8d. per share for eight months to May 31, 1907.

Le Roi No. 2.—Interim of 2s. per share.

MISCELLANEOUS.

Albion Steam Coal.—Interim for past half-year at the rate of 10 per cent. per annum on the ordinary shares.

Andrew Knowles and Sons.—Interim of 12s. per share, being at the rate of 5 per cent. per annum.

B. Morris and Sons.—Interim at the rate of 4 per cent. per annum for the six months ended June 30.

Baiss Brothers and Stevenson.—At the rate of 9 per cent. per annum.

Bell's Asbestos.—Interim of 6d. per share for half-year ended 30th ult., being at the rate of 5 per cent. per annum.

Bradbury, Greatorex, and Co.—Interim for six months ended July 12 on the ordinary shares of 8 per cent. per annum.

British Steamship Investment Trust.—Final at the rate of 6 per cent. per annum on the deferred stock, making 5 per cent. for the year ended June 30.

Burlington Hotels.—Interim of 2½ per cent. on account 1907.

City of London Brewery.—Interim of 1 per cent. on the ordinary stock and shares for six months ended June 30, being at the rate of 2 per cent. per annum.

English Velvet and Cord Dyers.—Interim at the rate of 6 per cent. per annum on the ordinary shares for half-year ended 30th ult.

Gas Light and Coke.—At the rate of £4 8s. per cent. per annum for past half-year, carrying forward £306,992.

Hobbs, Hart, and Co.—6 per cent.

Hopcraft and Norris.—4 per cent. for the year to Sept. 30, carrying forward £193.

Imperial Tobacco.—For half-year ended April 30, an interim at the rate of 6 per cent. per annum upon the preferred ordinary shares.

Isaac Holden and Son.—On the ordinary shares for year ended June 30 at the rate of 5 per cent.

Jeremiah Rotherham.—Interim for six months ended July 15 on the ordinary shares at the rate of 7 per cent. per annum.

John Howell and Co.—Interim of 2s. per share for half-year ended July 13.

John Oakey and Sons.—Interim at the rate of 12 per cent. per annum on the ordinary shares for six months ended June 30, payable Sept. 2.

Kempton Park Freehold Land.—Further of 2¾ per cent., making 5⅜ per cent. for the year.

La Société Egyptienne de la Daira Sanieh.—Interim of 25s. per ordinary share and £10 per deferred share, payable Aug. 1 at the National Bank of Egypt in Cairo, Alexandria, and London (4 and 5, King William Street, E.C.).

London Pavilion.—Interim of 2 per cent.

Mercantile Steamship.—Interim at the rate of 5 per cent. per annum.

Morrison and Fleet's Dairies.—Interim at the rate of 6 per cent. per annum for half-year ended June 29.

North's Navigation Collieries.—Interim of 5s. per share on both preference and ordinary shares for half-year ended June 29, payable Aug. 15.

Paquin.—Interim on the ordinary shares at the rate of 10 per cent. per annum for half-year ended June 30.

Perry and Co.—Interim for first six months of this year, on the ordinary shares, at the rate of 10 per cent. per annum.

Ramsbottom Paper Mill.—Interim of 5 per cent.

St. James's and Pall Mall Electric Light.—Interim for half-year ended June 30 at the rate of 10 per cent. per annum on the ordinary shares.

South Africa (*South Africa* newspaper).—15 per cent. for year ended June 30.

Standard Tea of Ceylon.—Interim of 5 per cent. for six months ended June 30.

Thomas M'Kenzie and Sons.—Interim of 5 per cent. per annum.

Thomas Wallis and Co.—Interim for six months ending July 31 at the rate of 8 per cent. per annum on the ordinary shares.

United States Debenture.—Interim for half-year ending the 31st inst. on the ordinary shares at the rate of 5 per cent. per annum.

W. B. Fordham and Sons.—Interim at the rate of 5 per cent. per annum for six months ended June 30.

Weldons.—On the ordinary shares at the rate of 10 per cent. per annum for half-year ended 30th ult. (making 10 per cent. for the year), placing £7,000 to reserve, £1,000 to be applied as bonus to staff and management, and carrying forward £5,275.

Western Wagon and Property.—Interim at the usual rate of 10 per cent. per annum for half-year ended June 30.

William M'Laren, Sons, and Co.—Interim at the rate of 5 per cent. per annum on the ordinary shares for half-year ended 20th ult.

Wraight Dumbrill.—At the rate of 10 per cent. per annum, making 8 per cent. for year ended June 29.

MINING RETURNS.

Alaska United Gold.—Crushed 22,020 tons, value $18,607; saved 333 tons sulphurets, value $11,212.

Brilliant Extended.—Crushed 3,816 tons for £7,521.

Brilliant and St. George.—Crushed 1,508 tons, 617 ozs.

Briseis Tin Mines.—Shipped 16 tons, including 7 tons for New Brothers Home No. 1.

British Broken Hill Proprietary.—2,800 tons crude ore produced 350 tons concentrates, containing 221 tons lead and 9,450 ozs. silver.

Camp Bird.—Crushed 6,369 tons, 8,735 ozs.; concentrates 560 tons.

Chinese Engineering.—Output of coal 27,000 tons, sales 17,500 tons, consumption 1,400 tons.

Duff Development.—Prospecting dredge 39 ozs., No. 3 dredge 23 ozs.

Hyderabad (Deccan).—Output of coal 30,699 tons.

Kluchi Gold.—638 tons for 200 ozs. The assay value of the ore is 15 dwts. per ton. Tailings assays average 8½ dwts. per ton.

Komata Reefs.—Crushed 2,300 tons, bullion £3,950.

Mount Lyell.—31,160 tons of ore treated. In addition 1,554 tons of purchased ore and metal-bearing fluxes. The converters produced 683 tons blister copper, containing as follows:—Copper, 673 tons; silver, 53,973 ozs.; gold, 1,582 ozs.

North Broken Hill.—Treated 2,282 tons crude ore, producing 390 tons concentrates, containing 267 tons, 14 cwt. lead, and [illegible] ozs. silver.

New Bayley's of Coolgardie.—Crushing 363 tons for 675 ozs. of gold.

Ouro Preto of Brazil.—5,704 tons of ore, 1,[illegible] ozs.

St. John Del Rey.—Gold produce, [illegible], yield per ton, .59 of an ounce troy.

Tronzk Goldfields.—Crushed 1,380 tons, 222 ozs.; 152 tons tributers' ore crushed, 82 ozs.; alluvial gold [illegible] ozs.; 5,500 tons tailings, 375 ozs.; 28 ozs. from scaling the plates of the Alexandrovsk mill; total, [illegible] ozs.

United Rhodesia Gold Fields.—King's Daughter [illegible] tons, 663 ozs.; Camborian 220 tons, 151 ozs.; [illegible] tons, [illegible]; Bonanza 1,300 tons, 173 ozs.; Mariner Claims [illegible] tons, 120 ozs.; Jumbo 1,021 tons, 1,330 ozs.; [illegible] tons, 138 ozs.

Victoria Proprietary.—Crushed [illegible] tons, [illegible] ozs.

Wahn Grand Junction.—Crushed 3,550 tons, yielding £[illegible].

COMPANY MEETINGS.

ANGLO-ARGENTINE TRAMWAYS.

An extraordinary meeting of the Anglo-Argentine Tramways Co., Limited, was held yesterday at Winchester House, Old Broad Street, E.C., for the purpose of considering an agreement with the Compagnie Générale de Tramways de Buenos Ayres, to agree to the acquisition of the assets of the Buenos Ayres and Belgrano Electric Tramways Co., Limited, and to approve alterations in the articles of association necessary to carry those agreements into effect. Mr. J. B. Concanon presided.

The Secretary (Mr. Louis Striem) having read the notice calling the meeting,

The Chairman said: Gentlemen,—You have all no doubt received copies of the provisional agreement entered into with the Compagnie Générale de Tramways de Buenos Ayres for the acquisition by this company of the Buenos Ayres and Belgrano Electric Tramways Company's undertaking, together with copies of the necessary resolutions altering our articles of association in case you approve of, and confirm, the provisional agreement, which we have no hesitation in recommending you to do, and as we have informed you by circular as to the general effect of that agreement upon both classes of shareholders, I need not trouble you with a very long speech. Those of you who heard, or read, my opening remarks at our annual meeting early in April last will recollect that I stated that we had not up to that date been formally approached, and that when we were—as I had no doubt we should be sooner or later—we should, in considering any proposition made to us, pay due regard to the exceptionally strong position we were in as regards our earning power, the ideal situation of our lines and our prospects generally. Well, all those considerations were most carefully weighed by us before the expected negotiations were commenced, during the month of May, upon the initiative of the representatives of the Compagnie Générale de Tramways de Buenos Ayres of Brussels, and the agreement now before you, which it is for you to accept or reject, is the outcome. I think it is due to Messrs. Lazarus and Oliven, who represented the Brussels Company, to say that they not only knew their own minds as to how far they were prepared to go, but that they also gave us—the Anglo-Argentine directors—credit for an equal amount of determination as to the minimum we should accept, so that little or no time was wasted by either side in endeavouring to get the better of the other. It is true, however, that we endeavoured to induce our friends to agree to the new 10 per cent. preference shares being cumulative as to dividend, and, seeing that the Brussels company and their friends hold something like 40 per cent. of our ordinary shares, we were hopeful that they would give way upon the point. They did not do so, however, and we on our side did not think it advisable to break off negotiations in consequence and for these reasons: in the first place, it seemed to us that any untoward circumstances which would cause a diminution in the new 10 per cent. non-cumulative preference dividends would, to a greater or less extent, reduce the dividends payable on our ordinary shares if we remained in our present position. In the next place, we had regard to the fact that the nett profits of the Buenos Ayres and Belgrano Company, which for last year, after allowing for depreciation, amounted to £61,977, will in the immediate future be available to supplement the sum necessary to pay the new preference dividends annually. We believe, therefore, that both classes of preference shareholders may calculate with reasonable certainty upon receiving their dividends regularly and in full, less income-tax, of course. I may here mention, by the way, that although we shall receive the profits of the Belgrano Company as from the 1st of this month, no appreciable surplus can be expected from that source until the balance of the purchase money has been paid, as we have to pay to that company in the meantime £60,500 per annum interest on the purchase money. We made a proviso, however, that our reserve fund should, if necessary, in the meantime be drawn upon to make up 2 per cent. of the 10 per cent. dividend on our new preference shares. It rests with the Belgrano Company's shareholders to say whether they will accept the final payment on July 1 next or on July 1, 1000, but I think you may take it that the date will be the earlier one, as the directors of the Belgrano Company have undertaken to call a meeting of their shareholders to sanction the earlier date as soon as this, and the subsequent confirmatory meeting which we shall hold a fortnight hence, have approved of the various resolutions. I do not think I need say anything to recommend the scheme to our present 5½ per cent. preference shareholders. They will receive an additional ½ per cent. dividend, with an additional £1 per share in case of liquidation, for the purely nominal risk of allowing an increase of the borrowing powers by way of debentures, as such debentures can only be applied to purposes which I may call self-supporting, without the sanction of the preference holders voting separately from the ordinary shareholders. You will notice, gentlemen, that we ask you to sanction the creation of £5,000,000 new ordinary capital, to rank after the present and proposed new preference shares. £1,600,000 of that capital is to be the consideration for the acquisition of the Belgrano undertaking, and the remaining £3,400,000 will be reserved for the purpose of purchasing shares in other tramways in Buenos Ayres. The Brussels Company already own a very large majority of such shares, by which they control the various companies concerned, and they have expressed their willingness to enter into negotiations with us for their transfer, or the transfer of the respective concessions, when their arrangements are in a more advanced stage. They expect a revenue from those investments of about £100,000 for this year, and when all the lines of the companies in question are electrified and in complete working order, they look for a very much larger revenue. Such revenue will, when the shares of those companies are possessed by us, in the manner I have described, still further add to the security of our present and proposed new preference shares. It only remains for me to say that we propose to add four new directors to the board, all of whom will be nominated by the Brussels Company. This, you will see, is only the natural outcome of the proposals, having regard to the fact that, whilst the owners of the new ordinary shares are going to take, so to speak, a back seat in the distribution of profits, they, as a matter of course, desire to have a controlling voice in the management of the company. The resolutions all hang together as giving effect to a complete scheme. I propose, therefore, to put them en bloc. After they have been moved and seconded, I shall be happy to answer any questions or give any explanations in my power. I therefore formally move the resolutions Nos. 1 to 6 inclusive set forth in the notice convening the meeting.

Lord Richard Browne seconded the resolutions, and they were carried unanimously.

A vote of thanks to the chairman terminated the proceedings.

UNION BANK OF AUSTRALIA.

The annual general meeting of the proprietors of the Union Bank of Australia, Limited, was held on Monday, at the office, 71, Cornhill, E.C., Mr. Arthur Flower (the chairman) presiding.

The Manager (Mr. A. C. Willis) having read the notice convening the meeting and the certificate and report of the auditors,

The Chairman said: In our present accounts you will find that, while our deposits have increased by £1,200,000, our advances are practically the same as six months ago. This follows a decrease in deposits of £500,000 and an increase in advances of £900,000 in our last accounts. Our expenses show an increase of £4,000 as compared with six months ago, of which amount salaries account for £1,500, the remainder being due to sundry items of expenditure connected with our business. Our liquid and readily available resources, as shown in the present accounts, consisting of specie on hand and cash balances, bullion and advances on bullion, money at call and short notice in London, balance of remittances and drafts in transitu and bills receivable at London office and investments—amounting to £10,486,000—represent, after deducting £1,000,000 for investments allotted to the reserve fund, some 8s. 9d. in the £ of all our liabilities in London and the colonies. I am glad to be able to repeat the favourable account put before you six months ago as to the general prosperity and progress shown in all branches of industry and business throughout Australasia. (Applause.) With regard to weather, it is, of course, difficult to generalise when dealing with such a vast continent; but, speaking generally, while there are districts where more rain would have been beneficial, the season has been a good one, and all classes have shared in the benefits accruing from such conditions, while our report and accounts certainly show ample evidence of the benefit accruing therefrom to the bank. You will notice among the appropriations now made the £10,000 to the bank's guarantee and provident fund, to which I referred at our last meeting, thus completing the £30,000 pointed to by the actuaries in their report as called for. There has, as you are no doubt aware, been a serious decline in the value of many classes of securities during the interval since we last met, and in order to provide for all depreciation to the present time in our investments it has been found necessary to provide a sum of £60,000 for this purpose. I can only hope that this may prove to be the lowest point to which it will be found necessary to go in this direction. I am sure the increase of our reserve fund by £50,000 from the result of this half-year will be a matter of satisfaction to our shareholders, who, I know, hold strong views on the subject. I think, then, I am safe in assuming that the continuance of the dividend and bonus at the same rate as last half-year, together with other appropriations to which I have referred, will be regarded by you, as it certainly is by the directors, as most satisfactory. (Applause.) But of course, as you will readily understand, and as is conveyed by our report, these results have not been accomplished by means of the ordinary six months' banking profits, but have been assisted to a material extent by recoveries on account of debts in respect to which the materially-improved condition and prospects in Australia have obviated the necessity for provision previously called for. So that to this extent these results are exceptional; and, on the other hand, if the results are exceptional, so certainly are the dividend and other appropriations. It will, I am sure, be of interest to you to know that the directors have recently had an opportunity for full discussion of the bank's affairs with our general manager, who is on a visit to this country, as is also our inspector in New Zealand, and we have reason to be in every way pleased with the present management and business of the bank in all its departments. (Applause.)

Mr. William O. Gilchrist seconded the motion, which was carried unanimously, and the proceedings terminated with the usual votes of thanks to the chairman, the directors, and the staff.

NATIONAL TELEPHONE.

The fortieth ordinary general meeting of the National Telephone Company, Limited, was held on Tuesday at Hamilton House, Victoria Embankment, E.C., Mr. George Franklin (the President) presiding.

The Secretary (Mr. Albert Amis) read the notice convening the meeting and the report of the auditors.

The President referred with great regret to the loss which the company had sustained by the death of the late general manager, Mr. W. E. L. Gaine. Having expressed much satisfaction that their former colleague, Lord Balfour of Burleigh, had again joined the board, he alluded to the accounts for the half-year ended the 30th ult., remarking that they were absolutely accurate as regarded the first five months, while they were only an estimate for June. The income accrued in respect of the business of the half-year was £1,314,760 or a record increase of £119,639. The nett result for the half-year was £436,271, showing an increase of £40,000, to which they must add a diminished balance carried forward of £5,000, giving them £51,000 more for distribution. Of that amount £11,000 had already been absorbed in debenture and other interest, £30,000 more had gone in dividends, and £10,000 had been added to the reserve fund. The half-year's income represented the earnings on 428,703 stations, being an increase of 20,967. In 1900 their average income per station was £7 11s. 8d., but it fell gradually year by year until it reached £6 3s. 7d. He was glad to say that for the first five months of the present year for which they had accurate accounts the average income per station had risen to £6 4s. 5d. From this figure he thought they might predict that the decrease in revenue per station, owing to the adoption of cheaper and popular tariffs, had at last been overcome by the increased user. If that were so, there was no reason why the company should not look forward to being as prosperous, during the remainder of their tenure as they had been in the past, if not more so. The amount of the working expenses had increased in the half-year compared with those for the corresponding period of 1906, but the percentage of working expenses fell from 63.94 per cent. to 63.32 per cent. The increased prosperity of the company had its reflex action in the dividend—that was to say, for the first time the directors had been able to make the dividend on the deferred stock at the rate of 6 per cent., or the same as on the preferred stock. They were doing their best as regarded the question of dividend on this stock, always having in view a policy of prudence, and at the same time the possibilities which might be in store for the company, for there might be a surprise for them. The total amount of capital spent, including £658,000 for land and buildings, was £13,059,277, which had been raised by preferred, deferred, and debenture stocks amounting to £10,516,000, leaving a balance, in round figures, of £3,143,000, which was brought into the balance-sheet as an asset representing the difference between capital expended and capital raised. The stock of materials figured at £395,796, or about the same as it stood at six months ago, but the "special replacement account" now amounted to only £129,805, compared with £189,473. That item represented a sum to be charged to revenue in respect of underground works which had been undertaken in many of the large towns; and in order that it might not fall unduly on the revenue of any particular year or half-year, the directors instituted a scheme by which it could be spread over a period of years. He believed that by the year 1909 this item would have been written off altogether. Generally, he thought he might safely congratulate the shareholders on the comparatively smooth water in which they found themselves that day. It was true that they had before them a somewhat anxious time when they reflected on what might happen in 1911, but he could not help thinking that if they adopted a policy of financial prudence all the time, there was no reason for alarm among the shareholders, who might be well assured that the directors were fully alive to the responsibilities which rested upon them, and that they would see that the very best was made of the opportunities presented to them from time to time. He concluded by moving a resolution for the adoption of the report and the payment of the dividends recommended therein. Mr. Samuel H. Sands (the vice-president) seconded the motion. A short discussion followed, and the resolution was then unanimously adopted.

BOMBAY ELECTRIC SUPPLY AND TRAMWAYS.

The second ordinary general meeting of the Bombay Electric Supply and Tramways Company, Limited, was held on Wednesday at Winchester House, Old Broad Street, E.C., Sir Edward Sassoon, Bart., M.P. (chairman of the company), presiding.

The Secretary (Mr. Ernest Hopwood) having read the notice convening the meeting and the auditors' report,

The Chairman, after dealing with the figures in the report, said: It will be noted that the interest and dividend charged have all been paid out of revenue, and capital account has not been debited with any proportion of the debenture interest, although the directors consider that it would have been quite legitimate to charge to capital the interest on the proportion of the debenture capital which has been unremunerative during the period of reconstruction. It may be interesting to compare the figures of the year's working with what was earned during the preceding years by the former company, as this is the first complete year of working since this company was registered. The gross traffic receipts for the year 1904 were £109,091 and for 1905 £112,454. [illegible] construction and equipment of the [illegible] ended 1906 amounted to £121,631 [illegible] taxes and sundry receipts, bring the total up to £[illegible]. Electric traction has to the [illegible] yet been brought into operation [illegible] popular. Its influence on our traffic [illegible] period the cars have been running [illegible] ings of the electric 113 8d; with the [illegible] advance of over 50 per cent in the earnings of the tramway per car per mile, as you will see from the report. At present the work of the electrification of the tramways is [illegible] under compulsory [illegible] extends from June until the end of September. [illegible] say it will be vigorously proceeded with [illegible] We expect to have the entire system running [illegible] the monsoon of next year. During the year under review the excess of expenses over receipts in the electricity supply department amounted to £1,039 12s. 11d., which your directors have considered it advisable to carry to suspense account, bringing the total up to £3,503 3s., with a view to its being written off out of subsequent profits from that branch of the undertaking. There is every indication from the returns received that this year there will be a profit on this branch of the business. The lighting and power supply branch of your business has made excellent progress during the year under review. Our mains have now been extended to Malabar Hill, and we look for a large business in that, the most wealthy residential quarter of the city. The commercial and industrial situation in Bombay continues satisfactory, as is evidenced by the [illegible] returns of its export and import trade. The operations of the Improvement and Port Trusts continue to be directed to assisting the expansion of the city by the creation of new suburbs and by important reclamations from the sea. The field for profitable extensions of our tramway is certain, therefore, to be a widening one. I have no hesitation in telling you gentlemen, that you are participants in a good and highly profitable business. I never doubted it, and we have still less reason to doubt it since the earnings of the electrified portion of the line, although it is only partially electrified, have revealed the capabilities of a dense and compactly situated population to require and to use a cheap and expeditious and comfortable means of locomotion. Having paid a tribute to the excellent services of the staff, the Chairman moved the adoption of the report and accounts.

Sir Charles Olivant, K.C.I.E., seconded the motion, which was unanimously adopted without discussion, and the proceedings ended with a vote of thanks to the chairman, directors and staff.

CERRO MURIANO MINES.

The fifth ordinary general meeting of the Cerro Muriano Mines, Limited, was held on Thursday at the Cannon street Hotel, E.C., Mr. William Frecheville (the Chairman of the company) presiding.

The Secretary (Mr. F. H. Williams) read the notice convening the meeting and also the report of the auditors.

The Chairman: Gentlemen,—In the annual report which is now submitted to you you will find, I think, a fairly clear statement of the position of the company up to March 31 last. On looking at the accounts you will notice that the issued capital remains the same as last year—that is to say, 225,000 shares, with 10,000 unissued shares in reserve. The working capital now stands at £18,750, and this will no doubt be required, and will be called up between now and the end of the year, in fact, I may mention that the directors have to-day decided to call up the remaining 5s. per share, that call being payable on August 15 next. On the credit side of the balance-sheet you will notice that the land sold to the North Cerro Muriano Company is valued at £25,000. Some figure had to be taken, and after consultation with the auditors the above figure was agreed at, based partly on the area of the ground sold and partly on the work done on it. You will also notice that the 100,000 shares which we hold in the North Cerro Muriano Company are taken into account at a nominal figure of £100. Here also considerable difficulty was experienced in arriving at a valuation, and under the circumstances it was thought best to take the nominal figure. We have, as you know, a large number of these shares, but, considering the absence of a market in them, it has been thought wise by your board to defer the question of distributing part of them until the work of exploration on their property has reached a more advanced stage, as they have not yet succeeded in tapping any of their bodies below the ancient workings. The directors refer in their report to the loan up to £20,000 which has been arranged for with the North Cerro Muriano Company. It was found, after providing for the development of our mine, that the working capital furnished by the last issue of shares, although sufficient to put up concentrating works for treating the ore, would not suffice to put up smelting works as well, and as it was considered very important that smelting works should be provided as we are glad to be able to report this arrangement to you. The erection of smelting works will be not only to reduce the cost of carriage of the product to England, but also to enable a better extraction of the copper in the ore to be made. Mr. Collins reports that he hopes to have the concentrating plant working by the beginning of next year. The smelting plant, however, has not yet been ordered, as we have only just completed the financial arrangements which permit this being done, and consequently a date

for its completion cannot be given; but it will be pushed on with all possible speed, and we hope it may be possible to get it to work soon after the concentrating mill starts. I may mention that the necessary power plant for the smelter is already on order. As regards the mine itself, as I shall presently call on Mr Edgar Taylor to describe in detail, the results of the past year's work, I will not enter further into this subject than by drawing your attention to the fact that on March 31 last, measured on conservative lines, there were 58,000 tons of ore developed in the mine of an average value of 2.6 per cent. of copper. This substantial tonnage has been considerably added to since, and by the time the plant starts it does not seem unreasonable to expect we may have approximately three years' supply of ore for it practically assured. The grade of the ore is not very high, it is true. Still, according to Mr Collins's figures it will be profitable. Our ground is exceptionally easy to work, and we have a good labour supply, and I look forward to very low working expenses being ultimately achieved. I may also point out that we have within certain limits the power of meeting possible falls in price of copper by somewhat increasing the value of the ore sent to the mill. That is to say, by exercising certain care and selection in stoping, and subsequently in hand-picking, the ore sent to the mill might be improved somewhat, say, up to 3 per cent.; but, on the other hand, the quantity available for treatment would be somewhat reduced by this procedure.

Mr. Edgar Taylor having addressed the meeting, the motion was carried unanimously, and the proceedings terminated.

RAPHAEL TUCK AND SONS.

The sixth annual ordinary general meeting of the members of Raphael Tuck and Sons, Limited, was held on Monday at Salisbury House, Finsbury Circus, E.C., Mr. Adolph Tuck (Chairman of the company) presiding.

The Secretary (Mr. J. W. Bretherton) having read the notice convening the meeting and the auditors' report,

The Chairman said that at their last annual meeting he based his remarks with reference to the year's working upon the results shown on the completion of the first five years' cycle since the company was established as it was now constituted, and he was enabled to report increased profits for each succeeding year. The financial year 1906-7, which they had met to discuss that day, saw the completion of the first year of a new cycle, and every probability had pointed to his being in the same happy position that day as he had been in former years. In the autumn of last year, however, the strike, which lasted over three months, occurred in the colour-printing labour market in Germany, and the result so far as the company were concerned was that the fruit of months of labour and expense in certain sections of their business could not be reaped owing to causes entirely beyond their control. Fortunately, their resources in the United Kingdom—where they had long been printing some of their best colour work—had enabled them to weather the storm with comparative ease. Some of their profits in the past year had also been absorbed owing to the defalcations of one of their bookkeepers in Paris. Every penny of the loss, however, had been written off, and the new financial year started with an entirely clean sheet. Apart from these two untoward events, their business had proved quite satisfactory in its various departments. The latest and most remarkable competitive postcard exhibition ever held by the company opened its doors to the public that morning at the Royal Institute of Painters in Water-Colours in Piccadilly, and he trusted that all the shareholders would endeavour to visit it. A second section of the exhibition was devoted to postcard albums, which were shown by competitors from all parts of the kingdom, and which illustrated tours in the British Isles and elsewhere by means of the company's postcards. What, however, would come as an undoubted surprise to the public were the home decorations—articles of furniture and bric-à-brac decorated with Tuck's postcards. In going through the balance-sheet, he stated that the increase of £5,451 shown in the item of leasehold properties represented the balance of the cost paid during the year for the new wing added to Raphael House. Sundry debtors, bills receivable, &c., amounted to £97,705, or an increase of £4,475 over the previous year's figures. The cash in hand and at the bank figured at £39,987, showing a reduction of £5,297. The stock this year stood at £59,070, with expenditure on new season's goods—which practically represented stock—of £7,804, the total being £66,874, or £1,744 in excess of last year's figures. Copyrights, patents, goodwill, &c., stood at the usual figure of £240,732. Their liabilities, on the other hand, amounted to £27,070, or £862 more. The nett profit for the year had been £42,273, which was increased by the sum brought forward to £45,338. The preference dividends had been paid, as well as an interim dividend on the ordinary shares at the rate of 6 per cent. per annum, and they now recommended a dividend on the latter shares at the rate of 10 per cent. per annum, making the regular 8 per cent. for the year. Without any desire to gloss over the results of the past year's working as against those of the year before—the difference against them being £9,570—he must point out that the nett total of their profits last year was actually in excess of the average annual profits for the five last years of the business before it was taken over by the present company; and not only were they able to pay their regular dividends out of the year's profits, but also to carry to reserve a sum actually in excess of the amount originally contemplated on the issue of the prospectus. He concluded by moving the adoption of the report, which was seconded by Sir Arthur Conan Doyle and carried.

EGYPTIAN ESTATES.

The second ordinary general meeting of the Egyptian Estates Limited, was held yesterday at Winchester House, London, E.C. Mr. Greville H. Palmer (Chairman of the company) presiding.

The Secretary (Mr. S. W. Bartman, F.C.I.S.) having read the notice convening the meeting and the auditors' report,

The Chairman, in the course of his speech, said: Gentlemen—We appear before you to-day in circumstances which have no parallel in my business experience. We are trading in a rich country, our trading has been successful to an extent that is quite remarkable, we have presented to you a balance-sheet showing, for the second time in the history of the company, a very large profit, and yet we have to meet you with the very disappointing statement that we do not at present recommend the payment of a dividend. The reason is that, notwithstanding the general prosperity of the country, money in Egypt is very scarce. It is very difficult to borrow money, even on the best of securities, and therefore, for the present, we have to utilise all our available funds for our current requirements. You will say, "Why do you not realise some of your assets?" The answer is that it is very difficult to make realisations on a large scale at the present moment. People with large sums available are not to be found at every corner. Real property in Egypt has not, so far as can be ascertained, fallen in value to any appreciable extent. So far from that being the case, wherever we have been able to trace sales of real property at all comparable to our own holdings, the values are fully maintained, and even enhanced, but the majority of such sales are of small parcels and sales of large property as a whole are for the moment almost entirely suspended. It is, therefore, obvious that we cannot raise such a sum of money as would be required for the payment of a dividend in this manner, not because the properties are not worth the price they are valued at, but because the buyers are few and far between. The financial position in Egypt to-day is a very remarkable one. You will remember that, when we last met, I told you that I did not believe in the pessimistic views of people in general, and in this country in particular who were predicting a slump in land values in Egypt. These predictions have been persistently indulged in ever since, and as far as the value of real property is concerned the slump has not come, nor does it at present show any signs of doing so. But there has been financial trouble of another nature. People thought that because Egypt was prosperous and money was flowing into the country from the sale of its agricultural products this money would benefit the industrial condition of the country generally. In this the business community in Egypt has been woefully mistaken. The rush of industrial companies has resulted in financial trouble, which has been widespread, and to this extent, and this only, have prophets of evil been justified. You must remember that we are as yet a young company, and although I hope it will not be long before we are in receipt of a steady income from our properties, there is still a certain amount of development work and building to be done before that end is attained. Had financial matters taken the course which I think we were all justified in expecting from the general prosperity of the country, we should have been able to get cheap money, and we should not have had to ask the shareholders to make the present sacrifice. We all reckoned, however, without the ultra-toryism of the Fellaheen. They have not yet come to realise the value of money; they have got land hunger to an extent only to be paralleled, I should imagine, in Ireland, and failing the appeasement of that hunger, they are just as prone to bury their money as they were in the days of Ismail Pasha, and so we get no benefit out of it. I own that I was, last year, too apt to ridicule the pessimistic utterances to which I then alluded, but, so far as I did so in relation to the predicted land slump I contend that I was, and am, still right, and that, although trouble has come, it is of an extremely different nature from what was then prophesied. We have to inform you that we are negotiating for a rearrangement of our debenture capital, which while it gives increased security and satisfaction to the debenture shareholders, has, at the same time, given us a surplus amount of debentures of a more marketable nature, which will be at our disposal for the purposes of our businesses. We are also asking you for powers to increase the ordinary share capital. We have no intention of making a public issue, but we have found it so convenient in the past to have shares at our disposal for our business that we wish to continue the practice. I need hardly remind you that most of our reserve has been built up in this way. He concluded by moving the adoption of the report.

Mr. G. A. Sheppard seconded the motion, and it was carried.

The usual formal business was transacted.

The special meeting to increase the capital was adjourned for one week, as the requisite quorum was not present.

According to cable advices from Santiago, Chili, the arrangement between the Antofagasta (Chili) and Bolivia Railway Co. Limited, and the Antofagasta Nitrate Company has been satisfactorily concluded. This will result in considerable direct advantages to the railway company, and removes outstanding matters in dispute between the two companies, in respect of a contract which has been in existence from the establishment of the railway company, and should lead to the further development of the traffic derived from the Antofagasta Nitrate Company.

In accordance with the provisions of the Companies Act, 1900, we certify that all our requirements as auditors have been complied with. We have satisfied ourselves of the correctness of the Cash Balances, and have examined the Securities held against the Money at call and Short Notice, and those representing the Investments of the Bank, and having examined the foregoing Balance Sheet and Profit and Loss Account with the Books of the Bank, we report to the Shareholders that, in our opinion, the Balance Sheet is a full and fair Balance Sheet, and properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs as shown by the Books of the Bank.

TURQUAND, YOUNGS & CO.,
17th July, 1907. **Auditors.**

BRITISH NORTH BORNEO COMPANY.

This company has recently been much in evidence because of the development of the rubber interest in its territory, as a result of which its sales of land during 1906 rose from $35,747 to $235,694 or £27,498. Including this amount the total revenue with £1,249 received in London amounted to £14,206, of which expenses took £83,140, depreciation £6,280, and adverse exchange £1,851, leaving a surplus of £48,976. The directors have had the property revalued in accordance with the terms of the supplementary deed of settlement with the result that the assets show an increase of at least £13,000, and this sum they treat as profit available for dividend purposes. A balance of £102,492 brought forward from the previous year gives a total of £104,468 to be dealt with, of which interest on debentures and bonds took £19,375, commission on shares allotted £6,359 and after payment of a dividend at the rate of 5 per cent. per annum £111,623 is carried forward. Expenditure on capital account, including £11,625 for proportion of salaries, subsidy to steamers, &c., and £6,465 for cost of expedition, in connection, &c., was £18,879, while £4,303 was written off for depreciation, making with the addition for increased value of the property a total of £764,684. In addition £18,528 was spent on the railway and rolling stock, £3,647 on telegraphs, and £6,258 on works and buildings so that altogether the capital account stands at £1,408,613 against an issued share capital of £400,000 and a debenture debt of £385,000, but the company also has a premium on debentures and bonds fund of £19,250. Liabilities to sundry creditors including £44,200 of Treasury notes amount to £76,133, and on the other hand advances to rubber companies under guarantee of directors, debts for land sales and other credit balances come to £40,529. Cash amounts to £43,000, of which £7,005 is payable to trustees for debentures holders in respect of land sales, and investments, less depreciation reserve, are valued at £22,938.

SCOTTISH AMERICAN MORTGAGE CO., LIMITED.

Steps were taken during the year ended May 31 to carry out the scheme for reconstituting this company's capital, under which holders of fully paid shares agreed to convert the amounts paid in advance of calls into £48,370 4½ per cent. "A" and £246,568 5 per cent. "B" preference stock. When this had been done holders of partly paid shares were entitled £1 in "A" stock and the balance at the "B" stock in exchange for payment of an equal amount of uncalled capital. The result of these changes is that the share capital now consists of £120,370 in "A" and £300,000 in "B" preference stock, £111,592 in fully-paid £2 shares, £188,496 in £15 shares £5 paid, and £7,056 in called capital paid in advance, or £733,432 in all. A corresponding reduction has been made in the uncalled capital, which now amounts to £726,352 in debenture stock and debentures and £18,785 in deposits, so that the total capital is £1,498,569, against which the assets consisting of mortgages, vendors' lien notes, &c., are valued at £1,493,668. In addition the company has a reserve fund of £150,000, represented by securities costing £149,480, the market value of which on May 31 was £150,845, and other premises in Edinburgh valued at £7,300. While making the above changes, the directors decided that in future the revenue account shall only contain the income actually received, and under this new arrangement the nett profits, after providing for interest and all other charges, were £45,504. To this was added £24,712 brought forward making a total of £70,215, but £25,158 is required to meet the accrued interest and dividends taken credit for in the previous account, and £5047 is written off for premium on debentures stock redeemed. Preference dividends having been paid, the available surplus was £11,897, out of which a dividend of 3 per cent is paid on the ordinary shares, leaving £7,897 to be carried forward. The profits, it is explained, showed an increase of over £15,000 compared with 1904, but of this nearly £8,000 was required to meet the preference dividend, and takes the place of interest which would otherwise have been declared, and the real improvement is therefore about £7,000.

FORTY-FOURTH REPORT OF THE DIRECTORS,

Submitted to the Shareholders at the ORDINARY GENERAL MEETING, held at the Offices of the Company, 39 Cornhill, in the City of London, on Thursday, the 18th day of July 1907, at Half-past Twelve o'clock in the Afternoon.

THE DIRECTORS beg to submit to the Shareholders the statement of the affairs of the Company for the half-year ending 30th June, 1907.

The Accounts, including the balance brought forward from last half-year, and after making provision for contingencies, show a gross profit of £271,289 8s. 4d. Allowing rebate of interest, amounting to £135,060 12s 5d, on bills not yet due, and deducting current expenses, there remains a balance of £116,975 1s 3d. Out of this sum the Directors have placed £15,000 to Reserve Fund, making it £465,000, and recommend placing £5,000 to Provident Reserve Fund, and the payment of a Dividend at the rate of 11 per cent. per annum for the half-year free of Income Tax, carrying forward £55,725 1s. 3d.

The Dividend will be payable on and after the 20th inst.

By Order of the Board,

W. B. HOBBS, *Secretary.*

39 CORNHILL, LONDON, E.C., *6th July*, 1907.

W. T. BRAND, HENRY OPPENHEIM, } *Directors.*

Balance brought down .. £55,725 1 3

In accordance with the provisions of the Companies Act, 1900, we certify that all our requirements as Auditors have been complied with.

We have examined the Securities representing investments of the Company, those held against Loans made by the Company at call, short and fixed dates, and all Bills discounted in hand. We have also verified the Cash Balances, and vouched the Securities and Bills given as collateral security for Loans, and we have now to report to the Shareholders that the foregoing Accounts agree with the Books, and in our opinion the Balance-sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs as shown by the Books of the Company, except that, whilst it shows the amount of the Bills discounted which have been re-discounted, it does not show the amount of the Bills and other Securities given out against Loans shown on the debit side of the Balance-sheet.

London, E.C., *6th July*, 1907.

ADAM T. YOUNG (per Turquand, Youngs & Co.), THOMAS A. WELTON (Welton, Jones & Co.), } *Auditors.*

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 500. New Series. SATURDAY, AUGUST 3, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,

"Investors' Review" Office,

Norfolk House, Norfolk Street,

London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Budget of France.

A valuable analysis of the French Budget for the current year has just been issued by the Foreign Office. It has been compiled by the Hon. R. Lister, Councillor of His Majesty's Embassy at Paris, and deserves a welcome, although rather belated. If Mr. Lister had added to his intelligent and careful summary of the Budget proposals for the current year a synopsis of the proposals now before the French Chambers for the Budget of the coming year, the pamphlet would have been much enhanced in value. It may be said that as yet the Budget for 1908 has not been voted by the Chambers. The Ministry has not been able to push through its new income-tax, and until the exhibit is complete it may not be the province of a British official to summarise what is called the "Budget project" for the coming year. We cannot see any force in an objection of this kind, supposing it to be entertained, and as the Minister of Finance has long ago issued his justification for the proposals submitted to the Chambers, as the Budget committee of the Chamber of Deputies has also delivered its mind upon them, we ought to have had the two years put side by side as a means of enabling students to judge of the condition of French finance.

With this grumble we pass on to look at the French official exhibits. They are not very cheering, and yet the projected Budget for the coming year presents some features which give promise perhaps of better days to come. For the year 1907 now running the Finance Minister had to provide for borrowing £4,335,000, and it is proposed to do without borrowing for 1908, the successive Governments having striven for years to suppress the "extraordinary Budget" as a fertile source of waste and fiscal derangement. Whether the Ministry will be able to carry out this reform or not is more than can now be predicted, but by dint of small parings, of slight additions here and there to existing taxes and relying on the hopes of a steady increase in the revenue due to the ordinary effects of the country's assumed prosperity, an increase of more or less magnitude is expected from most of the chief branches of income. Even direct taxes are expected to yield about £202,000 more next year, and the increase in the Customs duties is put at £1,434,000, while other indirect taxes are looked for to give nearly £800,000 more, altogether Customs and indirect taxes being expected to increase by £2,393,000 or more. The increase in the indirect taxes is thus painfully in contrast with the slight increase in the direct taxes, but then the income-tax, if passed, may come in to help to redress the balance. Altogether the increase from taxation of every description is put at £3,400,180, and an increase of upwards of £1,040,000 is looked for from the product of monopolies and State industries. This year's anticipations are all based upon the actual receipts for 1906, it being the invariable habit of the French Government to act thus. No other course is indeed practicable, because the work of framing the Budget begins so early in the year. Comparison, however, is made with the estimates now in course of justification.

With all helps, however, it will be extremely difficult to make ends meet because of the steady pressure upon the Government to enlarge its expenditure in various directions. The Morocco scare forced it last year to

incur increased outlays upon the army and navy, and the floating debt had to be augmented in order to find the means, until its total on May 1st this year was nearly £55,000,000. We get, perhaps, the best idea of the difficulties besetting the Government of the Republic through the weight of expenditure by looking at the devices hunted up and relied upon in order to try and squeeze a little more money out of the taxpayer. No great reform in taxation is attempted, but some little addition is made to the centimes levied upon property, the stamp put upon small trade bills of 100 francs and under is to be raised from a halfpenny to a penny, and various measures are proposed in order to prevent evasion of the graduated stamp duty upon bills of larger amounts. Sundry adjustments are made in the duties upon alcohol, and the zone system under which the sale of State tobaccos has been conducted is to be suppressed with a view to larger receipts and greater economy in distribution. These are amongst the changes suggested by means of which the revenue is to be increased, and they lead us to infer that the French people are now taxed just about to the amount of their capacity. Fertile new sources of revenue there are none. Even the income-tax will give nothing like the return ours does.

The Budget presents a most formidable total. For the current year it is put by Mr. Lister at £160,412,000, including the extraordinary expenditure of the Ministry of War. Deducting most of that as being expenditure distributed over a series of years, the total is none the less £152,960,000, and for the coming year the total is fixed at £154,166,000. What is done with all this money? The debt services and pensions alone take, in round figures, nearly £50,000,000 of it, for the total debt of France, exclusive of local obligations, amounts to £1,211,384,000, after allowing, apparently, for the effect of the terminable annuities in redeeming debt. Then the Ministries of War and Marine sweep away about £44,000,000 between them, so that about £94,000,000 in all of the revenue disappears in what may be called dead-weight charges. The expenditure upon pensions of all descriptions is mounting with really alarming rapidity, and the railway subventions will require £3,600,000 in the coming year. Then the demands of the secular educational system, which to its everlasting honour the Republic has established, now amounts to about £11,000,000 per annum. The colonies are also a severe drain upon the country, an expense for which so far no adequate compensating advantage is to be seen. The amounts set down for next year under colonies aggregate about £4,320,000. To some extent the Budget total is made up of expenses connected with the State manufactures and monopolies, and the £21,420,000 set down against these cannot, perhaps, be regarded as a charge upon the taxpayer, although we are very doubtful whether monopolies are ever a source of income good for nations; but leaving this out, the Budget is a sufficiently formidable one, and is constantly expanding. Shipping bounties and subsidies require nearly £1,500,000, but are, perhaps, a diminishing load upon industry. Considerable increases are shown in the charges of the Ministry of the Interior, for the navy, for public instruction, for commerce and industry, and for public works, in the Budget for the coming year, the aggregate increase being, however, lowered to a mere £800,000 by reductions, more or less temporary we fear, in other directions. A slight decline, for example, is shown in the charges of the War Office for the coming year, and rather less is asked for the colonies, as well as for the Ministries of Justice and Finance than was voted for the current year, but the Budget none the less swells in most categories of outlay, and must be productive of discontent in many parts of the country, besides those three or four departments in the South which have been driven into a general strike through the collapse in the prices for their wines and the frauds of adulterators.

And France, Mr. Lister reminds us, has not merely a National Debt to carry, but a communal debt, which in 1905 reached a total of almost £160,000,000, besides a departmental debt of £23,000,000 at the same date. He puts the public debt of France at £1,239,855,000 also in 1905, but there have been amortisations through the action of the terminable annuities since then. On the other hand, the floating debts, the annuities to the railways, and local debts have probably increased, so that at the present time the aggregate public burdens of France may well amount to more than £1,400,000,000, a debt of upwards of £36 per head of the population. We are generally led to suppose that France is an extremely rich country, and in some respects it is the richest in the world. Wealth is also better diffused there than, perhaps, anywhere else. Yet the value of the estates charged with succession duties in 1905 was only £245,466,000 gross, or about £230,000,000 nett, and of this total only about £113,000,000 represented estates of £10,000 and under, nearly one-half that is. The population of France at the same time grows very slowly. It increased only by 290,322 persons in the five years ended March 31, 1906, when the last census was taken, and the total is now only 39,252,267 persons. No doubt some drain upon the population of the country has occurred through the expansion of French colonial possessions in Africa and Asia, but even so the rate of increase is miserably small, and points to national decay unless something can be done to stimulate it. How anything can be done while the country remains burdened with debt and man-killing charges of all kinds to the extent now visible may well baffle the wit of the greatest of statesmen to compass.

By dint of patching, postponing, and paring, the Budget for the coming year as now framed should end with a tiny surplus of little more than £10,000, but we may be quite sure that its shape will be much battered yet before it passes into law, and there is great probability that further additions to the floating debt may have to be made long before the end of 1908. The slightest political fright, a hint of disagreement with Germany, of coldness between the Republic and Russia, of disturbances in the Balkans or in Asia Minor would set the spenders all clamouring for more guns, more powder, more warships, more men, and a colonial Empire always implies punitive or other expeditions, such as France is in no position comfortably to afford. In this inability the Republic is only like its neighbours, and because all the Powers of Europe who count, and some who do not yet, are crushed between the nether millstone of their debts and the upper millstone of their armaments, they may be compelled to keep the peace no matter what their passions may prompt them to do. But it is a depressing thing to contemplate—civilisation's benefits wasted, barbarism and brutality dogging the steps of progress, ever ready to put forth their foul talons and draw mankind back again into the abyss out of which it has so painfully striven to emerge.

Joint-Stock Company Bankruptcy.

Another report, the 16th annual one, has been issued by Mr. George Stapylton Barnes, Comptroller of the Companies Department, and is, as usual, most instructive. The public, however, pays little attention to the teaching of experience, as little often as to that of precept, and, therefore, year after year crops of scandals come under the review of the Board of Trade officials, are blandly commented upon and analysed by them and straightway pass into oblivion. Mr. Barnes points out that last year there were altogether 1,730 joint-stock companies wound up, and of these only 116 were compulsorily dealt with by order of the Court. Purely voluntarily liquidations numbered 1,602, and about that kind of obsequies Mr. Barnes has nothing to tell us. We have always held it to be a scandal that any joint-stock company should be allowed to conduct its own funeral in private, and, in spite of the discouragement given by the indifference of the public to the lessons of such facts as do come to light, we must still insist that the only chance we have of

minimising the robberies of the promoter lies in the rigorous and searching examination of the affairs of every joint-stock company that fails, no matter under what pretext. One satisfactory change seems to have taken place of late; there is a much less pronounced tendency to register companies in the island of Guernsey or to launch them in this country without a prospectus. In the first half of 1904 the percentage to the total number of companies brought into existence without prospectuses was 68, and in the second half of last year it fell to 26. This is so far a wholesome indication, and if the committee of the Stock Exchange would exert itself in the interests of the public the proportion might soon be still more minute. It has simply to refuse to permit dealings or to grant a settlement or quotation to the shares of any company which emerges surreptitiously upon the market, and we should soon find the prospectusless company a thing of the past.

Of more interest perhaps than dry statistics of this kind are some of the facts set forth about a few of the companies that have come under the harrow of the Department. Amongst these have been a certain number of bogus insurance companies, "bond investment" companies and impudent rapacities of that description. Their method of business is always of the simplest. Whatever money they may rake in, either on shares sold or in the form of premiums paid upon sham policies issued, is utilised as long as it lasts for the benefit of the starters and runners of the "company," and when no more cash can be had the whole thing collapses. One such company rejoicing in the name of "The Co-operative Sickness and Accident Association" failed with no assets except the "unpaid calls" of £152. Another affair, "The British Investment Assurance Company, Limited," registered in Guernsey in 1904, managed to get £8,705 out of the public on its shares issued, and £1,261 for bond instalment payments. The whole of this money, with the exception of a small outlay on office furniture, was used as directors' and agents' salaries and fees and office charges. Another similar imposture managed to rake in about £4,000 from outsiders in one form or another all of which was spent on working expenses and directors' fees. Debentures were issued to the company's solicitors, and a Receiver is now in possession of the assets. The enterprising individuals who attain success in these directions are not all aliens either.

Another kind of company which always turns up in these annual reports is the one-man company. Generally, it is based upon an insolvent business which the owner contrives to turn into a limited company so as to enable him to borrow on debentures either for the purpose of carrying the business on or in order to get a hold over the assets, and to annex the property alike of trade creditors and shareholders. Several of these companies are gibbeted by Mr. Barnes this year, and he may safely count upon having to continue to pass sentence in the same way next year. That system of issuing debentures and obtaining credit simultaneously from the ordinary suppliers of a company is a thoroughly vicious one, and yet we do not see how the imposition is to be stopped while merchants will go on supplying goods to companies whose assets are already mortgaged. These debenture-holders nearly always step in and snap up whatever is in the place without regard to the outside creditor, and very often, if it is a one-man company, the organiser so contrives it that he will, by virtue of debentures held by himself, get all the goods he has managed to collect on credit from the wholesale houses into his own possession without paying a farthing for them.

Of course, Mr. Bottomley's Joint Stock Trust and Finance Corporation comes up for judicious and reticent handling as well as his wonderful "Selected Gold Mines of Australia, Limited," but Mr. Barnes does not tell us anything new about either, nor indeed does he name the singular Horatio at all, being doubtless afraid lest that elastic man should fall to worrying the Department as only an expert like him could. The story as told is none the less curious and suggestive to those who have followed Mr. Bottomley's rhetorical and circularising career, and this Joint Stock Trust appears to be still in rather a desperate case for all he has done for it, since it has no appreciable assets nor any means of getting money from those other "joint-stock enterprises" in the kaleidoscopic group of other ephemeral structures which subscribed for its capital. Nominally, its share capital is £500,000 in 5s. shares, but 3s. 6d. per share was credited as paid up, and a good deal of the remainder seems to be beyond the reach of creditors or anybody else. It took over certain assets of the Joint Stock Trust, but not those acquired by the "Selected Gold Mines," and then it entered into dealings, or "stock operations," as Mr. Bottomley called them, which always ended in a purchase by the outside simple Simons of debentures of the Selected Gold Mines at wonderful profits. This sort of thing, which never had any substance behind it, without large supplies of fresh money by the dupes, could not go on very long without bringing the institution within sight of the Bankruptcy Court, and, accordingy, a compulsory winding-up order has followed in slow, very slow, due course.

Does the public lose much money by the failures of joint stock companies? Doubtless, but elaborate although the statistics presented at the end of the Official Receiver's report appear to be, they convey little reliable information upon this point. Apparently, in the ten years ended December 31 last the loss to shareholders and creditors together came to just £40,000,000, but it is all estimates, and we cannot even be sure that the proportion set down to shareholders or contributors of all descriptions is really loss of cash. In so many instances the nominal capital is more or less made up of unstained paper, so to say. On the other hand, if a company has a market vogue of any description and its shares pass into the hands of the public at more or less elevated premiums, the real loss of contributors may be very much greater than anything shown in the statistical tables so industriously put together by the Board of Trade officials. We are making no complaint against them. They do all that is possible, and the utmost they can do gives us but a faint idea of what joint stock company promotion of the greedy, let alone the "road agent," type annually costs the British public. The Comptroller, however, at the beginning of his report tells us that the number of new companies registered in England and Wales during the past year was 4,395, and that the number which for one reason or other disappeared was 3,487, so that the nett increase on the year was only 908. Many of the companies, indeed more than half those which disappeared last year, were apparently failures from the first as their names were simply removed from the register, while the rest, numbering 1,728, went into liquidation, usually voluntary liquidation, as we have already explained. And as with private traders who fail the loss is nearly always greater than the estimate. For all that, the companyising habit spreads and reaches down into the small bye-ways of commerce and industry. As recently as 1897 the average nominal capital of each company created was £56,714, last year it was only £28,480, and that was higher by £4,350 than the average for 1904. Since big companies are still launched, this decline in the average shows that the multitude of companies with small capitals is on the increase, and the same tendency is visible in Scotland and Ireland.

Lloyds Bank.—By an unfortunate slip we made the total value of the securities held by Lloyds Bank £[illegible] in a note published last week. In actual fact the total [illegible], the smaller amount being that representing "Consols and British Government securities" alone.

Tenders for the issue of 600 ordinary shares of £10 each issued in the East Surrey Water Company were opened on Friday at the offices of the company and amounted to £9,046 5s. at prices ranging from £16 12s. to £16 15s. per share. The average price obtained for the issue was £16 11s. 6d. per share.

Economic and Financial Notes.

Splitting the Charter Trust.

Company splitting threatens to become the latest craze in the City. The Exploration set the fashion some time ago, and now that curious Chartered "relief" company the Charter Trust and Agency is to follow in its footsteps. Of course, share splitting and multiplying, capital watering, reserve capitalisation and other tricks designed to bamboozle the unwary can be traced back a greater number of years than we care to reflect upon. But games of that sort are the exclusive privilege of enterprises making some pretence to success. The failures have to think of something else, and having recently handled the reports of one or two Kaffir Trusts we have a decided notion that some more "splits" will have to be dealt with presently. Something of the kind must happen if shareholders are ever to see the colour of their money again, legal opinion being against the payment of dividends while depreciation exists, and it is clear that the loss of income is agitating the minds of the Charter Trust directors—solicitude for the shareholders, needless to say. Just to make things quite plain it will be well to first deal with the report and accounts for the past year, ended April 30, because the trend of the directors' thoughts will be easier to follow. In the 12 months the company raked together a revenue of £69,590, interest and dividends giving £56,872, commissions and agency and trustees' fees £7,959, and balance of realised profits on sales of investments and Stock Exchange transactions £4,432. The last-named item is worth a full description. Administration in London and Rhodesia took £13,085, or less than 20 per cent. of the income—how extraordinarily modest!—and income-tax was £472, so £56,033 remained. Then £53,629 came in from previous account, bringing up the profit balance to £109,662, and the directors slap £40,000 on the contingencies account, making it £100,000, leaving £69,662 in hand, as it were. Not half a bad position at first glance, but the company's assets are not quite up to the mark, the depreciation indeed being £279,542 on a total of £1,575,827, a pretty stiff percentage. The quoted investments, which are valued at £1,003,102, show a loss of about 18¼ per cent., and the unquoted securities and loans to Rhodesian companies and mortgages are short to the tune of 16⅞ per cent.—how carefully they must have been sized up! Why not go the whole hog and make it it a round 17 per cent.? The result is a total estimated depreciation of about 17¾ per cent., but if we knock off the contingencies account £100,000, and the undistributed profit £69,662, the deficiency is brought down to about 9 per cent. on the share capital.

But the directors are evidently not very sanguine about an immediate recovery—is not the shrinkage at the present moment greater still?—and therefore formulate a scheme under which shareholders may, if they like, remain in blissful ignorance that such a thing as depreciation exists. The undertaking would be lopped in two, one part keeping the present title and £750,000 of the capital, and the other part taking £500,000 of capital, thus accounting for the whole, and to be called the Trust and Agency Assets, Limited. No. 1 will acquire the more liquid assets and carry on the business, while No. 2 will take over what is left, realising the cargo as opportunities occur, and returning the proceeds in cash to the shareholders. Anything more delightfully simple can hardly be imagined. The effect will be that a present holder of 10 shares will receive six £1 Charter Trust and Agency, Limited (new), shares, and four £1 debenture shares of the Trust and Agency Assets, Limited, and will become entitled to dividends from the former and return of capital on the latter. "What's that?" "Suppose the liquid assets indulge in another violent slump directly they are separated and upset the whole plan?" "Never mind, cheer up, there's a good time coming, and things might be worse." "Suppose the company's money were in Consols!"

Speeches of Bank Chairmen.

A few extracts from these are given on another page in order to show how cheerfully boards of directors look upon the present state of credit. They are none of them dismayed by the fall in the price of Consols and other securities and apparently have no reason to be. In making these extracts it has been our design to try and print merely what was distinctive in each utterance. We had already analysed the half-yearly reports and balance-sheets, and had not space to repeat the official exposition of them given by the various speakers. This effort of ours has been somewhat foiled by the very uniformity of the prosperity which appears to have attended banking business in the past half-year. All the speakers view the situation from much the same standpoint. Some of them, however, refer to the movement to try and strengthen the gold reserves, and more than one had a little fling at the supineness of the Chancellor of the Exchequer in this direction. None of them, however, indicate that anything like concerted action amongst the joint-stock banks has been decided upon, but we are glad to note that private reserves in gold are being gathered together, and believe that this is in present circumstances the best possible policy to follow. The more our banks accumulate gold for themselves, within reasonable amounts, the better protected will they be against any sudden public excitement which, if not immediately allayed by prompt measures, might develop into a mischievous terror. Because business has been excellent recently, and profits unusually good, so good as to enable the banks to write down their investments in a most necessary but none the less praiseworthy fashion, it does not follow that we are going to be exempt for all time from scares or panics. Rather do good business and high profits carry within them the seeds of reaction. Hence the opportunity should be taken by each bank to form its own gold reserve in prosperous times, building it up to an amount commensurate with the risks run, an amount sufficient to supply the sudden demand of any district should a fright arise therein through some local exhibition of distress, enough also to sustain anything approaching a run until the excitement has died away. Nothing stimulates fear about a bank's stability so much as the slightest indication of inability to promptly meet all engagements. Banks, therefore, must never forget the conditions under which they conduct their business. They have enormous liabilities to the public which they may be called upon to meet almost at a moment's notice, and their safety must always lie in the ability to meet even unreasoning demands for repayment when occasion arises. Aside from this question the figures for the past half-year displayed by nearly all the banks are of a highly satisfactory description, and bear testimony to the unrivalled strength of our banking institutions.

A Trust in New Issues.

It hardly seems to want any introduction, the offers and the failures to sell have been so recent. Because the stocks did not go off at once it by no means follows that they are not worth buying. Apart from the unsettled condition of the money market, which has interfered with the successful sale of new stocks of no matter how excellent a class, there is, now-a-days, an increasing unreadiness displayed by the public to rush in on invitation and subscribe for stocks that have been underwritten. The shrewd prefer to wait until the underwriters consent to share commissions with them. All the four securities in this week's trust can now, accordingly, be bought below the issue price, except perhaps the new debenture stock of the Great Central Railway. Even that, however, was not all taken up by the stockholders, and the jobbers in whose hands it is will probably be glad to let it go at very little more than the issue price of 120. It should be worth rather more, because buyers can still get the stock

registered in their names without payment of stamps and fees.

Both the East Indian Railway loan and the Middlesex County loan scrips are quoted at about the discount which is allowed for in the prices given below. The stocks are being absorbed, and had it not been for the market's distress, underwriters might already have been thinking seriously of keeping a fuller share of the commission for themselves.

The South Manchurian Railway loan fell to 1¾ per cent. discount when the share allotment first became known, but has recovered to about ½ discount. It is going off more reluctantly than any of the other three stocks for various reasons, but the railway the money is designed to extend and re-equip ought to furnish ample funds for the service of the loan, wholly apart from the Imperial guarantee of Japan. It is because we take this view that we have included it in the suggested trust for this week, and to an amount sufficient to bring the average return on the money invested up to rather more than 4 per cent. This is not amiss on a group of securities, two at least, of which are suitable for trustees.

Nominal Amount. £		£ s. d.		£ s. d.
250	Great Central Railway New 4½ % Deb. Stock, at say, 120½	301 5 0	..	11 5 0
200	East Indian Railway 3½ % Deb. Stock, at 1 discount=94	188 0 0	..	7 0 0
250	Middlesex County 3½ % Stock, at 1 discount=96	240 0 0	..	8 15 0
300	S. Manchurian Railway 5 % Guar. Bonds, at ½ discount=96½	289 10 0	..	15 0 0
		£1,018 15 0	..	£42 0 0

Central Mining and Investment.

It was only the other day that we had the report of the Gold Mines Investment, the particular pet of the Gold Fields Company, to gaze upon and make us miserable, and now, before we have had time to gulp down its deficiency of half a million or so, Wernher, Beit's Central Mining and Investment statement is flung at our heads. Is it really playing the game to spring two such documents upon a semi-paralysed Stock Exchange and a half-ruined public within the space of three weeks and right in the midst of the holiday season? Why, the financial year only closed on June 30 last, and there seems something fiendish in the desperate hurry to acquaint the shareholders of their ghastly losses when another six months' wait would have been much more in accordance with Kaffir traditions. Many a poor devil must now sneak down to Margate on an excursion, if the snobocratic South-Eastern Railway runs such a thing, whereas had he been allowed to remain in blissful ignorance something in the way of a Cook's Tour to the Continent might have been managed without a pang. But the bolt has fallen, and all concerned must make the best of it. There are no half measures about this Wernher, Beit thing. When the company was formed it was clearly recognised that a rotten, pulpy structure like the Kaffir Circus would take a bit of shoring up, so the whole six millions of capital was slung out, most of it in Paris, thank goodness, and the rest between sundry magnates at home, or rather what they have made their home, worse luck. But the Aliens Act doesn't apply to these.

What makes us smile is a recollection of the virtuous indignation of sundry dealers when we ventured to disbelieve the original yarns that the capital was not to be used for supporting the market, but was to be strictly confined to actual mining operations. It was the industry that was to be helped, not the market, and the money would go for the laudable purpose of bringing numerous undeveloped mines to the stage of production. To do the magnates justice they never spread these stories themselves, but set to work to do their level best to hold up or lift prices in a last desperate hope that the public would seize the bait and prevent the shops from being smothered beneath their own paper. But it was not to be. Up to the present these trusts have merely succeeded in holding the market down. The public knew there were some buyers about and crowded shares upon them in a way that must have made the magnates swear. And so it is that the Central Mining and Investment Company now possesses dividend-paying gold shares to the value of £2,494,646, interests in non-dividend paying gold shares for £1,556,994, and first-class securities entered at £1,014,753. During the past year the directors have been going desperately slow, conditions having been absolutely rotten, hence the great lump of gilt-edged stuff. You see, apart from general adverse conditions there have been special reasons for the continued mistrust and the shrinkage in the quotations for Transvaal shares. "The disquieting effect of the General Election and the damage caused by permitting the all-important unskilled labour problem to become a party question have not tended to restore confidence. Your directors, however, feel justified in still taking a hopeful view of the future, because the Transvaal Government is undoubtedly anxious to promote the prosperity of the Colony, which entirely depends upon the success of expansion of the mining industry, and a satisfactory solution of the labour difficulty may therefore be expected within a reasonable measure of time." We indeed hope all this and lots more, but do not forget that Chinkee is going.

Willingly would we stop at this point and say nothing about the balance-sheet, but that is hardly possible. That little pack of securities just mentioned make up a total of £5,066,394, and it really is most distressing to find that almost two millions of this has disappeared, the exact figure being £1,920,672 an increase on the year of £477,492. After making sundry adjustments this deficiency is reduced to £1,917,183, and we may as well at once say that there is a credit to profit and loss of £419,143 as a set-off to the loss. Last year the company gathered a total revenue of £234,375, or 4.42 per cent. gross, on the investments, and after meeting sundry expenses the balance left was £210,704 to be added to the amount brought in making the sum named. A few other assets possessed by the company might be mentioned, such as shares in other companies taken in at £91,993, loans at short notice against security £486,000, bills receivable £693,500, debtors £28,951, and cash £8,075. What do we think of the prospects? Let us have a list of the investments and then we'll tell you.

Great Northern and City Railway.

We want to give some prominence to the half-yearly report of this tube railway, running from Moorgate-street to Finsbury Park, because for the first time the accounts are in ordinary railway form. We have dwelt long and often in the past on the company's unfortunate history, and need now only recall that until February 13 last the line was worked by the contractors, Messrs. S. Pearson and Sons, who guaranteed interest on the preferred ordinary capital and also on certain B shares. These guarantees have now ceased, and unhappy shareholders must depend upon the actual working of the line for their dividends. When they will see one we do not know, although the undertaking makes steady progress. This has been much more marked since the through booking arrangements with the Great Northern, North London, Metropolitan, and City and South London Railways came into force. The number of passengers carried in the six months to June 30, including season ticket holders, was 8,200,435 as against 8,087,740 in the corresponding period, and the number of local season tickets issued was 3,995, or the substantial improvement of 804. The number of three-route season ticket holders using the company's line in the past half-year was 2,735, a gain of only 38. Receipts from ordinary passengers were £38,570, local season tickets produced £2,870, and three-route seasons £3,480, or an aggregate passenger revenue of £40,920. Transfer fees were

£7, and miscellaneous, advertising, rents, &c., reached the considerable sum of £2,911, so that under all heads the income was £49,838. The company worked at 49.39 per cent. of this revenue, the expenditure being £24,616; maintenance taking £987, locomotive generating power £8,185, repairs of carriages and lifts £958, traffic expenses £9,809, general charges £2,401, and rates and taxes £2,156. Profit on working therefore came to £25,222, out of which the company has to pay £7,960 for rent, and £933 to Messrs. Pearson. General interest takes another £4,710, and the directors manage the interest on the debenture stock without much difficulty, adding £500 to the revenue fund and carrying £1,035 to next account. The amount of capital that receives no dividend is £1,560,000 in equal amounts of preferred and deferred ordinary shares, and it is a lamentable fact that the company does much less than half the business which would be necessary to give a fair return on all the money sunk.' Tube railways, thanks to the heavy cost of construction, and in some cases to promoters loading, do not and never will pay. That is the plain fact, and there is no getting away from it. This company's capital account is at present overdrawn by £197,595, against which £153,000 in Lloyds Bonds have been issued, and £330,089 is due to the contractors.

Some Local Debts in the United Kingdom.

So good is the partial return by the London County Council illustrative of the position of 16 of the great towns in England, Scotland, and Ireland in the matter of their debt, that we cannot help wishing the compilation had been more complete. It deals, however, with debts aggregating about £250,000,000, and illustrates the position not only of London, but of cities like Glasgow, Liverpool, Manchester, Birmingham, Leeds, Sheffield, Dublin, Belfast, Bristol, Edinburgh, Bradford, Newcastle-on-Tyne, Hull, and Nottingham. It also includes West Ham. From the compilation we get the amounts of the remunerative and non-remunerative debts of each municipality and of the metropolis, together with an exhibit of the annual charge in respect of the nett debt in the financial year 1905 or 1905-6, and a segregation of these charges into remunerative and non-remunerative. On the whole London comes well out in the comparison except in the matter of remunerative debt. Its aggregate debt, including the £38,575,517 imposed upon its inhabitants by the purchase of the water company undertakings, was £109,928,546 at the date given, or £23 9s. 3d. per head of the population. Of this total £56,149,319 was unremunerative debt and the charge per head imposed by the whole debt was 2s. 10.14d., of which 1s. 10.59d. came out of rates. But the charges of other cities are much higher than this. In Bradford, for instance, the total charge in the £ imposed by debt is 6s. 6.81d., in Leeds 6s. 3.64d., in Birmingham 5s. 9.27d., in Manchester 5s. 11.69d., and in Liverpool 4s. 0.01d. Among the big towns Glasgow comes close to London in the comparative lightness of its debt burden, whose total charge is only 3s. 11.83d., but of this charge only 1s. 11.14d. is met out of rates, whereas in Manchester the charge upon the rates is 2s. 5.71d., in Birmingham 2s. 9.08d., in Leeds 2s. 10.62d., in Dublin 2s. 8.73d., in West Ham 2s. 4.01d., and in Nottingham 2s. 6.32d. Most of these cities, however, possess increasingly remunerative undertakings which bear a considerable and growing portion of the debt burden. London, for example, provides only 11.55d. per £ of rateable value of its debt charge out of receipts other than rates against 2s. 0.69d. provided by Glasgow, 3s. 5.98d. the income of Manchester, and 3s. 0.19d. the relief afforded to Birmingham. Not one of the great towns given as examples makes so poor a display in this respect as London, not even West Ham, with the single exception of Edinburgh, the whole of whose burden of 3s. 2.74d. seems to be met out of rates. That, however, is partly because the water and gas companies in Edinburgh, although really in a sense owned by the population of the city, are placed under trustees or commissioners, and even where rates appear to be heavy as, for example, in Manchester, the indirect benefit obtained from the expenditure of money on the Ship Canal has more than compensated the inhabitants for the extra charge levied upon them in consequence of that particular addition to the debt of the municipality. Next to London the debt of Manchester is the largest of all these great cities, and yet we do not find its citizens continually growling about the waste of public money. It owes £35 13s. 6d. per head against £23 9s. 3d. per head, the amount of the London debt, and £26 17s. 8d. per head, the aggregate of the debt of Leeds. Birmingham, indeed, comes next to Manchester with a dead weight of £31 5s. 8d. per head, but Birmingham also accepts the situation with serenity.

Watney, Combe, Reid, and Co. Limited.

It is waste of space to animadvert year after year on the financial position of this bloated brewery and public-house combination, and we shall confine ourselves mainly to a statement of the facts. Gross trading profit for the half-year came to £623,721 or £10,860 more than in the previous year. The company, however, received £24,154 less in the shape of interest on loans at £102,695, and there was also a decline of £5,692 in the interest and dividends received, which came to £22,799. Rents, on the other hand, went up by £12,087 to £142,435, this being the nett amount after deducting rents payable, and altogether the gross profit shown in the accounts came to £891,787 or just £6,921 less. There were no savings worth mentioning on the general charges set forth in the profit and loss account, but it deserves mention that the directors' fees came to £1,200 less at £10,800. Some £3,753 less was also spent on repairs and depreciation of freehold and leaseholds, which appear at £131,329. In addition to this, however, £31,672 figures as repairs, maintenance and depreciation on brewery promotions and plant, a quite trivial amount to be thought sufficient for a property still valued in the balance-sheet at £9,244,145. In spite of the savings made in various directions and to a reduction of the amount allowed for bad debts to £4,591, the charges for conducting the business grow, and the nett profit of £474,080 is £25,819 less than in the previous year and nearly £250,000 short of the estimates put forward in the original prospectus. However, the directors pay the preferred ordinary stock its full 4 per cent. for the year, and again distribute 3 per cent. upon the much reduced deferred ordinary stock, and have £30,210 left to carry forward against £35,373 brought in. Also they add an additional £5,000 to the insurance fund, making it £10,000 for the year, in order to meet further risks under the Employers' Liability Act of 1906. Why, however, is the valuation of the brewery, buildings, goodwill, &c., mentioned above, now £401,306 more than it was twelve months back, and where did the directors get all the money with which to make this addition? The nominal capital has, no doubt, been increased by £277,000 odd through an issue of £160,000 in 5 per cent. cumulative first preference shares and of £64,590 each in preferred and deferred ordinary shares of £1 each, but this has not yet been issued, and anyway would not be enough to cover the addition to the cost of the properties. We merely ask the question and pass on, wondering whether the combine has fallen heir to a fortune. Other changes in the balance-sheet point to gradually altering conditions of business. The loans and interest due by customers after providing for depreciation, discount and cost of collection show a decline of £318,815 at £2,492,766. The company's investments, nominally £250,580 and of the actual value of £241,571 at the date of the balance-sheet, show a decline of £163,656, so we suppose stock to about that amount has been sold in order that the money might be put into the business. Trade investments are

also nearly £5,000 down at £152,600, and the stock of beer, casks, malt, &c., &c., is less by £5,325 at £312,123. Cash, however, is £60,909 better at £156,738, so that the whole of the money obtained from the sale of securities, the redemption of loans, or otherwise does not appear to have been as yet disbursed. But have the loans been paid off by the company's borrowing, or has it just foreclosed and added the securities to the capitalised value of what New Zealand experts in the staging of bankruptcies used to term "globe" assets? Deposits and sundry creditors on the liabilities side together amount to about £225,000, and this is a decrease of £44,000 on the year. The total issued share capital, it should be added, is now £6,321,763 and the debenture debt £5,883,893, the aggregate of the balance-sheet being £12,679,061.

The City of Rosario and its Debts.

Once more an arrangement has had to be come to with this Argentine municipality, which, in spite of the prosperity of the country, always pleads poverty. It was only in 1900 that the arrangement now cancelled was entered into, and bondholders then made no small sacrifice of their capital and claimable revenue in order to meet the wishes of the municipality. They are now again asked to submit to changes, and Messrs. C. J. Hambro and Co. advise them to accept the new scheme. This is the best, and indeed the only, course open to them, and thanks to the energy and prudence displayed by this firm in meeting the difficulty and standing up for the bondholders' rights, the arrangement bondholders are asked to fall in with, although it represents a sacrifice of interest claims, is probably the best now possible. It was in vain that Messrs. Hambro, in their correspondence with the Intendencia, or Mayor, of Rosario, strove to embue him and his municipal council with something like proper pride, and to rouse them to some recognition of the losses the foreign creditors of the city had suffered. Always the answer was, "We cannot afford to pay all this interest, and unless relief is given further default is not far off." "Some portion of the probable future prosperity of your city," said Messrs. Hambro, in one of their letters, "should be given to the bondholders either now by anticipation or in future when the finances of the city are in a more flourishing condition." "We can do nothing," the municipality, in substance, replied, "unless the Government of the Province of Santa Fe comes to our help," and this is just what it has done. Under the proposed arrangement the new bonds are to be the direct obligation of the Province, as well as of the city of Rosario. Holders of existing Rosario bonds are accordingly invited to exchange them against new sterling 4 per cent. bonds guaranteed in all respects by the Government of the Province of Santa Fe, both as regards principal and interest, and specially secured by the direct tax in the said Province, which is apparently a prolific one well able to bear the load now to be laid upon it. It yielded about £200,000 in 1906, and is expected to give £50,000 more in the current year, so that it largely exceeds the sum required for the service of the new bonds. Although nominally 4 per cents., the new sterling bonds of the Province to be exchanged for the existing 5 per cent. Rosario bonds (once 6 per cents.) do not yield the full rate of interest just at once any more than those did. For the five years interest accruing from November 1, 1907, will be paid at the rate of 2¾ per cent. in cash and 1¼ per cent. in bonds of the new loan, a vicious, but apparently inevitable, arrangement. After five years interest in full on all the bonds is to be paid in cash, and redemption at the rate of ½ per cent. per annum by purchase or drawings will commence ten years hence, the municipality reserving the right to increase the sinking fund at any time. Messrs. Hambro, believing the proposed arrangement to be an improvement in the security of the bondholders, have no hesitation in recommending its acceptance by the creditors of the city, and holders are accordingly asked to deposit their Rosario bonds at the London and Westminster Bank, which will issue certificates against them. But before depositing holders should detach and retain from the bonds of the Road loan of 1889 the coupon dated November, 1907, payable on January 1 next, and from the bonds of 1887, 1888, and of the funding loan the coupon dated October 1 next. Those interested in the negotiations which have led to this, in the main, satisfactory result can get a copy of the correspondence on application to Messrs. Hambro. Altogether, the debt of Rosario amounts to $9,250,000 gold.

Yorkshire Indigo Reconstruction.

Who is the Mr. F. A. Kelley, of Sheffield, that has been chosen to devise a scheme for the reorganisation of the Yorkshire Indigo Scarlet and Colour Dyers? He ought to be worth a good fat retaining fee to vendors of rotten textile and other companies. To put the matter shortly and simply, this company has been a rank failure during the last two or three years, after starting off fairly well, and the change is attributed to the substitution of khaki uniforms for the blue and scarlet cloths previously in use. For the quarter to June 30, 1906, the company made a deplorable display, and the earnings were a good £4,000 short of the debenture interest. We judge the past 12 months to have been still worse, although no accounts are published—doubtless will not be if the proposed reconstruction can be pushed through—and in referring to the causes which have brought things to their present pass the delightfully simple Mr. F. A. Kelley observes that it is probable that no useful purpose would be served now by discussing whether or not more effective steps might have been taken at an earlier date to obtain business in place of that which has been lost. Oh! wouldn't it? As to that there are one or two questions to ask. Is the present directorate composed of the original vendors, and what are the vendors' holdings of ordinary and preference shares respectively? Everything depends upon the reply to these questions, because the preference shareholders are practically being made to suffer for all the mistakes of the past. It is said that trade is beginning to buck up a bit, the trading profits for the second half of the financial year ended June 30, 1907, being £3,185, compared with £146 in the first half, after allowing for exceptional losses that fell upon both periods. The fashion in fancy goods which has held the public taste for a much longer period than usual seems to be giving place to a demand for plain articles, and when this, that, and the other reform has been carried out it is hoped that a much better condition of affairs can be brought about. Therefore, now is the moment to do the preference shareholders out of their rights so as to smooth the way for the ordinary shares, to what extent vendor-held we are not very sure. Capital was originally fixed at £400,000, of which £312,000 has been issued, and it is proposed to knock this down to £78,000, any number of branches having been closed, which gives us some idea of the real value of the assets sold to the company. To provide the losses, 16s. 8d. will be written off each ordinary share, and 13s. 4d. off each preference, while, to add insult to injury, the preference dividend is to be reduced from 5½ per cent. to 5. When this has been paid, and the ordinary shares have received a similar dividend, remaining profits are to be equally divided, but the proposal is grossly unfair to the preference shareholders, and will, we trust, be vigorously opposed. How about the heavy arrears of preference dividends? The whole business needs thorough investigation right from the beginning, and if the scheme is forced through there are always the Courts to afford protection.

Mr. Henry Andrade Harben has been elected chairman of the Prudential Assurance Company in the place of Sir Henry Harben, who has been appointed president, and Mr. Thomas Charles Dewey a director and deputy-chairman.

Mr. Norman Caldwell Plummer, who for the past eight years has been in the service of the Northern Assurance, has been appointed inspector at the head office of the Central Insurance.

American Business Notes.

Apparently the Wall Street market was a little bit disappointed last week that the Associated Banks' averages should have exhibited an increase of £3,600,000 in their loans and advances. As usual, excuses were forthcoming, but mostly of a stereotyped character. Loans had been retransferred from the trusts to the banks, it was alleged, and speculation had increased. Probably enough the true source of the increase was payment of calls upon new issues which underwriters of the securities had to borrow. The National City Bank, for instance, which is entirely a Standard Oil institution, showed an increase of £2,320,000 in its own advances, and unless we are mistaken a call fell due during the week upon the unplaced bonds issued by the Union Pacific Railroad Company. From one source or another specie was raked up to the amount of £1,136,000, and there was even an increase of £36,400 in the greenbacks held, so that, although deposits rose by £4,560,000, the surplus reserve was actually £32,400 better at £1,850,000 as compared with £3,778,600 a year back. On these figures the position is still ticklish enough, and it has been aggravated during the current week by the renewal of shipments of gold to Europe. It was only £100,000 worth that was taken in the beginning of the week for Paris. More was said to be going, but the exchange has gone back. The Bank of Montreal, however, swept up for Canada various sums aggregating about £200,000, and the exchanges are still against the United States, so that it is by no means improbable that metal will continue to be exported in a fitful way, especially as the excess of exports is insufficient to cover the foreign obligations of the Republic. Should that prove to be the case, we shall presently find call money becoming warningly dear upon Wall Street, and the hovering crisis will once more threaten to burst upon the world. Money is tightening already.

Actually during the five years ended with June 30 last the United States has sent £446,000,000 worth of goods and money out of the country in excess of the total values of goods and money imported. It must be a rich country that can stand a continuous drain of this kind, a drain averaging about £90,000,000 per annum, and not only stand it but boast of it, and wail also when the margin narrows as it has done in the fiscal year just ended. The excess of export values—"the balance of trade in our favour," as the simple-minded American puts it—has only been £79,440,000 for the year ended June 30 last, and the year before it was upwards of £96,000,000. Here is, indeed, a falling off full of evil portent to these distraught gentlemen. We in this country would be ready to welcome the change as some indication that the United States was beginning to obtain a mastery over its destinies, that its trade was no longer at the mercy of the foreign capitalist or conducted in foreign bottoms, but the American will not have it that way at all, therefore it is waste of wind to argue with him. He is delighted to think that the excess of exports has nearly doubled in about eight years, and will even go so far as to admit that "the continuance of the cycle of unexampled prosperity in this country"—this being the language of the New York *Chronicle*—and the need and desire for things brought from abroad, lend an impetus to the import trade.

However this may be, the volume of the Republic's foreign trade was large, not to say impressive, for the past year. Imports alone came to £286,880,000 which was the largest total ever reached in that country's history, and the value of the exports, in spite of this terrible growth in the imports was £376,200,000 or £27,400,000 more than in 1905-6. A year before that the increase was £72,460,000. In what did this expansion consist? So far as imports went, it appears to have consisted in all manner of things such as a wealthy community desires and is willing to pay for, not least in the higher classes of European manufactures and articles of luxury. The strength of the exports, however, still lies in raw produce, in cotton, cereals, provisions and petroleum, and last fiscal year's exports of cotton alone were valued at £96,412,000, which was upwards of £16,000,000 more than in the previous year, in spite of the fact that the average price of 10⅝ cents per lb. was decidedly less than in 1905-6 when it was 11⅛ cents per lb. In provisions there was a moderate decrease, which fell almost wholly under the head of canned goods. The aggregate decrease, however, was only about £2,000,000, and the total was still upwards of £40,000,000. In petroleum there was no particular change either in quantity or value, but the aggregate increase in the value of breadstuffs, cotton, provisions and petroleum was only £15,400,000 over that of the preceding year, so that of the total increase £14,000,000 remained to the credit of other merchandise. And no doubt the United States is making some headway in the export of manufactured goods, although not very much. In cotton tissues, however, there has been a distinct setback, but this is ascribed to the glut of stocks in China. Something may also be due to the boycott of American tissues and other manufactures by the Chinese. Cotton manufactures accordingly fell back to little more than £6,000,000, as against nearly £10,000,000 in the previous year, but there were increases of a sensible amount in the manufactures of copper and steel exported. The total of iron and steel manufactures alone exported in the past fiscal year was nearly £33,000,000, and exports of copper manufactures rose from £14,746,000 to nearly £17,000,000. There was likewise an increase in the export of coal, raw silk, and chemicals. Broadly speaking, however, the export trade of the United States is still in the main that of an undeveloped country, a country in the raw, which, do what it may, is unable to take an assured place amongst the great manufacturing nations of the world. And its farmers and millers are beginning to discover that they are no longer able to rule the roast in the world's grain markets. "The fact has become very evident that our breadstuffs exports are really the least dependable item in our foreign trade." Soon the same thing may have to be said about cotton.

Last quarter's gross income of the Carnegie Steel combine, otherwise the United States Steel Corporation, was the largest for that space of time in the company's brief history, and amounted to £9,100,800, making the total income for the first six months of the year nearly £17,000,000. No wonder some people expected an increase in the ordinary stock dividend, but the directors think otherwise, and are probably well aware of reasons why no such extra payment should be made. So the ordinary shareholders just get 10s. for the quarter as before, or at the rate of 2 per cent. per annum, and had better not waste the money. The nett revenue, after meeting charges unspecified in the telegram, came to £6,168,600, and when the 7 per cent. preference dividend and the ordinary mite has been paid out of this there will still be £4,399,000 left. The dividend on the common stock might therefore have been on a Standard Oil scale, only the directors are compelled to spend at an enormous pace on upkeep and the extension of the property. Altogether £3,700,000 out of the balance is applied in this way, leaving only £699,400 to go forward to the new quarter. Of the money taken from revenue to be devoted to capital purposes, £2,000,000 will go into the new Duluth and Gary plants, and it is to be hoped that the expenditure will prove remunerative, but business is not so good as it was. New orders for July show a decrease of 25 to 30 per cent. as compared with July, 1906. Uncompleted orders, however, at the end of June aggregated £7,604,000 tons against 6,809,000 tons in June last year and 8,044,000 tons on March 31 last. Where the combine will stand when the full tide of the reaction comes against it we shall be curious to see.

One or two interesting items of information are to be found in the report of the Westinghouse Electric

and Manufacturing Company of the United States. This great corporation may be said to divide with the General Electric Company the electric business of the Republic, and it has ramifications all over the civilised world in the form of subsidiary, dependent or license holding businesses, one of the most prominent of which, as many people in this country know to their sorrow, is the British Westinghouse Company. Even about that, however, the report of President George Westinghouse, covering the operations of the parent company for the year ended March 31 last has something cheerful to say. It is being established, he says, upon a sound and profitable basis, and the orders received for its fiscal year ending last Wednesday will exceed £1,200,000. There is even a Russian Westinghouse Company, or, at any rate, it has a Russian name, although it is really French, which has been organised for the purpose of carrying on business in Russia, and is at the present time engaged in the electrification of part of the tramway system of Petersburg. It is also doing a growing manufacturing business in Moscow. The Petersburg contract alone will amount, we believe, to about £1,000,000. In such circumstances, it is not surprising that the parent company wants more capital, and 100,000 new shares of $50 each were offered in September last at $25 per share premium. Up to the date of the report apparently only 33,066 of these shares were subscribed by the stockholders, the balance of 66,934 shares is accordingly available for those who like to go and buy at the fixed price. When all issued the total amount of the company's share capital will be £6,000,000, and it, of course, has a debt in the form of collateral trust notes to the amount of £1,200,000, which had to be renewed at 6 per cent. the other day. The profits of the company for the year to March 31 last were £1,087,200 before deducting interest and other prior charges, together with £180,000 written off for depreciation, &c. Ten per cent. dividends were paid on both the preferred and assenting stocks out of the balance of £553,600 left, involving the disbursement of £502,000, and sundry other adjustments were made taking £64,000 more, so that at the end of the chapter the accumulated credit called surplus was only about £6,400 better than a year back at £2,519,000.

Passing Events.

The always well-informed *Frankfurter Zeitung* has been told by its Paris correspondent that the American group known as the Sao Paulo Light and Power Company, which controls the Rio Light and Power and the Mexican Light and Power Companies, with other ambitious enterprises in South America, has arranged with an Anglo-French group to take up the loan of £2,000,000 required by the State of San Paulo. At the head of the English section of this group is the Bank of Scotland, and the French subscribers are headed by the Société Générale. The whole of the loan is apparently to be advanced by the undertakers pending the chance to place it in the open market, and £1,200,000 of it is to be immediately furnished, the balance being required before the end of the year. We confess this is not a kind of operation that commends itself to us in present circumstances, and we really cannot imagine why the Bank of Scotland should be found heading such a combination in high finance. Suppose the money it and its associates advance is completely locked up for a year or more, and that the coffee cornering experiment of the San Paulo Government ends disastrously, what will the directors of the Bank of Scotland then say to their shareholders? What security do they possess meanwhile for the risks they take in connection with this loan?

It is officially announced that the 4 per cent. loan to be made to the Congo State is about to be issued. It will amount to £400,000, increasable to £1,000,000 at a future date. Apparently Belgian financiers are themselves able to find this money, and it will be disbursed for the purpose of building railways in the Lower Congo and from the ore districts of the Benguella line, which will be constructed to the Portuguese frontier. The loan will be exchangeable in case Belgium takes over the Congo State at any time during the succeeding five years into new 3 per cent. Belgian Rentes.

Those who go to the speeches of some railway chairmen for light and leading will come away disappointed. They talk of many things, but nothing in their utterances we have so far seen is calculated to stimulate the Home Railway market. Mr. Bonsor's prescription for its distress appears to be the Monte Carlo one—that bearer warrants should be issued instead of stock to make play easier for the market, and both that gentleman and Lord Claud Hamilton, the chairman of the Great Eastern Railway, devoted a great deal of time to the ventilation of their grievances against the agitators who, they assert, are disturbing the contented minds of the working staff. Both denied that there was discontent among their employees. All was well, or would be, if that unmentionable Amalgamated Society of Railway Servants would only be quiet or could but be suppressed. We do not know that this carries us much further, or that the attitude was a wise one. It would have been more grateful to shareholders, even to critical journalists, if the men had been less talked about, Mr. Bell less profusely cursed, and some evidence adduced that a sustained attempt to find a solution for the traffic problems now pressing upon all the railways is in contemplation. On that vital subject the few references are nothing to the purpose. Mr. Bonsor damned the London County Council in the usual manner for carrying passengers at low fares, and Lord Claud Hamilton—what did Lord Claud say to the purpose? He said nothing. The great problem—how to revive prosperity—was left on one side, but shareholders appear to be pleased that it should be so, and we fear that all the talk of the formation of a Railway Shareholders' Protection Society will, as heretofore, come to nothing.

Another Sydney newspaper has reached us, and we regret to learn from it that the shares of the Marconi Wireless Telegraph Company of Canada sold in Melbourne and Sydney last year by an American claiming to act for a firm named Munroe and Munroe, of Montreal, do not appear to have even yet been delivered. The latest communication from that Canadian firm, printed in the Sydney *Sunday Times* of June 16, contained the excuse mentioned by us in our original note, with variations. Regret is expressed at a "seemingly unnecessary" delay, and blame is laid upon the transfer office of the company which Messrs. Munroe and Munroe assert to be "out of engraved certificates." They excuse themselves therefore for non-fulfilment of the contract. This looks a barefaced subterfuge, and we draw attention to the affair once more in order to press again upon the British Marconi Company the desirability that it should devote some attention to this "seemingly" most irregular proceeding. Who are Messrs. Munroe and Munroe, and what are their connections with the Marconi Wireless Telegraph Company of Canada? On a previous occasion these Montreal gentlemen laid the blame for the non-delivery of certificates on a lithographers' strike, and now they mock the people who paid their money for shares still more insolently by telling them that the office is out of engraved paper. It would be such a pity, such a waste, to supply temporary certificates, they blandly observe. The scandal, for it bears all the appearance of one, will recoil upon the British company if it does not take action.

We do not know that we can altogether join in the sentiment expressed by Sir Marcus Samuel at the final meeting of the "Shell" Transport and Trading Company. He laments that it has ceased to be a dominant force in the development of the Asiatic oil industry, and declared at the meeting held the other day that it has been a keen disappointment to him that the Indian Government, instigated and supported by the Admiralty, persisted in classifying the "Shell" Company as a foreign corporation, and in refusing to per-

mit it to share in the development of the Indian oil-fields. Essentially, however, it was a foreign company in India, so far as domestic Indian interests are concerned, and although it may be sentimentally soothing to lament that the "Shell" Company's business should now be divided between a Dutch and an Anglo-Saxon Company, if the shareholders prosper through their investments in these companies there will be no great harm done to anybody. Capital, after all, knows neither empire no republic, despotism nor anarchy—such as is exhibited in the Baku oil region—except in so far as profits, or the chances of profit, are affected.

It is going to be all right yet with the Zinc Corporation, Mr. F. A. Govett told the shareholders at much length when he faced them on Tuesday. Processes have failed, it is quite true, and their failure has so far cost the company at least £175,000, but what of that, when there are many millions of tons of dumps or waste heaps capable of yielding 8s. per ton profit if only the right process can be applied to the extraction of their metallic contents? We are are going to apply the right process at last, Mr. Govett and others told the meeting. We have discovered the Elmore system, which has been doing wonders down in Cornwall, and if only money is provided to enable us to apply this new process everything will soon be all right. That is the substance of the long story, and the shareholders apparently agreed that the extra 100,000 shares should be issued. Whether they will take them all up, however, is another question. We hope the company will succeed. It deserves to do so because it embarked vigorously on an enterprise which seemed to promise success, and its aims are perfectly reasonable and legitimate. Only we must be forgiven for having doubts when failures so conspicuous have thus far resulted from the efforts put forth and the money spent.

There was a most awful row at the first annual meeting of the Automobile Cab Company, held on Monday last, and no wonder. Out of the original directorate only two brave men remained to face the storm, and well may the misguided shareholders have asked why Sir James Ritchie, sometime Lord Mayor of the City of London, and Messrs. H. E. Wootton, B. H. Morgan, and P. L. D. Perry resigned. The statement of accounts submitted is simply indescribable. It covers the period from November 22, 1905, to June 30 last, and the deplorable result shown is attributed to the fact that the company was unable to obtain full delivery of cabs until November, 1906, to the exceptionally bad weather! and the fact that the cabs did not fulfil the anticipation of the directors. A nice array. The cab receipts seem to have been £8,121, and interest and transfer fees gave £144, but to cut a long story short the outgo was £18,461, including sums written off cabs (33⅓ per cent.), preliminary expenses, &c., so that the deficiency was £10,197. Altogether preliminary expenses and underwriting came to £9,500, and the capital subscribed was just £24,694. It is a good thing it was no more. The company's assets consist of cabs £7,150, garage alterations and repairs £368, office furniture and fixtures £114, deposits and sums paid in advance £115, and cash £357, the balance being completed by underwriting and issue outlay £7,600, and loss on working £10,197. A committee was suggested, but nobody seemed to care how things went, and nothing was done in this direction, while the two remaining directors, who wanted to resign, were asked to continue. What is going to happen now we have not an idea, but surely liquidation is the wisest course.

The Premier of the Dominion of New Zealand is a happy man. He will not require to raise all that annual loan of a million at home, since his "Government" can obtain half of it outside at 102 per cent. less ½ per cent. brokerage. Has he borrowed it in Germany by any chance? No neighbouring colony has the money to spare, and very few Australian insurance offices, but it might be just the thing for the Dresdner Bank.

The capital of the Brush Electrical Engineering is to be again cut down. It went through this process once before, in 1897, when £1 per share was written off the ordinary capital in order to reduce the item of patents and goodwill. About half-a-dozen years ago a "business" arrangement was entered into with the B.E.T., an exchange of shares being arranged, but it does not necessarily follow that this has anything to do with the present troubles. As usual with these reorganisations, the principal sacrifice is asked of the preference shares. At present the capital consists of 150,000 preference and 105,732 ordinary shares, all of £2 each, and it is proposed to wipe away 13s. 4d. from each, the preference having no special capital rights, and to convert them subsequently into one-pounders in the proportion of four new for every three now held. This means a lopping off of £170,488—a heavy sum, but probably not enough, and although the preference dividend is to be raised from 6 per cent. to 7 this will still leave the holders with much less return than they are now entitled to, with a proportionate benefit to the ordinary proprietors. But if the B.E.T. is on the side of the scheme it can easily be put through.

Critical Index to New Investments.

Indo-China Steam Navigation Co., Limited.

An issue of £345,000 in 5 per cent. first mortgage debentures, part of an authorised £495,000, is made by this company through its bankers, the Hongkong and Shanghai Banking Corporation, and the price asked is par. Compared with the current price of other shipping company debentures worked out on a 5 per cent. basis, this price looks attractive. The company has been in existence since the end of 1881, and has gradually increased its fleet from 12 steamers of less than 14,000 gross tonnage capacity to 42 steamers of nearly 98,000 gross tons. Its business has been prosperous throughout, and although the return to shareholders for 1906 was only 2½ per cent. that does not indicate any falling off in earning power. It was merely an after-effect of the cessation of the Russo-Japanese war. Most of this new money is required to pay off temporary advances obtained in connection with the building of new steamers, and the strength of the company is shown by the fact that hitherto the additions to its fleet have been effected without adding to its paid-up capital, which still stands at the original £495,890, while the value of the fleet after writing off each year full depreciation is £1,062,985. These debentures ought, therefore, to be well secured, and they will be issued under registered first mortgages to trustees upon steamers to the value ascertained after deduction of depreciation as provided by the trust deed, such value to be double the amount of the debentures issued and outstanding from time to time. They will also be a floating charge upon the remaining assets of the company.

British Cotton Ginning Co., Limited.

This is an offshoot of the British Cotton Growing Association, and is to be in the hands of members thereof. Its share capital is £100,000 in £1 shares, all of which are offered for subscription at par through the agency of the Manchester and Liverpool District Banking Company, Limited. Apparently the object of the company is to supplement the efforts of the British Cotton Growing Association to develop the cultivation of cotton in West Africa, a business in which it has already made substantial progress. All the factories, warehouses, &c., belonging to the British Cotton Growing Association will be taken over by this company for a payment of £38,369, a sum arrived at after deducting depreciation at the rate of 15 per cent. per annum on all factories and plant. It is estimated that another £12,000 will be required to complete and fully equip

the Alfred Jones ginnery, and further expenditures of the same kind will be necessary as the cotton crop expands. It has already risen from about 500 bales in 1903 to about 6,000 bales for the past year, and the association estimates that by 1909 the crop will be 50,000 bales. Obviously, therefore, the scope for a company of this kind is great. We do not quite understand the various transactions described in the prospectus, particularly the under-leasing of the Ginning Company's undertakings to the Cotton Growing Association, but the board consists of honourable and responsible men, and doubtless it is all right.

S. F. Edge (1907), Limited.

A share capital of £275,000 in £1 shares is to be provided for this reorganised company, which has been in existence as S. F. Edge, Limited, since 1900, and has enjoyed the exclusive agency for the sale of the "Napier" motor-cars. Mr. Edge is well known in the business, and according to the figures given in the prospectus has managed it with brilliant success, the sales of his company having risen from £18,228 in the year ended February, 1901, to £333,117 in that ended with February last. Whether the basis of the business is broad enough in view of the probable growth of competition and reduction in prices for motor-cars may be an open question, but the project appears to be put before the public in a straightforward way. S. F. Edge, Limited, are vendors to and promoters of this company, and will accept £200,000 in fully-paid ordinary shares as the purchase price of the properties sold, taking on themselves besides the repayment of £65,000 cash advances previously made to the vendor firm. Its remaining obligations, however, must be paid by the new company, and these amount to £107,000, leaving £93,000 as the amount charged for goodwill. The enterprise may be attractive to those interested in this branch of industry, but is hardly one for the general public.

The Sungei Salak Rubber Co., Limited.

A modest little affair this, with a share capital of £70,000 in £1 shares of which 55,000 are now to be issued, but the vendors take 14,000 of these in part payment of the purchase price of £28,000, the remainder being in cash, and only 41,000 shares are now offered for subscription at par. A considerable number have already been applied for by the directors and their friends and will be allotted in full. The properties are taken over by the company as from May 1 last, and are of an aggregate extent of 3,078 acres, of which 1,080 acres are already planted with over 140,000 rubber trees which will begin to bear in 1911 on the Sungei Salak estate, and two years later on the new Labu estate. The enterprise looks a clean one enough, but demands patience and faith.

United States and South American Investment Trust Co., Limited.

The Law Debenture Corporation, Limited, has purchased £100,000 4¼ per cent. perpetual debenture stock of this trust, part of an authorised £200,000, and offers it to the public at 97½ per cent., the first half-year's interest being due on January 1 next. Payment in full on allotment may be made under 4 per cent. discount. The stock seems to be well secured, since a valuation of the company's assets made on April 4 last showed that after meeting all existing debenture stock charges and other liabilities, the share capital of £750,000 and the reserve fund of £28,000 were fully covered by the securities. This new stock ranks after the £375,000 of debenture stock already issued, but has behind it nearly £780,000 of capital all covered by investments. The company's revenue has risen from £32,302 in the year ended April 4, 1904, to £38,660 for the past year ending at the same date, and only £4,250 per annum is required to meet the interest on this new issue. Therefore the stock appears to be well protected.

Motor Bus and Traction Company of Ireland, Limited.

The capital is £205,000 in 200,000 ordinary shares of £1 each and 100,000 deferred shares of 5s. each, but for the present only half the ordinary capital is offered at par and the National Bank will receive the subscriptions. It is the intention of the promoters to establish motor omnibus services and other forms of motor traction in and around Dublin, Belfast, Cork, Waterford, and all the principal towns and tourist routes in Ireland. The conception is good, and we hope the 75 'buses to be started will prove a source of profit to the company, even though the profit is not at first enough to give the ordinary shareholders 18 per cent. and the deferred 160 per cent., as seems to be calculated, with a few pounds over. If 10,000 shares are subscribed the board will go to allotment. Preliminary and flotation expenses are fixed by the promoting company, Erin Issues, Limited, at £11,000, payable £6,000 in cash and the balance in shares.

Peruvian Pacific Railway, Limited.

An issue of £800,000 in 6 per cent. first mortgage debentures, part of a creation of £1,600,000, is announced by the directors of this company, a powerful and representative body. The price is tempting, for at 87½ per cent., which is all that the company asks for the bonds, the yield to the speculatively disposed investor is over 6¾ per cent. per annum. But for the bad name Peru has acquired, the bonds would not have been so cheap we may be sure, but the project has by no means insignificant prospects. The bonds are for small amounts, and all the money has to be paid up by November 9 next, but payment in full may be made at any time under discount at Bank rate. The loan is also being offered abroad.

Answers to Correspondents.

Deposits against future queries may be lodged with the Publisher.

R. T. S. H.—(1) Should be kept, company is doing a good business, and there is always the possible purchase by corporation to be remembered. (2) Last year's accounts show an improvement, but the company is not a strong one, and requires further capital. Might be kept for the present, but should be watched. (3) Traffics good, but finances are not in a healthy condition. Capital is too large for comfort, and dividends on deferred should not be paid until various assets have been written off. We are inclined to think you should sell and cut your loss. (4) After paying 12½ per cent. for 1903-4, there was no dividend for 1904-5, and for 1905-6 7½ per cent was distributed. Goodwill figures for a large amount still in the balance-sheet, and it is to be hoped the writing down will be continued. The preference shares should be all right, and might be kept for the present. (5) This company is reported to be doing better, but we think you should sell if there is any improvement. As in many other cases, it is over-capitalised. (6) There is some talk that the company is doing better, but it is an uphill fight. The percentage of profit is small on the new products now made by this company, and advertising is costly. We think you should cut your loss.

A. B. C.—Rather too risky. Too much given for property. If new process fails, all fails. Better let alone.

R. H. S. (King Williams Town).—You have not complied with our rules, having asked four questions and only sent 1s. And you do not specify the bonds when several issues exist. We may, however, say generally that, as far as can be judged, you should keep everything you have for the present.

I. B. C.—Yes, we see no reason why the exchange should not be made. In a bank the uncalled liability might be serious, but it should not be in the case of the company you name. It is a rich and progressive company possessed of large reserves.

Cardigan.—We think you can do no great harm, but it will be years yet before the enterprise is in working order, and for years after the income will be small.

"Pathos."—We see very little immediate prospect of a recovery, and a further decline is quite probable, though it should not go much further. Would it not be better to keep the stock, unless you want a larger income? It will sadly spoil [illegible].

H. R.—In the existing demoralised state of markets your broker is probably right. A turn will doubtless come one of these days, but you will lose nothing by waiting, for the stock looks like going below 3s.

A. G.—The security is all in the future, but time is in the company's favour. At a low price, 5s to 8s, a few bonds might be worth buying.

MINING NEWS AND NOTES.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Another dreary and unsatisfactory week has been passed in the Kaffir Circus, and it is quite impossible to imagine the combination of circumstances that would be necessary to again put life into the market. Prices showed very little movement, and on most days the stagnation was complete. Except for the discussion of the eternal labour question, practically nothing goes on. We still get a lot of contradictory reports concerning the future of Chinkee. A good many coolies are said to be petitioning to be allowed to renew their contracts, and some remarks made by the Minister of Mines in the Transvaal Legislature seemed to indicate that most of them would be permitted to finish their indentures, despite previous assertions that next May would witness the departure of the last Chinaman from the Rand. The miners' strike was officially declared "off" last Monday, but here, again, we are unable to get anywhere near the truth. The early reports said that the Government had induced the mine-owners to re-engage the men on the old terms pending the issue of the Mining Commission report, but the moment this story had come over the cable it was followed by a denial. However, the varied statements had little or no effect, business being quite dead, and the market wound up without any pronounced tendency having manifested itself throughout the week. One or two of the low-priced shares were inquired for in a small way, but the bigger-priced things were inclined to go back. One failure was announced on pay day, a few South African shares being involved; but this, like all the other incidents, had no particular effect.

Land and Finance things were as dull as ditch-water, and the batch of Rhodesian reports recently issued has effectually choked off both professionals and public from that section. Some official of the Tanganyika Company is said to have just returned from the territory with wonderful stories of its mineral wealth, and this had such a startling effect upon the minds of one or two dealers that the price went up nearly 5s. Diamond shares continue to attract some attention. At first prices were given a further lift, and De Beers deferred were run up to 24¼, but there was some profit on this price, which punters took, and the Paris settlement led to pretty liberal offerings from that quarter. So the quotation came back at a nice pace for the bears, and got under 23 again before the fall was stayed. A yarn that De Beers were negotiating for the purchase of the Premier was denied too quickly to give the bulls a chance to profit by it, but Premiers, after showing quite as much weakness as the shares of the big company, steadied somewhat. Jagersfontein, New Vaals, and Roberts Victors all went the wrong way, and the Lace Diamond directors seem disposed to throw up the sponge, having ordered the managers to only work enough ground to pay off the company's liabilities, estimated at £18,000.

In the West Australian section, Kalgurlis had a very bad time, and slumped almost a couple of pounds. No thoroughly good reason was forthcoming, although there was vague talk of unsatisfactory developments, probably traceable to the decision recently come to to reduce the grade of ore put through the mill. Germany was credited with being a heavy seller, and the most likely reason for the fall was that a deceased account of 8,000 shares was being realised. There was a recovery from the lowest level, the colony coming in on the drop. The collapse naturally had a depressing influence on other West Australian things, and Broken Hills were anything but happy. The prices for Deep Lead shares will disappear altogether if they fall much further, but Zincs had the temerity to put on 3d. when the shareholders accepted the board's financial scheme. It was lost again before the end.

Copper and copper shares continue to give dealers an anxious time. The price of the metal has been falling in lumps, and the fluctuations in Tintos have been between 80¾ and 77, getting near the worst at the close of the week. Other prominent shares, such as Amalgamated, Bostons, Anacondas, Tharsis, and Great Cobars, went rattling down as well, but Capes and Lyells remained fairly steady. Tins were not a bad market, one or two dividends helping to keep them up.

Among miscellaneous things, Le Roi No. II. were pushed back, the June development report meeting with disfavour, but other American things maintained their prices, El Oros going a little higher. New Zealands went down, and then up, Siberian things seemed frozen, and Indians were inclined to rally. We had forgotten to say anything about West African mines, but that is pardonable.

Robinson Deep Gold Mining Company.—During the twelve months ended March 31 the erection of the 110 new stamps and the extension of the cyanide plant have been completed, the total cost being £233,802. With the full 300 stamps in operation it will be found necessary to draw from many points of the mine and take in as far as possible considerable tonnages of low grade ore which have been left behind, as they can only be profitably dealt with by the larger stamping power. It is considered that when the 300 stamps are crushing to their full capacity the grade should not be maintained at a higher average than 9 to 9½ dwts. In the past twelve months the tonnage crushed was 416,676 yielding 122,307 ozs., the tube mills gave 20,131 ozs., 288,986 tons of sands 55,627 ozs. and 127,690 tons of slimes 11,404 ozs. By-products produced 1,314 ozs., making a total of 210,782 ozs. valued at £887,569, or 10.117 dwts. per ton crushed, say, £2 2s. 7¼d. The directors have decided to discontinue the carrying of reserve gold and have added in the amount in hand, 4,953 ozs. valued at £20,764 to the year's totals, bringing up the aggregate to 215,736 ozs. and £908,334. Working costs, including £52,084 or 2s. 6d. per ton allowed for development redemption, were £448,826 or £1 1s. 6.192d. per ton crushed leaving the profit on working at £460,074. Sundry revenue was £9,620 and £206 was provided for London income-tax after which £92,807, being the balance brought forward, was added in, making a disposable balance of £562,295. The 10 per cent. tax on profits took £41,175 and two dividends at 17½ per cent. accounted for £343,600. A sum of £34,300 is then set aside to provide for equipment, additions and renewals, £5,641 is written off and £138,179 remains undisposed of. The estimated reserve of milling ore developed on March 31 was: Main reef 1,412,224 tons and South reef 420,001 tons, making a total of 1,832,225 tons of an average assay value of 9 dwts. per ton. Including expenditure on equipment, shafts and development the valuation of the property is £1,806,267, capital being £980,000 in £1 shares and premiums £707,214. There is a reserve fund of £33,414 and £98,567 has been appropriated from the fund for capital expenditure. The company has plenty of cash and other liquid assets, but the capital is weighty and stands in the market at over 300 per cent. premium.

East Gwanda Mines.—Not a few are probably still unaware that the company bearing this name is an amalgamation of four old wrecks known as the Geelong, West Nicholson, Jessie, and Eagle-Vulture. The second annual report covers the twelve months to December 31, 1906, and tells the patient shareholders that stoping and development was confined to the Jessie, Valley, and Eagle-Vulture mines. Jessie seems to have behaved quite respectably and furnished most of the ore treated during the year. The reef proved to be much wider than anticipated, so that notwithstanding inadequate development owing to want of labour, the payable ore reserves at the end of the year, according to the estimate of the late consulting engineer, were 32,900 tons against 27,400 at the end of the previous year. Information since received shows that the reserves were largely in excess of this estimate. Payable ore reserves at December 31 on the Valley mine were put at 25,000 tons, an increase on the year of 2,000 tons, development work having been very limited, while no effective development was accomplished on the Eagle-Vulture in consequence of shortage of labour. The greater part of the small quantity of high-grade reserves has been taken out of the mine, which has been closed down until conditions permit vigorous development on it. A storm last December flooded the Valley mine, killing a considerable number of natives, besides a couple of Europeans, and the accident affected the operations in that month and the early part of the present year. It may therefore not be wise to look for brilliant results in the current twelve months, especially as the labour shortage continues acute, but for the sake of all it is to be hoped they will be better than the performances of the year under review. Bullion and matte sales, including a pretty coniderable amount recovered in 1907, produced £95,057, and royalties, &c., gave £268 or £95,324 in all. But total expenses in South Africa ran away with £90,391, London outlay was £2,945, debenture and other interest £8,035, depreciation of buildings and machinery, including loss on sales, £12,152, and bad debts £1,362, meaning a loss for the year of £18,544, increasing the aggregate deficiency to £37,557. At the end of the year the company had less than £1,000 in cash, a heavy adverse trade balance owed £3,871 to bankers, and possessed such useful assets as general outlay prior to first crushing £14,067, and formation expenses £2,086. Truly a cheerless outlook.

African Land and Investment.—In submitting their report and accounts for the year ended March 31 the directors "regret to record that the period under review has been one of great depression in practically all branches of South African enterprise. Business has suffered considerably from this fact, and it has been impossible for the company either to turn to account its chief assets or to enter into new transactions." The year's operations after providing for debenture interest and all outgoings and writing off £1,104 against debenture issue and preliminary expenses is a loss of £84 and this deducted from the credit balance of £1,087 brought forward from last year left £1,003. Preference dividend was provided for the six months to April 30, 1906, but from that date payments have had to cease and on October 26 last a circular was issued to the preference shareholders notifying them that until a material improvement takes place there is little hope of a further dividend being paid Arrears of dividend now amount to £8,250. The company's investments in fixed properties are valued in the balance-sheet at £430,004 while loans and shares in sundry companies at cost make up a total of £58,896.

Lancefield Gold Mining.—This company's accounts cover two years to December 31, 1906, and the period has been one of some difficulty and anxiety. Owing to a radical change in the value of the ore the method of treatment had to be entirely altered, the wet milling plant being displaced by a complete dry crushing and blasting plant. The new mill started in October last and the extraction percentage gave complete satisfaction, but owing to mechanical difficulties its capacity was seriously limited. This meant high working costs, but the troubles have been largely overcome and for June the expenses were pulled down to 25s. 7d. per ton with promise of a further considerable reduction. Very little development work has been done, all the money available going into the new plant, and the ore actually blocked out at December 31 above the No. 3 level amounts to 185,525 tons of an average value of 34s. 6d per ton. A further 400,000 or 500,000 tons are likely to be available above the depth reached by the borehole. The sinking of the main shaft has

been resumed. Total revenue for the two years was £80,068 gold account giving £79,716, but the expenditure was £82,623 leaving a deficiency of £2,825, against which there was a credit brought in of £695. The debit carried forward, therefore, was £2,130. The company is now practically stumped for money and owes the bank £12,582. Property account is in at £147,967 and £111,652 has been spent on machinery, plant and buildings.

Ashanti Consols.—Undoubtedly the most satisfactory statement which the directors of this concern make in their report to April 30 covering a period of 18 months is that, as promised at the last general meeting, they have not entered into any new business. The Obenemasi Goldfields, which the company sold for 10,000 shares of £1 each and £2,000 in cash, has gone into liquidation, but no loss is made on the business, neither will the company participate in any distribution under the liquidation on account of its vendor shares. It, however, applied for and holds 1,000 shares on which 17s. 6d. per share has been paid and these will come into any distribution. The principal asset consists of a considerable number of shares in the Surinam Gold Concessions, which is now erecting machinery. This should be completed on August 30 and if the engineer's estimates are realised profits should immediately commence to be earned. Issued capital is £82,473 and in various ways a deficiency of £37,674 has been piled up, so it is no wonder the advisability of winding up has been considered, but for sundry reasons explained at the recent meeting it has been decided not to take this course at present.

Arizona Copper.—This company's report for the half-year ended March 31 states that the results were seriously affected by the flood in December last and the bursting of a neighbouring dam. Operations were suspended for nearly a month, with the consequent loss of profit, current expenses naturally running all the time, besides which heavy expenditure was involved in repairing the damage to property. The actual amount expended during the six months in repairing the damage exceeded £30,000, in addition to which there was a much larger indirect loss on account of the prolonged disorganisation of operations. The output was also affected by the prevailing labour conditions, and an unprecedented shortage of railway cars necessitated purchases of coal at much higher prices. The rise in wages was another factor, and it is fortunate that copper prices were high. Including the amount brought forward, there was a surplus on operations of £247,421, and the directors propose interim dividends of 2s. 3d. on the preferred and deferred ordinary shares, leaving £76,433 to be carried forward.

NEXT WEEK'S MEETINGS.

Tuesday, August 6.

Bank of Scotland.—Edinburgh, 12.30 p.m.
Caledonian Banking.—Inverness, noon.
Dublin Distillers.—Dublin, noon.

Wednesday, August 7.

Aluminium Corp.—Winchester House, 11 a.m.
Brecon and Merthyr Tydfil Railway.—Palmerston House, 12.30 p.m.
Central London Railway.—Holborn Restaurant, 12.30 p.m.
City of London Brewery.—Cannon Street Hotel, 1 p.m.
Gaiety Theatre.—Strand, W.C., noon.
Great Northern Railway.—King's Cross Station, noon.
Great Southern and Western Railway.—Dublin, 2 p.m.
Lancs and Yorks Railway.—Manchester, noon.
Loddon Valley Goldfields.—Salisbury House, noon.
Normanby Iron Works.—Middlesbro', 3 p.m.
Seville Waterworks.—Cannon Street Hotel, 3 p.m.
Sheffield District Railway.—Hamilton House, 3.30 p.m.
Taff Vale Railway.—Bristol, 2 p.m.
Victoria Consolidated Goldfields.—Salisbury House, 12.30 p.m.
West Ham Gas.—Liverpool Street Hotel, 12.30 p.m.

Thursday, August 8.

Belfast and County Down Railway.—Belfast, 11.30 a.m.
Bryant and May.—Cannon Street Hotel, 3 p.m.
Central Mining and Investment.—1, London Wall Buildings, 12.30 p.m.
Hull and Barnsley Railway.—Kingston-on-Hull, noon.
John Lovibond and Sons.—Greenwich, 2.30 p.m.
London and South-Western Railway.—Waterloo Station, noon.
Manchester Ship Canal.—Manchester, 11 a.m.
Midland Great Western Railway of Ireland.—Dublin, 1 p.m.
San Francisco Breweries.—Winchester House, 3.15 p.m.
Scottish African Trust.—Salisbury House, 12.30 p.m.
Straits Settlements (Bertam) Rubber.—Winchester House, 12.30 p.m.
Whitehaven Bank.—Whitehaven, 1 p.m.
Zapiga Nitrate.—Winchester House, 12.30 p.m.

Friday, August 9.

Cambrian Railways.—Palmerston House, 2.30 p.m.
Frederick Hotels.—Hotel Russell, W.C., 1.15 p.m.
Furness Railway.—Barrow-in-Furness
Leyland and Birmingham Rubber.—Leyland, 12.30 p.m.
Manchester Trust.—Manchester, 3 p.m.
Millwall Dock.—Cannon Street Hotel, noon.
North Eastern Railway.—York, noon.
Rylands and Sons.—Manchester, 11 a.m.
South Suburban Gas.—De Keyser's Royal Hotel, 3 p.m.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and July 27, 1907:—

Revenue and Other Receipts.

Treasury July 30, 1907. Total £12,500,000

London and Westminster Bank.—Liabilities on July 27 consisted of current accounts and deposits £[illegible], acceptances and endorsements £1,293,711, and other liabilities £[illegible], against which there were cash in hand and at Bank of England £3,154,207, money at call and short notice £[illegible], Imperial Government securities £3,885,000, bills discounted, loans, &c., £18,004,980, and other securities £1,674,041.

The directors of the Assam Company have allotted 521 new shares of £20 each, at an average of £32 1s. 1d. per share. The balance of 121 shares will be held over until January, 1908. Application will be made to the Stock Exchange for quotation with the other ordinary shares in due course.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.— Earnings for week ended July 21, $4,773, increase $2,439; aggregate from July 1, $13,782.

Argentine North Eastern.— Traffic receipts for week ended June 28, £2,168, increase £274; aggregate from January 1, £52,394, increase £8,640.

Assam Bengal.— Traffic receipts for 8 days ended June 30, Rs. 91,069, increase Rs. 12,719; aggregate from Jan. 1, Rs.23,27,478, increase Rs. 4,76,783

Bilbao River and Cantabrian.—Traffic returns for June £7,533, decrease £2,837; aggregate from January 1, £55,115, decrease £8,197.

Canadian Northern Railway.—Traffic receipts for week ended July 21, $218,200, increase $76,800; total from July 1, $642,600, increase $227,300.

Egyptian Delta.— Traffic receipts for week ended July 13, £4,572, increase £619; aggregate from January 1, £70,744, increase £12,490.

Lucknow Bareilly Railway.—Traffic receipts for 8 days ended June 30, Rs. 39,968, decrease Rs. 5,577; aggregate from Jan. 1, Rs. 9,54,003, increase Rs, 7,120.

Midland Uruguay.— Receipts for month of June, £5,958, increase £958; aggregate from July 1, £74,664, increase £15,151.

North Western of Uruguay.—Traffic receipts for June, $23,100, decrease $2,100; aggregate from July 1, $259,459, increase $42,460.

Quebec Central Railway.—Traffic receipts for the 3rd week of July, $26,818, increase $5,342; aggregate from January 1, $510,225, increase $23,378.

Quebec and Lake St. John.—Earnings for June, $55,049; increase $565.

Rohilkund and Kumaon Railway.—Traffic receipts for 8 days ended June 30, Rs. 37,020, increase Rs. 13,395; aggregate from Jan. 1, Rs. 6,31,450, increase Rs. 1,76,878.

Uruguay Northern.—Gross receipts for month of April, £1,866, increase £330; aggregate from July 1, £18,095, increase £2,271.

White Pass and Yukon Railway.— Traffic receipts for week ended July 21 amounted to $78,641.

English.

Cleator and Workington Junction.— Receipts for week ending July 27, £1,343, increase £170; aggregate from July 1, £5,150, increase £524.

Cockermouth and Keswick Railway.— Receipts for week ending July 27, £1,177, decrease £44; aggregate from July 1, £4,325, increase £41.

East London Railway.— Traffic receipts for May, £3,850, decrease £316.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending July 27, £423, increase £103; aggregate from July 1, £1,758, increase £576.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Bath Electric.—Traffic receipts for week ending July 24, £890 decrease £69; aggregate from January 1, £22,664, decrease £491.

Blessington and Poulaphouca.—Traffic receipts for week ending July 24, £27, decrease £4; aggregate from July 1, £75, decrease £21.

Bristol Tramways and Carriage.— Traffic receipts for week ending July 26, £5,134, decrease £304; aggregate from July 1, £21,288, decrease £963.

British Electric Traction.—Receipts of all the Associated Companies for the week ending July 19, £32,310; 419½ miles.

Burnley Corporation.—Traffic receipts for week ending July 27, £1,308, increase £150; aggregate from July 1, £5,108, increase £154.

Dublin and Blessington.— Traffic receipts for week ending July 24, £176, decrease £1; aggregate from July 1, £583, decrease £27.

Dublin and Lucan.—Traffic receipts for week ending July 26, £157, increase £11; aggregate from July 1, £549, increase £13.

Dublin United.—Traffic receipts for week ending July 26, £7,167, increase £1,488; aggregate from July 1, £27,428, increase £6,731.

Edinburgh and District.— Traffic receipts for week ending July 27, £5,809, decrease £108; aggregate from January 1, 1907, £150,165, increase £2,593.

Hastings and District.— Traffic receipts for week ending July 25, £1,280.

Isle of Thanet.— Traffic receipts for week ending July 27, £1,208, decrease £135; aggregate from October 1, £18,067, decrease £413.

London County Council.— Traffic receipts for week ending July 20, £32,855, increase £6,692; aggregate from April 1, £498,623, increase £76,379. Miles 116⅝, against 94⅜.

London General Omnibus.— Traffic receipts for week ending July 27, £22,299, decrease £2,790; aggregate from July 1, £91,256, decrease £11,548.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending July 27, £6,699.

London Road Car.—Traffic receipts for week ending July 27, £8,901, increase £174; aggregate from July 1, £35,817, increase £1,421.

London United.— Traffic receipts for week ending July 26, £7,888, increase £387; aggregate from January 1, £185,612, increase £4,310.

Provincial Trams.—Traffic receipts for week ending July 27, £2,148, decrease £48; aggregate from October 1, £69,202, increase £5,768.

Rossendale Valley.— Traffic receipts for week ending July 26, £219, increase £9.

Sunderland District.—Traffic receipts for week ending July 24, £528; increase £29, aggregate from Jan. 1 £13,101, increase £1,628.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending July 28, £1,169, increase £285; aggregate from January 1, £33,617.

Foreign.

Anglo-Argentine.— Traffic receipts for week ending July 29 £16,137, increase £2,631; aggregate from January 1, £494,097 increase £51,488.

Auckland Electric.—Traffic receipts for four weeks ending July 19, £10,168, increase £849; aggregate from January 1, £73,706, increase £2,968.

Brisbane.—Traffic receipts for month of June, 1907, £12,500, increase £905.

British Columbia Electric.—Nett earnings for June, $45,854, increase $16,158. Nett earnings, including income from investments, from July 1 to June 30, $698,111, increase $206,817.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for week ending July 29, £6,776.

Calcutta.—Traffic receipts for week ending July 27, Rs. 47,098, increase Rs. 4,129; aggregate from January 1, Rs. 14,56,797, increase Rs. 1,43,570.

Cape Electric.—Traffic revenue for month of June, Cape Town, £9,633; Port Elizabeth, £2,760.

Cartagena (Colombia).—Traffic receipts for September, £10,646.

Carthagena and Herrerias.—Traffic receipts for the month of June, £4,516, decrease £107; total from January 1, £31,191, increase £3,725.

Geneva Trams.— Earnings for June Fr. 208,491; increase Fr. 10,871.

Kalgoorlie Electric.—Traffic receipts for June, £2,537; aggregate from January 1, £23,752.

Lisbon Electric.—Earnings for June, milreis 137,213.

Madras Electric.—Traffic receipts for fortnight ended July 22, Rs. 17,694, increase 16 per cent.; aggregate from January 1, Rs. 2,21,596, increase 19 per cent.

Melbourne Tramways and Omnibus.—Traffic receipts for June, £39,500.

Mexico Electric.—Nett earnings for month of June, $187,135, increase $18,159; aggregate nett earnings from January 1, $947,583, increase $45,295.

Perth (W.A.) Electric.—Traffic receipts for week ended July 26, £1,375, increase £16; aggregate from January 1, £42,936, decrease £1,470.

Rio de Janeiro.—Nett earnings for June, $168,444; aggregate from Jan. 1, $925,801.

Sao Paulo.—Traffic returns for June: nett earnings, $102,769, decrease $3,846; aggregate from Jan. 1 $675,265, increase, $24,009.

Twin City Rapid.—Traffic receipts for the month of May, $496,711, increase $48,607; aggregate from January 1, $2,317,873 increase $247,855. Nett traffic receipts, $260,724, increase $21,884; aggregate from January 1, $1,169,500, increase $98,320.

LOANS OF THE CITY OF ROSARIO.

On the 20th September, 1906, the City of Rosario informed Messrs. C. J. Hambro & Son that on account of the difficult financial position of the City, it was forced to bring the matter before the Bondholders, so that an arrangement might be come to which would guarantee definitely the interest which might be arranged for the future.

Messrs. C. J. Hambro & Son beg to announce that they have been authorised by His Excellency the Minister of Finance, representing the Superior Government of the Province of Santa Fé and the Municipal Intendente of the City of Rosario of Santa Fé, to submit to the holders of the existing Bonds of the City of Rosario a proposal for the exchange of said Bonds against new Sterling 4 per cent. Bonds, guaranteed in all respects by the Government of the Province of Santa Fé, both as regards principal and interest, and specially secured by the direct tax of the said Province.

During the first five years the interest accruing from the 1st November of the present year will be paid as follows:—2¾ per cent. in cash, and 1¼ per cent. in bonds of the new loan, and afterwards the full interest in cash.

The Coupons of the new Bonds as they mature will be accepted in payment of the direct tax. This tax forms the chief source of revenue of the Provincial Government; it yielded about £200,000 in 1906, and according to the official estimates it will yield about £250,000 for 1907; therefore it largely exceeds the amount required for the service of the new Bonds, and it is increasing steadily, whilst the special taxes pledged by the City of Rosario for the service of the existing City debt are decreasing every year.

Redemption at the rate of ½ per cent. per annum by purchase and/or drawing is to commence after ten years, and the Municipality reserves the right to increase the Sinking Fund at any time.

Messrs. C. J. Hambro & Son, believing that the proposed Bonds, besides having the guarantee of the Province of Santa Fé, are as well secured as possible in view of the fact that due coupons can be used in payment of the chief tax of the Province, have no hesitation in recommending the acceptance of the offer of the Municipality.

Holders are requested to deposit their Bonds at the London and Westminster Bank, 41, Lothbury, who will in due course issue Certificates of Deposits.

Before depositing the Bonds holders should detach, and retain, from the Bonds for the Road Loan of 1889 the Coupon dated November, 1907, which is payable 1st Januaay, 1908, and from the Bonds for the 1887, 1888 and the Funding Loans the Coupons due 1st October, 1907.

Copies of correspondence which have led up to this offer have been prepared by Messrs. C. J. Hambro & Son, who invite holders to apply for same at 70, Old Broad Street, London, E.C.

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Reduced from 4½ per cent. on April 25.)

Norfolk House, Friday Evening.

Cheap money would appear to be as far away as ever, and the hope which we shared with the market, that August would bring us a few weeks of comparative ease, appears to be destined to be falsified. Several influences have been at work counteracting what seemed to be the natural tendency of markets. One was the withdrawal of £1,500,000 of the market's money by the Treasury last week on its additional Treasury bills. What it wanted the money for is not visible in the weekly Treasury return issued on Wednesday, for that shows that the balances of the Exchequer at the Bank have been increased by £560,000 over and above the £1,500,000 brought in by the Treasury bills paid for last Saturday. To lose over £2,000,000 just at the end of the month was a serious matter for a market by no means flush in any case.

Most likely the Chancellor of the Exchequer wants it all to enable him to pay off the £6,500,000 in Exchequer bonds due next Tuesday. If the whole of these bonds had to be redeemed on that day a much larger credit operation would have been necessary in anticipation. Probably, however, many of the bonds have already been bought in by the Government, and the discount market is only interested in guessing to what extent the payment of the remainder may temporarily flush the short loan market with credit. Probably enough the redemption will, at least, give back more than what was taken away last Saturday; even so, anything like confirmed ease is not to be expected from this or any other operation.

When a German bank suddenly appeared in the bullion market on Monday and took away half the available supply of about £1,000,000, people began to shake their heads and to screw up rates. The Bank of England only managed to get about £300,000 of the metal, and the German demand, whether on Austrian account or directly for the relief of the still pinched Berlin market, continues. It is said that the unfulfilled orders extend only to the current week, but obviously our market remains liable to surprise orders of this description, and it is not in a position to meet them with equanimity. Next week there will be only about £440,000 of new gold available in the open market, and that it will be fought for seems certain, because the nominal price of bars has risen to 77s. 10⅛d. per oz.

No wonder if loans became dearer, rose in fact to 4 and 4½ per cent. on call money, which rates were reached on Wednesday's Stock Exchange settlement payments. Yesterday also the Consol market wanted a good deal of credit for its "monthly settlement," so that a certain amount of business went direct to the Bank both in bills discounted and in short loans. In the beginning of the week seven-day money could be had at 2¾ and 3 per cent., but the rate soon became firm at a minimum of 3 per cent., and discount rates, which had been about 3⅛ per cent. for three months' bank bills, rose to 3⅜ and even 3½ per cent., with a disposition on the part of the discount houses to hold out for the higher quotation, which they may get unless the aspect of the market materially changes. The India Council, it may be added, continues serenely to lend for month at 2¾ per cent.

It seems likely enough, though, from what has been said above that short loans will be abundant enough next week, but the bill brokers will none the less strive to maintain their rates in view of the uncertain position abroad. Our market cannot say when the latent German demand for gold may not develop into a sudden emergency call. It is almost equally uncertain what the course of the New York market will be. It is now liable off and on to send gold to Europe, but were the long expected crisis to really develop over there, this position might be suddenly reversed, and were gold to be wanted by New York as a matter of urgency it would not be a 4 per cent. or a 5 per cent. Bank rate that would tide us over here.

This afternoon loans eased down, but not discounts. Seven-day money could be had occasionally at 2½ per cent., and call money fell to 2½ per cent. in the afternoon. The usual rate for both was 3 per cent., and discounts tended to settle at 3¼ per cent., although business was done this morning at 3 1/16 per cent. The increased supply of credit probably arose from the repayment of some County Council bills which took place to-day. Commercial paper is not so very plentiful in the market.

There is not much encouragement in the Bank return to hope for steady lower rates. It is rather a weak return all things considered, particularly the time of year which brings us near the date when the usual autumn outflow of currency to the provinces and to foreign countries may be looked for. The Bank is weaker in capacity to meet such demands than it was a year ago by nearly £1,000,000, the stock of coin and bullion being £917,000 less at £35,840,000 than it was at this date last year. The market is also becoming poorer as the decrease of £2,000,000 in the other deposits indicates, and although the total of these is still fully £1,000,000 better than it was a year ago, it is by no means sufficiently large to afford solid foundation for the hope that a lower Bank rate than 4 per cent. will be seen this autumn. If a reduction does not take place soon it can hardly be looked for at all this year. We think a rise far more probable, and therefore bill brokers are fully warranted in struggling to keep their rates firm. They never have let the rates on long usances down, and continue to ask 4 1/16 to 4¼ per cent. on six months' remitted paper.

Calls due next week are not of any great moment as we may rule out the heavy amount due on the £12,000,000 of Great Northern (U.S.) Railway stock and the £13,000,000 Union Pacific bonds, because no appreciable amount of these were placed here. Other calls specially affecting our market do not much exceed £1,000,000 all told, but £143,000 is due next Wednesday on State of Para bonds, and the same day £875,000 is payable on new India 3½ per cents.

Silver.

The strength of the silver market has been well maintained, and quotations have further risen. Recent purchases by the American Government have been on an increased scale, so that the amount of metal offering was more than usually limited. The Indian Government and also the bazaars proved fairly consistent buyers, and as the immediate outlook does not favour the expectation of any material fall in prices "bears" covered with some freedom. Prices, therefore, finished ⅛ up on the week at 32¼d. per oz. for cash, and 32 1/16d. per oz. for future delivery. On Wednesday the offer of Rs. 40,00,000 Council drafts on India brought applications for Rs. 2,27,00,217 in bills and Rs. 1,25,50,000 in telegraphic transfers. The amounts allotted were Rs. 32,33,000 in bills and Rs. 7,07,000 in transfers, tenders at 1s. 4 3-32d. and 1s. 4 1/16d. per rupee receiving 78 per cent. Next week the amount offered is again 40 lakhs.

The Stock Markets.

Members of the Stock Exchange should be glad of the brief respite afforded them by the August St. Lubbock's Day. They managed to wind up a dreary nineteen-day account in the middle of the week without disaster, but have had no comfort in that account or since and markets all week were depressed. So unpleasant is the week's history that we need not spoil the brief holiday by dwelling upon it, and shall indulge in no prolonged discourse. In one sense the incident of the week has been the fall in the price of Consols to 82⅜, which was the figure touched for a moment on Tuesday last. It rallied immediately to 83, but dropped back again, and the money price last night was hardly better than 82⅜. Money was fairly cheap at the Consol settlement, but nobody got it for less than 3 per cent., and many paid 3½ per cent., the tendency being for the rate to harden as the arrangement of the account proceeded. After all, however, Consols now yield nearly as much as the contango rate, so in that respect the position of holders is improving, and as Mr. William Hubbard aptly remarked at the meeting of the London and County Bank held yesterday, Consols at the present price are on a 3 per cent. basis higher than our old 3 per cents. were at any time in their history until Mr. Goschen's conversion came into view. At least, we never remember 3 per cents. being quoted at par in earlier days and seldom at 99. They were oftener round about 95 and sometimes as low as 93 even in times of profound peace, so the credit of the country is still all right and the market will come all right too, time given, when, as Mr. Hubbard also pointed out, the nation has made its money in trade and wants to find investments.

Contangos.

The market obtained its fortnightly account to account money from the joint-stock banks at 3½ per cent. as a rule, seldom giving as much as 3¾ per cent., while money brokers got all they wanted at 3½ per cent., the supply being abundant on Monday. Contango rates in all departments were, in spite of this case, inclined to stiffen, and were noticeably about ½ to 1 per cent. harder on Home Railway stocks, American Railroad shares, Grand Trunk stocks and some things in the Miscellaneous list. Generally speaking, borrowers inside the markets had to pay from 4 to 5 per cent. for their accommodation, rarely more, and on Foreign Government securities there was the usual difficulty of lending even at 3½ or 4 per cent., there being so little stock to be carried.

Colonial Securities and Foreign Government Stocks.

Quotations have been on the whole well maintained for Colonial Government and Municipal securities, but some of the Natal, New South Wales and New Zealand issues have fallen back a little on the week. In the Municipal groups, however, a rally has taken place in Rosario bonds, thanks to the new scheme for arranging the city's debt dealt with in another column. Rand Water stock has been flat, and in the Foreign Government bond group, Japanese bonds have receded a little, especially one or two of the older loans. Russian loan scrip has also been rather weak, although the general Russian list has shown steadiness, and apart from some decline in Greek bonds, particularly in the

Funding loan, and a little weakness in one or two Argentine issues as well as in the sterling bonds of the Province of Buenos Ayres, nothing important happened, the decline in German 3 per cents. being merely a reflection of the weakness which has prevailed on all German markets.

Home and Other Railway Stocks.

Consols as usual gave the tone to the other domestic markets, and Home Railway stocks have been distressingly flat all week. Still more has the market been without business to do, and there does not seem any possibility of cheering it up just yet. Certainly the utterances of railway chairmen have done nothing so far to encourage buying. They have proclaimed their futility by raging against facts, by scolding their employees, and assuming a defiant attitude where common-sense would dictate soft speech and a readiness to negotiate. No wonder, then, that quotations are disposed to give way, and that some of the southern Railway stocks have been pressed for sale in a languid way, while investment business has been conspicuously absent. The debenture and preference stocks are suffering almost as much as the ordinary, particularly Chatham arbitration and North London, but North-Western debenture stock has not escaped, and the whole market for privileged issues is in a semi-demoralised condition, with another ugly tumble in the lower preferences of the Great Central Company and in Chatham preference to emphasise their impotence.

During the week the players in Canadian Pacific shares have been very busy, and apparently both in these and in sundry Yankee Railroad shares there has been a large option account to settle, which has been adroitly used by the holders of the options to call the stock. Hence on the week Canadian Pacific shares are nearly $10 up, and it is possible that the same kind of jump might have been brought about in some of the Yankee Railroad shares but for the helpless state of the Wall Street market. That continues to be entirely professional, and this week the "bears" have pounded away at it until every now and again the rickety structure seemed about to collapse. For all that Union Pacific and Southern Pacific shares have been maintained in price, although the Southern Pacific dividend at the rate of 5 per cent. announced yesterday seems to have encouraged the "bears." Only stocks like the Great Northern preferred and Northern Pacific have displayed serious relapses. Our dealings, happily, are insignificant in all this region, and had better remain so until it is seen which of the warring hosts obtains the victory in America. Harriman says the boom is coming, and he doubtless has much to sell. Grand Trunk stocks have steadied up and, according to the *Morning Post*, the market is hoping for the full dividend on the first and second preference stocks, with perhaps £20,000 left to carry forward. Let it hope.

As a group Foreign Railway stocks have also been under the same distressing influences, and a few Argentine Railway stocks, together with some Uruguay ones, have lost ground on the week. The fall has not been brought about by selling so much as by the absence of business of any kind, for this has been one of the worst weeks of the year, partly because the mood of the City was sulky and disappointed, and also because a holiday was at hand, and eveybody who could avoided commitments until that was over. Mexican Railway stocks have been nearly as idle a market as any of the rest, although prices have been steady for these as well as for the stocks and shares of Cuban Railways and for Brazilian Railway stocks like San Paulo and Leopoldina.

Miscellaneous Notes.

Bank shares have been a little weaker in a few instances, but the weakness has touched banks in the colonies rather than our own banks, although there were fractional declines in one or two instances amongst these, but nothing serious occurred at any point. Brewery shares, too, were just as uninteresting as usual with only one movement on the week of the slightest importance, a relapse of 2½ in Ohlsson's "B" debenture stock. Dock securities have been unaffected by the tide.

Another decline of 10s. took place in Artisans' and Labourers' Dwellings ordinary stock, and the changes amongst Nitrate shares were again for the most part adverse, although the market rallied now and then. Very few securities in the great Commercial and Industrial list have risen on the week, but Lever Bros. preference shares continue to profit by Mr. Lever's great victory over the Harmsworth Newspaper Trust, and the jobbers have marked Lewis and Allenby's debenture stock £19 higher since the end of last week. Motor shares still lose fractions on balance, and United Lankat Tobacco shares still give ground as well as United Alkali shares and the preference shares of Paquin. Spiers and Pond's preference shares, however, have recovered a little on the week. Iron, coal and steel have been firm, with slight improvements in Guest, Keen shares and debenture stock, in Cammell's preference shares and others, as well as in a good many other debenture issues, in Parish and Knowles' ordinary shares and both the share issues of Pease and Partners. United States Steel common have been flat on the "bear" forecast, referred to in our "American Business Notes." Tea shares have been in some demand, as well as a few Telegraph securities, though Anglo deferred has dropped to 17¾.

Electric securities were dull with day by day scarcely a bargain doing in most of them. Pekin Syndicate and Peruvian Corporation stocks have fallen back a little, and Hudson's Bay shares have been rather jumped upon, partly because of fears about the harvest and also because the financial situation in Canada is radically unsound.

Friday Evening's Markets.

The Stock Exchange, as usual, began its holiday early and had little or no business to record, but there are two or three small items of interest to be mentioned, and first of all the discounts upon the various new issues deserve notice. They are just about where they stood a week ago, all the new issues of any consequence, including the two South African municipal loans, being still practically at 1 discount. The South Manchurian Railway loan, however, is rather better at ½ discount.

It is said that Paris is going to put up De Beers shares to-morrow; in other words, that the "shop" there is going to start a movement for the rise. It has been a steady seller for a long time back, and we do not think much of the statement. Tintos moved up £1 with one bargain between. The general markets were quiet, and inclined to be steady at the close with no business going on.

Yesterday Lancashire and Yorkshire Fire shares went up £2, and to-day the Ocean Marine followed with a rise of 1. As both these are popular Liverpool companies the market thinks this portends another amalgamation.

With little to do dealers and others have been discussing the action of the Japanese Government in deciding to repay its 6 per cent. bonds on September 10. "A piece of sharp practice this," people told us, "by which we are done out of a month's interest." But the Japanese, on the other hand, say, Everything is straightforward and perfectly in order. We distinctly intimated when issuing these 6 per cents. that they would be repayable on April 5, 1911, but that the Imperial Japanese Government retained "the option to pay the bonds off at any time after April 5, 1907, on giving six months' notice." People read this as meaning that the notice must be given after April 5, 1907, but the Japanese say: "Not so, we could have given notice so that the bonds might have been repaid on April 6 last, and, as a matter of fact, did give notice so that repayment could fall on September 10 next."

Points from the Speeches of Bank Chairmen.

BARCLAY & COMPANY, LIMITED.

Mr. F. A. Bevan (Chairman):—"It would be dangerous to prophesy, but that he thought that bankers could hardly expect, in the ordinary course of things, that next year's profit would be equal to that secured in the twelve months under review. Trade, however, appeared to be flourishing, especially in the North. Though they did not expect or desire such high rates as obtained in the autumn of last year, yet, looking to the demand for capital all over the world, they could hardly expect that there was any immediate prospect of cheap money. Therefore the probability was that, so far as profits were concerned, the bank had a good year before them." "The Chairman also referred to the vexed question of the publication of average figures in banks' balance-sheets, and to the importance of banks' holding a large proportion of notes and gold. Bankers, he said, had held many meetings on this subject, but, though he could not say that any definite arrangements had yet been arrived at, there seemed to be a general opinion that the banks might well hold a larger supply of gold. He thought that most of the banks—he could speak for their own bank—held a larger amount in gold and banknotes than was held at the corresponding period a year ago. It was much to be desired that some arrangement could be made by which the gold reserves of this country could be increased, but when the bankers came to talk over the matter the difficulties were very great. Bankers had the matter under consideration, and he knew that the Chancellor of the Exchequer also was considering the question, but he did not think that the Chancellor quite saw his way, as bankers would like him to do, to the formation himself of a special reserve of gold against the large deposits he held in the Savings Bank; for, after all, he was the largest banker in the country. (Bankers were of opinion that, if they were going to sacrifice a certain amount of profit, which they would have to do if they kept a large amount of gold earning no interest, the Chancellor of the Exchequer ought to come forward and do something himself to keep a reserve against the large amount he held on account of the Savings Bank. Passing from this subject, the chairman alluded to the heavy depreciation in all Stock Exchange securities during the twelve months covered by the report. The causes producing this depreciation were, he said, many and were self-evident, but what had struck him personally as the most serious feature was that British securities had suffered the most. One reason for this was, no doubt, that investors obtained a better return for their capital by investing money abroad, and, so long as that were the case he did not know what was to tempt the investors back again into English railways and British securities generally. Without going into politics, he was afraid that investors had the impression, well-founded or not, that the tendency of present-day legislation was likely to depreciate further all kinds of English property."

CAPITAL & COUNTIES.

Mr. E. B. Merriman:—"The past financial year had been one of unbounded prosperity for the civilised community in all parts of the world, with, perhaps, the exception of South Africa. There had been demands for money from Canada, the United States, South America, and Australia in connection with the great commercial prosperity of those countries, and the speculation in Wall Street had also caused an abnormal inquiry for gold. The result of this was that very high rates had ruled for money, and for the unprecedented period of three months there had been a 6 per cent. Bank of England rate. As to the public applications for money in the past year, these amounted to £150,000,000, and in the past four and a-half years the demand had been for no less than £608,500,000. In the circumstances it was not altogether surprising that there had been a very considerable depression in high-class securities. Of course, high rates for money were a favourable factor for banks as a trading community, but there was a decidedly adverse effect in the depression which had been brought about in Consols and other gilt-edged investments. The result had been to drive investors to foreign bonds and securities of that class. There had been a period of very great depression in the past twelve months on the Stock Exchange, and losses of a large amount had been made in consequence of the realisation of over-weighted accounts. With regard to the gold reserve question, while he would not inflict a long speech upon them, he felt that it was only right to allude to that important subject. The large London bankers were by no means indifferent to that weighty question. There had been a great many meetings held, and much had been written on the subject, and the result was that the bankers of London had appointed a small expert committee to examine further into the question, and at a later period to report thereon to the general bankers with a view to taking some action in the

matter. At the same time there was a general feeling that what was done should be by the Metropolitan Clearing bankers in uniformity with their provincial friends, the country bankers, because the metropolitan bankers could not be further handicapped unless there was to be concerted policy and uniformity of action on the part of the provincial bankers. Any decline in the production of raw gold at the Rand would be a very serious factor to face, and in these circumstances he trusted that the troubles which still existed in South Africa would be speedily settled."

LONDON & COUNTY.

Mr. William E. Hubbard:—The present yield of Consols was 3 per cent. as near as might be—that was, if they were now a 3 per cent. stock they would stand at par. If one looked back over the years when that was their rate of interest one would find that they very seldom touched par. English credit was pretty good before the year 1880, but, up to that date, only in four years did their highest quotation exceed 100. After 1889 they paid 2¾ per cent., and they steadily rose, until in 1906-7 the quotation touched its highest point, 113⅞. He submitted that this had no reference whatever to the credit of England, but that it was largely owing to the fact that money was very cheap, and that there were not many opportunities for obtaining higher rates. Consequently, all spare capital was forced into this security, and the supply not being increased the price was greatly inflated. The purchases on account of the Savings Bank alone absorbed in the ten years 1891-1899 about £60,000,000 of Government securities. Now, all the circumstances were reversed; for the last ten years there had been a greatly increased supply of these securities. Remembering this, one ceased to wonder that the supply exceeded the demand, and that the price of a security paying the *minimum* rate of interest had fallen sharply, although, as he had shown, not below the values obtaining over the greater part of the last century. This perfectly natural procedure had been accentuated quite recently because the great boom in trade, both here and in America, had so greatly enhanced the value of money as to attract all available capital to investments which yielded a good return, and to leave gilt-edged securities solely to those investors who were debarred from placing their money elsewhere. A few days ago there was a consensus of opinion that the worst was past, that we had touched bottom, and that there might be a prompt reaction. Those opinions were immediately followed by a further fall, but, still, he thought them not very far wrong. The boom in trade must soon steady down—was, perhaps, already doing so—and the day would come when the proceeds of successful commerce and manufacturing would be seeking investment in other directions. They were now in the process of making money, as the Board of Trade figures clearly showed; when it was made and realised they would see a different range of values to what they were considering that day. Referring to the question of the adequacy of the gold reserve, he said he expected that adequacy could not be defined by any fixed limit. The amount must surely be variable according to circumstances, and clearly the safety and credit of the country did not vary only with the actual amount of the gold shown in the bank reserves. If it were so, Russia would enjoy the best credit and be in the best position of all, for she could show gold for every rouble of her note issue, while no other country could, but Russia had to pay 5¾ per cent. for money, while England's credit was twice as good. The question, however, was not so much one of credit, but the problem of how to keep enough gold in London for our own wants and at the same time to meet the demands of other nations with whom we did business. If the amount of coin and bullion were not enough to go round, let them all—all banking houses—keep a little more. At present the country banks looked to the London banks to keep the reserve of the precious metal; they did not appear to feel an obligation to do much in that way. The London joint-stock banks relied, perhaps, too much upon the leading joint-stock bank, the Bank of England, and the latter did the best it could. Might they not all keep a little better balance with their banker, and watch that the institution with whom they all banked kept that improved balance in a most ready and available form, and did not regard it simply as the opportunity for doing a larger business in competition with its own best customers? He did not, however, believe that any central reserve ear-marked 'for emergencies only' would effect its object. While it was not used it would be wholly unproductive, and if it were brought forth for use people would say 'there must be some great emergency,' and panic might ensue, and thus cause the disaster which the central reserve had been created to prevent. He thought that the first thing to be done was to ascertain the real state of the case as it existed at present. They knew the figures of the reserves, &c., on one day in the month, but not what they were on the other 29 days. They would not know the facts of the case until the average balances kept day by day were known."

LONDON JOINT STOCK.

Lord Milner:—"The balance-sheet revealed that they no longer entered Consols as a separate item, but that they included their holding of the premier security under the same heading as securities in the same category—that was to say, stocks the interest of which was guaranteed by the British Government. In doing this the Joint Stock Bank, of course, made no reflection upon Consols. The bank held the same amount of Consols as formerly, but they were not disposed to regard the present price as indicative of their permanent value. A number of causes had contributed to their present—as it seemed to him, personally—undue depreciation. But the directors saw no reason to make an artificial distinction between [illegible] and [illegible], or that they should tie themselves down to the holding of a particular amount of one British Government stock and not of others."

LONDON & PROVINCIAL.

Mr. William Hayes Fisher:—"In South Wales there has been a very brisk trade in exported coal. Germany, [illegible] made very great demands on Wales for coal, and the price of coal are, we all know, exceedingly high. From the point of view of the bank, no doubt, that brings prosperity to Wales and helps the bank's interest where its connection is so large as it is in Wales. But I do not think that the high price of coal, looking at it from the general point of view of trade and commerce, is a matter for altogether undiluted joy and congratulation, because, after all, although the excessively high price of coal may bring money to those who own the coal and work it, we must remember that it affects prejudicially the great national interest, amongst other interests, and that it affects prejudicially all those manufacturing interests whose margin of profit depends upon a fairly cheap supply of coal. . . . Now about Consols. How are we to treat Consols? That has been a matter much talked of in City circles for a long time, and there are some who would say, "They stand at 85 now in your balance, let them stand there; they will rise to it." There are others who say, "No, they may fall, and you ought to anticipate the fall." Well, we have not agreed with either of those opinions. We have taken the middle course of writing them down to just about a point below their market value—i.e., to 83—and I believe that that is a very sound and wise step to have taken."

LONDON & SOUTH-WESTERN.

"The depreciation of securities is due to many concurrent causes, but principally to the great revival of trade all over the world, which has obliged men to employ in their own business much of the money that would otherwise have been invested in Stock Exchange securities. Secondly, to the unsettled state of politics in Russia, and of business in the United States. Thirdly, to the fear in our own country of legislation hostile to capital. It must be satisfactory to you to know that we always provide amply for any fall in the value of our own securities, and, in addition, in the present condition of things we have deemed it prudent to carry forward a sum larger by nearly £19,000 than we did a year ago. The question of the proper gold reserve is still an unsettled one, notwithstanding the frequent discussions which have taken place on the subject by the best financial authorities. I trust that the matter may be satisfactorily arranged by the joint and harmonious action of the banks themselves without any legislative interference. I may mention that our own proportion of cash to liabilities is about 15 per cent. If all other banks in the country really maintained the same proportion much trouble and anxiety would disappear. We have paid the same dividend and placed the same sum to premises account as we did this time last year. We have carried forward a much larger sum, and set aside a sufficient amount to cover all depreciation of all our securities; and you may rely upon our continuing to give our best services in order to extend and safeguard the important business which you have entrusted to us. As a proof of the closeness and accuracy with which our books are kept, I may mention that at the close of business on the last working day of June the balances were struck, and on July 1 we were able to let the Press have a statement showing the satisfactory result of our six months' work. In consequence of this early communication there seemed to be an immediate improvement in the market for bank shares."

LONDON & WESTMINSTER.

Mr. Vincent Wodehouse Yorke:—"At the end of last half-year they were face to face with Consols at 84½, and the fact that they had fallen as low as 83⅛ within the period under review, and this with Consols at 85 in their last balance-sheet. Two courses were open to them, either to write down Consols to some such figure as 83 or to open a reserve account to provide for the depreciation. At first sight it might seem that the first of the two courses was the right, and from the point of view of the financial purist the best one to adopt; but, inasmuch as banks were not accustomed, when they had once written down to write up an investment (and he would be the last to advocate that they should do so), the bank's Consols, if they had written them down, might have remained at a permanently low level in their balance-sheet, and the public might have been led to think that Consols were valued by the directors at no more than 83. That Consols should remain permanently as low as they now were seemed to him an almost untenable proposition, and was contrary to the opinion of those with the greatest experience and best qualified to judge of the future. These considerations had led the directors to take the step of providing for the fall in Consols and other Government securities by transferring £150,000 from the rest or surplus fund to a special reserve called "Government Securities Depreciation Account." This reserve provided them with a considerable margin over the price of Government securities at the date of the balance-sheet, and at the same time left it open to them, in the event of a rise in the price of Government securities, to preserve Consols at 85, and let the special reserve for depreciation merge into the bank's rest or surplus fund. At any rate, though they had not taken the drastic step of writing down permanently their Government securities, they made it absolutely clear in the balance-sheet what value they had set upon them, and that value was considerably below market value both at the end of June and at the

present moment, and indeed below any price that these securities had yet reached."

PARR'S.

Mr. Cecil F. Parr:—"I should mention that Mr. Nix, after doing much good work as deputy chairman, has asked to be relieved of his responsibilities, and Mr. A. J. Fraser, whose knowledge and experience of the city are almost unique, has kindly consented to assume them, and Mr. Fraser is now our deputy chairman. With the help of our good friends the Hong Kong and Shanghai Bank, the Yokohama Specie Bank, and Messrs. Rothschilds, Mr. Whalley was once again in the early part of the year able to negotiate, and carry through, with his usual tact and ability, a conversion loan for our friends the Japanese Government. It was, perhaps, a more than usually difficult and delicate operation when we consider the very awkward conditions which prevailed in the money market up to the very moment of issue, and great credit is due to those responsible for the success which it undoubtedly was. Some of you will have noticed that we have been interested, with the above-named banks, in the issue of a Manchurian Railway loan, which bears the guarantee of the Japanese Government, and, therefore, is quite as good a security as a direct loan to that Government. In this instance, the three banks acted as agents of the Industrial Bank of Japan, who are solely responsible for the loan. Under the present condition of the money market we can congratulate the Industrial Bank on the loan being applied for so extensively as it was. In view of the very free criticisms which during the past year have been made by certain organs of the Press on the conduct of banking generally, it is consoling to find that banks both in London and the country have been able to meet a very heavy depreciation in their securities, and yet in no single case have they been forced to drop their dividends. It would appear that this subtantial evidence of solidity and prudence is fully appreciated by the investing public, for the shares of some 20 banks or more have risen anything from ¼ up to as much as 2½ points since the publication of the various reports at the beginning of the month. A few weeks ago a well-known so-called 'Society' paper published in its weekly issue an article commenting upon the relations between the bank and a certain Mr. Horsfall, about whom some of you may have heard. As the paper has, I believe, a considerable circulation, we consider this article as standing on a different footing from statements which had been made by Mr. Horsfall, and as the paper intimated that it would return to the subject, and as we were advised that the article was certainly libellous, we at once brought an action against the proprietor, the editor, and the printers of the paper. The fact that this action is now pending prevents me, as I am advised, from commenting either upon the action itself or upon the article and the circumstances which have given rise to it, and all that I am at liberty to say is that we intend to press forward the action to as early a hearing as the present congested state of the Courts will allow, and we shall welcome the earliest possible opportunity of stating in Court and in public the true facts of the case. As you can well understand, we were anxious to place the whole of the facts before you so that you might know the truth relating to these charges."

UNION OF LONDON & SMITHS.

Sir Felix Schuster, Bart. (the Governor):—"Various reasons had been given for the depreciation of securities generally, and of so-called gilt-edged stocks in particular. The question was one of interest not only to bank shareholders but to the public generally. It was necessary to remember that the conditions mentioned at the outset had prevailed not only in this country but in all the great commercial centres. The depreciation in investment stocks had taken place in a more or less marked degree on all the Stock Exchanges of the world. Investments were, after all, like other commodities, subject to the laws of supply and demand, and the creation of new securities had in the last decade been on such a scale that the growth of liquid capital had not been equal to absorbing them easily. Two great wars, destructive of capital, had entailed enormous borrowings; the creation and development of new industries and inventions, especially with regard to locomotion, had made vast demands on the money markets; prosperous seasons, the development of new agricultural areas, and active trade in countries such as India, the United States, Canada, and the Argentine had put the existing railway communications of those countries to a severe test, and demands not only for new lines, but for the better equipment of the existing ones, call for increasing capital expenditure in every direction. On the gold reserves question he remarked that he was more confident than ever that a proper solution would be arrived at before long with due acknowledgment of the responsibilities and regard to the interests of all concerned, and he did not think it was too much to say that the general position in that respect was already much improved, that the urgency of the problem had been far more recognised, and that even without the attainment so far of a general agreement the actual gold reserves in the hands of the banks throughout the country showed a not inconsiderable increase." Dealing with the future, he observed:—"A forecast was always difficult, and especially so this year. A great deal depended on developments in the United States, where there had been extraordinary activity in commerce, followed by huge expenditure for industrial undertakings, and the creation of a very large if not excessive mass of new securities placed on the market rapidly, which the market had not been in a position readily to absorb. Hence the great and almost universal fall in securities, a good many of which found their way to this side. But it was clear that a halt had been called, especially as Europe showed now less inclination to take up those new creations. After a period of great activity there was generally some reaction. During such a period of reaction the great recuperative powers of the country must soon assert themselves. Capital would begin to accumulate, and would be equal to the demands that had been somewhat rapidly put upon it. In conclusion he remarked that through those somewhat troubled and anxious times credit throughout the country had remained unimpaired, there had been few failures, and according to all appearance the general trade of the country was in a thoroughly sound and healthy condition. Over-speculation in Egypt led to the collapse of some new undertakings in that country and to consequent losses here. But, on the whole, trade had been carried on on sound and prosperous lines, and it was to the trade of the country that they must look as the most essential condition of the well-being of the people."

UNION DISCOUNT.

Mr. W. T. Brand:—"The year opened with a 6 per cent. Bank rate, and a Bank reserve of £19,689,000. Three weeks later the reserve increased to £22,593,000, and the Bank rate was reduced to 5 per cent., at which it remained until the second week in April, when it was reduced to 4½ per cent., and the Bank having continued to gain strength, it was further reduced on April 25 to 4 per cent., at which it still remains. The market for money during the greater part of the six months may be described as decidedly tight, and I think Mr. Nugent and the staff of the Union Discount deserve great credit for the satisfactory results shown in our balance-sheet. It has been anxious work at times during the half-year to the directors and all concerned in the working of the company, and I think the results should be satisfactory to all. I am glad to say that our securities stand at considerably less than the market value on June 30, and that we are able to place before you a thoroughly satisfactory account."

NATIONAL DISCOUNT.

Mr. Edmund Theodore Doxat:—"It is impossible for concerns whose business demands the holding of a considerable amount of gilt-edged securities to avoid the writing down of values in times like the present; but, on the other hand, it places these securities on such a basis of values as to lead to the expectation that any move must now be in an upward direction. The average bank rate for the half-year was £4 13s. 10d.; the average published deposit rate for the six months was—for call money £3 3s., for notice money £3 8s. The average fine rate for three months' bills was £4 3s. 11d., the actual average rate of interest on deposits was £3 13s. 2d., and the actual average rate of discount £4 5s. 4d., giving a difference of 12s. 2d. per cent. Comparing the present balance-sheet with that of June 30, 1906, you will see at a glance that our business has steadily increased."

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

Great Central Railway.

The June half-year's income of this company was decidedly better than the aggregate of the weekly traffic figures led people to expect. Gross receipts rose by £175,008 to £2,157,871, thanks to the inclusion of the Lancashire, Derbyshire and East Coast figures as from January 1, 1907. Even so this would have been excellent if the gross and nett expansion had in any measure corresponded. Unfortunately, working expenses took £119,559 more at £1,424,932, so that the nett income of £732,939 was only £55,449 better than in the corresponding half of 1906. These are the figures from the company's own lines to which its proportion of the nett receipts from joint lines has to be added and this at £114,511 gave £8,423 more. Then £7,507 was brought forward from the December half-year, or £463 more than at the end of 1905, so that altogether the nett revenue of the system came to £854,957 or £64,335 more. Here, again, there would have been cause for satisfaction if any of this additional money had been available for the company's unsecured stockholders. But it was all swept away in prior charges and £3,555 more. Debenture stock interest, for instance, took £39,068 more than in the corresponding half-year and general interest £11,282 more, while £9,494 more had to be paid as interest to the Great Western Railway on its advances. Then the rents due to the Metropolitan Railway and the Great Central and Midland joint committee went up, the one by £3,302 and the other by £10,104. Against all these increases the only reductions were interest on Lloyd's bonds down by £1,110 to £18,630 and the payments on account of the railway rolling stock trust which were brought down to £5,000 or £4,250 less. In spite of these reliefs the increase in the nett revenue was more than swept away and the directors had difficulty in again paying the 2 per cent. for the half-year upon the company's 1889 preference stock. To do this the balance forward had to be reduced to £4,728. An examination of the accounts cannot help to cheer shareholders up after their assimilation of these results. Working expenses show an uncontrollable tendency to mount, and the increase in the cost of

locomotive power in the past half-year was £52,128 compared with the June half of 1906. Maintenance of way rose by £19,000, traffic expenses by £24,000 and so on. As usual, the dock and steamship enterprises of the company show anything but a flourishing state of affairs. Including about £51,000 spent during the past six months upon docks, steamboats and other special items, the total outlay of capital in these directions has now reached £4,624,903, and from all we can gather in the accounts the steamboat expenses came within about £2,000 of the receipts in the past half-year, while the revenue of Grimsby Docks and wharfage was only about £16,000 more than the expenditure. Allowing for all indirect benefits this represents an extremely meagre return upon such a lavish outlay of capital. But capital continues to be spent by the company in all directions as if it were as rich as Crœsus. The total outlay for the last half-year came to £487,227 of which £275,940 gross, or deducting the premium received on the issue of debenture stock, £247,103 nett, went into lines open for traffic and no less than £104,631 into new rolling stock. Where the money comes from it is difficult to grasp, for, the debenture issue notwithstanding, the capital account on June 30 was overdrawn by £4,225,271. This money has in part been found by borrowing on Lloyd's bonds, the total of which outstanding is still £931,500. The company also now owes the Great Western Railway Company £1,185,731 and is indebted to the Railway Rolling Stock Trust to the amount of £200,000, but with all these helps together with over £1,256,000 drawn from its own steamship renewal account, its savings bank and pension funds and its fire insurance account, the huge overdraft is far from being made good, and we should like to know the composition of the £602,938 representing debts due to other companies, for the accounts due by other companies to the Great Central do not by any means balance this figure, their total being less than £500,000. The exhibit altogether is a distressing one, and we do not believe there should have been any such haste shown in extending the dividends over preference stocks so long in default. It would have been much better to have husbanded the revenue and tried to bring the financial position of the company into something like order. It is now insolvent.

Great Northern Railway.

In the June half-year this company's gross income amounted to £2,970,797 or £103,116 more than in the first half of 1906, most of which came from the increased coal traffic. That gave £68,438 more. Working expenditure also went up by £95,590 to £1,970,660, so that while the increase in the receipts was 3.6 per cent. that in the working expenses was 5.10 per cent. on the corresponding half-year and the ratio of total outgo to total income was 66.33 per cent. against 65.39 per cent. in the first half of 1906. As a result the nett income was better by no more than £7,526 at £1,000,137. The company was, therefore, only able to pay the same dividend at the rate of 3 per cent. per annum on the original stock. This gave 2 per cent. on the preferred and 3 per cent. on the "B" stock for the half-year, a balance of £61,646 being left to carry forward as against £51,390 brought in. In the passenger business the growth of revenue was not conspicuous. In second-class there was a decrease of £2,760 and the increase in first-class was only £789, but third-class gave £10,741 more. Merchandise also yielded £11,664 more, but live stock only £501 more. Exclusive of seasons, there was a decrease of £309,947 in the total number of passengers carried, but including seasons there was an increase of 16,321, and the company carried 792,797 tons more merchandise and coal. The nett revenue, therefore, ought to have shown a more substantial increase, but then working expenses expand at an ominous rate, partly accounted for perhaps by the small expenditure of new capital. Apart from any question of that kind the rise in the price of coal has had a marked influence in increasing the working charges. Locomotive power, for instance, cost £57,019 more in the past half-year as against an increase of only £9,772 in maintenance of way and £12,683 in traffic expenses. General charges were also about £6,294 up and there was a small increase in compensation, but rates, taxes and Government duty show a reduction of £3,284. Not only are working expenses going up, but nett revenue charges also expand, so that £7,222 more was absorbed under this head last half-year than twelve months back. Debenture stock interest takes £3,358 more, and owing to the increase in the capital account overdraft the general interest account took away £3,864 more. As the years pass this insidious eating into the revenue account tells with ever increasing force. Happily the company is now spending very little upon capital account. Still £198,538 disappeared in this way last half-year, bringing the total amount at debit of the capital account up to £548,033, but this deficiency does not imply an immediate further issue of capital since the trust fund in the company's hands aggregated about £960,000. Dividend warrants are payable on Tuesday, August 20.

Lancashire and Yorkshire Railway.

In the June half-year this company's gross receipts were £2,905,185 and working expenses came to £1,745,623, the ratio of expenses to receipts being about 60.10 per cent. That is to say, the gross revenue showed an increase of £88,101 and working expenses went up by £74,216, so that only £13,805 of the gross gain remained as nett. As at the same time the interest on loans and debenture stock took £9,220 more than in the corresponding half-year while only £1,539 was saved in general interest and bankers' interest, it follows that the nett revenue finally remaining was only £6,403 better. Accordingly the directors were merely able to pay the same dividend at the rate of 4 per cent. per annum with £21,679 to carry forward against £20,177 brought in. About £1,000 was saved on maintenance of way, &c., but locomotive power cost £13,520 more, and there was also an increase of £3,600 in traffic expenses, which is surely rather an ominous fact and [illegible] the advisableness of an agreement amongst the great railway companies by help of which unremunerative competitive traffic might be reduced. A small saving is seen in rates and taxes and in general and law charges, otherwise the account would have been worse than it is. All classes of passenger traffic show increases, but the third-class alone gives any substantial gain, it being about £35,500 better. From the accounts it would be impossible to guess that this company has a share in a steamship service except for an entry on the receipts side, "Lancashire and Yorkshire proportion of Fleetwood, Belfast and Londonderry steamers £2,155." What these steamers cost the company is nowhere disclosed and its partner, the London and North Western, is equally reticent. Canal receipts are also hidden away in the general figures, and facts of this description point to the need for a reform in the exhibits made to shareholders. A fresh issue of capital cannot be very long delayed if the company goes on spending as it is doing. In the past half-year £620,577 of new capital was disbursed, £275,905 of it on lines open for traffic, that figure including £113,525 spent on new working stock. This outlay brings the debit of capital account up to £1,405,606 against which, however, the company possesses £1,276,000 in various trust funds none of which are repayable or invested, but in the current half-year it is proposed to spend another £380,000, and as the company's borrowing powers are nearly exhausted a fresh issue of stock must be made at no distant date. Dividends are payable on the 8th inst.

London and South-Western Railway Company.

Gross traffic revenue for the opening half of the year was £2,557,067 an increase of £22,718, against which the working expenses advanced by £40,222 to £1,683,520, the railway being worked at 63.21 per cent. of the gross receipts compared with 62.15 per cent. Passenger business suffered a little, probably from the weather, all classes being involved, and the drop in receipts was about £9,000. In the circumstances it is satisfactory to note an increase in season tickets of not quite £3,000. Other traffic included under coaching, such as parcels, horses, carriages, &c., and mails, showed little movement. Neither merchandise, live stock, nor minerals exhibited any particular elasticity, and the receipts of the Waterloo and City Railway were over £800 worse, so we have to look to the steamboats and docks for the moderate rise in revenue. The steamers did better by £9,610 and the docks by £10,549, but expenses were higher by £8,711 and £4,864 respectively. A moderate profit is made on the actual working of the dock, but the operation of the steamboats still results in a tidy loss, quite apart from the £11,500 allowed for renewals and insurance. As to the railway expenses there was little or no change under maintenance of way, but locomotive power cost an extra £18,847, although the train mileage, apart from the rail motors, was very stationary. The motor services, however, are being steadily developed, the mileage being 240,580 compared with 110,338. Coal and coke went up by more than £20,000, but locomotive repairs and renewals were smaller. Traffic expenses were up £7,000 and general charges rose a couple of thousand, but compensation to passengers was only £575, and rates and taxes were less by £3,605. Tolls and expenses of joint lines rose by £4,438, and to work the City Electric line cost more despite the fall in receipts. Balance of nett revenue comes to £873,547 or £17,504 less, and other credits, including the balance brought in, not showing much change, the total for disposal is £910,974 against £930,300. Debenture interest was rather more but, the Waterloo and City Railway having been purchased, rent of leased lines, &c., is only £40,541 against £12,562. Bankers' and general interest did not require so much and there is no debit this time on account of the Salisbury accident against £20,000, so that the fixed charges were just about £33,000 down. Balance for dividend, therefore, comes to £650,867 compared with £637,104, but there are much heavier amounts to be paid, thanks to the Waterloo and City exchange. However, after meeting the preference dividend the directors experience no difficulty in maintaining the distribution on the ordinary stock at 4 per cent. per annum, giving the preferred stock a similar distribution with £24,071 carried forward. Ordinary capital expenditure in the six months was £274,183, but the purchase of the Waterloo and City [illegible] and balance of purchase of the Axminster and Lyme lines £44,038, brought up the total to £946,461. Capital debt now stands at £755,649, but there is a lot of money available in the shape of savings bank, superannuation, insurance, and other funds. The dividend will be payable a fortnight hence.

London, Chatham and Dover Railway Company.

There is no great amount of interest in the separate results of either this company or the South Eastern, all the essential facts being given in the report of that expensive managing committee. The proportion of nett revenue payable to the C. & D. is £270,302 or a decrease of £3,913 and other items to credit consisted of rents £32,629, transfer fees £200, balance brought in £27,220 and income from the managing committee on account of interest £7,303. Administration charges came to £[illegible] and fixed payments to £213,310 or £5,247 more, thanks to additional debenture and bankers' and general interest. The result is a balance available for dividend at only £88,319 or £[illegible] less and the dividend for the half-year on the ordinary preference stock can only be at the rate of 2½ per cent. per annum against £2 17s per cent. per annum last year with, however, an increase of a good £3,000 at £4,326 in the sum carried forward. For

the full year the dividend on the arbitration preference stock will be £3 10s. instead of £3 13s 6d. On its own account the company only managed to spend £9,244 of capital last half-year, but the proportion of the managing committee's outlay was £25,656 and discount on issue of 3½ per cent. debenture stock was £15,946 making a total of £50,846 and increasing the debit to the account to £822,684 mainly provided by the South Eastern Company, Lloyd's bonds and temporary loans, to say nothing of the reserve fund and savings bank money. The company is in a hopeless plight and the presence of two M.Ps. on the board and two who used to be M.Ps. before the Tory *débâcle* does not help it in the least.

London, Tilbury and Southend Railway Company.

For the opening half of the year the gross revenue of this company was £254,476 or an increase of £11,082 and working expenses of £162,035 were larger by £10,818, the ratio between expenditure and income being 63.66 per cent. against 62.12 per cent. The improved business was well distributed and fairly substantial gains in third-class passengers and periodical tickets are especially welcome in these days of dwindling suburban passenger traffic. Merchandise also gave a fairly good result, but the mineral traffic was practically stationary and rents dipped about £1,000. Transfer fees were the same in each half-year even to an odd 6d. The profit on working the Gravesend ferry was £161 compared with £478 after placing £1,000 to the steamboats depreciation fund. The principal part of the additional outlay went in maintenance and locomotive power and the company's experience in the matter of rates and taxes was not so fortunate as some, the item showing an advance of £726. Mileage and demurrage cost a good deal more and traffic expenses were also higher. There was some improvement in nett revenue credits including the balance from the previous half-year, so that although the profit on working was hardly changed the sum for division was a good £4,000 better. But against this we have to place an increase of a still larger sum in fixed charges, and after providing the preference dividend the distribution on the ordinary stock is maintained at 3½ per cent. per annum and a practically identical sum is carried forward. The company spent £78,290 on account of capital in the half-year, but the present debit is only £1,599. Dividends are payable August 2.

Hull and Barnsley Railway Co.

This company's revenue gross for the half-year ended June 30 came to £317,419, or the substantial increase of £44,957 compared with the corresponding half of 1906, against which the working expenses rose £25,385 to £187,271, leaving the nett income better by £19,572 at £130,148. The company's passenger business is still quite unimportant, and shows a small reduction on the half-year, but traffic in merchandise yielded an additional £9,000 or almost, and minerals showed the very gratifying advance of £29,588. The dock receipts were also substantially higher, the total tonnage entering the Alexander Docks being 1,109,933, or an increase of 224,122. On the expenditure side the principal increase was in locomotive power, which cost an additional £12,618, followed by traffic expenses, which were a good £8,000 up. Maintenance of way and stations was a little heavier, and carriage and wagon repairs advanced £1,000. Dock expenses, including maintenance, were not much larger, despite the greater business done, and there is a fresh item, steamboat account, £1,913. Balance of nett revenue is £130,148 being £19,572 more, and fixed charges being the same, the balance available for dividend was better by this sum. Preference dividend absorbs £13,125 and the directors pay 2 per cent. per annum on the ordinary stock against nothing, carrying forward £17,201 less at £24,962. Capital outlay in the six months was £94,153 against receipts of £118,743, the debit to the account now being £73,081. Last February the company issued £400,000 of new preference stock, of which not much more than one-fourth has yet been received.

Central London Railway.

Traffic receipts fell off £15,599 in the June half-year and working expenses were cut down by £4,372, or by £4,017 if the increase in rates and taxes is allowed for. Compared with the June half of 1903 when the number of passengers carried reached 23,179,138, the highest total ever attained, the falling away last half-year was 2,918,267, the total being only 20,260,871. Compared with a year ago the decrease is 2,075,618. Nett income at £74,950 is £11,227 down and the directors have only £90,724 to deal with, including the balance brought forward, against £112,784 in 1906. So the dividend on the undivided stock is down 1 per cent. per annum to 3 per cent. per annum. This, however, leaves £31,423 to be carried forward against only £14,608 brought in. The company spent £6,352 on capital account in the six months most of which represents capital overdrawn. Locomotive generating power cost £1,230 less and none of the other items of expenditure attain much, except traffic expenses, on which the saving was £1,603 and on lifts and rolling stock upkeep, however, £1,553 was saved.

Furness Railway.

In the June half-year this company's gross income went up £13,457 to £289,714, every branch of the business except the Lake and Fleetwood steamers showing increases, and the Lake pleasure traffic was set-back by the bad weather. Working expenses took £142,959 or £2,732 more, the ratio being 49.34 per cent. against 50.76 per cent. This left the nett income at £146,754 or £10,726 more, and after meeting the prior charges enough remains to allow the directors to give the shareholders an increase of 7s. 6d. in their dividend, which is at the rate of 3 per cent. per annum against 2¼ per cent., with £7,068 to carry forward against £5,354 brought in. Very little change is exhibited in the details of expenditure, but it is noticeable that locomotive power cost rather less than in the corresponding half-year. Maintenance and traffic expenses are each higher, the second-named by £2,236, and there was a saving both on general charges and rates and taxes. The capital expenditure of the half-year was only £17,055, but the account is overdrawn £48,305. The ordinary stock dividend is payable August 19.

Barry Railway.

Gross revenue in the six months to June 30 £376,024 or practically the same, working expenses £212,562 or £13,891 more, ratio of expenditure to gross income 56.53 per cent. against 52.82 per cent. Passenger business showed scarcely any movement in the half-year, if anything tending downward, but there was a modest improvement in the live stock traffic. Minerals also did a trifle better, the shipping revenue was much the same, and a matter of £2 separated the dock receipts from last year's figures. But when it comes to expenditure the changes are sometimes important. Locomotive power cost an extra £8,500, coal being dearer, carriage and wagon repairs rose over £1,800, and shipping expenses went up £7,693, despite the stationary character of the receipts. Dock working expenses and repairs were a little heavier, but Parliamentary expenses were over £4,000 lower, and a saving of £1,491 was effected in rates and taxes. Nett revenue shows a sharp drop of £13,943 at £163,461, and no great amount of help comes from increases in the balance brought forward and general interest, the total disposable balance being £167,499 compared with £179,555. Fixed charges were heavier, and after providing the preference dividends the distribution on the ordinary stock is lowered from 10 to 8½ per cent. per annum with a credit of £1,080 to next account. This gives the fixed 4 per cent. per annum to the preferred and 4½ per cent. per annum to the deferred ordinary stock against 6 per cent. on the latter last year. Capital expenditure was very light at £24,920 and the debit to the account is £272,252, partly provided by reserve and other funds but mainly by temporary and bankers' loans. Dividends payable August 7.

Brecon and Merthyr Tydfil Junction Railway.

Gross receipts for the half-year ending June 30 were £59,585, an increase of £3,960. Expenditure £36,896, an increase of £2,360. The free balance thus shows an increase of £1,600, but the excess is reduced by the smaller amount brought in leaving the nett increase £479. After paying debenture and fixed charges, in all £19,838, there is left £3,208 out of which the directors recommend a dividend at the rate of 4 per cent. on the first preference stock. It is not a brilliant success this railway; nearly £700,000 of its capital has never earned any interest.

Great Southern and Western Railway (Ireland).

In the opening half of the present year the revenue from all sources came to £670,655, an increase of £27,285, and the expenditure to £412,459 or £26,396 more, so that the profit on operations was a little better at £258,196. Passenger traffic did pretty well, thanks mainly to a good increase in third-class, the second showing a rather considerable decline, and there were no movements worth noting in parcels, horses, carriages, &c. Merchandise gave an improvement of £11,779, minerals were practically stationary, and live stock went up £3,425. Rents showed a substantial increase. The advance in outlay arises mainly from additional charges for locomotive power and traffic expenses, both the direct outcome of the heavier traffic handled, because the engine repairs and renewals were much smaller. Coal and coke cost a good £11,000 more. Maintenance of way and works and general charges went up, and rates and taxes were just on £1,000 higher. Miscellaneous receipts were over £3,000 less, nothing being received on account of the Fishguard and Rosslare Railway against £3,400, and fixed charges were enormously up, requiring £106,741 instead of £90,168. General interest was £1,808 against £1,341, and under the head of "amounts due or accruing for worked lines" £14,887 compared with nothing was payable in connection with the Fishguard and Rosslare Railways and Harbours. Therefore, although the balance brought forward was £15,577 larger the sum available for dividend was down by £3,215 at £226,885. Nevertheless, the distribution on the ordinary stock is advanced from 3¾ to 4¼ per cent. per annum, various reserves which last year received £18,000 between them being passed over, and rather more at £34,033 going to next account. Capital expenditure in the half-year was £63,552 and the account is now overdrawn £333,334.

Belfast and County Down Railway Co.

Revenue for the half-year to June 30 was £69,390 or an increase of £1,033, and the working expenses came to £41,512 against £40,935. Movements in the various items on both sides of the account were quite unimportant. Balance of nett profit was £28,117, being an increase of £455 and including the credit brought forward and one or two other items the sum for disposal is about £300 up at £34,396. Fixed charges and the preference dividends were the same, and after maintaining the distribution on the ordinary stock at 6 per cent. per annum there remains a credit of £2,632 to be carried forward. Capital outlay in the half-year was little more than £3,000, but the account is in debit to the amount of £54,478.

Coutts and Co.

No important alteration has taken place in the figures of this private bank for the half-year ended July 18 compared with the corresponding period of the past year, but the aggregate of the

balance-sheet is £248,432 down at £9,651,886. Capital and reserve remain as before, the one at £600,000 and the other at £400,000, but the liability of the bank on current and deposit accounts has receded by £192,228 to £8,330,075. Acceptances at £321,793 are also £52,204 down. Corresponding changes are to be found in the assets, but the largest item of all among them, bills discounted and loans, has increased by £472,246 to £4,800,262. Cash in hand and at the Bank of England is down £29,279 to £718,811, and money lent at call and short notice is £255,000 down at £1,270,000. There is also a decrease of £218,081 in the item "war loan," which now stands at £654,188 (of which £200,000 is lodged for Queen Anne's Bounty). The holding of the bank in Consols and Exchequer bonds, however, has gone up by £115,758 to £584,088 against which again there is a decrease of £281,773 in the large item "Indian Government securities, Egyptian guaranteed bonds, Corporation stocks, railway debenture stocks and bonds and other investments," the total of which is now £1,082,725 as compared with £1,364,498 twelve months back. Bank premises continue at £220,000. Nothing is stated as to what the prices are at which the Government or other securities held are taken into the balance-sheet.

Martin's Bank, Limited.

Gross profits in the June half-year came to £73,856 which was £8,164 more than in the corresponding half of 1906. Interest to customers, however, took £3,270 more at £18,425 and expenses rose by £1,068 to £21,100, and there was likewise £1,433 more allowed for rebate at £6,688. It followed that the nett profits, including the balance brought forward, rose only £1,808 to £52,247, the balance in having been £24,604. Out of this the usual dividend at the rate of 8 per cent. per annum is declared and £10,000 carried to the reserve fund which at £150,000 is now £15,000 higher than at this date last year. A balance of £22,247 will then be left to carry forward. In the balance-sheet the liability on current, deposit and other accounts is down £236,836 at £3,115,944. Acceptances, however, are £10,381 higher at £412,574. The creditor side of the balance-sheet shows a decrease of £148,774 in the cash in hand, at the Bank of England and with other bankers now standing at £797,625. Call and short notice loans, however, are £56,952 up at £639,552. British securities held show a decrease of £66,005 at £328,365, but whether this decrease is due in part to writings down or not neither the report nor the balance-sheet says, nothing whatever being mentioned about the value of the company's securities. Bills are a mere £2,220 less at £916,118, but loans have fallen off by £54,876 to £937,191. Investments, including freehold property adjoining the head office in Lombard Street, are entered at £67,360 which is £5,085 down, but the value of the banking premises in London and Kent remains at £132,000, the total of the balance-sheet being £209,645 lower at £4,230,765.

Stuckey's Banking Co., Limited.

A comparison of this old West of England bank's exhibit for the half-year ended June 30 last appears to indicate systematic writings down, for nearly every item in the unusually detailed list of securities shown in the balance-sheet is taken in at a less total than that of twelve months back. The decline is seldom so much as to lead to the inference that some of the stock has been sold, and we should therefore judge that the directors have written down their securities in the books. The aggregate value of these investments, for instance, was £3,879,674 a year back and is now £3,823,635, showing a decrease of £56,039. Consols and other British Government stocks at £1,758,100 are £21,475 less, Metropolitan stock, City bonds and Bank of England stock form an entry of £433,221, which is £6,857 lower than a year back, and there is a decrease of £3,849 in the value of Canadian, Egyptian and Turkish bonds guaranteed by the Imperial Government, which now stands at £256,155, the second largest decline of all, however, being £12,987 in the British, Colonial and Indian Railway debentures and debenture stocks held, which now aggregate £623,783. Over and above such writings down, however, the directors have taken £55,000 from the reserve fund, bringing it back to £300,000 and set this amount aside as an investments reserve fund, a very proper proceeding. In other respects the balance-sheet is of the usual eminently stable description, its total of £7,348,754 being only £96,938 under that for the first half of 1906. Deposit, current account and other liabilities at £6,513,859 are only £34,264 down. There is a decrease of £2,657 in notes and drafts in circulation which now stand at £76,453. Among assets, call and notice money shows an increase of £164,166 at £427,175, but cash in hand and at the Bank of England is £38,683 up at £420,879. On the other hand, bills discounted, loans and advances at £2,619,191 is an agglomerate item showing a decrease of £93,464. Bank premises are £1,220 down at £78,889, but freehold and leasehold properties owned by the bank have gone up nearly £6,000 to £33,984.

Sheffield and Hallamshire Bank, Limited.

A dividend at the rate of 10 per cent. per annum is declared by the board of this bank for the past year, its nett profits having been £44,505. A bonus of 2½ per cent. is also paid in addition, the same as before, and after meeting income-tax, £5,000 is set aside for depreciation in investments against £3,000 a year ago, and £616 is added to the surplus fund as against £351 at June 30, 1906. The balance-sheet shows a decrease of £215 in the note circulation now down to £2,415, but deposit and other liabilities to customers have risen by £80,523 to £1,750,433. All balances owing to the bank together with bills discounted by it are £137,077 up at £1,670,620, and cash and call and notice money is £56,788 down at £305,834. £100,000 of 2½ per cent. Consols is taken into the accounts at £84,000, a decrease of £4,000 on the year, so that writing down has been sufficiently attended to there. The other securities held by the bank aggregating £172,703 show an increase of £1,735. Premises have gone up about £2,000 to £47,500, and the total of the balance-sheet is £2,285,956.

Lincoln and Lindsey Banking Co., Limited.

The annual balance-sheet, covering the year ended June 30 last, shows few changes in the accounts of this country bank. The nett profits were only £212 down at £[illegible], but as a larger balance of £1,181 was brought forward the [illegible] amount really increased by £669 to £[illegible]. The directors accordingly make up the dividend for the year to the usual 18 per cent. and again assign £500 to the staff fund, leaving £3,554 to carry forward against £7,915 brought in. The balance-sheet shows a liability on current, deposit and other accounts, non-interest, of £1,421,864 or £66,761 less than twelve months back, and there is also a shrinkage of £3,385 in the note circulation, which is down to £23,780. Cash in the bank's own hands has risen by £4,089 to £59,474, but call money is down £18,450 to £92,376, and the item "brokers' bills," which was £61,[illegible] a year ago, has now disappeared. Investments are practically the same, and the bank a year ago wrote its Consols down to 88, as well as its other securities, to prices below those of the market. The aggregate value of the investments, of which £270,125 is in Consols, is, however, about £4,000 down at £478,216. Freehold and leasehold properties remain at £14,327, and bank premises have risen only £270 to £59,225. Properties yielding rents, however, are down £1,375 to £15,050, while there is an increase of £10,936 in the advances, bills discount, loans, &c., now amounting to £1,168,649. With £1,046 added as the value of the stamps on hand, the balance-sheet total is brought up to £1,888,369.

Provincial Bank of Ireland, Limited.

In its half-year ended June 30 this bank earned £102,414 gross, and including £12,348 brought forward the nett available profit came to £65,763. Out of this the directors pay the usual dividend at the rate of 12 per cent. per annum, add £[illegible] to the reserve fund against £20,000 a year back, and write £5,000 off cost of premises against £[illegible], leaving £[illegible] to be carried forward. To provide for depreciation in Consols and other investments £50,000 has been taken from the reserve fund, which, however, is reduced by only £35,000, thanks to the assignment out of the past half-year's profits, and its total is now £330,000. In the balance-sheet the liability on the note circulation shows an increase of £20,410 at £721,947. Deposit and current accounts, &c., have also risen by £182,995 to £4,976,042, and the aggregate of the balance-sheet is £6,614,351. Amongst the assets cash in hand and in London stands at £361,780. Investments of British and Colonial Government securities are £5,887 up at £608,063. The holding of Indian Railway guaranteed stocks, however, is £3,489 down at £146,131. On the other hand, Bank of England stock and other investments are up £148,412 to £1,081,323. Call and notice money is £230,000 less at £360,000, and bills discounted and advances show an increase of £238,552 at £[illegible]. Premises are down £3,606 at £111,105. It should perhaps be added that the gross profit was £11,192 more, while working expenses rose by only £590 to £48,999.

Frederick Hotels, Limited.

By the help of relieving revenue to the amount of £[illegible], being the balance of a sum of £4,821 spent on furnishing and equipping the Botanical Gardens, the Channel boats, refreshment rooms at Folkestone, and the garage at the Royal Pavilion Hotel and carried to suspense account, the nett profits of this company are brought out at £441 more for the year ended June 30 last than for the previous year, the total being £[illegible], £6,573 being the amount brought forward. The directors accordingly pay the preference dividend of 4½ per cent. for the year and give 5 per cent. both to the preferred and deferred ordinary shares, besides setting aside an extra £1,000 to reserve and maintenance reserve account, and adding £10,000 to the general reserve. A balance of £5,810 will then remain to carry forward, or £763 less than was brought in. The directors state that the property of the company has been maintained in the highest state of efficiency by an outlay of £23,309, or £1,866 more than a year ago. Altogether nine hotels with their adjuncts are owned by this company, whose reduced share capital still amounts to £700,250, in addition to which there is a debenture debt of £900,000, of which £5,727 is held by the company, which has altogether £18,818 invested partly in its own debenture stock, and also in the debentures of its Burlington Hotel at Dover, and in the "B" debenture stock of Maple and Co. There is likewise £5,253 put away in London County Council 3 per cent. stock, which is entered at £5,000 or cost price. Properties and goodwill, stocks, &c., stand at £1,503,984, but no other item in the balance-sheet figures for any corresponding amount, and the cash in the company's possession is substantial at £[illegible]. A notable increase of £8,127 was shown in the consumption of wines, spirits, provisions, &c., in the past year, the total cost of which was £121,900. Working expenses went up £[illegible] to £112,409, but directors' fees were £793 down at £7,[illegible]. Gross receipts rose by £14,123 to £148,[illegible]. On the whole, the company has done better than we should have expected in the circumstances.

Rylands and Sons, Limited.

Profits were good in the first six months of this year, the total being £118,738, making with £21,208 brought forward £[illegible] altogether or only £1,641 less than twelve months back when

however, the balance brought in was about £10,000 larger. The usual dividend is accordingly declared at the rate of 12½ per cent. per annum, £15,000 is added to the reserve fund and £5,000 to the insurance fund, leaving £26,256 to be carried forward. The reserve fund now amounts to £485,000 and the insurance fund to £245,000, in addition to which help the company owes £600,000 upon 4 per cent. debentures. Nothing of any value is revealed in the balance-sheet, as we have often remarked before, but it is curious to note how the item "sundry liabilities" continues to grow. It is now £1,012,925, which is £38,674 more than at the end of December last, and almost £98,000 more than it was a year ago. Stock-in-trade, ledger balances, investments, bills receivable and cash in hand and at bankers, all heaped together in one entry, show an increase of £73,081 on the half-year at £3,487,860, but freehold and leasehold land, buildings, plant, &c., have been reduced by £9,419 to £799,346.

Champdany Jute Co., Limited.

There is little to encourage shareholders in this Finlay, Muir Company in the report just issued for the year ended April 30 last. Greater cost of raw material and disappointing prices for the company's sacking goods are given as explanation of the fact that the profit balance was only £8,874 out of which the directors have written £6,000 off for depreciation, leaving £2,874 to be carried forward. To reach this meagre result the managing agents have made a substantial rebate in their commission. The Wellington Mill did much better than the Champdany one, showing as it did a profit of £7,245 against only £1,072 yielded by the larger property. The directors state that for a number of years the company has bought some of its jute from Messrs. M. Sarkies and Son, paying them the usual 2 per cent. buying commission. Messrs. Finlay, Muir and Company, however, the Calcutta agents of those other Finlay, Muir companies have bought up that business as from the beginning of last jute season, and the directors are of opinion that the purchase of some of the company's jute should be continued through the same channel on the usual 2 per cent. commission. It is not an unreasonable commission by any means, but the position is a delicate one for James Finlay and Company and their Calcutta firm, Finlay, Muir and Company.

Anchor Line (Henderson Bros.), Limited.

Grumbles are always to be found in the reports of shipping companies, and the board of this old and prosperous one has the usual complaint that the freight trade has not been good in all respects, although the passenger business again showed a gratifying improvement. The rate war, however, was in force part of the year and the outward cargo to Calcutta earned very poor money. Hope, however, is held out that rates will soon again be placed upon a reasonable basis. In the matter of earnings, though, the company really has nothing to complain of, nor the shareholders either, for they got 8 per cent. for the past year, or 3 per cent. more than they have been accustomed to, and the balance left to carry forward is £3,152 up at £32,849. Profits for the year ended April 30 amounted to £190,015 and adding in the £29,694 brought forward the divisible balance was £219,709, out of which £100,000 was written off for depreciation, and after meeting the debenture interest and preference share dividends the directors were able to do as we have said. That does not imply an unprofitable business, and the balance-sheet indicates a strong position in all respects except possibly the extent to which the assets are pledged in one form or another, the company having outstanding £465,000 in 4½ per cent. debenture stock, while it also owes £474,598 on current and open accounts, passenger money prepaid, mortgage on property, bills payable, and so on, not a particularly luminous agglomerate.

Samuel Fox and Co., Limited.

Profits for the year ending June 30 show an increase of £5,657 at £42,954. With the balance brought in £15,628, the total amounts to £58,582, of which the interim dividend of 2½ per cent. absorbed £7,500, and the final dividend now proposed of 7½ per cent. and a bonus of 5s. per share will take £26,250. A reserve fund is started with £15,000, leaving £9,832 to be carried forward. There are several changes in the balance-sheet. Debenture stock, the issue of which was authorised last year, figures at £48,480, and accounts for the increase in land, buildings, plant, &c., of £50,176 to £246,541. Stock-in-trade, loose tools, &c., are nearly £10,000 up at £84,037. Sundry debtors and investments amount to £79,937, an increase of £28,235, a sum which should be properly divided up and not given in a lump. Creditors, £81,547, show an increase of £33,966. The Stockbridge Railway figures remain unchanged, but cash and bills have risen by £7,612 to £41,594. No profit and loss account is published and no reference is made to depreciation. We presume this is done thoroughly, but it would be an improvement if more details were given.

The Otago and Southland Investment Co., Limited.

The wind-up of this old New Zealand business is now completed and the final statement of affairs has been issued by Mr. A. D. Fraser, the liquidator. It is better than might have been expected, and yet much worse than the early history of the company, which dates back to 1864, would have led shareholders to expect. As Mr. Fraser points out, in the first 29 years of the company's existence it did a fine business and paid an average dividend of 10 per cent. per annum besides accumulating a reserve fund of £78,000 gathered from profits and premiums on new share issues. In the subsequent years of distress and disaster all this disappeared and the unhappy shareholders had to meet a call in order that the debts of the concern might be paid. The call amounted to £18,700 and £17,385 of this was received, which is surely an excellent result. The final accounts now show that all debts have been met, leaving a balance of £2,433 out of which the shareholders are to get back 4¼d. per share on the 137,374 shares 22s. 6d. paid up. So ends a disastrous history.

TRADE AND PRODUCE.

Wheat.—Farmers' deliveries were again small, the 16,867 qrs. brought forward obtaining an average of 32s. 11d. against 8,015 qrs. averaging 30s. 5d. in the same week of last year, but the average for this season is still below that of last by 1s. 4½d. Trade has been principally in imported grain this week, but has not been active even in that. Buyers' needs continue small, and the markets, more or less influenced by American cables, **have fluctuated but mildly.** The quantity of wheat and flour on passage to the United Kingdom is again less than last week at 2,540,000 qrs., and imports are larger, amounting to 588,677 qrs. against 449,703 in the same week last year.

Wool.—The decline in prices at the London sales has not altered the state of things much in the trade as far as fine crossbreds and merinos are concerned, and in Bradford topmakers are holding out to their recent quotations. But in medium inferior grades values are more in buyers' favour, and in home-grown wools the drop is sometimes considerable. Cheviot wool, for instance, could only be sold last week at from 5s. to 7s. per stone less than the prices obtained last year. Actual business at present is quiet, and will be till holidays and local "tides" are over, but there is a good deal doing one way or another, particularly in the yarn market, where spinners are busy both for local consumption and for export. Manufacturers also are well employed, not so much on new orders as because in many cases they are behindhand with deliveries.

Cotton (from our Manchester correspondent).—There has not been much change in the general state of our market during the past week, and although the tendency of American cotton has been towards higher rates, quotations in yarn and cloth have not shown much change. Values are on too high a level for free operations. Recent advices relating to the American crop are favourable to the plant, and the outlook is encouraging, but lower prices scarcely seem to be in sight. Most manufacturers have only met with a small turnover. Here and there certain makers, who have wanted business, have accepted low rates, and then put up their quotations again. Engagements vary to a considerable extent, and there is no uniformity in any quotations. Isolated sales have occurred for India for shirtings and also lighter goods. There is no general demand, however, and the business seems to be of an exceptional character. The general inquiry from India is disappointing, and very little can be done for Calcutta in any class of goods. Small sales have transpired for Madras and Bombay. Fairly early delivery can be secured in most makes of cloth. The Levant is dull, and shippers do not readily take goods against old orders. The financial difficulties of certain firms trading with Egypt continue to cause some interest, and a firm this week has issued a circular calling a meeting of its creditors for next Wednesday. Various rumours are current relating to other firms, and the market is generally disturbed. In home trade cloths buyers have resisted prices, and not much has been put through. Distribution in summer fabrics is rather better, but many complaints are met with. American yarns for home use have moved off slowly, users for the most part holding aloof. There is now very little scarcity, and deliveries are more up to contract time. Ring beams are in stock at some of the mills. Medium numbers of twist are still healthy, but the margin all round for spinners is not so remunerative as a month ago. In export yarns India buyers have been prepared to do business where price and delivery could be arranged. Bolton yarns remain stiff in price owing to the extensive engagements of producers. A fair amount of new business has come round, very full rates being held for.

Coal.—House coal trade is lessening considerably, but there is no talk of lower rates, the tendency, as in other branches, being if anything upwards. Coalowners and railway companies still disagree as to contract prices, the difference of opinion being about 1s. a ton, and holders are also growing hostile against the proposed advance of railway rates on coal. General business in steams is as active as ever, and in exports particularly demand is increasing, and from Hull the quantity shipped during the week ending July 23rd reached 88,253 tons against 44,768 tons for the same week of 1906. Welsh trade shows no new feature, both steam and anthracite continuing firm and strong.

Copper.—Messrs. H. R. Merton and Co. give the visible supply at 12,907 tons, against 12,298 tons a month ago. Supplies for July came to 31,738 tons and deliveries 31,129 against 22,573 tons and 21,904 tons respectively for June. Stocks in England and in France were 6,107 tons against 6,187 at the end of June. The Chile Charters for the month were 3,000 tons. Prices have dropped each day since the end of last week, and the slackness on the part of consumers, together with discouraging advices from America, has depressed the market and given it a pessimistic tone. Movements in cash prices fluctuated rather wildly at times, but never closed higher on balance. The market finished to-night at 82¼-82½. For three months' contracts the closing price was 85½-85¾.

Tin.—The market at the opening was adversely affected by heavy liquidations, and a sharp fall in prices resulted. Prices recovered from it a little, the unexpectedly high figures realised at the Dutch sales and the steadiness of Eastern cables further helping to check heavy selling, and though demand was small

values moved up a little. Later a dull session and poor business caused another drop of about £2 on the day, and to-night's closing prices were: cash, 179½-180, three months' 179¾-180.

Iron.—The fluctuations in Cleveland warrants have disturbed the market, and consumers are hesitating about buying for forward delivery, but there is nothing in the condition of trade to justify such fluctuations. Makers are bare of stocks, and but for the surplus from Connal's stores prompt delivery would be impossible. In hematite buying also there is a pause, which is not troubling makers, as they are well supplied with orders. Barrow market is, if anything, stronger than last, a clearance of 2,654 tons from stocks of makers' warrants leaving only about 14,850 tons, and of makers' stocks there are none. Makers of finished iron are fairly well supplied with orders, and can afford to disregard new business for a time, and in steel rails and plate mills are in full operation, though buyers are holding back on account of high prices.

Tea.—Rather more Indian was brought forward this week, Messrs. W. J. and H. Thompson's circular giving the quantity offered by importers as 16,352 packages, of which 11,122 packages were new seasons. All kinds were competed for, but the market was strongest for common leaf and broken up to 7¼d. per lb., while the new teas were freely taken where they showed improvement in quality. For the week the averages for the whole sale came to 7⅞d. against 6¼d. last year. Ceylon auction was fairly heavy also, 34,947 packages being brought forward, but the trade found no difficulty in dealing with this quantity, and bidding was better for all descriptions. Prices for the lower grades were particularly firm, although there was no actual change in quotations. Medium and finer teas, however, showed a marked advance since last week's sales, and the average for the week came to 7.54d. against 6.63d. in 1906. A small catalogue of 438 packages comprised the Java sale, which passed with good competition at firm prices.

Sugar.—The market (says Mr. Czarnikow) remained steady up to the close of last week, but on Monday signs of weakness were perceptible, which became more accentuated as the liquidation of August progressed, the price of that month declining to 9s. 7¼d. Since, renewed buying by "bears," as well as fair purchases by refiners, caused a recovery to 9s. 9d. The correction of the Hamburg stock, which has been overestimated by 11,000 tons, has likewise assisted the firmness, and the soundness of the position, too, has contributed to the improvement from the late low level to which values had been unduly depressed by manipulations of speculators. The more hopeful outlook for the maintenance of the Brussels Convention has also had some effect, and though nothing definite has yet been settled it appears that the majority of the Powers are willing to concede to Great Britain some latitude as regards the penal clause. The advices from the Continent respecting the beetroot crops are still of a varying character, but on the whole there is reason to believe that the unusual atmospheric conditions during the last three or four months have unfavourably affected the roots, and it is quite possible that the luxuriant growth of the leaves, which at present hide bare patches, may lead to miscalculation on the part of superficial observers. It must not be forgotten also that the weather during October and November last year was exceptionally favourable, and was an important factor in the heavy weight per acre and the richness of the roots. Sellers of new crop have acted with greater reserve, and these deliveries at one time suffered to the extent of ¼d. to ⅜d., but have now advanced to 1d. above last week's quotations. Refiners bought some 88 per cent. at 9s. 10d. to 9s. 8½d. to 9s. 9¾d., and seconds at 8s. 3d. to 8s. 4½d. Tate's cubes are unchanged at 10s. 9d., standard granulated 17s. 9d., Lyle's No. 2 17s. 3d. Hamburg granulated, prompt, moved from 11s. 3d. to 11s. 2¼d. to 11s. 3¼d., August from 11s. 3¼d. to 11s. 2¼d. to 11s. 3¾d., October-December from 11s. 3d. to 11s. 2¼d. to 11s. 3d.; Paris, July, from fcs. 26.37 to fcs. 26 to fcs. 26.43 (10s. 11¼d., f.o.b.), October-January from fcs. 27.25 to fcs. 27 to fcs. 27.50 (11s. 4½d., f.o.b.); Hamburg beet, August, from 9s. 9d. to 9s. 7¼d. to 9s. 9d. October-December from 9s. 6d. to 9s. 5¼d. to 9s. 6¾d., January-March from 9s. 7d. to 9s. 6¼d. to 9s. 7d., May from 9s. 9d. to 9s. 8¼d. to 9s. 10d. The United States market has been firm, but closes rather quieter at unchanged quotations—viz., 3.93¾ cents for spot centrifugals, equal to 10s. 4½d. c.i.f. for 96 per cent. non-preferential, equal to 9s. 3d. f.o.b. Hamburg for 88 per cent. nett beet. Receipts have again been only 16,000 tons and meltings 46,000, reducing stocks to 290,000 tons.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Brecon and Merthyr. — Full on the first preference stock, carrying forward £1,085.

Cork, Bandon and South Coast.—At the rate of 2¾ per cent. per annum, carrying forward £1,786.

Dearne Valley.—At the rate of 4 per cent. per annum, carrying forward £6,297.

Great Western.—At the rate of 3¾ per cent. per annum, with £80,000 forward.

Hull and Barnsley.—For half-year ended June 30 on the consolidated (ordinary) stock at the rate of 2 per cent. per annum, carrying forward £24,962.

Isle of Wight.—For past half-year at the rate of 4 per cent. per annum on the preference stock, 4 per cent. per annum on the preferred converted ordinary stock, and 2½ per cent. per annum on the deferred converted ordinary stock.

Midland.—At the rate of 2½ per cent. per annum on the preferred converted ordinary stock, and at the rate of 2½ per cent. per annum on the deferred converted ordinary stock, being equal to 5 per cent. per annum on the former ordinary stock, with £2,145 forward.

North London.—For the half-year at the rate of 2½ per cent. per annum, placing £2,000 to reserve, and carrying £6,[illegible] forward.

Rhondda and Swansea Bay.—At the rate of 3 per cent.

Vale of Glamorgan.—At the rate of 4⅛ per cent. per annum, carrying £544 forward.

BREWERIES.

City of London.—1 per cent. on the ordinary stock and shares.

Hull.—Interim of 5 per cent.

Smith, Garrett, and Co.—7½ per cent. on the ordinary shares, making 10 per cent. for the year, placing £3,000 to [illegible] account, £500 to repairs to brewery and plant account, and carrying £8,574 forward.

Southdown and East Grinstead.—Interim on the ordinary shares for half-year ended June 30 at the rate of 10 per cent. per annum.

MINES.

Ashanti Goldfields.—10 per cent.

Briseis Tin.—Further interim (No. 7) of 9d. per share, payable Aug. 28.

Dolores.—Third interim of 3 per cent., payable Aug. 24.

St. George's Coal and Estate.—2½ per cent., payable in Durban, Sept. 9.

Waihi Gold.—3s. 6d. per share, payable Sept. 2.

MISCELLANEOUS.

Bank of Whitehaven.—Interim at the rate of 10 per cent. per annum, equal to 10s. per share.

Borax Consolidated.—Interim of 5s. per share for quarter ended March 31, being at the rate of 10 per cent. per annum, payable Aug. 1.

Bovril.—Interim on the ordinary shares for half-year ended June 30, at the rate of 7 per cent. per annum.

British and Irish Steam Packet.—10s. per share.

British Electric Traction.—Half-yearly on the preference shares at the rate of 6 per cent. per annum.

British Wagon.—Interim of 4s. per share.

Crocker, Sons, and Co.—Interim at the rate of 5 per cent. per annum on the ordinary shares.

Dublin Brick and Tile.—5 per cent. per annum.

"Financial Times."—Interim at the rate of 10 per cent. per annum on the ordinary shares for the half-year ended June 30.

Four per Cent Industrial Dwellings.—Interim of 2 per cent. for the half-year to June 30.

Frederick Hotels.—5 per cent. on the deferred ordinary shares, placing £10,000 to reserve, £1,000 to repairs and maintenance, £1,440 written off a suspense account for building, &c.

Hayes, Candy, and Co.—Usual interim on the ordinary shares for the half-year ended July 19 at the rate of 7½ per cent. per annum.

Harvey United Steel.—Interim of 7½ per cent.

Holborn and Frascati.—Usual interim for half-year ended June 30 on the ordinary shares at the rate of 8 per cent. per annum, payable Sept. 2.

Horbury Junction Iron.—10 per cent. for the year ended June 30, placing £2,000 to reserve, and carrying forward £2,344.

Hunter and Hyland.—Interim of 3 per cent.

International Coal.—6½ per cent. (making 10 per cent. for the year), and a bonus of 5s. per share, placing £5,000 to reserve, and carrying forward £11,863.

Joseph Travers and Sons.—Interim on the ordinary shares at the rate of 5 per cent. per annum (6d. per share) for half-year ended 31st ult.

Kodak.—The usual quarterly of 1½ per cent. (being at the rate of 6 per cent. per annum) upon the preferred stock and of 2½ per cent. (being at the rate of 10 per cent. per annum) upon the common stock; also an extra of 5 per cent. on the common stock.

Melbourne Tramway and Omnibus.—Bonus for year ended June 30 at the rate of 3 per cent., payable Aug. 14.

Metropolitan Electric Supply.—Interim of 3 per cent.

National Gas Engine.—Interim at the rate of 2½ per cent. per annum on the ordinary shares for six months ended June 30.

Newbury's.—Interim at the rate of 10 per cent. per annum for half-year ending Aug. 19.

Oxford Electric.—Interim at the rate of 5 per cent. per annum for half-year ended June 30.

Pawsons and Leafs.—Interim for half-year ended July 24 at the rate of 5 per cent. per annum.

Price's Patent Candle.—For six months ended June 30, 15s. per share.

Read Bros.—Interim for six months ended June 30 at the rate of 8 per cent. per annum on the ordinary shares, payable Sept. 2.

Samuel Fox.—10 per cent. for the year, together with a bonus of 5s. per share, placing £15,000 to reserve, and carrying forward £9,832.

Santa Catalina Nitrate.—First quarterly of 5 per cent., on account of profits for current year, payable on Sept. 1.

Spencer, Turner and Holdero.—Interim on the ordinary shares at the rate of 5 per cent. per annum for six months ended 15th ult.

Swan and Edgar.—Interim at the rate of 5 per cent. per annum on the ordinary shares for half-year ended July 31.

Thomas Wolte and Son.—Interim for three months ended June 24 at the rate of 6 per cent. per annum.

Westminster Electric Supply.—Interim for half-year ended June 30 at the rate of 10 per cent. per annum.

Wolcombers.—Interim on the preference shares for half-year ended June 30 at the rate of 7 per cent. per annum.

COMPANY MEETINGS.

PHŒNIX ASSURANCE COMPANY.

An extraordinary general meeting of the members of the Phœnix Assurance Company was held at the chief office of the company, 19, Lombard Street, on July 31, 1907, to consider the following resolution:—"That the provisional agreement, dated July 10, 1907, and made between the Right Hon. Sir John Eldon Gorst on behalf of the Pelican and British Empire Life Office of the one part, and Bristow Bovill, Esq., on behalf of the Phœnix Assurance Co., Limited, of the other part, which is submitted to this meeting, be and the same is hereby approved, and that the directors be empowered to take all requisite steps to carry the same into effect with power nevertheless for the directors to assent to any modification of the said agreement, so long as it continues to be provisional, which in their judgment shall be expedient." Mr. Bristow Bovill presided.

The Manager and Secretary, Mr. H. B. Guernsey, read the notice calling the meeting.

The Solicitor, Mr. Dawes, then read an abstract of the provisional agreement.

The Chairman said: We have asked you to meet here to-day to consider, and, if thought right, to confirm the provisional agreement entered into for the amalgamation of this company with the Pelican and British Empire Life Office. Most of you know that the Phœnix was founded in 1782, but perhaps it may be news to a great many that only three years later its directors wished to take up life insurance business. Owing, however, to legal and other difficulties the matter was not proceeded with. The board, nevertheless, still desired to be connected in some way or other with life insurance, and consequently fathered the Pelican Life Office in 1797, several directors of the Phœnix having a seat on the board of the Pelican. These friendly relations have gone on ever since, and at the present moment four of our directors are on the Pelican board. Well, gentlemen, this platonic affection of 110 years is perhaps a record, and the two historic birds think that, though they have both got on very well, and have been very prosperous in single blessedness, the time has come for them to join forces in a legal and formal manner, and they have every confidence of being able to protect in every possible manner the interests of all who may have any connections with them. So that this is no ordinary case of the transfer of one company to another, but a legal combination of two old friends for the mutual protection and extension of their business. The fashion of the day is in favour of large undertakings, and the public seem desirous of being able to do life, fire, and accident insurance with one company. It saves time and trouble, and, whilst being advantageous to the public, is also of great help to agents and connections, who can, with obvious benefit, devote their time and energy to one insurance company instead of acting for several offices each carrying on a different class of business. This is now recognised as almost an axiom, and has been vigorously acted upon by our competitors. The circulars issued to the shareholders explaining the object of this meeting went so closely into details that it is unnecessary to take up much time in enlarging on the *raison d'être* and advantages of the proposed amalgamation of the two companies. The proposals have received a favourable reception from the shareholders, from whom a very large number of proxies have been received, and the criticisms appearing in the public Press have recognised that the amalgamation is a natural one, and benefits both sides alike. The underlying motive of the arrangement is summed up in the adage "Union is strength," and the directors of both companies are strongly of opinion that they can more readily advance the objects of their respective offices by coming together and creating a prominent and important insurance company doing business on comprehensive lines. Negotiations have been carried on from the outset with the utmost harmony, neither side seeking to strain a point to the detriment of the other, but both recognising the fairness of the terms eventually arranged and the consequent advantages which a fusion of interests would create. The directors of our sister office, the Pelican, were naturally reluctant to part with the quaint and picturesque name of the Pelican, and our company will endeavour to retain that name in some connection; not only because we appreciate their feelings, but also because the name has a distinct goodwill attaching to it, as it has been the symbol of all that is sound and desirable in life assurance. Our own directors were, however, very glad when the directors of the Pelican yielded to the opinion of their advisers that a short and simple title counted for a great deal for purpose of advertisement, and agreed that the combined company should work under the name and style of the Phœnix. Fire connections must help life business and accident business, just as life connections must help fire business, and so on. The motive power, in fact, of a company with several branches of business is greatly increased. In this direction, therefore, we see a distinct advantage to the Phœnix shareholders from the amalgamation. Again our funds in hand (apart, of course, from the life assurance fund, which has to be kept separate by Act of Parliament) will be increased by upwards of £210,000. The combined fire and life funds of the two companies will amount to upwards of £6,800,000, and the additional prestige and driving power resulting therefrom, coupled with the active assistance of the numerous officers and agents, will be of the greatest possible help in the strenuous competition for business, which is the great feature of the time. Another point is that we are hopeful of effecting economies in the administration of our business when all branches—fire, life, and accident—are worked under one board of directors and executive. I think I ought to add that if this arrangement goes through, Mr. Ryan, of the Pelican, will be the general manager, and Mr. Guernsey, of this office, the fire manager. Thus your directors think it is not too much to claim for the amalgamation that it will extend our business, increase our reserves, and reduce our expenditure; and, if you agree with me that these are reasonable anticipations, I am sure you will cordially approve the steps the directors have taken, and pass the resolution to sanction the amalgamation. Before asking you to vote on the resolution I may perhaps mention that we have received proxies representing 34,000 shares in favour of the proposal, and only one proxy for 96 shares against the proposal, the reason stated in the latter case being that the shareholder has an objection to very large companies. The amount of support which the directors have thus received is surely surprising, bearing in mind the importance of the occasion, and would tend to show that the scheme is a sound and prudent one, calculated to promote the company's interests. I should, however, add that I have received letters from a shareholder who owns two shares criticising the proposals and the position of our company. The directors are, of course, sorry that he should not see eye to eye with them in the course they have thought it beneficial to adopt. They are also sorry that he is not present to-day, though he has been personally invited to attend, to bring before the meeting any matters which he considers material to our business to-day. His criticism is mainly devoted to figures taken from our accounts showing the shrinkage in our funds and the other effects of the deplorable loss we sustained by the fire in San Francisco. Now, as the last report of the directors states, the company lost £624,000 through this fire, and we are, of course, so much worse off by the accounts, but we have suffered in company with all the offices doing business in the United States of America, and have not suffered more severely than the majority of those companies. Criticism on points like this would have been better made at the last annual meeting. To refer to them now can serve no useful purpose, and it is difficult to see the motive with which such points have been raised. I trust that on reflection our dissentient shareholder will recognise that his opposition is not well founded, and that at subsequent meetings that may be held later on we shall have his report. I now move that the resolution which you have heard read be approved.

The Hon. Edwin Ponsonby seconded the resolution.

A number of questions were put by shareholders present, and answered by the chairman or the solicitor.

The resolution was then put to the meeting and carried unanimously.

The Chairman: Thank you very much, gentlemen. I have every confidence that the arrangement will be most satisfactory to you all in every respect.

A vote of thanks was then passed to the chairman, and the proceedings terminated.

PELICAN AND BRITISH EMPIRE LIFE OFFICE.

An extraordinary general meeting of the proprietors was held on July 31 at the head office of the company, 70, Lombard Street, E.C., for the purpose of considering the following resolution:—"That the provisional agreement, dated July 10, 1907, and made between the Right Hon. Sir John Eldon Gorst on behalf of the Pelican and British Empire Life Office of the one part, and Bristow Bovill, Esq., on behalf of the Phœnix Assurance Co., Limited, of the other part, which is submitted to this meeting, be and the same is hereby approved, and that the directors be empowered to take all requisite steps to carry the same into effect with power, nevertheless, for the directors to assent to any modification of the said agreement, so long as it continues to be provisional, which in their judgment shall be expedient." The Right Hon. Sir John Gorst, F.R.S., Chairman of the company, presided.

The General Manager, Mr. G. H. Ryan, read the notice convening the meeting.

The Chairman: Gentlemen,—The object of this meeting of the shareholders of the Pelican and British Empire Life Office is to confirm an agreement. That agreement is on the table, and if any shareholder desires to hear it read it can be read to the meeting; but the substance of the agreement has been communicated to the shareholders in a circular, which they have all received, and I do not suppose that merely hearing the legal language in which it is embodied would very much add to your knowledge. I rather gather from the silence with which my observation is received that no one particularly desires to have the legal document read, and, therefore, we will take it as read. The union of the Phœnix and the Pelican offices is not an ordinary amalgamation of two strange offices, because these two great companies have for more than a hundred years—been very closely in communication with one another. It is only that the exigencies of modern business and the changes which take place in the insurance world have now made it in the interest of both companies that this informal alliance should be made into a formal amalgamation. Of course, this amalgamation, which has been very carefully considered and discussed by the boards of the two companies, is, in our opinion, for the advantage of both. There is an advantage to be gained by it in which both companies partake, and I do not think there has been any desire on the part of the Pelican to grasp at too great a share of this advantage, nor, on the other hand, has the Phœnix Company been unwilling to yield to the shareholders of the Pelican that part of the benefit

which is their due. The advantages to the Pelican shareholders are very clear, and not only has the nature of the agreement been generally approved by all who have written upon it, but it has been approved by an immense number of our shareholders, whose proxies are here upon the table before me. There has, in fact, been hardly any dissentient voice expressed, and there has been no tangible or practical objection made by any body to the amalgamation. The circular sets out the advantage which all the Pelican shareholders will receive, and the actual advantage has been shown on the Stock Exchange by the rise in the value of the shares which you gentlemen hold. I should be needlessly taking up your time if I were to descant on the advantages which are set out in the circular, which are known to you all, and which I think I may take it are approved by the great mass of the shareholders. I will, therefore, conclude by moving the formal resolution which has been read by the manager, and which will give to the provisional agreement which was entered into some weeks ago the force of an actual agreement for amalgamation between the two companies. I may, perhaps, mention to the meeting that if this agreement should be confirmed by the shareholders of the two companies concerned it will be necessary to make an application to the Court, which acts as the guardian of the interests of the policyholders, and we shall have to get the leave of the Court to the amalgamation because the policyholders are concerned in the matter. I have no doubt that the company will have no difficulty in convincing the Court that the amalgamation will be a great advantage to the policyholders. It will give them an even greater security than that which they at present possess, and I do not think there is any reason to anticipate that the Court will do otherwise than approve an amalgamation, in which the interests of the policyholders just as much as those of the shareholders have been consulted and provided for. I will now, therefore, move the resolution which we have heard read.

Lord George Hamilton seconded the resolution.

Sheriff Sir Thomas Crosby addressed the meeting in support of the resolution, which was put and carried unanimously.

The Chairman announced that at the meeting of the Phœnix shareholders a similar resolution had just been carried unanimously.

The Right Hon. Viscount Hampden proposed a vote of thanks to the chairman and directors for their services in connection with the negotiations. Sir John Runtz seconded the resolution, which was carried and acknowledged by the Chairman.

Mr. W. H. Davison proposed a vote of thanks to Mr. Ryan and the staff. Mr. Charles Wallis seconded this resolution, which was carried. Mr. Ryan briefly replied, and the proceedings terminated.

THRELFALL'S BREWERY.

The twentieth annual general meeting of Threlfall's Brewery Company, Limited, was held on Thursday at the Cannon Street Hotel, E.C., Mr. Charles Threlfall, J.P., presiding.

The Secretary (Mr. W. J. Burnside, A.C.I.S.) having read the notice convening the meeting and the auditors' report,

The Chairman said: I cannot proceed to deal with the report and accounts of the company without first speaking to you about the loss we have sustained through the lamented death of our chairman. My brother, by his urbanity of manner, his calm judgment, and his readiness of speech, made an ideal chairman. I only hope when my time comes to go I may receive as much regret from my colleagues as is now bestowed on my brother. Turning now to the accounts, it is very gratifying to be able to announce that the trading profit for the year just concluded is £8,194 in excess of that of the previous year. Comparing this year's figures with last, you will see that we have written off for depreciation £17,694, against £6,039 last year. The charge for interest is £1,670 more than last year. Directors' fees are less. The compensation levy is £1,294 more, the figures being £8,838 in 1907, against £7,544 in 1906. A new item of £1,000 appears in connection with the Workmen's Compensation Act of 1906. Your board, after a great deal of consideration, came to the conclusion that for the first year of the new Act it was better for the company to create its own insurance fund instead of insuring their employees with any office, but this decision does not prevent your board from changing its policy, if at any moment they think it necessary or advisable to do so. After providing for the dividend of 16 per cent. for the year on the ordinary shares, the balance to be carried forward is £4,101 greater than last year, the figures being £17,322, against £13,221. I have much pleasure in stating that there is a distinct improvement of trade, and I am looking forward to a continuation of the same during the present year. With respect to the further issue of debenture stock, the matter must be deferred until a more favourable opportunity arises.

Mr. Peter J. Feeny, J.P., seconded the motion, which was then put to the meeting, and carried unanimously.

The Chairman next moved the re-election of Mr. George Barker and Mr. P. J. Feeny, the retiring directors. He stated that Mr. Barker had been connected with the concern for 50 years, so that this was his jubilee year. (Applause.) He worked first with his (the chairman's) father, and then, in conjunction with his brother, for many years he carried on the business for the Threlfall family as a trust. Later, when the company was formed, in conjunction with the late Mr. W. A. Matheson, he saw the business increase by leaps and bounds, and of late years it was mainly owing to his work that the success of the business had continued as it had done. (Hear, hear.) Mr. Barker, in fact, was a tower of strength, and he hoped that he might occupy his present position for many years to come. (Applause.) They were also very fortunate in having Mr. Feeny as a director. He was in business at Liverpool, where he was well known. He was also a large shareholder of the ordinary shares, and, as the late Mr. Matheson's son-in-law, he represented the large interests of the Matheson family.

Mr. Tomson seconded the motion, which was unanimously agreed to.

Mr. M. C. Buszard, K.C., in a feeling speech, proposed a hearty vote of thanks to the chairman, the directors, and the various employees for their strenuous exertions on behalf of the company during the past year. He was quite sure that every man who was engaged in Threlfall's business had the prosperity of the concern at heart, and that the shareholders owed a very deep debt of gratitude to those who occupied subordinate positions in this great business. (Applause.)

Mr. Straker seconded the motion, which was unanimously adopted.

SAPONG RUBBER AND TOBACCO ESTATES.

The second yearly general meeting of the shareholders of the Sapong Rubber and Tobacco Estates, Limited, was held on Monday at Salisbury House, London Wall, E.C., the Hon. Charles Hedley Strutt (chairman of the company) presiding. The Secretary (Mr. E. Vokes) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—At Sapong we are engaged, as you know, mainly in two industries—the growing of rubber and of tobacco. We have grown as well a little rice and chillies, and have planted a few sago trees. Ground nuts have been cultivated on a larger scale. The climate of Borneo seems very bad for keeping the nuts after they have once been lifted from the soil. It is not easy to discover whether they have paid for themselves from the accounts we have received. I expect a great deal depends on how much of the labour of preparing the land is charged to the ground nuts and how much to the tobacco. All the virgin soil is subjected to the somewhat drastic treatment of a crop of ground nuts before the tobacco is planted. This tames the land a bit, and prevents the tobacco being too rank and strong. The progress in the improvement of the quality of our tobacco is worthy of our closest consideration. It has been my experience, and I believe that of other cultivators in Borneo, that it is impossible to grow tobacco at a profit the first two or three years after opening out an estate. I had hopes, with such an experienced manager as Mr. Lease, and with the acclimatised coolies he brought with him from the Kinabatangan estates, he might have been able to prove Sapong a brilliant exception to the universal rule; but such has not been the case. The tobacco grown the first two years fetched very inferior prices; the crop of 1903 was sold at 27c., and the crop of 1904 at 33½c. The year 1904 was a bad one for drought, and the crop of other companies fetched lower prices than usual that year. In 1905 it was realised that the land was too rich for tobacco, and experiments were undertaken to reduce its fertility and so improve the quality of the crop. The experiments having proved satisfactory, the whole crop of 1906 was grown under more favourable conditions than before. The crop has been distinctly profitable, whatever the last lot fetched, so we may hope that we have turned the corner, and that, though the season was no doubt favourable in 1906, there seems no reason why Sapong should not be able to hold its own. I believe Sapong could, without the smallest difficulty, grow 800 to 1,000 fields a year, provided we did not want the land for other crops and provided we had sufficient capital and did not attempt to increase the output except by gradual steps. According to our published report, 420 acres of land have been planted with rubber, and our manager was only waiting for rain to plant another 100 acres. We have now received a cable stating that the 500 acres have been planted. We still intend to go on planting, and shall continue for some time to do so as long as we believe our natural advantages enable us to compete successfully with all our rivals. That the climate is suitable for rubber Mr. Lease's experiments at Tenom, only four or five miles from Sapong, are a sufficient proof. To obtain at the rate of 1½ lbs. of rubber from trees under six years old is very satisfactory. Though the climate is practically the same at Tenom and Sapong, the land at Tenom, as I could see for myself when there, is greatly inferior to Sapong, so unless good land is a disadvantage in growing Para rubber we should have a satisfactory future before us. After quoting the highly favourable opinion of Mr. Angier, Mr. Strutt went on to say: If we have land that can grow the "outside" leaf of tobacco, which can only be grown over a very small area of the globe, in sufficient quality and quantity to pay well for its cultivation, if we can at the same time compete successfully, as we hope we can, with all our rivals in the production of rubber, we surely possess a fine property.

Mr. Percy E. Laurence seconded the motion.

The Chairman, in reply to Mr. Hunt, stated that the shares would be offered in the first instance to the shareholders *pro rata* to their holding, and in case certain shareholders did not desire to subscribe for their share shareholders could apply for more than their proportion. The board proposed that 2s. 6d. per share should be paid on application, 2s. 6d. on allotment, and the balance in three instalments of 5s. each.

The resolution was then put to the meeting and carried unanimously.

BRITISH-BUTTE MINING.

A meeting of the shareholders of the British-Butte Mining Company, Limited, was held yesterday at the Cannon Street Hotel, E.C., to hear a report on the property from Mr. Charles Olden, F.G.S., M.I.M.M. Mr. Lafayette H. de Friese presided, and gave an interesting history of the company, after which Mr. Charles Olden, F.G.S., M.I.M.E., gave an account of his visit to the mine. Quoting his report, he remarked: From published statistics it is found that 17 mines, whose lodes are included in former references in this report—that is, the Moody, Sankey, Burlington, Blue Bird, &c.—have produced within 350 ft. of surface over $11,500,000. The combined area producing this total is less than that embraced in your mining claims. The lodes from which these values were obtained all trend into the lands of the British-Butte Company, adding that it was a safe conclusion to go upon where these lodes trended directly on to the borders of the property without any fracture or apparent geological disturbance they run into the lands of the British-Butte Company. In order to make that clear to his own mind and establish the truth of his supposition, he went four miles from the eastern boundary of the properties to the western foot hills, and there the lodes occurred again, the outcrops being even stronger on the western than on the eastern side. Certain surface work had been done to prove, if possible, the value of the gold in the placer ground, but the time at his disposal was too short to give the necessary full time for testing the whole of their ground, 1,000 acres more or less. Systematic sampling tests, however, were made over an area of probably a little over 3,000 ft. in length by about 350 ft. in width in order to have something upon which to base his calculations. Results were certainly remarkable, ranging as they did from 11 cents to $2⅓ per cubic yard. There were many much higher, and several lower, but in calculating upon the area of ground and the number of cubic yards the high values were omitted and the poor ones included, and the result gave an average value of 56 cents per cubic yard, which was just about twice what one would expect to get in the best placer ground in the world. In his report he had stated that although the company's placer grounds were very rich and offered remarkable inducements for extracting the gold, it was far better to regard the placer gold as a secondary asset, if he might so call it, and he would suggest that the lode formation should have the first consideration and that development work should go on without loss of time. There was one shaft down to a depth of 415 ft., but this had not yet reached the bottom of the placer ground. It was intended to sink that, in common with other Butte shafts, to 1,000 ft. He had not dealt in his report with what might be found on bedrock, but it was probable that considerable values in gold would be found there. Not having reached bedrock, it was not possible to speak more definitely on the subject, but generally the best gold was found there, and he thought they had reason to expect to find good gold values when this stage was reached. He went to the British-Butte property, as he had already said, prepared to discount a great deal of what he had heard, but he came away converted to the belief that the possibilities of the property were greater than those of any property he had had the pleasure of examining in the course of many years. (Applause.)

The Chairman asked Mr. Olden if he would tell the meeting whether in his opinion the veins extending east were not the identical veins which made Anaconda and the Amalgamated properties what they were.

Mr. Olden said he had given this matter a great deal of consideration, and there was nothing to show that the geological or other conditions were in any way different from those on the Anaconda Hill; indeed, he felt satisfied that the same lode formation continued west right into and through the British-Butte property. Answering a further question, he said that the present rate of progress in the sinking of the shaft was about 100 ft. per month.

A shareholder proposed a vote of thanks to the chairman and also to Mr. Olden for his interesting account of the property.

Mr. Frank Dodd seconded the motion, which was carried.

INTERNATIONAL TEA COMPANY'S STORES.

The twelfth annual general meeting of the International Tea Company's Stores, Limited, was held on Thursday at Winchester House, Old Broad Street, E.C., Mr. G. A. Tonge, J.P., presiding.

The Secretary (Mr. W. G. Ivimey) having read the notice convening the meeting and the auditors' report,

The Chairman said in the course of his speech: We come before you, if not showing an increased profit, at all events an increased turnover. By increased turnover I do not mean that we have been opening a lot of new branches, but that those 317 or so branches which were open at this time last year have shown both a larger turnover and better trade than at any time during the company's existence. Our wholesale trade also shows a considerable increase. We have been widening the area of our operations, and I hope that all these improvements will in the near future help to show us an increased profit. You may remember that during the past year we had an extremely trying summer, and this brought about abnormally high prices in some of the articles in which we deal—especially butter. I may say that in my experience I do not think I have ever seen butter so high as it was for some months during 1906. You may say that this is no great hardship, and that all we have to do is to advance our prices to the consumer and so secure our normal profit; but that is not so. There is no doubt that the retail customer has, rightly or wrongly, a very great objection to paying more than he is accustomed to for anything, and, if you press him too hard, or advance the price beyond a certain point, he takes the matter into his own hands and does not buy as much as he otherwise would; in fact, he limits his consumption. Of course, you can understand how desirable it is from our point of view to prevent that, if possible. You will see, therefore, that with very high markets it is not always easy to make profits such as you are entitled to, and, as I have said, the past year has been one of the worst you could possibly have imagined. Mr. Tonge then analysed the balance-sheet, and remarked: On the credit side of the balance-sheet you will see an item of goodwill. It might be suggested that we ought to write down this item, and I reply, as I have replied before, that if we continue to add liberally to our reserve fund, we can at any time devote a portion of that reserve fund to obliterating the goodwill; but I think that it is worth that amount. I mentioned when I addressed you last year the very enhanced value which I attached to our freehold property, and I do not think I need enlarge upon that question. If revalued now, I have no doubt that it would come out very much higher than £222,000, which is the figure at which it stands in the balance-sheet. Turning to the profit and loss account, you will note that we have placed £17,000 to depreciation—a very liberal amount—and that we have, with the amount brought forward, £23,971 to deal with. Out of this we propose to pay a final dividend of 3 per cent., making 6 per cent. for the year, carrying forward £8,971. I can only express the hope that next year the ordinary dividend will be increased, but as the ordinary shares belong to the original vendors, and as no shares are held by the outside public, I do not know that any fluctuations of dividend are of much interest to anyone but ourselves. I cannot conclude my remarks without paying a tribute to the zealous support which we get from the whole of the staff—support which, I am sure, we very much appreciate. (Hear, hear.) I beg to move the adoption of the report and balance-sheet.

Mr. H. Evans seconded the motion, which was then put to the meeting and carried unanimously.

MINING RETURNS.

Briseis Tin.—Shipped 18 tons, including 8 tons for New Brothers Home No. 1.

British Broken Hill Proprietary.—2,875 tons crude ore produced 376 tons concentrates, containing 237 tons lead and 10,152 ozs. silver.

Broken Hill South Silver.—16,036 tons crude ore produced 2,365 tons concentrates, containing 1,679 tons lead and 47,300 ozs. silver.

Chinese Engineering.—Output, 26,500 tons; sales, 16,000 tons; consumption, 1,500 tons.

Day Dawn Block and Wyndham.—Treated 960 tons quartz, value, including concentrates, &c., of £3,000.

Duff Development.—Prospecting dredge, 27 ozs.; No. 1 dredge, 48 ozs.; No. 3 dredge, 19 ozs.

Great Cobar.—14,050 tons; output matte, 949 tons; contents, 384 tons copper, 1,100 ozs. gold, 6,100 ozs. silver; ingot copper made at Lithgow works, 251 tons; despatched, 267 tons.

Mills Day Dawn United.—Crushed 1,957 tons quartz for value, including residues, £7,300.

Mount Lyell Blocks Mining Co.—Treated 4,342 tons crude ore for 29 tons fine copper.

No. 2 South Great Eastern.—Crushed 1,350 tons for 447 ozs.

North Broken Hill.—Treated 2,300 tons crude ore, producing 404 tons concentrates, containing 276 tons 2 cwt. lead and 7,393 ozs. silver.

"O.K." Copper.—Treated 823 tons crude ore, producing 70 tons fine copper.

Phillips River.—Shipped 60 tons of copper matte,

Tanganyika Concessions.—Ruwe.—Output 342 ozs.

Tolima.—65 tons, value £3,500.

Weardale Lead.—Ore raised, 404 tons; pig lead smelted, 78½ tons.

Waihi Gold.—Crushed 26,999 tons of 2,000 lbs., and £64,320 gold and silver produced.

Books Received.

Prospectuses of Public Companies, &c., advertised in the *Times* from January 1 to June 30, 1907. (London: *Times* Office, Printing House Square, E.C.)

Magazines—*Strand, Sunday Strand, and Grand*—for August. (London: G. Newnes, Limited, Southampton Street, Strand, W.C.)

Coupons due August 15 of the Imperial Japanese 4½ per cent. loan (first series) for £30,000,000 will be paid by the Yokohama Specie Bank, Limited.

The directors of the Vallambrosa Rubber Company, Limited, have resolved to recommend to the shareholders the desirability of splitting the £1 shares of the company into ten shares of 2s. each.

The secretary to Associated Newspapers, Limited, writes as follows:—"In answer to numerous inquiries from shareholders respecting the recent soap litigation, my directors instruct me to say that the dividends on the ordinary and preference shares will in no way be affected." The inference is that the Messrs. Harmsworth themselves will pay.

F. C. GOODENOUGH, General Manager. F. A. BEVAN, Chairman. R. BARCLAY, R. WOOLHOUSE, } Directors.

We certify, in accordance with Clause 23 of the Companies Act, 1900, that all our requirements as Auditors have been complied with. We report to the Shareholders that we have verified the Cash at the Lombard Street Office and at the Bank of England, and have examined the Securities representing the Investments of the Bank and those held against Loans at Call and Short Notice. We have also compared the above Balance Sheet with the Books and with the books at the Head Office, and with the detailed returns from the Branches, and report that in our opinion it is a full and fair Balance Sheet, properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs as shown by such Books and Returns.

PRICE, WATERHOUSE & CO., C. F. KEMP SONS & CO. } Auditors.

London, 18th July, 1907.

American, English and General Trust, Limited.

The second annual report of this concern, made up to July 1 last, brings to light a revenue of £15,829 or, roughly, £1,000 more than in the previous twelve months. Administration and interest take £2,007, and the balance brought in was £1,447, meaning a disposable balance of £15,270. From that two dividends aggregating 5 per cent. are paid, £2,496 goes to reserve and £1,112 is carried forward. The company publishes a list of its investments, and, on the whole, the securities appear to be well selected. Their balance-sheet value is £275,876 against an issued capital of £245,507, so that £23,500 has been raised on security. The reserve fund will now amount to £7,496.

Prudential Mortgage Co., Limited.

This company conducts a fairly remunerative business quietly and unobtrusively, and during the year ended March 31 gathered the revenue from interest, rents, &c., of £11,724, or a trifle more than in the previous twelve months, and £3,842 was brought in, making £15,566. Interest on deposits and loans requires £4,721, and management expenses £2,235, while the sinking fund charge of the short leaseholders takes £371, leaving £8,238. From this a dividend of 4 per cent. has been declared and paid, and from the balance in hand of £4,058 the directors propose a bonus of 1 per cent., making 5 per cent. for the year. Paid-up share capital is £80,200, and deposits and loan, including interest accrued, amount to £118,099. Freehold and leasehold properties, principally freeholds, are valued at £106,968, and £102,053 has been advanced on mortgage, besides which the reserve looks small at £1,558. Only £97 is owing by debtors against £1,263 due to sundry creditors, and the cash balance is £3,284. The board seeks the co-operation of the shareholders in extending the company's business, and would be glad to hear of any likely property in or near London.

Anglo-Portuguese Telephone Co., Limited.

This company continues to make steady and genuine progress, and for the past half-dozen years has never looked back. Revenue for 1906 was £31,[illegible] or £4,283 in excess of the preceding twelve months, and after meeting operating, management, and general expenses, £18,361, and royalties to Portuguese Government £958, the balance over was £14,[illegible], an improvement of £2,488. Debenture interest and sinking fund take £3,000, compared with £2,281, and income-tax is £4[illegible], so that including £5,458 from previous account the directors have £10,154 at their disposal. Two dividends, making 7½ per cent. for the twelve months, are declared, £5,000 goes to reserve, increasing it to £10,000, and £3,655 is carried forward. The extension of the system south of the Tagus was continued during the year, total capital expenditure being £8,[illegible], raising the outlay to date to £107,[illegible], and it is the intention to increase the underground cables in Lisbon and Oporto. Since the commencement of the present year there has been a continuous improvement in the business. Share and debenture capital are in comfortable proportions, and the latter will be gradually extinguished by the operation of the sinking fund. There is a rather heavy excess of creditors over debtors, but stores on hand are valued at £4,900, and the company has a good cash balance.

Mr. Frederick Gottlieb Braunsdorf, who for seven years has been in the service of the Law Accident Insurance, has been appointed chief of the accident claims department at the London office of the Central Insurance Company.

LONDON & COUNTY BANKING COMPANY

Registered under "The Companies Acts." Established in 1836. **LIMITED.**

CAPITAL £8,000,000, in 100,000 Shares of £80 each.

REPORT adopted at the HALF-YEARLY ORDINARY GENERAL MEETING, the 1st August, 1907.

WILLIAM EGERTON HUBBARD, Esq., in the Chair.

The Directors, in submitting to the Shareholders the Balance-sheet for the half-year ending 30th June last, have to report that, after paying interest to Customers and all charges, making provision for bad and doubtful debts, and allowing £28.052 15s. 3d. for rebate on bills not due, the net profits amount to £303,225 16s. 2d. From this sum has been deducted £100.000 transferred to an Investments Depreciation Fund, leaving £203,225 16s. 2d., which, with £97,371 4s. 8d. balance brought forward from last account, leaves available the sum of £300,597 0s. 10d.

The Directors have declared a Dividend for the half-year of ten per cent., which will require £200,000, leaving the sum of £100,597 0s. 10d. to be carried to the Profit and Loss New Account.

The Dividend, £2 per share, free of Income Tax, will be payable at the Head Office, or at any of the Branches, on or after Monday, 12th August.

London and County Banking Company, Limited,
12th July, 1907.

In accordance with the provisions of the Companies Act, 1900, we certify that all our requirements as Auditors have been complied with, and we report that we have examined the Balance-sheet and Profit and Loss Account, dated the 30th June, 1907, have verified the Cash-Balance at the Bank of England, the Stocks there registered, and the other investments of the Bank. We have also examined the several Books and Vouchers and certified Returns showing the Cash-Balances, Bills and other Amounts set forth, the whole of which are correctly stated; and in our opinion the said Balance-sheet and Profit and Loss Account are properly drawn up, so as to exhibit a true and correct view of the Company's affairs as shown by the books of the Company.

(Signed) HY. GRANT,
THOS. HORWOOD,
STUART PLEYDELL-BOUVERIE,
} Auditors.

London and County Banking Company, Limited,
18th July, 1907.

LONDON & COUNTY BANKING COMPANY, LIMITED.

Notice is hereby given, that a Dividend on the Capital of the Company at the rate of 10 per cent. for the Half-Year ending 30th June, 1907, will be payable to the Shareholders either at the Head Office, 21, Lombard Street, or at any of the Company's Branches, on or after Monday, the 12th instant.

By order of the Board,
E. F. ROBINSON, Secretary.

21, Lombard Street, 2nd August, 1907.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 501. New Series. SATURDAY, AUGUST 10, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Outlook in the Money Market.

It is not very encouraging just at present. We must not, however, assume that the conditions prevalent in the corresponding half of last year will again dominate the situation. Last year gold began to leave the country in very heavy amounts during the first week of September, and the export went on with more or less severity right up to the end of the year, with the result that between August 11 and December 31 £3,933,000 more gold left the Bank of England than was received by it from abroad. In other words, the whole product of the mines and every sovereign or bar that could be raked in from any part of the world was swept away with this amount from stock in addition. As the internal demand was at the same time increasing and severe, it followed that the stock of coin and bullion in the Bank of England was about £7,700,000 less at the end of the year than at the beginning of August. If anything like the same movement were to occur again this year we should have a repetition of high rates for money, rates probably exceeding those which held the market as in a vice during the concluding months of 1906. The mere prospect that such an untoward state of affairs may again lay hold of the market has already induced dealers of credit to advance their rates, and bill brokers in particular have systematically and prudently disregarded the temptation offered by low rates for current short loans.

But must we really look for heavy withdrawals of gold by foreign countries this year? Is it not the case that several of the heaviest buyers last year are now more or less crippled? The United States, for instance, is not likely to come again upon us as it did in the middle of September last, unless such a disorganisation of credit occurs in New York as to make gold purchases from that quarter a matter of utter desperation. A possibility undoubtedly exists that such a dangerous juncture might arise there, but in the meantime the power of United States bankers, as we note elsewhere, to create credit with which to buy gold is not nearly so assured as it was a year ago. Mere finance paper, or "kites," will not be readily negotiable either here or abroad, partly because every money market has about enough to do to ward off troubles from itself.

Our own market, however, is most of all afraid of what may happen in connection with Egypt. Between the beginning of September and the end of December Egypt last year took away nearly £7,000,000 of gold from the Bank of England. Will it require anything like this amount between now and December 31? We think not. Some will have to go several millions, unquestionably, but the position of Egyptian banks is not such as to make them able to utilise credit for the purpose of laying hold of gold here with the abandon they have shown in recent years. At the same time the crops have to be moved, and as these are reported excellent, while cotton too is commanding high prices, we must lay our account with having to encounter a more or less severe Egyptian demand for the metal this end of a year. South America will also take away gold from us, and if a new Brazilian loan should be issued the requirements both for that Republic and Argentina may well mount up to the £3,000,000 absorbed last year mostly during December. It is possible even that exports might be larger

still because of the continued heavy expenditure of British railway companies in Argentina, and of various other incidental demands arising out of capital commitments either in that country or in Brazil. Nor must we leave Chili out of sight if a new loan is to be floated for that country likewise. The real question, therefore, is whether we shall be able to meet the various demands for gold without any marked reduction in the present stock held by the Bank of England. That is now down to £35,000,000, or £1,700,000 less than the total of a year ago, and the amount is inadequate.

Such is the demand for currency in our internal trade that we cannot spare any appreciable amount of this too reduced stock for export. It is already quite too small for our own safety and comfort, and the effort of all bankers and dealers in credit must therefore be to so restrict the foreign demands for gold upon us as to make the product of the mines as much as possible suffice to meet their requirements. At a moderate estimate, between now and the end of the year some £9,000,000 to £10,000,000 of the metal ought to be available from the mines, and if the export demand from all quarters, including Germany, does not exceed this amount, we may get through the autumn and winter with nothing worse than a 5 per cent. Bank rate. Should, on the other hand, the exports of gold exceed to the extent of even £2,000,000 the amount supplied by the mines, we are by no means unlikely to have again to encounter a 6 per cent. Bank rate, with its nerve-straining possibilities. Our credit institutions stood the last 6 per cent. Bank rate in a remarkable way. Will they all survive the next? The wise banker will answer that question by acting as if he might not.

Depreciated Consols and the Savings Banks.

The Chancellor of the Exchequer's answer to Sir Howard Vincent on Tuesday should dispel that gentleman's fears about the decay of England's credit. Sir Howard, in his unfamiliarity with facts, wanted to know whether Mr. Asquith could name any time "within the life of the present generation" at which Consols have fallen to so low a level as at the present time. And Mr. Asquith answered him thus:—"With Two-and-a-Half per Cent. Consols at 82½ the cost of an annuity of £3 is £99. In 1885 a similar annuity from Consols (then a 3 per cent. stock) could be purchased for £94 7s. 6d., while at no time between 1854 and 1878 would it have cost more than £96 10s. In 1866 it fell as low as £84."

That answer is excellent, but Sir Howard also propounded a wailing request for information about the steps Mr. Asquith proposed to take "to restore the national credit, and to save the depositors in the P.O. Savings Bank, who have been induced to invest the product of their thrift in Consols from the losses attending the realisation of their little capital," and to this the Chancellor of the Exchequer gave no answer beyond what he has put forward on previous occasions. He can do nothing, and he cannot be expected to do anything, when money invested is concerned. The investment is made at the individual's own risk, just as much as if he bought Chartered shares, and holders of Consols, no matter through what channel acquired, must be prepared to accept the downs as well as the ups of the market. Has Sir Howard Vincent become a Socialist?

The position, however, of the Government towards the mere depositor in the P.O. Savings Bank is quite different, for there a direct liability is imposed upon the Government, and accepted by it, to pay back to the depositor sovereign for sovereign the whole of the money the State savings bank has accepted in trust from the public. A duty, therefore, lies upon the Government to see that the securities representing this liability are kept intact, and reasonably up to the necessary market value, and this duty, we continue to insist, Mr. Asquith is neglecting, just as obstinately as if he were a Minister at his wits' end to find the means wherewith to carry on a wealth-eating war. He shelters himself behind the law as inspired by the committee of 1902, and in so doing not only presents to the nation the spectacle of a banker who openly and coolly carries on business when insolvent, but blocks the way to such reforms as might help with time to bring the Government savings bank back into an approximately healthy position. Accept the plea that the Bank "is insolvent only for prigs and purists"—unworthy and unbusiness-like though it is—and it remains true that the Bank is conducted on lines which would have made its insolvency inevitable ten times over, but for the fact that it leans upon the general revenue and the credit of the nation. The book loss on its investments is only one symptom, though a grave and ominous one, of its actual insolvency: the whole system upon which its business is conducted is calculated to land it in a wellnigh hopeless mess. It permits deposits to accumulate at compound interest, a habit of business which, as Mr. Alfred Marks, an experienced banker, has again and again demonstrated, would ruin any ordinary banker in a few years. And the corrosive effect of this unwise liberality is aggravated by the high rate of interest allowed to depositors compared with the average rate yielded by the investments of the Bank. A sort of cumulative impulsion towards insolvency is thereby given to the business, and not only is the Bank unable to accumulate one penny of reserve against any contingency, no matter what, but it has to call upon the Treasury to make good the deficiency in its working account.

By refusing to look at the facts from any point of view, and not alone because he declines to frame and publish a straightforward balance-sheet, Mr. Asquith is putting the Government of which he is a member in a false position. One day a situation will arise in which the possibility of concealing the true condition of this quasi-philanthropic but most costly and ill-managed business can no longer be hidden. It may arise within the present Ministry's tenure of power, or it may not come until its successors become in turn the Parliamentary departmental screens, but, either way, Mr. Asquith will be discredited. He had the opportunity given by a strong, energetic majority to put this thing right, he will be told, and he neglected it with as much solicitude and assiduity as if he had been the originator of the system through whose operation the Post Office Savings Bank has been brought to the verge of disorganisation. Does he imagine that it and he will escape if we have a banking panic to struggle through? He may think that, and he stands to be painfully disillusioned.

Economic and Financial Notes.

Our Foreign Trade in July.

It came to a total of over £108,000,000 including the imports and exports of bullion and specie. Adding this to the total for the first six months we get for the seven months of the year now expired the dazzling figure of £735,500,000. Talk is becoming common that "the business of the nation is beginning to pause," and it will no doubt do that one day. At present it is furiously expansive, too furiously. Last month it looked as if the imports were going to slacken off, but the figures have resumed their upward movement, and in July the total is accordingly £3,605,505 or 7.4 per cent. higher than for the corresponding month. But an increase of this kind looks modest beside expansions of nearly 21 per cent. in the exports of home produce, and of almost 22 per cent. in those of foreign and colonial merchandise sent abroad again. Our shipping also reflects the larger business done, especially in the export clearances with cargoes, and there can be no doubt at all about the solidity of the business now showing such unexampled elasticity.

In imports the principal increase is again to be found under raw materials and articles mainly unmanufactured. These gave £2,183,000 of the total expansion compared with increases of only £720,000 under food, drink and tobacco, and little more than £707,000 under "articles wholly or mainly manufactured." How far the advanced totals are to be ascribed to higher prices

Excess value of imports over exports	95,485,243	90,420,407	83,310,532	— 7,109,875

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.

The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board" values.

it remains impossible to determine with exactness, but prices are unquestionably up, and to an extent that in some instances warns observers to be on the look out for a recoil. Everything we buy is dearer now compared with 12 months back except coffee, flax and hemp. A decline in wool has often been predicted but has not yet come; raw cotton is up on the comparison of months 3.4 per cent in quantity and 8.7 per cent. in value; copper respectively about 35 and 82½ per cent.; tin, 20 and 33½ per cent., and so on, all kinds of food grains sharing in the advance. Wheat, for instance, fell off last month 2.2 per cent. in the quantity imported, but the value rose by 6.3 per cent.

The vital question therefore is, how far are compensating increases in price obtained on the commodities we export? If prices have not risen in proportion the margin of profit must be narrowing, and may in some instances have already disappeared. We cannot solve this problem. It is obvious, however, that export prices are higher, in some cases much higher, although the increase is seldom in like ratio with that in raw materials. Of cotton piece goods, for example, we sent 10.5 per cent. more in quantity out of the country last month than in July 1906, but the increase in value was only 17.4 per cent. according to the valuable comparative analysis in the *Times*. The prices of woollen and worsted fabrics have also risen a little, and there was an actual shrinkage in the value of raw wool exported compared with the quantity. Still, prices are higher on the average, and their height accounts for much of the augmented value of our export trade. Even in machinery, it may be roughly estimated that prices have gone up, for the weight exported last month went up little more than 25 per cent., against an increase of 28.3 per cent. in the value. It is doubtful, however, whether this slight margin represents a remunerative business, especially as all our iron and steel manufacturers are being more and more hampered by the ominous advance that has taken place in the price of coal.

A month ago we mentioned the increased German demand for English coal. It continued last month, and reached 1,060,000 tons shipped to that country alone, compared with 703,000 tons in July, 1906, and 666,000 tons the July before. From no other country has the demand been so conspicuous, but that from the Netherlands has increased at a relatively much greater ratio, and heavier shipments were likewise made last month to France, Italy, Belgium and Norway. Altogether, £1,131,000 worth more at £4,028,000 was shipped abroad last month than in the previous July. This was an increase of fully 39 per cent., but the increase in the quantity was not so conspicuous, being less than 21 per cent. Is it not reasonable to infer that prices have been forced up too fast, and that there must soon come a check in this part of our export business? The question is important for many reasons, not least because dear coal touches and tends to cripple manufacturers everywhere. Were the present high prices to become permanent and to prevail the world over, the whole basis on which manufacturing rivalry is now built up would alter for the worse. Dear coal is thus a warning to look for changes.

The Arrival of Sir Julius.

Sir Julius Wernher has emerged. We at least never suspected it to be in him to produce a speech such as that he delivered at the meeting of the Central Mining and Investment Company. It has lifted him at once into the first rank amongst company chairmen, and the world is all before him where to choose. He might become the leader of a political party if he cared for that sort of career. The way he "went for" Mr. Winston Churchill was something for the party gladiator to gloat over. No party mace-wielder of the crowd could have done it better. The idyllic picture, too, that he drew of the Chinese coolies, happy and pure in their wifeless compounds, jolly in their isolation, was in its way quite a masterpiece of gloss and glamour. True it may be that the Chinaman has supplanted the native whose claim surely stands first to the benefits accruing from the mineral wealth of his country; true, also, is it that Mr. Winston Churchill did not bring the Chinamen to the mines, had no part in hatching that unnecessary war by which so many men, so many industries, and such numbers of promising speculations have been undone; but why should considerations

like these hamper an orator on the war-path, intent, it may be, on covering tracks better hidden. Besides, nothing is easier than abuse of politicians. To clout Mr. Churchill on the head was, therefore, both good party tactics and tactics as easily executed as a barrack-yard parade. Sir Julius did the job well, and it is now Mr. Churchill's turn. The scuffle may be diverting, and we would not mind being bottle-holder. But—

Seriously, does Sir Julius really think that the interests of his "holding" company, of South African mining as a whole will be advanced by his language and attitude? Does he really believe that prices can be raised on the Stock Exchange by language such as his, or by that perfect neglect of the common moral sense of the nation which his sketch of Chinese life in the Rand Sodom discloses? We hope not, for he is obviously a man of unusual capacity, and ought to have sense enough to select a better way. And we can assure him beforehand that the effect of his words will be hurtful rather than helpful to markets. The stripped and weary shareholders want practical results, economies, well-organised and thrifty mining, larger dividends, not mere rhetoric, however brilliant. Is it not in the power of Sir Jnlius Wernher to gratify them in this practical direction? We think it should be, and if he will permit a mere spectator of the play to offer a suggestion we should like to point out that he has in this Central Mining Company the germ of what might be a great and far-reaching reform. Through the "controlling interest" held by it in so many other companies of the operating or potential mining order, a great unification project might be carried through, involving the extinction of many boards of directors, the reduction in numbers of supervising clerical or ornamental *employés*, and a great economy not only in working the live mines but in developing such of the others as may be worth the trouble and expense. The cost of supplies, commissions, and other pickings might also be lowered by many thousands a year. The development work could be so organised as to involve the minimum of capital outlay, and crushing machinery could be concentrated so as to serve a number of properties instead of one or two. With a policy of this kind systematically followed and the fruits thereby accruing in the form of increased nett profits faithfully distributed to the shareholders, we can guarantee Sir Julius that he will not long have to bewail slumpy markets and the apathy of the public.

A Good but Mixed Trust.

The five securities noted below are all good of their class, and yield well, so that a judicious investment from amongst them ought to pay, although we cannot guarantee that in present circumstances prices will not fall.

Canton-Kowloon 5 per cent. bonds are guaranteed unconditionally by the Chinese Imperial Government. Some people may think that guarantee not worth very much, but we are not of this opinion, for the Chinese are an honest people, and the Pekin Government has never shirked its public obligations. Apart altogether, however, from this guarantee, the road itself ought to be a profitable one, serving, as it will do, one of the most populous, and on the whole prosperous, districts in China. At present these bonds are only paid up to the extent of 25 per cent., the remaining calls being due as follows:—On September 18, 25 per cent.; on October 10, 25 per cent.; and on November 6, 25 per cent. The interest is payable in June and December of each year.

The Orange River Colony, or Orangia, was before the war a highly prosperous State, and Bloemfontein a pleasant and expanding capital. The territory will prosper again, and is gradually pulling round. As it does so, the security offered by the capital city ought to increase, so that a purchase of Bloemfontein 4 per cents. at about 92½ should prove a safe investment. The city's total debt is only £800,000, involving an interest charge of less than £35,000, and in 1905 the municipal revenue was £97,600. The water works and electric light undertakings belong to the town, which has also considerable property in real estate. Dividends are payable in January and July.

Wm. McEwan and Co.'s 5 per cent. £10 cumulative preference shares have fallen considerably in recent years, through the general discredit of brewery securities, but the company is one of the best in Scotland, and it has no debenture debt, no obligation in connection with tied houses, or anything of that kind. Perhaps the absence of a tied house trade has somewhat interfered with the development of the business, and it has found competition becoming more and more fierce in the foreign and colonial markets, where so large a portion of its trade is done. None the less do we think a purchase of these shares at par a very promising investment—speculative investment if you like, but still not a mere speculation, for the beer is excellent. All the ordinary capital is held by the partners of the old firm, and the dividend on the ordinary stock, which was 12½ per cent. for 1901, has since then been 10 per cent., so there is ample margin for these preference shares. Besides, the company has a reserve fund of £100,000.

Nitrate Railways 5 per cent. debenture bonds.—If these can be got at 104 they are well worth buying. The price cannot go up much, because the bonds are redeemable by half-yearly drawings at 105, plus interest, but this proviso keeps the price steady, and the only risk at all is that bonds bought now may be drawn soon, so that the holder may have the trouble of reinvestment at an early date. Otherwise the security is one of the best on the West coast of South America. These bonds were first issued in 1888, and already the total has been reduced to little more than half the original £2,000,000. There is an ordinary capital of £1,756,000, the dividends on which have risen since 1901 from 3½ per cent. to 8 per cent. A better security of the sort could hardly be found.

Finally, there is the 4½ per cent. preferred £10 shares of the Metropolitan Trust, behind which stands £300,000 in ordinary stock, the dividend on which is 8 per cent. The Trust is a good one, and, as far as we have ever observed or heard, carefully managed; hence the shares are not to be got at par, but they might perhaps be picked up slightly under the quotation here given. It is, at any rate, worth while to try, as the security is good of its class.

Canadian Electric Enterprises in Brazil.

We quoted last week some statements from the *Frankfurter Zeitung*, or fathered upon it, because that newspaper is one of the best informed and most carefully edited in Europe. It appears, however, that its information was wrong with reference to the San Paulo Tramway, Light and Power Company, and that the said company has nothing whatever to do with projects outside its own sphere, and never has had. A correspondent, therefore, writes to correct the paragraph, and as he speaks of what he knows intimately we think it best to give the bulk of his letter without alteration or curtailment. This we do the more willingly because the information it affords is not merely reliable but stated with great clearness. We were afraid that the Canadian gentlemen had been drawn into a position where the success of the splendid enterprises they are engaged in might be imperilled, and rejoice to learn that it is not so.

"The Sao Paulo Tramway, Light and Power Company was organised some ten years ago, since which time it has earned large profits, paid big dividends, and accumulated big reserves; is a Canadian enterprise,

financed with Canadian capital, by a powerful group of Canadian electric railway men.

"The Rio de Janeiro Tramway, Light and Power Company is a younger enterprise, also Canadian, and financed by the same people.

"At the head of these two companies is Mr. William Mackenzie, president of the Canadian Northern Railway, and on their board is found the chairman of the Canadian Pacific, vice-president of the Grand Trunk Pacific, vice-president of the Canadian General Electric, and several directors of the great Canadian banks.

"The Mexican Light and Power Company is also a Canadian company, under the presidency of Sir George Drummond, the Governor of the Bank of Montreal.

"Interested with these gentlemen in the Rio company to a not very large extent are two or three Americans, including Messrs. Farquhar and Bull, of New York.

"It is within my personal knowledge that the Canadians referred to, who organised and are managing the three named companies, have no other interests whatever in Brazil, and will not consider any further enterprises there until the Rio undertaking, which is a very large undertaking, is completed, and is thoroughly well established on a good paying basis—this not because they have any doubt as to the future of Brazil, which they thoroughly believe in, but because Mr. Mackenzie personally, of all men, stands for doing one thing at a time.

"It is the above-named New York gentlemen who are connected with the Rio undertaking, and who, I understand, have undertaken the very ambitious railway enterprises in Brazil to which so much reference has been made, and by no stretch of the facts can it be said that an American group controls Sao Paulo or Rio, or holds any great interest therein, or that the Canadians who do control Sao Paulo or Rio are connected with other large South American enterprises."

New South Wales Agricultural and Live Stock Statistics.

A preliminary set of tables has been prepared by Mr. H. C. L. Anderson, the director of the Statistical Office of New South Wales, on these industries, and they present much interesting material well worth study. In the past five years the total area of land under principal crops in the colony has increased by nearly 578,000 acres, of which the principal part has fallen to wheat. This is all the more remarkable because of the unusual uncertainty attending all agricultural and pastoral industries in Australia. In the first year of the five, for instance, that ended March, 1903, the wheat crop of the colony was returned at little more than 1,585,000 bushels, and next year it jumped to 27,334,000 bushels, a figure not again attained in any subsequent year. 1903, in fact, was one of the worst of the drought years, and we fear all these colonies will remain subject to the devastating consequences of aridity. How great these are is illustrated, not merely by the figures of the wheat and other cereal crops—except maize, which, probably because it is grown on irrigated land, seems to be less subject to fluctuation than the others—but by the statistics of live stock, especially on the Western plains. The figures for these are given since 1897, and show that the total number of sheep on these plains and Riverina alone dropped from 14,719,000 in 1901 to less than 7,000,000 in the succeeding year. In one year more than half the sheep disappeared, perished for lack of water and food. A fact, a liability, like this throws an enormous responsibility upon the Government and people of the colony, and one cannot help feeling a certain amount of apprehension about the future when it is seen that the stock of sheep upon these regions has again risen almost to 16,000,000, or within little more 400,000 of the highest number ever before carried. Over the whole of the colony the total last year was the highest since 1897, if not the highest ever shown, at 44,132,421. This is an increase in five years from 26,049,000, and the greater portion of it is ascribable to the increase in those Western plains so peculiarly liable to a water famine. What will happen when the next drought comes along—unless in the meanwhile, the colonists have provided enough water by storage or wells to at least prevent the flocks and herds from dying of thirst—we dare not think. Beeves did not suffer to the same extent as sheep, yet on the same Western plains and Riverina region the number of ordinary cattle dropped from 1,115,000 in 1901 to 69,000 in 1902. It has again risen, however, and the aggregate for the entire colony, exclusive of dairy cows and heifers within three months of calving, is now 1,837,000, against 1,073,598 in 1887. Whatever happens to the field industries of New South Wales we fear it will never be able to claim the position of granary of the world. At the very best its yield of grain per acre is comparatively insignificant, lower considerably than that of the United States, which is by no means a model of fertility to the world. The average yield of wheat per acre, for example, has never been higher than 17½ bushels, and usually the output is little more than 10 bushels. It was 11.7 bushels in the year ended March 31 last, but only 10.7 bushels in the previous year, and 9.3 in 1905, while in 1903 the return was only 1.2 bushels per acre, and in 1899 only 7 bushels per acre. The exhibit made by maize is better at an average of 27.3 bushels per acre, as against an average of 10 bushels for wheat, 15.4 bushels for barley, and 19 bushels for oats. None of these averages, however, not even the best output of any individual year, gives promise that New South Wales will ever be a trustworthy source of supply for cereals.

London Road Car.

Transport companies in and around London have been having a very bad time of it recently, and although their misfortunes are very largely their own fault, we cannot withhold sympathy from the dividendless shareholders. In the past half-year the London Road Car Company's operations resulted in a nett loss, according to the accounts just issued, of about £9,500, but a strict audit, such as is so vehemently clamoured for in the case of the County Council, would probably disclose a very much heavier deficiency. The total receipts amounted to £214,787 against £223,644 in the corresponding half-year, while the expenditure was £219,691 against £200,120. Accordingly, while the first half of last year gave a profit of £17,524, the past six months produce a loss of not far short of £10,000, without reckoning the loss on "substitution suspense account." As regards expenditure, there was a saving of £4,000 in yard expenses, and "maintenance" cost £10,000 less, the forage bill alone being £13,600 less, while motor fuel and lubricants advanced nearly £5,000. Repairs, however, went up to an alarming extent, the total being £63,288 or £20,000 more than last year, practically the whole of the increase being due to motor repairs and renewals. We should have liked to see this matter dealt with more frankly, and there can be no possible reason for concealment, which merely arouses the suspicion that the actual state of affairs is very much worse than we had imagined. All that the report says on the subject, however, is that "the board, having had from two to three years' experience of motor traction, are now in a position to decide as to the capability of the various types of motors the company has been working: while some of these have been disappointing, the board are pleased to be able to state that about 80 per cent. of the company's motors are of the types which have shown satisfactory results." This conveys a minimum of useful information, and it would certainly be interesting to have a few actual facts about the "satisfactory results." Of course, the past half-year has been a very trying one in various respects, and the inclement weather, coupled with cut-throat fares, doubtless affected receipts very severely, the number of passengers carried showing a reduction of 1,155,000 to 37,000,000, and the movement for an increase of fares has at least a certain amount of plausible justification.

But we are afraid the company's troubles lie much deeper than that. The number of horses in stock has been reduced from 5,204 in 1905 and 4,438 in 1906 to 3,305 in the past half-year, and the "substitution suspense account" now shows a deficiency of £90,936, which figures in the balance-sheet as an asset. From this point of view the position looks rather desperate, but the company has accomplished such good work in the past that we hope it will be able to give a better account of itself in the future.

George Newnes, Limited.

Ordinary shareholders in this company have to be content with the interim dividend of 2½ per cent. (actual) paid in February last, for the results of the year to June 30 do not permit of any further distribution. After paying the preference dividend, the balance to be carried forward will only be a trifle over £1,000, against £3,910 brought in, although the profits for the year amounted to £32,160. But the capital is £900,000 in 500,000 preference and 400,000 ordinary shares, and the preference dividend alone requires £25,000 a year, so that the interim dividend on the ordinary was not earned within about £3,000. We have the greatest sympathy for Sir George Newnes in the circumstances, and the report is one long, pathetic apologia on his behalf, but we must point out that the company has been conducted on lines which must ultimately have ruined even a stronger concern. Sir George states that he holds about £150,000 in ordinary shares, and that he has "the strongest belief in the successful future of the company," and we are further informed that over £900,000 has been distributed in dividends. In a sense, this may be regarded as a very fine record, but when we come to look at the balance-sheet and find that the reserve fund stands at a beggarly £12,500, while "copyrights and goodwill" figure at the enormous sum of £662,500, the conclusion is forced upon us that dividends in the past have been paid without the slightest regard to the permanent interests of the company. That intangible item of goodwill, &c., ought to have been written down to a purely nominal sum before the shareholders received more than 4 or 5 per cent., and a strong reserve ought to have been built up as a war-chest to fight the competition which was bound to arise at some time or other. If this prudent course had been adopted, the company could have faced the Harmsworth, Pearson, and other rivals without a qualm, and there would have been no regrets about the passing of the dividend. We should have thought this lesson had been sufficiently inculcated in recent years, but it evidently still needs a great deal of driving home.

Arthur Guinness, Son, and Co., Limited.

Words fail us in the effort to describe the amazing prosperity of this Dublin brewery business. Last year the profit on brewing reached the enormous sum of £2,269,035, an increase against the previous 12 months of £276,734, and trifling sums for rent and transfer fees bring up the total revenue to £2,270,452. The company paid over one million pounds in excise duty, and after providing for maintenance, general expenses, rents payable, and £626 written off for bad debts, the balance of profit was £1,178,230. Additions have to be made to this on account of dividends on investments, balance of interest, and sum brought forward, meaning a total disposable sum of £1,296,836. Debenture interest at 5 per cent. for half the year and 3½ per cent. for the other half took £55,000, and the preference dividend £120,600. Appropriations are £200,000 to the credit of reserve for capital expenditure and contingencies, £30,000 to depreciation fund, and £170,000 for the purpose of writing down investments to market value or below. The ordinary stock dividend and bonus will be 25 per cent. for the year, or 3 per cent. more, and £58,884 is carried forward. Reserve for capital expenditure and contingencies is raised to £1,520,000 by the addition now made, but £500,000 has been applied to the payment of an equal amount of debentures, and the directors hope that future additions to this fund will provide for further debenture redemption. The remaining million of 5 per cent. debenture stock has been continued at 3½ per cent. redeemable at par on or after May 1, 1937, but with power to the company to pay off the whole or any part at par on or after January 1, 1912. Ordinary reserve fund reaches the round million, investments are now valued at £1,198,479, cash is £285,235, and book debts £248,497, against creditors of £321,317. Stocks on hand are valued at £1,248,378 and the business, goodwill and all other property appear at £5,864,638 after allowing for depreciation.

American Business Notes.

With two exceptions, the position of the New York Associated Banks was last week worse than it has been for about a quarter of a century, so far as the surplus reserve went. It fell off by £355,200 to £1,495,000 against £2,825,000 a year back, and it was weak enough then. So weak, in fact, was the position of the New York money market a year ago that it had in the following month of September to arrange for emergency gold imports from London exceeding £3,000,000. It is a fair inference that the same operation may have to be repeated this year upon a larger scale, but at present the exchange is against any hope of being able to relieve the market in this way. Gold is leaving New York instead of coming to it, another £100,000 having been exported to Holland this week almost in defiance of the exchanges. Furthermore, banks on this side are not so keen to cash bills drawn from New York in advance of the harvest as they have been in recent years. The probability, therefore, is that New York will have to depend upon itself and do without gold, even at the risk of seeing rates of interest touch excessive heights before many weeks are over. In the past week the banks had to increase their loans and advances by £760,000, of which, however, £700,000 remained to the credit of deposits, a fact that partly accounted for the decrease in the surplus reserve, but the adverse position was intensified by the withdrawals of specie and currency to the aggregate of £160,000, this being, presumably, the beginning of the Western demand, which is otherwise declared to be already clamorous, Western banks being in urgent need of funds.

It is reported that Attorney-General Bonaparte has given it as his opinion that the heavy fine of £5,848,000 imposed by Judge Landis, of the United States District Court at Chicago upon the Standard Oil Company of Indiana—a Rockefeller dependent—will have a powerful influence in putting an end to the depredations of this, the most notorious and malignant of all American trusts. Neither the Press of the Republic nor its citizens appear to endorse this view, and they are right. It is not fining that is wanted, for no matter how great the amount of money exacted may be, the Standard Oil Trust can pay up and smile so long as its combination is not broken up or dissolved. Either its shareholders would have to suffer in dividends—most of them innocent enough in the ordinary acceptance of that term—or the public would be compelled to pay higher prices for the products the trust has to sell. In all likelihood both classes of people would be made to suffer, and the only way to put an end to the combination of Oil Trust potentates and corrupt railway officials is to bring them within the scope of the penal law. "One really responsible man in jail" is what Dr. Wilson, President of the Princetown University, asks for, and that would unquestionably be a better preventative of financial chicanery than the mere imposition of fines. Why are no railway officials indicted? It surely ought to be possible to get up a case of conspiracy against the Standard Oil officials and those of the railroad companies which have been the tools of the trust in granting the rebates by which its monopoly has been secured. Mr. John D. Rockefeller might pay the whole fine now imposed without feeling it, and it is not surprising that he

played out his game of golf with the utmost equanimity after hearing the news from the Chicago Court. As one correspondent points out, he lately gave away £0,400,000 at one stroke, and might repeat that many times without being reduced to beggary. Two years' penal servitude would probably induce him to restrain his predatory instincts for the rest of his life, and were a few railroad presidents sent to pick oakum in his company, the pestilential air of American business usages might be purified for ever.

So much is now being said about this Standard Oil combination that a few particulars regarding its position and ramifications may be acceptable. An opportune supplementary report on the unsavoury subject has recently been issued by the United States Commissioner of Corporations, and from this we learn that the parent company, the Standard Oil Company of New Jersey, whose capital is £20,000,000, and its subsidiaries have a nominal capital in all amounting to between £52,000,000 and £53,000,000. The New Jersey company controls some 10 companies principally engaged in refining, five lubricating and compounding oil companies, three crude oil producing companies, nine pipe line and other transporting companies, three importing companies, 16 natural gas companies and 11 foreign companies, of which one, the Anglo-American, with a capital of £1,000,000 all held by the Standard Oil Trust and its dependencies, is well known in this country. It has companies in South America and on the Continent as well as here, and it and its affiliated concerns produced or controlled in 1904 86½ per cent. of the whole oil output of the United States. Its investment in pipe lines alone is put at £10,000,000, though that is said to be excessive, but the estimate of the nominal capital in no sense represents the real value of the business taken as a whole. It and its dependents consumed about 84.2 per cent. of the total crude oil produced within the Union, leaving only 15.8 per cent. to the more or less struggling and independent refineries. It has 18 refining plants, of which seven, including the two largest, are on the Atlantic seaboard, five on New York harbour, one at Philadelphia and another at Baltimore. Through the control of so many pipe lines it is able to locate these refineries at points advantageous for the distribution of its products, whereas those other concerns that have the temerity to try to live in spite of it are too often compelled to refine their oil at spots which involve them in heavy expenditure for carriage. As long, however, as the Standard Oil Company gets its rebates this does not count for so much, because no matter how good the position of an independent refinery might be, it stands to be defeated in the competition through this one favouring influence alone. It is through those rebates that the Standard Oil Company has attained to its present position, as was demonstrated with such lucidity in the late Mr. Lloyd's book, "Wealth against Commonwealth." Therefore it is to the rebate system that the attention of the lawyers and State officials should be directed, with a view to putting sundry prominent rogues in the dock. Until it is abolished and every trader put upon an even footing, nothing in the way of fining or other "gallery" punishments the Courts may devise, will stop the chicanery out of which such enormous profits have been made. What these profits are it is impossible to state. That they have been screwed up unmercifully year after year seems undeniable.

A preliminary statement has been issued by the Baltimore and Ohio Railroad Company setting forth its receipts and expenditure during the year ended June 30 last. What is most significant about the exhibit is the way in which an increase of $4,852,000 in the gross income of $82,244,000 was completely swallowed up in working expenses. In fact, these expenses went up $513,000 more than the total amount of the increase in gross receipts to a total of $54,880,000. A little more money was received, or is expected to come in, from the other sources of revenue, but even so the free nett income is $127,000 less than it was in the year ended June 30, 1906. Charges, however, are brought down by $2,595,000 to $13,398,000, and the company is able to pay 6 per cent. on its common stock as against 5½ per cent. in the previous year, 4½ per cent. for 1904-5 and 4 per cent. in 1903-4, with $5,941,000 left compared with $5,815,000 a year back. Presumably the company has spent very much less revenue in relief of capital than it did a year ago. At any rate, it is noted that only $1,230,000 was put into "miscellaneous improvements" last year from revenue as compared with $3,000,000 in 1906, $2,500,000 in 1905 and £2,000,000 in 1904. The "surplus" is thus an arbitrary one.

Passing Events.

It is perhaps all right that we should build a line of railway into Northern Nigeria, but it is to be hoped that the Imperial guarantee will not be given in order to raise the money required. Mr. Winston Churchill, in answering Mr. Shackleton on Monday last, said that full estimates based on regular services place the cost of a line of 400 miles long of a 3 ft. 6 in. gauge at £3,000 per mile, or £1,230,000 in all, and on the basis of these estimates a loan is to be raised by Southern Nigeria, and will be made part of the colony's debt. Is any guarantee to be given to this money? Because if so we should object, no matter how advantageous to commerce and to the opening up of Northern Nigeria the construction of this railway may be. As an offset the Chancellor of the Exchequer is to give £70,000 per annum in relief of the finances of the Northern province. That is a bad sign, for that advance may turn into an annuity to cover interest and repayment of the principal of the money spent, and we shall be disposed to lay considerable odds that before the line is finished it will have cost more than £2,000,000.

Look what has taken place in regard to the Uganda Railway. The Home Government is saddled with an annuity of £319,112 to meet the interest and provide for the repayment of the principal of the money sunk in that hopeless undertaking. Mr. Churchill apparently sought to console the public by saying that when the debt is paid off the railway will belong to the Imperial Government, but we cannot see much comfort in that. There can be none indeed, unless an extraordinary change takes place in that part of the world. At present this line, which, what with annuities and the original capital sunk, has already cost the country something like £10,000,000, does not earn, in the slang of the railway world, enough money to pay axle grease. No effort is made to develop its trade, officials rather obstruct than attract business, and it is simply a dead weight upon the Home Treasury. What good will it do for the ownership to pass completely into the hands of the Home Government if this condition of affairs cannot be altered?

What is going to happen about that talked-of Brazilian loan of £3,000,000 we do not know. It is said to have been withdrawn owing to the hostile attitude of European bankers. This can only mean that the Rothschilds did not want to bring the loan out, and they are wise to come to such a decision. We have been sorry all along that this effort to hold up the price of coffee should have been begun by the State of San Paulo. It was too big an undertaking and altogether too full of risk. No doubt the coffee planters have been badly treated by the middlemen, forced to sell their crops at rubbish prices when abundant, and not allowed to get the full advantage that a short crop might have been expected to give. All the same, the Government of San Paulo, in deciding to come to the help of the planters, only substituted one class of master for another, because it had to do this with borrowed money; and so great has been the strain that it had to appeal to the Federal Government; hence this £3,000,000 loan, which has kept down the market for existing Brazilian stocks during the past few weeks. The loan, however, could not have been sold to the public just now on any terms,

and if that leads to some modification of the Valorisation scheme it may be good for all parties.

Brazil as a whole is by no means likely to suffer any grave set-back through the withdrawal of a proposal of this description. On the contrary, the country seems to be making progress in many directions, and its resources are bound to give both the individual States and the Federal Government increased revenues with time, come of this coffee speculation what may. Probably it is from a feeling that Brazil is going ahead that the Dresdner Bank has been so active there lately in connection with the lease of the Sorocabana Railway and other matters. It has agreed to raise a loan of £3,800,000 for that undertaking or for the Government of San Paulo, and may be able to get the money abroad. What we are more interested in than the fate of any particular enterprise of this description is the indication thus given of the steady and infinite push of the Germans. They have long been active in Brazil, and are now extending their energies into the neighbouring Argentine Republic, finding the money to finance new undertakings, capturing trade, laying hold of the exchange business, while we to all appearance sit still and permit them to pass us.

Mr. L. W. Slade, general manager of the Frederick Hotels, Limited, writes to us as follows, and we can only say that we regret the mistakes as much as he can. Unfortunately, the holiday season usually brings a crop of such:—

I have before me your issue of the 3rd inst., with summary of our report and balance-sheet, and I am sorry same is not more correctly reported. For instance, you allude to the paying of a preference dividend of 4½ per cent.; this should be 5½ per cent. You then say we own nine hotels; as matter of fact we only own seven. You also refer to our investments as "partly being in our own Burlington Hotel at Dover," which should be the Burlington Hotels, Limited, a totally different affair, which comprises the Burlington Hotel, Cork-street, the Buckingham Palace Hotel, and the Boscome Hotel at Bournemouth. You also allude to the directors' fees being down; this is not so.

We are sorry to see that a large borrowing project seems to be entertained by the Government of Chili. If the local reports are to be believed, it wants to raise no less than £10,000,000 here for the purpose of securing the paper currency of the Republic. Half the money will remain here, together with the funds accumulated for conversion in 1910, amounting, it is said, to about another £5,000,000, and this sum will remain here as a guarantee for the total issue of paper currency, which will be raised to about £7,500,000 when the additional 30,000,000 pesos have been put out. Of the new loan, however, £5,000,000 will be brought to Chili to pay the contractors in bonds for the projected urgent public works. That we take to mean that only half the loan will actually be issued here, the rest being handed to contractors, for them to sell at what price they can get. Such a scheme is unpleasant from many points of view, not least from that of Chilian credit, which cannot possibly be helped by measures of this description.

Why is the Sydney Chamber of Commerce so anxious to establish Preference in favour of the British manufacturer? It has put forth a statement to the effect that Australia imported £2,000,000 less British and £39,000,000 more foreign goods in the five years ended with 1905 than in the similar period 1881 to 1885. Would Preference given to British manufacturers remedy this? Why did Australia buy so much more from the foreigner? Were the goods forced upon the colonies, or did they purchase because it suited them? They got what they wanted in other countries on better terms or of better quality than they could have done here. Will Preference change that, or why should it? Presumably, the British manufacturer has been neglecting the Australian market. He does not take care to study it, and has allowed himself to be beaten. Why, then, give him a Preference? He has every advantage now, and has only to exert himself and get out of his old ruts to get back his trade. But that is only one side of the question. What benefit would Australia get by being driven again to purchase in markets they have left for one reason or another to them sufficiently good? Why should Australia be coerced into coming here if it is better served elsewhere?

Shareholders in the Anglo-Argentine Tramways Company made no bones about accepting the contract entered into by its board for the purchase of the Belgrano system. We consequently have nothing more to say, except to express the hope that amalgamation will turn out profitable to all concerned. And perhaps the absorption of the Belgrano Company may be taken as an indication that British enterprise is not allowing itself to be beaten by Germans or Belgians in the Argentine Republic, as it is in Chili and Brazil. The Brussels Company, it seems, is already the owner of a very large majority of the shares issued by other tramway enterprises in and around Buenos Ayres, and the board of the Anglo-Argentine Company is in negotiation with it for the acquisition of these undertakings, of which the Belgian Company has control. Should this be carried out, an English corporation will become practically the sole owner of local means of intercommunication in and around the capital of Argentina.

No doubt it was inevitable that the South Metropolitan Gas Company should raise the price of its gas by threepence per 1,000 ft., but we are sorry that Sir George Livesey went astray in search of fallacies in order to justify the step. Coal has gone up, and under the new contracts the directors have no choice in the matter, for the coal bill of the company will exceed by quite £240,000 what it was two years ago, but why assign the abolition of the export duty on coal as the one cause contributing more than any other to the advance in its price? That has nothing whatever to do with it, and it is not true that the foreigner paid this tax. What the foreigner did was to hunt everywhere else in the world for the coal that was to be got untaxed or cheaper, and our trade was in consequence falling off. In other respcts the memorandum and explanations offered by Sir George are sound enough, only we cannot quite see why gas shareholders should be regarded from a different standpoint to holders in any other class of stocks which may have been bought at a more or less high premium. The nominal dividend, says Sir George, is not the actual rate of interest the shareholders get on their investment, because Parliament decreed by the imposition of the auction clauses in 1876, which required all new gas capital to be issued at the market value, that henceforth gas shareholders should have only market rate of interest on their investment, and this is now below 4½ per cent. Would he then have gas companies at liberty to issue their stocks at par, or at any price they please, so that shareholders might have a chance of more or less heavy profits upon their investment over and above the rate of interest earned? Gas stock fetches the price it commands in the open market, and the law cannot be framed so as to restrict dividends or enlarge them on the basis of any such price.

Of course, the Loddon Valley Goldfields, Limited, has to get more money, and we do not know that shareholders were ill-advised in consenting to the reconstruction. It is all as their luck determines. Hitherto the enterprise has not only yielded nothing, but given no promise of yielding anything material, and the only approach to a load or continuous deposit or "run" found has been of the low grade of 14 dwts. 16 grains per fathom. Still, gold may be found, and as the Government of Victoria is willing to help the company with a loan of £8,000, shareholders were perhaps right to consent to saddle themselves with a new liability of nearly £60,000, that being roughly the effect of the proposed re-issue of capital. A new Loddon Valley Goldfields (1907), Limited, is to be formed, with a nominal capital of £240,000 in £1 shares. All of the old shares, however, were not issued, but only 232,827 of them, and the same number of new shares will be exchanged for the old, credited with 15s. paid on them, the balance being callable at the rate of sixpence on application, sixpence one month after allotment, and the remaining 4s. in amounts of not more than 1s. each call as required. We hope the money will be sufficient

to find the gold, for if not all is lost. Certainly the company wants money, as the directors quite candidly explain in their report. It had only £7,988 available at the end of last year and owed £10,500 on debentures besides £4,335 on other accounts. Since December, moreover, the expenditure has been about £3,000 per month, so that at the present time the company is about £30,000 to the bad. That is to say, more than half the money to be procured by this reorganisation has already been spent. This does not look particularly promising.

Critical Index to New Investments.

The F.I.A.T. Motor Cab Co., Limited.

A capital of £203,000 is to be provided for this company, of which £200,000 will be in £1 cumulative 7 per cent. preferred perpetual ordinary shares of £1 each, the remaining £3,000 being in deferred shares of 1s. each. Should these ordinary shares with the portentous name get their 7 per cent. dividend and anything remain over, they are entitled to 60 per cent. of such surplus after carrying 10 per cent. of it to a reserve fund. The remaining 40 per cent. of the profits go to the deferred shares in accordance with a pernicious usage. We have no hostility to motor cabs, much the contrary; but this company does not seem to us to offer a promising investment. Apart altogether from the deferred share arrangement, there are too many contracts and agreements to make it a fair proposition to lay before the public. So far as we can gather, the company has been brought into existence to provide orders for another company called Fiat Motors, Limited, which is to supply it exclusively with motor hackney carriages for hire, and, for a given time, not to accept orders for its chassis from any other company within a radius of 40 miles from London. Then the commissions to be paid are heavy, and we do not quite understand what the position of Steele, Lockhart and Co. is. They, however, are, in consideration of procuring Fiat Motors, Limited, to enter into agreement with this company, and for various other reasons to have the right for two years to subscribe and pay for at par 60,000 deferred shares of 1s. each, and this company is to pay them £10,000 in cash, while they also have the right for twelve months to nominate two directors. The present share issue, moreover, has been underwritten and sub-underwritten at varying rates of commission, averaging approximately 8 per cent., and such underwriting commission is payable by Messrs. Steele, Lockhart and Co. Several of the directors also partake in the underwriting, and Fiat Motors, Limited, is sub-underwriter of 50,000 of the shares now offered at a commission of 10 per cent. in cash, also payable by Steele, Lockhart and Co. With all these contracts and sub-contracts and commission receiving and paying we fear the outsider would stand very little chance of sharing much in the gains to come. However, profits of 17s. per day are estimated for the cabs to be put on the street, and when 400 of them are thus gathering in the money it is easy to count up what the gain will be. £70,400 nett is the sum the directors fix upon, and as it only takes £14,000 to pay the dividend on these cumulative preferred participating ordinary shares, why, the chance for the deferred is something fabulous. Only we have little faith in estimates.

The Loa Nitrate Company.

Otherwise the Compañia Salitrera el Loa, a company incorporated under the laws of the Republic of Chile, and possessed of a subscribed share capital of £450,000. It has created £250,000 in 5 per cent. first mortgage bearer debentures, which the Law Debenture Corporation has bought, and now offers for sale at 95 per cent., payable as follows: £5 on application, £15 on allotment, £25 on October 1, and £50 on November 15. The security is a specific first mortgage under Chilian law of the company's freehold nitrate grounds in Antofagasta, over 6,300 acres in extent, with all they contain. Redemption is to take place by drawings at 105, beginning July 1, 1909, or by purchase if the bonds are obtainable at a lower price. As the ground is new, estimates have to be depended on, but a responsible agent, Mr. Lomax, calculates for a profit of £195,000 per annum on the basis of a given output and price. There seems no doubt that the nitrate is there in plenty. The speculation, therefore, looks tempting.

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

S. M. H. J.—(1) Why should you sell these shares? It is true the company is a small one, but from all we have ever heard it is well conducted and possesses an excellent and stable business. (2) This is in a different category and we think it ought to be parted with. (3) The same remark applies to these shares which are quite full priced. (4) A good company, whose financial position is excellent, but whether the shares will go up in price just yet is more than we can say. They ought, however, to be held.

Cardigan.—No, we do not think these shares are worth buying just now because we fear a setback is coming in that quarter which will affect not only such securities but also the stocks of the Government. Therefore do not buy now.

P. M. (M. D. Edinburgh).—You might try Lloyds, but the speculation is not a good one, and we do not believe that any responsible insurance or guarantee company would insure the deposit with the bank suggested by you.

Hukeem.—As a speculation the shares are not tempting. They only appeal to those who are likely to make use of the place to an extent that would soon enable them to save the cost of purchase.

Investor (omitted last week by oversight).—No, not particularly good. Safe enough, perhaps, though of fluctuating value, but small and not often marketable.

Anglo.—We do not think you should be uneasy about these bonds which could only be indirectly affected by the speculation you mention. It, indeed, has already affected the price, but the country will, as far as we can see, come through all right.

Pessimist.—Certainly not. Probably nothing would please the manipulators better than sales for the fall. There is no live market for the shares nor does the public hold them. "Covering the bears" would therefore be easy.

Spector (Bloemfontein).—(1) We can hardly advise selling at present, the market is demoralised, and the price a few shillings, but do so on any rally. (2) It seems a pity to sell these now, at the same time if you could get 17s. 6d. or 18s. for them we think you would be well out.

G. R.—The decline will go on, we fear, and may end in a bad slump. On the whole, we should get out. Thanks, your directions have been obeyed.

H. B. C.—(1) No hurry to buy. We fear the stock will go lower. (2) Yes, a good security. The business is prosperous. (3) The most tempting of those under the first three names on your list are the best. Say Paris, 1869, 1871, or 1898.

E. M.—Wire sent.

Lloyds Bank.—The balance-sheet for July 27 shows liabilities consisting of current and deposit accounts £65,320,235 and bills accepted or endorsed £1,443,414, and assets of cash in hand and at Bank of England £10,018,809, cash at call and short notice £4,796,140, bills of exchange £7,878,920, Consols and other investments £5,970,207, and advances to customers and other securities £36,718,398.

Parr's Bank.—Liabilities on current and deposit accounts, &c., on July 27 amounted to £20,728,148, and on drafts current, acceptances on behalf of customers, &c., to £2,318,185, against which cash in hand and at Bank of England stood at £5,121,400, money at call and short notice £6,292,081, Government and other first-class securities £3,299,939, bills of exchange £2,894,380, and loans and advances to customers £15,248,862.

Union of London and Smiths Bank.—Deposit and current accounts on July 24 came to £36,820,253, acceptances and liabilities by endorsement to £3,507,551, and other liabilities to £747,777, while assets consisted of cash in hand and at Bank of England £6,738,805, money at call and short notice £3,402,450, investments including reserve fund £6,080,447, and discounts, loans and other advances £21,008,666.

London and South-Western Bank.—The statement for July shows current accounts and deposits of £11,117,[illegible] other liabilities £541,099, and acceptances and endorsements £31,496, against assets consisting of cash in hand and at Bank of England £1,925,256, money at call and short notice £1,502,070, British Government and other securities £2,281,594, and bills discounted, loans, &c., £9,347,376.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

There is less than ever to be said about the mining sections this week. Holidays have considerably interfered with the narrow business that still exists and the present month looks like being a record for paucity of dealings. Many of the big operators, or rather those who used to be big when the Kaffir Circus was alive, are out of town, and those that remain make no attempt whatever to instil any activity into the market. It would be wasted effort if they did, because the public will have nothing to do with gold shares, and when outsiders do not even look at a particular section for months on end, its vitality soon disappears. Professional play alone cannot make a market genuinely active, and the magnates have had many bitter experiences of the fact during the last few years. Not a movement among gold shares is worth a reference, and we cannot single out anything in the Land and Finance group that ought to be specially mentioned. The changes in Rhodesians rarely reached ½, and never exceeded it, and Diamond shares were less prominent than usual. Paris has taken the Moroccan trouble very well, and sold only a few De Beers. These were bought back later on, but Premiers, Jagersfontein, Vaals, Roberts Victor, and one or two of the smaller things all closed dull.

Nothing whatever was doing in West Africans, although Taquahs looked a little harder owing to the receipt of a cable announcing that the mill commenced running on the 3rd inst. West Australians showed strength in a quiet way, Horseshoes being in some request, but Broken Hill descriptions were distinctly heavy. Deep Leads went down if they moved at all, and Zincs got to the neighbourhood of 2s.

Some lively play again took place in the Copper group, and the bears have been having a grand time. The American situation has naturally been an important influence, and Paris has devoted more attention to Copper shares than to most other things. While our market was closed for the holidays Tintos were pretty badly knocked about, and began on Tuesday nearly £3 below the closing figure of the previous Friday night. The metal was banged down, but just when things looked at their worst a turn came and the market showed symptoms of recovery, although it was still very feverish. The Rio Tinto company has been a heavy seller of metal for some little time and the rally was brought about by a statement that the large stocks which it has been holding have now been disposed of. The collapse in Americans, however, soon upset things again and on the week quotations show some nasty losses. The troubles of the Arizona company are not yet at an end, the latest being a strike of furnace men and it was also said that the shares were being thrown out by some of the Scotch banks. Tin was very flat and several tin shares fell away.

In the Miscellaneous group Siberian things had one of their periodical spasms of weakness and Indian shares were distinctly dull. New Zealands were well maintained and in the American groups Esperanzas, El Oros and Mexico El Oros all kept steady. Le Roi II. picked up on the circular referred to lower down. Tomboys were inclined to be heavy on the drop in the profit for July, but the decline was quite in accordance with anticipations, a circular issued early in June pointing out that the profits during the past twelve months had been somewhat abnormal.

Native Labour.—In the report of the executive committee of the Transvaal Chamber of Mines for June reference is made to the recruiting operations during the opening half of the present year. The total number of natives received including the "boys" directly recruited by the mines was 55,813 as compared with 38,519 for the corresponding period in 1906, which seems a highly satisfactory increase, and goes a long way to dispose of the statements that the labourers cannot be got together in sufficient numbers. The Portuguese natives from south of latitude 22 received during the respective periods were 17,667 and 14,864, and it is satisfactory to note that there has been a marked increase in the number of recruits from the Northern Transvaal, the supply from the district being very small during 1906. Recruiting in Cape Colony, which was suspended in April last, has not yet been resumed, owing to there being at present no demand for short service natives. Application has been made to the Government for a statement of the conditions under which recruiting will be permitted to be resumed in tropical areas north of latitude 22 during the coming season.

Indian Mine Crushings.—The following table gives the total monthly returns from the Mysore Field alone, for 1907 and the previous five years :—

	1902. ozs.	1903. ozs.	1904. ozs.	1905. ozs.	1906. ozs.	1907. ozs.
January ..	41,612	48,080	50,935	50,999	50,870	44,889
February ..	40,053	46,268	49,500	49,629	48,538	42,224
March ..	41,575	48,327	50,914	51,629	47,935	43,535
April	38,329	48,271	49,991	52,324	44,940	43,565
May	28,093	48,628	50,445	51,095	47,305	43,522
June	37,466	48,980	50,800	51,553	46,633	43,108
July	43,847	50,571	50,476	51,086	46,094	43,618
August ..	49,628	50,286	50,613	50,541	45,644	—
September ..	49,420	51,452	50,520	50,962	45,465	—
October ..	47,858	51,380	50,031	51,287	45,941	—
November ..	48,332	51,559	50,442	50,802	45,307	—
December ..	48,078	53,984	51,560	53,077	48,806	—
Total ..	514,291	597,786	606,233	615,561	563,478	304,361

The small increase in the production for July compared with that for June is partly due to the additional working day and partly to the fact that the Mysore West and Wynaad crushed selected ore only before shutting down. With the exception of the Balaghat, whose output was less, all the remaining mines on the Kolar field showed trifling increases.

International Coal Company.—This company's capital is quite small, only £85,000, and mainly for that reason the report it issues for the year to June 30 is very satisfactory. Nett proceeds of coal sales were £120,437 and £459 came in from other sources making £120,896 in all. After meeting expenditure of every kind the balance of profit is £23,058 and £5,956 was brought forward meaning that the directors have an available credit of £29,614. From that dividends and bonus aggregating 15 per cent. are provided, £5,000 is added to reserve and no less than £11,864 is carried forward. The financial position is, of course, quite satisfactory. A number of workmen's cottages were recently acquired and the directors are taking steps to further increase the number of houses either by building or assisting in the formation of a building club. It is, naturally, very necessary to provide accommodation quite near to the colliery. Leasehold cottages stand in the balance-sheet at £2,708 and the funds for additional dwellings can be provided with ease. The cash balance is substantial at £26,230, debtors owe £13,387 against £14,885 due to creditors and stocks of coal are valued at £4,350. Railway wagon account stands at £12,415.

Weardale Lead.—This company has had rather a good year. Lead, as we know, had had a considerable rise along with most other metals the average price realised by the company for its produce being £19 os. 9d. per ton. The output, too, was largely increased, 4,331 tons of ore having been raised, 4,346 tons dressed and 4,306 tons smelted, producing 3,230 tons of pig-lead. Total income, counting in stocks on hand, on June 30 was £75,159 and after providing all expenditure and deducting stocks held a year ago the nett profit is £30,194 or something like double that of the previous twelve months. Including £2,040 brought in the sum at the directors' disposal comes to £32,234 and the shareholders get the nice return of 17½ per cent. This done the whole of the outstanding debentures amounting to £10,000 are paid off, very prudent finance, £2,500 goes to reserve for equalisation of dividends and a similar sum for exploration leaving £2,546 to be carried forward. From the manager's detailed report we should judge the present position of the mines to be generally satisfactory and lead is now fully up to the figure on which last year's profits were made. The financial position looks clean and healthy.

Le Roi No. 2.—Various rumours, no good to the company, have lately been in circulation regarding this undertaking, and the directors do wisely to put out a statement giving some particulars of the present position. It is admitted that shipments from the Josie mine have been seriously restricted during the last six months, due to such causes as scarcity of labour, the shutting down of the smelters owing to the coal strike, and the consequent inability of the mine to ship during the period mentioned, and the abnormal severity of the winter, owing to which the railway yards were blocked, leading to a very limited supply of cars. But against these adverse circumstances there has, the directors say, been a very marked improvement in the position of the mine itself; so much so that it may safely be asserted that the mine has now attained larger dimensions than have hitherto been anticipated. This result has only been achieved at a considerable cost for development, but the outlay has been more than justified by results. We shall be delighted if all this turns out as said. Sundry new discoveries have been made, some being of high-grade, and an important ore body has been located by diamond drill at a depth of about 1,220 ft., thereby entirely dispelling the theory hitherto existing that it will be necessary to pass through a large barren zone before recovering the ore bodies in depth. Latest advices from the manager also announce a strike of ore containing high copper values on the 400 ft. level. Outside the Le Roi No. 2 proper the company has an option over the Vancouver group of silver-lead mines situated in the Slocan district, and the directors clearly think very highly of their prospects. The policy of the board will be to carry on sufficient development to warrant the flotation of a new company. A considerable interest is possessed in the Cloncurry Syndicate, another venture with which the directors are evidently very pleased.

South Kalgurli.—In sending out details of the monthly crushing, the secretary further states that the ore taken from the Morty lode has proved to be harder and to contain a higher percentage of sulphur than is met with in the main lode.. The general managers have satisfied themselves that in other respects it offers no difficulties in treatment. The crushing to the necessary fineness and the longer roasting to eliminate the sulphur take, ton for ton, more time. To treat Morty ore, as the present plant is arranged, would cause a reduction in monthly tonnage and keep up higher costs. In order to maintain the old output and reduce costs to normal the directors have accepted the advice of the general managers and ordered a further ball mill and two additional furnaces at an estimated cost (erected) of £4,800, which will be charged to capital account. The work is expected to be completed in about 3½ months.

New Zealand Gold Returns.—The output of gold from New Zealand for the month of July was 52,966 ozs. valued at £212,809 as compared with 62,807 ozs. worth £254,011 in the corresponding month, a very severe falling off.

TRADE AND PRODUCE.

Wheat.—Trading slightly increased towards the end of the week, but during the first two or three days very little was done, and where any transactions took place prices for both spot and futures generally favoured buyers with the exception of occasional small parcels of English wheat. The price of this is creeping up, farmers' deliveries for the week amounting to 16,165 qrs. averaging 33s. 2d. against 9,480 averaging 30s. 9d. in the same week of last year, and the average for the whole season is now only 1s. 3½d. below that of 1906. Both the quantities on passage and the imports of last week are smaller, the first amounting to 2,510,000 qrs. of wheat to places in the United Kingdom, and the latter to 440,930 qrs. against 449,703 in the same week of last year. Trade on the Continent is quiet and firm, but American market prices have been depressed under favourable weather reports and heavy receipts, though they went up a little towards the end of the week on good export demand. The visible supply has increased 1,484,000 bushels on the week.

Wool.—The markets have done very little business this week, and only towards the end of it was there any inquiry of importance. So far fine merinos and crossbred prices have kept very firm, and it is thought by holders that they will do so till next London sales, but all other grades show a downward market, and a dulness that is attributed to a great extent to the comparatively low prices of home-grown wools. Also the news from Australia of the wool crop there points to heavy supplies in the near future. Though consumption is heavier than ever, it looks as if the arrival of the new clip will see a decided fall even in the finest grades of wool. Shipping continues brisk and demand from South American, Continental and colonial centres is very good, particularly for the cheaper and medium class of goods.

Cotton (from our Manchester correspondent).—The week under review has been generally quiet in our market, and owing to the holidays at the beginning of the week buyers and sellers were rather slow at getting to business. The outlook is rather discouraging for both spinners and manufacturers. In the latter section the margin has already been considerably eaten away, and spinners are not doing business on so profitable a basis as a few months ago. American cotton continues on a high level, and there seems to be little hope for a remunerative trade for Lancashire producers until we get on to a lower range of prices. Piece goods have been in fair request for various markets, but few sales of weight have occurred. Bombay business has been done in small lots, but Calcutta bids are rather discouraging. It is reported that goods have been cancelled which were bought at a much lower price than the quotations for to-day. China buyers, here and there, have been willing to purchase shirtings where reasonable terms could be secured. Merchants with the Levant are receiving rather better news, and more inquiry has been dealt with. This is a welcome feature after the quiet period for that market. Various Egyptian shipping houses are in financial difficulties, and meetings of creditors have been called of two firms this week. It will take time before things can settle down to the ordinary course. Manufacturers complain of the poor offers which are being made. American yarns for home use have rather dragged in demand, and spinners report that users are only prepared to purchase small lots to meet actual requirements. Ring beams tend to back up in first hands. Cop twist is not so much pressed for delivery as formerly. Shipping bundles have been in request for India, but the question of delivery has rather restricted operations. Bolton yarns remain quiet, and quotations for the poorer qualities show slight irregularity.

Sir Jacob Behrens and Sons' report states that although the bureau report published on the 2nd inst. was below expectations and gave the average condition of the growing crop at only 75 as against 82.9 same time last year, it had very little effect upon the market. Prices have since stiffened under the influence of unfavourable weather reports and drought in Texas, and the advance would have been more pronounced but for financial troubles on the New York Stock Exchange. In Egyptian cotton an increased business is reported, but quotations have given way 1/8d. per lb.

Coal.—Activity in steam coals shows no signs of abating. Exports in particular are increasing, and the advanced prices do not seem to check demand in any way. Germany is our largest buyer, but now it is reported that Japan is coming in, and France is also taking larger shipments. No new feature presents itself. The railway companies and mineowners have not yet come to an agreement, and judging by present prospects it does not look as if they would. Wages are following in the wake of prices, and in the North of England are said to be higher than since 1894. They have risen 20 per cent., says the *Engineer*, since the upward movement commenced in 1905, and realised prices have, over the same period, gone up 2s. 8d. per ton. Many leading companies in Wales are well sold over the next six months, and some of them over 1908 as well, at prices ranging from 18s. 3d. to 19s. per ton, latest quotations at Cardiff for best steams being 21s. 6d. to 22s. 0d.

Copper.—At the opening of business after the holidays values suffered a fresh break, owing to heavy selling, weak advices from America and the unsatisfactory condition of trade with consumers. Messrs. H. R. Merton and Co state that trade is pessimistic on general expectation of a further official cut in the prices of electro-copper. The Calumet and Hecla Company are offering Lake Copper in Europe at £100, which has led manufacturers to expect further concessions. Cash price on Thursday was down to £82 10s., and three months to £79 5s. Next day there was a rally, and the closing prices were:—Cash, 83½-83¾; three months, 79⅛-79¾.

Tin.—Dealings were restricted at the opening with very little interest taken in proceedings. A heavy selling of Lagos metal, 500 tons on £179 C.i.f. back in London, and adversely affected values. Markets fluctuated later, and on a good speculative demand and bear covering were slightly firmer, but values fell away again on Thursday to £174 5s. cash and £174 three months. The weakness continued on Friday, and prices finished at 174½-173 for money and 171¾-172¼ at three months.

Iron and Steel.—More business has been done in Cleveland hematites this week, prices are better, mixed Numbers being 6d. higher on the week and warrant iron 11d., and makers are pretty well booked ahead. Demand for Cleveland pig-iron is also improving, consumers now giving orders freely, and willing to pay the higher prices. No. 1 Cleveland is scarcely to be had, Connal's stores having practically only No. 3 quality left, and whereas formerly the first quality was only 1s. 6d higher than the third, makers can now get 5s. 6d. to 6s. per ton more for it. About 210,000 tons are now left in Connal's stores, and it is thought that these will all disappear before the autumn is over, and Glasgow speculators no longer be able to peg the market. Of Scotch warrants they have none to fall back upon. Shipments up to the end of July from the Cleveland district reached 1,082,524 tons, exceeding by 30 per cent those of the first half of last year, and though American consumers have taken nearly all they need for this year, Germany and the Continent generally show signs of coming in, and autumn buying has begun well. Very little buying has taken place in finished iron and steel, owing chiefly to the holidays, and prices are without change.

Sugar.—According to Mr. Czarnikow's weekly circular, less favourable reports about the beetroot crops and further covering of August shorts at the end of last week caused an improvement of about 1d., August being dealt in up to 9s. 0½d., and May up to 9s. 11d.; since, however, a reaction, due to small realisations of August and better weather advices, has set in, and not only was the advance entirely lost, but prices receded below last week's level. At the decline established—viz., at 9s. 8d. August and 9s. 9¼d. May, dealings were only small, and quotations recovered about ¾d., chiefly on account of the purchases by refiners of tendered sugars at 9s. 9¾d to 9s. 9½d. In refined sugars only a comparatively small business was done, which however, is not to be wondered at, the Bank Holiday having interfered with transactions, and we ought to see a revival of trade during the next few days, which will probably bring about a better margin between raw and refined. Crop reports to hand from the Continent so far are not of a favourable nature, except perhaps from Austria, where things seem to be progressing satisfactorily. From Germany the accounts vary; in the eastern districts there is perhaps nothing to complain of, but in Central Germany the weight is still much inferior to last year. In France the position seems to be about the same in many districts—so much so, that a fair number of buying orders emanated from that country at the end of last week. The July figures are partly to hand. Austria alone shows exports of 50,700 against 59,400 tons, and consumption 34,000 against 30,000 tons last year. Germany has exported 63,000 against 98,500 tons, consumption figures not being to hand so far. A rather interesting feature is that the Java exports to the East amounted during July to 97,000 against 84,800 tons last year, and will probably continue on a large scale, to judge by the amount of business done for that quarter. Our refiners bought some 88 per cent at 9s. 9¾d. to 9s. 9¼d. to 9s. 9¼d., and sellers at 8s. 9d. to 8s. 4½d. Tate's cubes moved from 19s. 9d. to 19s. 10½d., standard granulated from 17s. 9d. to 17s. 10½d., Lyle's No. 1 17s. 3d. to 17s. 4½d. Hamburg granulated prompt moved from 11s. 3¾d. to 11s. 4½d. to 11s. 3d. to 11s. 3¼d., August from 11s. 3¾d. to 11s. 4½d. to 11s. 3d. to 11s. 3¼d., October-December from 11s. 3d. to 11s. 5¼d. to 11s. 3¼d.; Paris August from 20.43 fcs. to 20.62 fcs. to 20.18 fcs. to 20.37 fcs. 11s. 11¼d. f.o.b.), October-January from 27.50 fcs. to 27.75 fcs. to 27.37 fcs. to 27.62 fcs. (11s. 4½d. f.o.b.); Hamburg beet, August from 9s. 9d. to 9s. 9¾d. to 9s. 8d. to 9s. 8¾d., October-December from 9s. 6¾d. to 9s. 8¼d. to 9s. 6½d. to 9s. 7d., January-March from 9s. 9½d. to 9s. 7¾d. to 9s. 8¼d., May from 9s. 11¾d. to 9s. 11¼d. to 9s. 9¼d. to 9s. 10¼d. The American market has ruled quiet at unchanged prices, 3.93¾ cents for spot centrifugals; equal to 11s. 4½d. c.i.f. for 96 per cent non-polarising, equal to 9s. 3d. f.o.b. Hamburg for 88 per cent. nett beet. Meltings have been reduced to 44,000 tons, and with arrivals of 52,000 tons, stocks are now 284,000 tons. The Cuban stock has increased to 138,000 tons, and it is reasonable to expect a revival of the demand for non-preferential sugars, which will have to provide a very large proportion of the American meltings for the year.

MINING RETURNS.

Abosso Gold.—Crushed 3,505 tons, 1,807 ozs.; 2,569 tons tailings, 710 ozs.; 1,032 tons old tailings, 280 ozs., total 2,797 ozs. gold.

Ashanti Goldfields.—Obuasi plant, 4,853 tons crushed, yielding by amalgamation 1,559 ozs.; tailings, 442 ozs.; 31 tons from roasting plant, 2,800 ozs.; total 4,801 ozs.

Associated of W.A.—Milled 10,920 tons ore, yield £19,180 sterling.

Associated Northern Blocks.—Milled 3,750 tons ore, treated 1,475 tons slimes, yield £14,200 sterling.

Ayrshire.—1,865 ozs. from 8,100 tons ore crushed; 711 ozs. from 6,480 tons cyanided.

Balaghat.—5,100 tons quartz, 2,328 ozs.; 4,368 tons tailings, 406 ozs.; total 2,734 ozs.

Barrett Gold.—279 ozs., value £1,050.

Bibiani.—Crushed 3,151 tons, 1,445 ozs.; 2,495 tons cyanide, £1,606; total 1,822 ozs.

Bonanza.—Crushed 3,000 tons, 957 ozs.; cyanide and slimes 3,243 tons, 859 ozs.; total 1,816 ozs.

Boston Consolidated.—Produced 800,000 lbs. copper, 1,728 ozs. gold, 10,292 ozs. silver.

Brilliant Central.—Crushed 1,180 tons quartz, value, including residues (tailings and concentrates), of £3,270.

British Broken Hill Proprietary.—2,563 tons crude ore produced 350 tons concentrates containing 217 tons lead, and 9,100 ozs. silver and 103 tons carbonates, making total output 2,666 tons.

Broken Hill Proprietary.—Refinery products:—Fine silver 309,297 ozs., soft lead 4,733 tons, antimonial lead 52 tons.

Broken Hill South Blocks.—Treated 7,238 tons ore, assaying 16½ per cent. lead, 2½ ozs. silver, 10 per cent. zinc per ton; produced 1,315 tons leady concentrates, assaying 62½ per cent. lead, 8½ ozs. silver, 7¾ per cent. zinc per ton; value £12,293.

Burbank's Main Lode (1904).—Crushed 1,370 tons, 752 ozs.; 1,020 tons cyanide, 202 ozs.; total 954 ozs.

Burma Ruby.—178,000 loads washed, producing rubies value Rs. 115,000; royalties Rs. 21,000.

Cape Copper.—O'okiep, 1,062 of 16 per cent. equals 170 tons fine copper; Nababeep 4,585 of 4 per cent. equals 183 tons fine copper; total 353 tons fine copper.

Central Chili Copper.—Production:—157 tons copper.

Central Siberia.—Clean up, 37 ozs.

Champion Reef.—15,053 tons stone, 8,473 ozs.; 19,594 tons tailings, 2,384 ozs.; total 10,857 ozs.

Charlotte Plains Consolidated.—600 fathoms, 397 ozs.

Chillagoe.—Chillagoe, 1,299 tons copper ore; Mungana, 320 tons copper ore and 2,355 tons lead ore; purchased, 176 tons copper ore and 337 tons lead ore; producing 330 tons copper matte and 321 tons lead bullion, containing 132 tons copper, 321 tons lead, and 36,980 ozs. silver.

Chinese Engineering.—Output of coal 25,000 tons; sales 14,500 tons; consumption 1,350 tons.

Consolidated Langlaagte.—7,622 ozs. from 23,409 tons treated.

Crown Deep.—Crushed 31,925 tons, 10,509 ozs.; sands 20,440 tons, 3,225 ozs.; slimes 11,817 tons, 1,124 ozs.; total 14,858 ozs.

Crown Reef Gold.—Crushed 20,212 tons, 6,349 ozs.; sands and concentrates 14,342 tons, 1,993 ozs.; slimes 8,849 tons, 847 ozs.; total 9,189 ozs.

Dharwar Reefs.—Crushed 1,100 tons, 502 ozs.; tailings assay 4 dwts. per ton.

Duff Development.—No. 1 dredge 110 ozs.

Durham Prospect.—Tati District:—1,423 tons crushed, 502 ozs.

Durban-Roodepoort.—Quartz milled 11,815 tons, 2,925 ozs.; tailings 7,775 tons, 1,013 ozs.; slimes 3,845 tons, 224 ozs.; total 4,162 ozs.

Durban Roodepoort Deep.—Crushed 12,010 tons, 3,387 ozs.; sands 7,832 tons, 982 ozs.; slimes 4,348 tons, 319 ozs.; total 4,688 ozs.

Eaglehawk.—1,100 tons crushed, 265 ozs.; cyanide 115 ozs.

Ferreira.—Crushed 23,400 tons, 8,831 ozs.; sands and concentrates 16,240 tons, 3,008 ozs.; slimes 9,536 tons, 1,239 ozs.; total 13,078 ozs.

Ferreira Deep.—Crushed 22,500 tons, 9,551 ozs.; sands 16,400 tons, 2,819 ozs.; slimes 6,260 tons, 528 ozs.; total 12,893 ozs.

Foldal.—Ore produced 5,142 tons; ore shipped 4,400 tons.

French Rand.—Crushed 19,200 tons, 3,749 ozs.; sands and concentrates 15,200 tons, 1,630 ozs.; slimes 6,904 tons, 424 ozs.; total 5,803 ozs.

Gaika Gold.—797 ozs. from 2,002 tons crushed; cyanide 1,479 tons, 188 ozs.

Geldenhuis Deep.—Crushed 30,535 tons, 7,360 ozs.; sands 19,536 tons, 2,512 ozs.; slimes 10,200 tons, 606 ozs.; total 10,479 ozs.

Giant of Rhodesia.—Treated 4,909 tons, 2,420 ozs.

Ginsberg.—3,232 ozs. from 9,763 tons treated.

Glen Deep.—Crushed 20,530 tons, 4,598 ozs.; sands 12,250 tons, 2,133 ozs.; slimes 7,920 tons, 654 ozs.; total 7,385 ozs.

Glencairn Main Reef.—4,350 ozs. from 19,100 tons treated.

Globe and Phœnix.—Crushed 6,485 tons ore, 2,654 ozs.; tailings, average assay value per ton 2.47 dwts.; cyanide, 4,264 tons, 488 ozs.; bullion equal to 1.63 dwts. fine gold per ton; slimes, 1,244 tons, 154 ozs., equal to 2.04 dwts. fine gold per ton; total 3,296 ozs.

Glynn's Lydenburg.—Crushed 2,942 tons, 611 ozs.; cyanide, 1,068 tons, 700 ozs.; slimes, 974 tons, 442 ozs.; total 1,753 ozs.

Golden Horse Shoe.—Ore treated 24,539 tons, yielded 12,594 ozs.

Golden Pole.—Crushed 1,510 tons crude ore, 675 ozs. gold; 1,490 tons sands and 15 tons concentrates, 241 ozs.; total 916 ozs.

Great Fingall.—Ore 22,476 tons, 4,707 ozs.; tailings 22,020 tons, 2,198 ozs.; concentrates 456 tons, 1,368 ozs.; total 8,273 ozs.

Hutti (Nizam's).—924 ozs. from 2,450 tons crushed; tailings, 223 ozs. from 2,100 tons.

Ivanhoe.—19,030 tons crushed, 3,058 ozs.; 9,350 tons sands, 1,589 ozs.; 7,970 tons slimes, 3,432 ozs.; 1,710 tons concentrates, 2,432 ozs.; total 10,511 ozs.

Jumpers Deep.—Crushed 18,906 tons, 4,316 ozs.; sands 13,690 tons, 1,585 ozs.; slimes 6,059 tons, 357 ozs.; total 6,258 ozs.

Killarney Hibernia.—Crushed 5,103 tons, 364 ozs.

Koffyfontein.—4,000 carats diamonds recovered; 368,000 loads blue ground on floors.

Lace Diamond.—Loads washed 20,977, yielding 3,225 carats, equal to 15.37 carats per 100 loads.

Lake View Consols.—11,358 tons, 3,226 ozs.

Lake View South.—Wallaby central crushed 795 tons, 425 ozs.

Lancaster Gold.—Crushed 16,200 tons, 2,509 ozs.; cyanide, 11,320 tons, 1,260 ozs.; total 3,769 ozs.

Lancaster West.—Crushed 6,650 tons, 1,262 ozs.; cyanide, 5,610 tons, 868 ozs.; total 2,130 ozs.

Lancefield.—6,487 tons ore treated, yielding 2,445 ozs.

Langlaagte Deep.—Crushed 27,708 tons, 7,303 ozs.; sands 17,839 tons, 1,892 ozs.; slimes 8,885 tons, 446 ozs.; total 9,641 ozs.

Le Roi No. 2.—Shipped 1,800 tons; net receipts $24,422 (£5,035), 1,935 tons shipped, and $251 (£52), being payment for 23 tons concentrates shipped. In all $24,673 (£5,087). Vancouver: Shipped 41 tons; net receipts $1,680 (£345), being payment for 19 tons concentrates shipped; 700 tons ore broken, not treated.

Broomassie.—Mill crushed 1,433 tons, 1,696 ozs.; 5⅓ tons concentrates of an assay value of £41 5s. per ton.

Lloyd Copper.—Production 73 tons, profit £1,600.

May.—Crushed 14,935 tons, 3,461 ozs.; cyanide, 9,880 tons, 2,094 ozs.; slimes, 4,440 tons, 353 ozs.; total 5,908 ozs.

Merton's Reward.—Crushed 878 tons, 279 ozs.; 666 tons sands, 121 ozs.; 279 tons slimes, 58 ozs.; total 458 ozs.

Messina.—Output 284 tons copper ore. Of this amount 150 tons is shipping ore, assaying 60½ per cent. copper, the balance of 134 tons remaining for treatment.

Meyer and Charlton.—1,999 ozs. from 13,000 tons crushed; 3,420 ozs. cyanide; total 5,419 ozs.

Mexico El Oro.—Shipped 565 tons ore, value of U.S. $94 gold, and 70 ozs. silver per ton.

Mount Boppy.—7,030 tons, 1,196 ozs.; cyanide 4,400 tons, 1,606 ozs.; slimes 2,615 tons, 1,038 ozs.; concentrates, tonnage 28, 170 ozs.; total 4,010 ozs.

Mount Molloy.—Smelted 513 tons crude ore, producing 19 tons blister copper and a quantity of copper matte containing seven tons fine copper.

Mount Morgan.—Treated 20,586 tons ore, 7,064 ozs.; treated 9,706 tons ore and metalliferous flux, and produced 298 tons blister copper, containing 3,624 ozs.

Mysore.—16,500 tons quartz, 5,509 ozs.; 13,000 tons tailings, 1,841 ozs.; total 17,350 ozs.

Mysore West, Mysore-Wynard.—760 ozs. from 2,094 tons crushed; 167 ozs. from 2,592 tons cyanided.

New Goch.—3,659 ozs. from 19,213 tons crushed; 2,914 ozs. cyanide; total 6,573 ozs.

New Heriot Gold.—4,380 ozs., 9,500 tons crushed.

New Modderfontein.—Crush 23,419 tons, 6,437 ozs.; sands and concentrates 14,555 tons, 1,463 ozs.; slimes 10,612 tons, 930 ozs.; total 8,830 ozs.

New Primrose.—7,035 ozs. from 18,638 tons treated.

New Rietfontein.—9,341 ozs. from 17,224 tons treated.

New Unified Main Reef.—3,045 ozs. from 9,528 tons treated.

New Vaal River Diamond.—Droogveld output £2,400, and old river diggings £1,600; total £4,000.

New Zealand Crown.—Crushed 2,279 tons ore, value £4,371.

Newhouse.—640,000 lbs. copper produced.

Nigel Gold.—Crushed 8,600 tons, 4,164 ozs.

North Broken Hill.—Treated 2,350 tons crude ore, producing 412 tons concentrates, containing 280 tons 7 cwt. lead and 7,004 ozs. silver.

Nourse.—Crushed 33,580 tons, 8,853 ozs.; 19,957 tons sand, 4,041 ozs.; 12,660 tons slimes, 954 ozs.; total, 13,848 ozs.

Nundydroog.—6,950 tons quartz, 5,422 ozs.; 7,290 tons tailings, 673 ozs.; total 6,095 ozs.

"O.K." Copper.—Smelted 835 tons of crude ore for 72 tons fine copper.

Ooregum.—10,228 tons stone, 4,944 ozs.; 4,874 tons tailings, 711 ozs.; total, 5,655 ozs.

Oroya-Brownhill.—Crushed 11,223 tons, 7,077 ozs.

Pena.—Output of ore 17,500 tons; shipments ore 10,044 tons. About 59 tons fine copper in precipitate produced.

Phillips River Gold.—Shipped 53 tons of copper matte.

Prestea Block A.—Crushed 5,500 tons, 3,369 ozs.; 3,211 tons of tailings, 461 ozs.; total 3,830 ozs.

Princess Estate.—Crushed 8,586 tons, 2,944 ozs.; cyanide, 5,615 tons 1,080 ozs.; total, 4,024 ozs.

Queensland.—Ore treated, 1,593 tons; production, 351 tons matte, containing 194 tons fine copper; shipment 337 tons matte.

Roberts Victor Diamonds.—29,094 loads washed, producing 12,810 carats, equal to 43.5 carats per 100 loads.

Robinson Central Deep.—Crushed 20,020 tons, 8,705 ozs.; 12,800 tons sands and concentrates, 2,183 ozs.; 7,440 tons slimes, 719 ozs.; total 11,607 ozs.

Robinson Gold.—Crushed 33,000 tons, 15,041 ozs.; 22,251 tons sands and concentrates, 4,031 ozs.; 13,331 tons slimes, 1,042 ozs.; total 22,814 ozs.

Roodepoort Central Deep.—Crushed 8,506 tons, 2,021 ozs.; 5,785 tons cyanide, 1,035 ozs.; total 3,056 ozs.

Roodepoort United.—3,082 ozs. from 15,202 tons crushed; 2,379 ozs. cyanide; total 6,361 ozs.

Rose Deep.—Crushed 31,700 tons, 6,886 ozs.; sands, 21,060 tons, 2,304 ozs.; slimes, 11,447 tons, 801 ozs.; total, 9,991 ozs.

Scottish Gympie.—Crushed 7,800 tons, 2,409 ozs.

Selukwe.—Crushed 6,614 tons, 1,680 ozs.; tailings assay 2.29 dwts. per ton; cyanide, 4,414 tons, 534 ozs.; total 2,203 ozs.

Sheba.—Treated 5,400 tons for 1,300 ozs.

Sons of Gwalia.—Ore crushed 13,345 tons, 2,281 ozs.; tailings 7,140 tons, 1,228 ozs.; concentrates 215 tons, 617 ozs.; accumulated slimes 3,116 tons, 350 ozs.

South Kalgurli.—Crushed 7,610 short tons ore, yield 2,270 ozs.

Sulphide.—13,638 tons of ore milled, producing 2,227 tons leady concentrates; also 16,775 tons tailings, producing 4,765 tons zinc concentrates and 66 tons leady concentrates. 2,389 tons leady concentrates, 218 tons residues, and 2,580 tons purchased ores smelted, yielding 1,433 tons lead, containing 154,764 ozs. silver and 6,591 ozs. gold; also treated 301 tons zinc concentrates, producing 84 tons spelter.

Tasmania Gold.—Crushed 5,927 tons quartz, 2,491 ozs.; 231 tons concentrates, 624 ozs.; 2,880 tons cyanide, 181 ozs.; total 3,296 ozs.

Tasmanian Smelting.—Silver-lead bullion shipped contained 830 tons lead, 112,000 ozs. silver, 491 ozs. gold.

Tingha.—Production of tin 33 tons 8 cwt.

Tomboy.—Mill crushed 9,300 tons ore; value $50,000; concentrates shipped, 520 tons, value $33,000.

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Reduced from 4½ per cent. on April 25.)

Norfolk House, Friday Evening.

We are afraid an advance in the Bank rate is not far off. Certainly all hope of a reduction below 4 per cent. has completely vanished, and credit dealers are again nervous about the future. One cause of their fears is found in the appearance of American finance bills on our market. There seems nothing unusual in the amount of these so far, nor is their appearance at this date out of the common. Every autumn brings forward a more or less formidable volume of bills drawn in anticipation of the cotton and grain shipments of the autumn and winter. Our market, however, had such a lesson last year that it is easily frightened, and will certainly put rates up if the mass of these bills becomes at all formidable-looking. Yesterday, we believe, two considerable parcels of three months' paper were offered, in the one case to a bank and in the other to a discount company, and both houses asked 4 per cent., thinking that they were naming a prohibitory rate. The bills were sold to them without hesitation, and so little did they relish the promptitude with which their offer was accepted that to-day some houses have been quoting 4⅛ to 4¼ per cent. for such. In the general market, bank bills of three months' usance have been quoted closer up to Bank rate since the beginning of the week, when 3 13/16 to 3¾ per cent. ruled. The finest quotations yesterday were 3 15/16-4 per cent. Soon the minimum rate will be hard at 4 per cent., and that will divert business to the Bank of England. Should the proportion of paper thrust upon it be large the directors will be driven to put up their rate almost forthwith.

Short money has been thus far in no way affected by this hardness in the discount market. If anything, the supply has been more abundant this week than last, probably because the Exchequer last week paid out £2,817,000 of its balances over and above the week's revenue incomings. How much of this money reached the open market we cannot be sure—£500,000 of it certainly went to the Bank of England itself, but the probability is that most of the balance was available for lending, and at any rate short loan rates have been easy, both call and notice money beginning and ending the week at 2½ to 2⅝ per cent. with no shortness in supplies at any time. This afternoon, however, there were indications that balances incline to dry up, although "loans till pay day" could be had at 2½ per cent. Stock dealers may therefore be thankful if the rate charged to them next week is no more than 3½ per cent. as last time.

The Bank Return affords a warning that short money, while it lasts, must not be allowed to pull discount rates down. It is a weak return notably for the heavy absorption of coin into the active circulation, upwards of £1,000,000, allowing for the £285,000 in gold received from abroad, having thus disappeared since the previous return. It is the habit to ascribe this disappearance of large amounts of coin in active circulation at these seasons merely to the holiday demand, but we notice that the gold thus withdrawn does not come back in anything like the same proportion, and it is probable enough that reserves are being strengthened in various parts of the country. The usual autumn demand is also now upon us, and the Bank is not strong, the reserve of £23,650,000 being at least £5,000,000 less than it should be at the present time in view of the critical state of German and American money markets, and of what lies ahead of us between now and the end of the year. The reserve is upwards of £1,000,000 below the figure of a year ago, and then we had a 6 per cent. rate on October 19.

The worst of it is that the Bank has ceased to dominate the bullion market, so keen already is the foreign competition for the metal. There was only about £400,000 available last Tuesday, and the Bank and the Continent each got about £150,000, the rest going to India and to industry. To get their portion, however, the Bank had to give a higher price, and the open market quotation for bars is now 77s. 10½d. It might be all right even so if the supplies of metal coming into the open market satisfied the foreigner. That is to say, we might then, perhaps, struggle through with a 5 per cent. Bank rate, but there is no reason to believe that this will be the case, and meanwhile the supply of gold to be expected within the next few weeks is nothing remarkable. There will be about £480,000 available next Monday, and £739,000 odd has left the Cape for London, but were the amounts twice as much they could not be trusted to satisfy the present demand.

Calls due next week, apart from that on £7,200,000 of Southern Pacific preferred stock, are not embarrassingly heavy at about £1,260,000, scattered over the week; Buenos Ayres and Pacific (£200,000), Great Central Railway (£230,000), Great Northern Railway (£168,000), Agricultural Bank of Egypt (£250,000), British Bank of South America, Cargo Fleet, and other recent new issues.

Silver.

The silver market had the benefit of a French tender for 20,000 kilos. which was sent in on Wednesday, and prices were raised a fraction above last Friday's figures. But the Indian demands, both on account of the Government and the bazaars, have not been in evidence, and as bulls were disposed to take profits after the recent rise, prices slipped back. Business was exceedingly quiet, and on the week quotations show a loss of 5/16 for cash at 31 13/16 and ⅜ for future delivery at the same figure. Tenders were received at the Bank on Wednesday for Rs. 40,00,000 India Council drafts, and the total applications for bills were Rs.

2,60,18,000 and for telegraphic transfers Rs. 45,00,000. The allotment in transfers was Rs. 3,83,000, the balance being in bills and tenders at 1s. 4 1/16d. and 1s. 4 1-32d. per rupee respectively received about 76 per cent. The amount offered next week is reduced to 35 lakhs.

The Stock Markets.

A Perilous Situation.

It is useless to make comparison with the past in order to try to measure the extent of the calamity which now hangs over the Stock Exchange. At no time in its history has that powerful institution had to endure such a prolonged strain as it now has borne for years past. To have been able to withstand its adversities so long is a remarkable proof of its essential stability, but even the strongest of institutions must break down one day if no relief is afforded. Members left for their short August holiday with a certain feeling of hopefulness, trying to think that the worst was over. They came back to find the demoralisation greater than ever, and the week ends in gloom indescribable. How the members manage to hang together in spite of the accumulation of losses the fall in prices has brought upon them during the past few years is a marvel. We fear many of them are living by charity or remaining on the Stock Exchange on sufferance, and unless a change comes soon the membership will be diminished not by twos and threes, but by hundreds. Those larger and wealthier houses that have been lenders of money in the market are gradually restricting their commitments, and with each account that has to be settled the difficulties of those who have exhausted their means must increase from this cause alone. They will not be able to get accommodation at any price. We fear, therefore, that the settlement which begins on Monday for mines, and whose pay day is Thursday next, will see the disappearance of not a few men either through exhaustion or actual failure. It cannot be otherwise when the capacity to hire credit is at an end, when capital is exhausted, and men have ceased to be able to arrange their affairs, when jobbing business has ceased for all except those who are strong. And the strong can no longer hope to job at a profit, for such markets as exist are clique-governed by men whose sole object is plunder.

The Consol Market.

As we went into the City on Thursday we saw in large letters upon a newspaper bill the words "Another record in Consols," and we could guess what that record might be. The price we soon learned had dropped back below 82, and after a slight rally which brought it up again almost to that figure, the final quotation for money was only 81 13/16. Why was this? Two banks were said to be selling, but people always say that when they know nothing whatever of the causes at work. Probably enough Consols are being pressed on the market from many quarters, and in present circumstances very little selling is necessary to drive the price down. Who cares to buy Consols just now? The stock is no use to a man who wishes to borrow money, to use it as a credit generator, because he will pay more for the loan it secures than he gets as interest on the stock. That might not matter much if he could get higher rates by lending on other securities, but he cannot be sure of that at present. Not but what rates are likely to be fairly stiff on most things next week, but, as we have just said, the money jobber is afraid to accept the risks which miscellaneous lendings involve. There is, consequently, no active market for the stock, and anything approaching forced selling inevitably sends the price down. As far as we can see, the bottom has not yet been reached. For a

long time we have thought that stock must go to 80 before the turn came, and it really looks to-day as if it might fall below that figure. Other trustee securities naturally suffer, including other Government stocks such as Irish Land stock and Transvaal guaranteed, both of which dropped yesterday about 15s. The whole trustee market is thus in a semi-paralysed state, rendering it for one thing almost impossible to bring out any new loan, no matter how well secured, and damaging the position of every other division of the Stock Exchange, crippling markets and credit distillers at all points.

Why is this crisis so prolonged? It is so for the reasons again and again set forth in these columns. We have been wasting our wealth. Credit is an excellent servant when it is employed to further enterprises calculated to increase the productive resources of a corporation or of an individual firm of traders, but it becomes a destructive and wealth-consuming force when it is employed merely as a market engine laid hold of to assist in the inflation of prices. It then becomes a wealth waster. Primarily therefore our market and all stock markets are suffering from wealth consumption brought about by the abuse of credit. We need not point to the Kaffir Circus as an example of this destruction; its lessons are too deeply burned into the minds of all who have ventured within its precincts. But the same thing has been going on in all directions and conspicuously in the American stock markets, where this week's demoralisation originated. There the employment of credit to inflate prices has been carried to an extent we cannot adequately indicate, and the fall in prices which this week has witnessed in New York is only one more revelation of the consumption of wealth a misuse of credit has caused. It is still the combat of "bull and bear" on Wall Street, and theorisers in New York and here are busy finding all manner of causes for the slump but the real one, which is that credit has been employed to exhaust instead of to increase the undoubted wealth of the Republic.

The most striking aspect of all stock markets therefore continues to be the universality of the present crisis. No centre of finance business escapes the contagion. All hang together, all struggle to prop each other in order to avert their own collapse. They have hitherto been successful in avoiding any cataclysmic smash in the inflated credit structure. This is good, and an excellent achievement if ultimately successful. By delaying or fending off the worst, time is given for recuperation, but what if the effort fails? Then all the world will be involved in such a setback, not merely of credit but of legitimate enterprise, as will change the whole aspect of business throughout the world. This is a danger which lies ahead, and we must not lose sight of it, although continuing to hope that the wearing crisis through which the world of finance is ploughing its way may be ended by the crippling of financiers or financial institutions whose operations have been a danger to the stability of governments, to the human race, while falling short of that utter paralysis which a universal breakdown of credit would involve.

Municipal stocks have been wonderfully inert, but those of London sink with Consols, and West Ham 3 per cent. were sold yesterday at 75. Colonial stocks, too, are forgotten in the tumble.

Foreign Government Stocks.

Except Chinese bonds, all Foreign Government stocks that have moved within the week have gone down, and the relapse in Argentine, Greek, Japanese, and Russian bonds has been unpleasant. German 3 per cents. also continue to lose ground, and could not be sold much above 80. Brazilian bonds have been unaffected. The postponement of the new loan would have caused them to rally in ordinary circumstances.

Home and Other Railway Stocks.

All the English Railway dividends have now been declared, and we must repeat the hackneyed saying that in ordinary circumstances their effect on prices would have been favourable. No company of any importance has paid less on its ordinary stock than it did a year ago, and some few have paid a fraction more. Amongst those who just maintained the dividend, the North-Western is conspicuous in showing the power to have increased it had the board so pleased. A belated wisdom, however, seems to have touched the minds of the company's directors, and they have actually put aside £70,000 to form the beginning of a reserve. That would have been held an excellent symptom had we been able to stop to think about it. As it is, the incident has passed almost unnoticed except by some of the newspapers, and the market has been heavy and declining day after day. Investment goes on, but in a hesitating, timid fashion, which renders the volume of buying wholly inadequate to dispel the black fog. Stocks have not lost ground much on the week, but they do not like to be looked at. North London actually rose on the report. Preferences rarely resist the current.

The weakness extends to other railway sections, but has been most conspicuous in the Yankee market, where the demoralisation has been such, owing to the crash of prices on Wall Street, that most people have avoided the spot. It is just as well, because the trouble is by no means over in New York, in spite of the rally brought about last night by "bear" closing on Wall Street. It may be that the Standard Oil people have ceased to support prices in revenge for the heavy fine imposed upon the company by the Chicago judge, but it may also be that many of these stirring and bold financiers are getting to the end of their tether, they and the credit companies they have utilised in their campaigns of robbery. Any way, New York is the chief visible danger spot in the world of finance, and the best thing people here can do is to keep away from it, so as to be able to follow the ups and downs with serenity of mind. Yesterday the market was treated to the pleasing news that the Union Pacific board has graciously condescended, after a delay suited to its game, to declare another quarterly dividend on the company's ordinary stock at the rate of 10 per cent. per annum, and after a violent day's contest between the rival players the shares left off $\frac{1}{4}$ better. That their price should be under 140, and that Southern Pacific shares, which are on a 6 per cent. basis, should be little better than 80 on Wall Street, are significant indications of the real state of affairs. Our own tables and week's price movements impress the same lesson.

Canadian Railway stocks have also been flat, partly because the Montreal market is in intimate relations with that of New York, but also because the harvest reports from the north-west have not only ceased to be glowing, but become unfavourable. Very little is allowed to transpire, but we did note that the wheat yield in the model province of Manitoba is expected to be only an average of 14 bushels to the acre, and that in the more northern provinces of Alberta and Saskatchewan the crop situation is, to say the least of it, extremely precarious. What a failure of the Canadian harvest would imply we need not pause to describe, but holders of Grand Trunk and Canadian Pacific speculative securities are obviously waking up to the danger as well as holders of Hudson's Bay shares, and no magnificence in gross traffic receipts or predictions of dividends can stay the dwindle. The circular of the Canadian Agency, however, says that if early frosts do not spoil the prospect, the northern crops will be all right, though Manitoba will be below the average.

South American Railway stocks have also been depressed throughout the week, without any particular fall. Business is on a mean scale, and that is enough to prevent anything like a movement. Mexicans have been without life, and the great consolidation project of the Mexican Government has left holders of the Central and National companies' securities indifferent.

Bank Shares and Commercial and Industrial Securities.

There has been a slight tendency shown in the Bank shares market to slip back, but it does not imply anything more than the sympathetic movement of the

various sections of the Exchange. Guinness's stock has been strong, but not the rest of the brewery market. On the whole, commercial undertakings have been by comparison steady, and a scattered business is visible therein. It never amounts to much, however, and the speculation lately so active in the shares of motor companies and in nitrate shares has nearly disappeared. Motor shares still incline downward, and we note a nasty drop in Argyll Motors debentures, as well as in the debenture stock of the *Illustrated London News*. Other debenture issues have tended to improve. The Insurance market is also as near as may be dead, with drops here and there, and precious little goes on in gas stocks or in iron, coal, and steel securities, although they also betray some weakness, as well as Telegraph securities. Peruvian Corporation stocks have relapsed. B.E.T. issues show a slight recovery.

Friday Evening's News.

What the evening placards call "another record price" was reached to-day in Consols. They touched 81¼ for money, and some say 2s. 6d. less than this, but the closing price was better at about yesterday's figure. The selling was said to be coming from Manchester, because of the troubles it is wrestling with in connection with the Egyptian collapse, out of which many small embarrassments have arisen, and a few failures, but that does not seem a likely story. What, however, seemed to be true was that Berlin has been a kind of agony seller, and it does not take much stock to depress the market 10s.

Berlin has also been a heavy seller of Canadian Pacific shares, which are a favourite on its market, and to-day's price again dropped back about $5, making the decline $10 in two days. There were reports that a big German discount company was in difficulties, but naturally a story of this kind could not be verified. What was obvious was the weakness of the Bourse and the readiness to sell.

Yankee shares were rather better this morning, because Wall Street closed above the worst yesterday on "bear" repurchases, but the market soon gave way again, and churned about with very little going on, closing above the worst. Mexican things were comparatively steady, but Grand Trunk stocks were inclined to recede on the disappointment of the market with the dividend declaration, or rather with the news that £40,000 of the balance left after paying the dividends on the first and second preference stock is to be set aside to form the nucleus of a pension fund.

Throughout this week the Paris market has been wonderfully calm, not joining in the selling, and even helping a little to sustain quotations, so that Rio Tinto shares, for instance, have often been rather an active market, and although the price left off to-night about ⅝ down on the day, there was much more freedom in dealing than has lately been seen.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Fall: 2¾ p.c. Annuities ½, to 89½-90½, 2½ p.c. do. 1, to 79⅞-80⅛, do. Acct. 1¼, to 79⅞-80⅛, Guaranteed Acct. Exchequer 2¾ p.c. ⅜, to 96-97, Local Loans Acct. ½, to 94-94½, Transvaal Gov. Acct. ½, to 92½-92⅝, India 3½ p.c. Acct. ½, to 97-97½, do. 3 p.c. Acct. ½, to 84⅜-85⅛, do. 2½ p.c. Acct. ½, to 70½-71½.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance sheets direct to the Office of the Investors' Review, Norfolk House, Norfolk Street, W.C., as it is desired to notice in first columns.*

Great Western Railway.

Last half-year this company's gross [illegible] and the working expenditure [illegible] showed an increase of £135,800, but [illegible] £274,000 and the proportion of expenses to receipts was 55.34 per cent. The net revenue was therefore [illegible] £2,300,545. Of this increase £31,615 [illegible] by "interest and dividends on [illegible] stocks and loans [illegible] stocks, rents of leased lines and other [illegible] altogether £208,388, so that the [illegible] after meeting the dividend on the [illegible] stocks, which took about £303 more, [illegible] than in the corresponding half-year. [illegible] the directors

pay only the same dividend at the rate of 3¾ per cent., carrying forward, however, £80,067 against £42,002 brought in a year ago. But this carry forward is fully £5,700 less than the amount brought in from December. As usual with railways, the heaviest increase in working charges fell upon locomotive power which cost £124,246 more. Maintenance of way, &c., went up £21,165, carriage and wagon repairs £23,773, traffic expenses £64,613 and general charges £9,365. Law and Parliamentary expenses, too, were greater by £2,217, but there was a small saving of £2,785 in compensation, there being an increase in the sum paid for damage and loss of goods, but a decrease of upwards of £7,000 in the charges for personal injury. A saving of £8,945 was also effected in the charge for rates and taxes, but steamboat charges went up by no less than £38,263, and nothing is said in the accounts as to the receipts to set against this heavy item. The only entry at all relating to sea carriage is dock and harbour dues, wharfage, &c., which gave £19,780 in revenue, being rather more than £1,000 up. Capital expenditure in the half-year came to £1,016,453, of which no less than £308,593 went into new working stock. The Cork City Railways and the Fishguard and Rosslare Railway and Harbours took £61,150, and £420,475 nett was sunk in lines open for traffic. In the current half-year the expenditure is put at £800,000 including another £100,000 for working stock. Premiums to the amount of £107,495 were received on the new stock issue during the past half-year, making the total amount received by the company on this score to date £10,430,330, and in spite of its heavy current expenditure, the overdraft on capital account at the end of June was only £421,500, or less than half the amount of the trust funds in the company's hands. It is thus in no immediate need of further appeals for money, but an indefinite amount of capital outlay lies ahead, and the company has many projects in hand or in process of incubation which will demand more or less weighty drafts upon capital. The Great Central Railway Bill, for instance, has become law, and under it the joint railways of the Great Western and Great Central companies are to be leased by the joint committee of these two companies for a term of 300 years, renewable in perpetuity at a guaranteed annual rent of £87,500. On the security of this rent the joint committee is empowered to issue £2,500,000 Great Western and Great Central 3½ per cent. guaranteed stock, the proceeds being paid over to the two companies respectively to recoup expenditure already incurred, and to meet further expenditure. A vote of the proprietors is also to be asked for at the meeting to sanction an outlay of £484,000 on a variety of small improvements, several of them being mere votes on account. A further sum of £250,000 is also to be devoted to the Fishguard and Rosslare Harbours undertaking, and an issue of share and debenture capital to an aggregate of £550,000 is in contemplation, as authorised by the Windsor and Ascot Railway Act of 1898. These are but samples of the capital demands lying ahead, and as long as the outlay continues on anything like the present scale, while working charges tend to expand, we fear it would be unwise to speculate for an increase in the dividend paid upon the ordinary stock. The dividends just declared are payable on the 20th inst.

North-Eastern Railway.

In the June half-year this company's gross receipts amounted to £5,017,674, an increase of £275,526 on the corresponding half-year. Expenditure, however, went up by £195,937 to £3,213,340, so that the increase in the nett receipts at £1,804,334 was only £79,589. All branches of revenue showed increases except the cattle traffic, and it fell off only £192. In mineral traffic the increase was £161,694, in goods £63,672 and in passengers £26,714. Parcels, mails, &c., gave £5,205 more, and the miscellaneous income was increased by £18,433. Against this we have to place very heavy increases in some of the items of current expenditure, locomotive power standing out with an increase of £80,069, followed by an increase of £46,334 in traffic expenses and one of £42,502 in carriage and wagon repairs. Compensation also went up by £17,619, and maintenance of way, &c., cost £16,050, the only substantial decrease being in rates and taxes, down £12,289. Also £2,859 less was spent in law and Parliamentary expenses. One reason of the increase in the current working charges was doubtless the augmented train mileage, which rose by 611,806 miles, but dear coal is the main cause and higher pay follows. The proportion of expenses to receipts was 64 per cent. After meeting all preferential charges, the directors were able to announce a dividend at the rate of 5½ per cent. on the consolidated stock for the past half-year, or ¼ per cent. per annum more than in the corresponding half of 1906. This absorbed £863,866, or £39,333 more, and left £101,017 to be carried forward against £82,889 brought in. Capital expenditure during the half-year amounted to £418,559, against which £301,796 was received, including £22,714 in premiums. Altogether the company has received in premiums on its stocks and shares £5,827,609, and yet at the date of the balance-sheet the capital account was overdrawn by £2,393,482. Of the past half-year's expenditure £210,033 went into lines open for traffic and £128,221 into new working stock, making the total expenditure to date on working stock £13,448,224. Apart from £20,800 laid out from capital in the six months on the Wilsons and North-Eastern Railway Shipping Company, none of the dock and shipping undertakings in which the North-Eastern is interested demanded any further capital during the half-year. For the current six months the capital expenditure is estimated at £592,700, of which £50,000 will be on working stock, £85,000 on the Hull Joint Dock, and £290,000 on lines open for traffic. Of this last item, however, £50,000 is attributed to Hull Docks. Interest, rents and other fixed charges were in the aggregate rather less last half-year than in the first half of 1906, but debenture stocks required £2,475 more and £10,000 more was absorbed by North-Eastern Railway 4 per cent. preference stock, so that the capital charges do eat into the nett revenue year by year. At no distant date, moreover, another issue of capital will be required, because the capital account is overdrawn by upwards of £300,000 beyond the amount of the various trust funds in the company's hands. Each half-year now the directors set aside £20,000 to the reserve, and in the past six months £35,000 was charged to revenue as "special expenditure on motor omnibuses"; hence the balance available for dividends on the preference and ordinary stocks was only £87,685 larger than in the corresponding half-year, notwithstanding the saving of £9,209 in the fixed interest, rental and other charges. What becomes of the money set aside to reserve we cannot say, the accounts giving no indication. The money, in other words, is all absorbed in the current requirements of the undertaking. The dividends are payable on August 17.

Midland Railway.

In the June half-year this company's gross revenue from traffic rose by £245,873 to £6,002,485 of which passenger traffic gave £28,307 more, including the receipts of the Burton and Ashby Light Railways, merchandise £69,798, cattle £2,745 and minerals £145,023 more. Profit, however, did not correspond for working expenses amounted to £3,892,938 or £210,474 more, so that of all the large gross increase only £35,394 remained as nett gain, the ratio of expenses to receipts being 64.86 per cent. Miscellaneous receipts, however, gave upwards of £12,000 more, so that altogether there was an increase of £48,000 in the free revenue and the directors in spite of an expansion of about £18,000 in the prior charges, rents, &c., raised the dividend payable on the old ordinary stock by ¼ per cent. to 5 per cent. per annum. This gives 25s. each to the preferred and deferred converted ordinary stocks. Among the items of working expenditure that went up the greatest increase was in locomotive power which at £1,248,267 was nearly £141,000 higher. The increase in maintenance of way was under £21,000, but traffic expenses rose by £45,321 and there was also an increase of £6,208 in the cost of carriage and wagon repairs. General charges, too, were nearly £3,000 up, but law charges fell off almost £1,000 and compensation, at £33,796, was also over £700 down, while the company saved nearly £5,000 on rates and taxes. For all that the current expenses were heavy and from the way wages have gone up in all branches of the business except under repairs and renewals we fear that with dear coal added the second half of the year will show no improvement on the first. Happily the Midland board is now restricting its capital expenditure and last half-year laid out only £372,928 of which a mere £26,519 went into new working stock. On lines open for traffic, however, the expenditure was £288,031 and in the current half-year an outlay of £350,000 altogether is estimated for. Small as such aggregates are compared to what used to be the habit of the board they must involve another issue of capital at a not distant date since the capital account was overdrawn on June 30th last by £950,971. No doubt the company has nearly £1,700,000 in trust funds to draw upon, but as these appear to be absorbed at present wholly in the business it might be somewhat difficult to lean very much further upon them. And what is now the position of the superannuation fund to which the company owes £1,141,842? Dividends are payable on the 24th inst.

Metropolitan District Railway.

The best we can say about this report is to express thankfulness that it is no worse. There is indeed some improvement on the half-year, in spite of the serious decrease in the number of passengers carried. This was altogether about 5,117,000, of which 1,970,678 were persons lost hitherto travelling with workmen's tickets. Probably this reduction in numbers is the result of the higher fares, and at any rate the average receipt per passenger went up by .24d. or 14.37 per cent., so that the gross income of the year was after all only £427 worse at £220,628. Working expenses were brought down by £22,976 to £143,963, and one way or another the nett revenue account deficiency was reduced to £18,035 as compared with £39,984 a year back. To this, however, £10,156 has to be added, being the company's proportion of nett revenue arising from the City lines joint undertaking which has to be set aside to provide a dividend on the 4 per cent. guaranteed stock. That stock accordingly gets a distribution at the rate of 1⅝ per cent. per annum as against a 1½ per cent. rate this time last year, and the entire deficiency for the half-year chargeable to capital under the company's statutory powers is brought up to £28,192. On December 31 last the amount so carried to capital account was £47,860, and the entire capital expenditure of the past half-year, this included, was £137,588, about £71,300 having been spent in rebuilding and improving stations and works and in providing more electric rolling stock. How the company is going to go on meeting outlays of this kind is more than we can guess, for its balance-sheet is pitiful to behold, the capital account being overdrawn £313,442 and the company being £250,000 in debt on temporary loans, which it has no means of paying off.

Alexandra (Newport and South Wales) Docks and Railway.

Gross receipts for the half-year ending June 30 show an increase of £1,981 at £129,785 and working expenses an increase of £1,437 at £75,771, giving a ratio of 59.49 per cent. com-

pared with 59.29 per cent. a year ago. Nett revenue is therefore up £544 at £52,577. Fixed charges, including interest to bankers, absorb £19,437, an increase of £5,916, leaving £33,140, of which the dividends on the A and B preferences absorb £24,322, so that £8,817 remains to be carried forward or £6,264 less. Capital expenditure during the half-year amounted to £222,988 and the estimated further spending is £570,000, of which £202,000 will be spent during the current half-year, to meet this the company has further capital powers including loan capital of £464,210. In the meantime £290,450 has been borrowed from the company's bankers, hence the increase in fixed charges. On outstanding accounts £121,267 is due against £40,540 due to the company, cash at bankers and in hand amounts to £34,925. Of the expenditure on new works £14,748 is chargeable to nett revenue account, an addition of £8,780 during the six months, for the present this figures as an asset. It is to be hoped that the various extensions will soon be productive enough to allow this item to disappear.

East and West Yorkshire Union Railways.

For the half-year ending June 30 gross receipts were £11,656 an increase of £221, working expenses £6,480 an increase of £1,195, nett revenue is therefore down by £974 to £5,176. Partly owing to a larger balance brought in and partly to a decrease in the cost of interest, the balance of nett revenue, after providing for debenture interest, is only down £195. A dividend at the rate of 4 per cent. on the preference stock leaves £945 to be carried forward. Capital expenditure amounted to £708, during the current year it is estimated £689 will be required, and in future half-years a total of £7,503, but the unexhausted powers are only £1,626, so a further creation will have to be sanctioned if plans are carried out. The general balance-sheet shows a balance of £869 on outstanding accounts in the company's favour, but £1,503 is due to bankers, and cash in hand is only £15, not a very cheering statement.

Cork and Macroom Direct Railway Company.

This Irish road shows an increase in its gross traffics for the half-year of £253 with a total of £9,073, and working expenses an increase of £138 at £4,933. Suspension account is credited with £200, and the balance is sufficient to pay the preference interest and a dividend at the rate of 3 per cent. on the ordinary capital, leaving £469 to be carried forward, or £67 more.

Brazil Great Southern Railway, Limited.

For the year 1906 this company again shows a balance to the credit of general revenue account, but the total is not brilliant. Nett revenue in milreis shows an increase, but working expenses absorb all but £230, as the balance of the total cost of the new workshops has been written off—a correct proceeding. Apart from this extraordinary expenditure working expenses show a decrease in percentage, but are still very high at 86½ per cent. Profits on working the Porto Alegre and Uruguayana roads show an increase of £608, but the loss on the ferry is increased by £93. A balance of £2,167 is shown to the credit of the account as against £3,861 a year ago, adjustment of exchange yields a debit of £464 instead of a credit of £1,572, nett revenue is therefore only £1,739 compared with £5,469. Under its guarantee the Brazilian Government has paid £40,500, transfer and other fees and interest bring up the total of nett revenue to £42,466, debenture interest, sinking fund and other charges require all but £2,962 of this amount, which added to the amount previously brought forward brings up the total of revenue credit to £31,315. On the other side of the balance-sheet there are unfortunately various suspense accounts amounting to £67,034 and until these have been wiped off the auditors in their report state that no dividend can be distributed. The balance-sheet shows very little change in its totals. Debentures for £7,800 have been redeemed during the year and reserves show an increase of a similar amount, the liability under the St. Angelo suspense account has been increased by £3,218 which has been added on the credit to the amount owing by that railway, £1,756 has been written off the discount and charges on the issues of debentures leaving £8,419 still to be dealt with, cash at £7,079 shows an increase of £1,348. In their report the directors state that there appears to be some disposition on the part of the Government to settle the company's claim arising out of the cancelment of the St. Angelo concession and they hope it will be shortly arranged. A new road is under construction, which it is expected will be ready by the end of the year and will form a link between the Great Southern and the railways of Rio Grande do Sul. Apart from this there is also a movement on foot to build an international bridge across the Quarahim connecting with the North-Western of Uruguay railway. Both these schemes should benefit this company in time.

North London Railway.

Gross receipts for the opening half of the year were £252,302, a decrease of £1,457, but the expenses were reduced by the considerable sum of £11,674 at £148,935, the proportion of expenditure to revenue being 59.01 per cent. compared with 63.27 per cent. There was a decrease in the number of passengers carried of 605,285, and the season tickets fell off 624, leading to a decline in passenger revenue of £6,011. The drop is principally due to the competition at lower fares of the L.C.C. trams along the Kingsland-road, and to the diminution in the city traffic from the districts of Kilburn and Hampstead through the continued competition of motor omnibuses. Happily, there were substantial increases in merchandise and minerals which went up £3,030 and £1,148 respectively, but the expenditure side of the account is without question the most satisfactory. An important saving has been effected without in any way starving the line, so far as we can see. Nearly £1,[illegible] on maintenance, locomotive power cost less, and traffic expenses were reduced almost £3,[illegible]. General charges were down on a smaller scale, law charges fell over £[illegible], and Parliamentary expenses £1,772. Then rates and taxes were [illegible] £2,[illegible], a highly gratifying saving, [illegible] and about [illegible] £882, and credits from other [illegible] £1,772. Balance of nett revenue is therefore £[illegible], and the balance brought in was larger as well as [illegible], so that altogether the disposable [illegible] with £98,311. After meeting fixed charges and [illegible] the directors add £[illegible] to the reserve fund, [illegible] sums withdrawn in the last year or [illegible] dend at the rate of 4½ per cent per annum on the preference stock, carrying forward £6,148. There was a small [illegible] account of capital in the half-year, but the [illegible] drawn £98,325. Dividend payable August 17

Cardiff Railway Company.

For the six months to June 30 the gross [illegible] an increase of £15,455, and the working charges went up by £10,906 to £148,868, leaving the nett [illegible] good at £86,174. Merchandise [illegible] increase, and the revenue from [illegible] principal gain was in the dock dues and other receipts, larger by over £11,000 at £261,730. The [illegible] docks during the half-year was the largest [illegible] ports and exports amounting to 5,928 [illegible] 11,856,812 tons per annum, further [illegible] trade. Important items of expenditure were [illegible] the principal increase being connected with the [illegible] maintenance of docks and works, up £5,413. [illegible] £2,000, locomotive power cost about £[illegible], and traffic expenses advanced £2,172. General charges [illegible] Parliamentary expenses were all on a higher [illegible] taxes were down a few hundreds and law charges [illegible] lower. Balance brought in from the [illegible] £43,379, an increase of no less than £[illegible] credits £35,263 on account of interest [illegible] struction, making the sum available £164,[illegible] Debenture interest takes the same, £[illegible] general interest £4,502 more at £21,[illegible] dividend. Preference and preferred ordinary [illegible] as before, and after again providing a dividend [illegible] per annum on the ordinary shares another £[illegible] tingency account and £31,381 extra at £[illegible] ward. Capital expenditure in the half-year was £[illegible] the company cannot go on much longer without a new issue, because the account is overdrawn £1,[illegible], and temporary advances and loans from bankers have been [illegible] of £1,274,422. The company has opposed the Bill relating to the tonnage measurement of vessels introduced by the President of the Board of Trade.

Cambrian Railways Company.

A very poor half-year was that ended June [illegible] company. Gross receipts showed a decrease of £[illegible], and the saving in working expenses was only £[illegible], the figures being receipts £142,121 and expenses £[illegible]. The [illegible] the decrease in the revenue and ascribe it to the general depression of trade in the district, passenger [illegible] being taken off over the entire system, but the falling [illegible], which amounted to £2,508, they ascribe principally to the loss of exceptional business, and they hope that the decrease will be only temporary. The balance [illegible] £47,031 against £49,848 a year back, but £12,329 was brought forward. Even so, there would not have been enough [illegible] the interest on the "A," "B," and "C" [illegible] other fixed charges, such as £3,210 for [illegible] interest, had not £3,500 been taken from the general [illegible] suspense fund. After that, too, only £[illegible] forward to the new half-year. In spite of this [illegible] £7,052 was spent on capital account within the [illegible] that account is now overdrawn by £[illegible], the company having temporary loans outstanding to the amount of £[illegible]. A more hopeless-looking position it would be hard to imagine.

Liverpool Overhead Railway Company.

There was a further small decrease of 21,[illegible] in the number of passengers carried during the past half-year, the total being 5,423,595 compared with 5,445,100 in the [illegible] of 1906. The through traffic to Southport and Ainsdale in connection with the Lancashire and Yorkshire Railway [illegible] make slow but steady progress. Revenue showed a trifling increase at a total of £37,020 and as a small saving was effected in the expenses, which reached £[illegible], the balance carried to nett revenue account is up £728 to £7,884. Balance brought in was larger by £462 at £1,240 and sundry [illegible] £327 making the sum for appropriation £[illegible] with £11,120. Fixed charges were the same and after providing the preference dividend the directors propose to pay [illegible] £4,452 meaning that once more the unfortunate ordinary shareholders receive no dividend.

Midland Great Western Railway of Ireland.

Gross receipts for the half-year to June 30 amounted to £280,747, including rents and tolls and dock dues from the Royal Canal, an increase of £11,182 as compared with a decrease of £3,200 last year. Working expenses were £[illegible], an increase of £13,513, of which £7,489 fall to [illegible], [illegible] a

nett decrease of £2,351 in the balance carried to nett revenue. The balance brought in was, however, £3,730 up, and with a small addition from interest the free revenue, after paying debenture interest, rent charges, and preference dividends, allows of a dividend at the rate of 3 per cent. per annum on the ordinary stock, with £5,891 forward against £4,690 a year ago. Only £1,962 was spent on capital account last half-year, but the account is £16,245 to the bad.

Great Southern of Spain Railway.

There is not much to encourage shareholders in the report just issued by this company for the year 1906. The nett result is an increase in the loss of £2,131, making the total to the debit of profit and loss account £6,432. Difficulties appear to have been numerous and working expenses have been very heavy, but an effort is to be made to further develop the mineral traffic. More capital is necessary, and the directors propose to increase the loan of £75,000 to £116,000, giving as security additional £84,000 6 per cent. first mortgage debenture stock, bringing up the total "in pawn" to £200,000.

Manchester Ship Canal Company.

Half-year by half-year this company's business continues to grow and the sea-borne toll-paying merchandise that passed over the canal last half-year was, at 2,112,813 tons, 158,770 tons more than in the corresponding half of 1906, but there was a slight decline in the barge traffic. Receipts, however, showed an increase of £15,157, while working expenses went up only £827 because the expenditure on the repairs at the Irlam Lock was £6,000 less than in the corresponding half-year. Therefore the nett profits went up by £14,330 and the entire free revenue was £131,033 including £17,408 from the Bridgewater Canal undertaking which gave slightly less than in the corresponding half-year. This revenue, however, was all absorbed by the interest upon the company's debenture stock and £34,026 had to be added to the capital account representing the arrears of interest owing to the Corporation of Manchester on December 31 last, this taking the form of preference stock issued to the Corporation, the total amount of interest on new mortgage debentures belonging to the Corporation of Manchester being £80,000. A balance of £13,974 is left to carry forward after meeting this charge and the rents of transit sheds and of Dock No. 9 together with the interest on the first and second mortgages and perpetual mortgage debenture stock. Up to date the total capital outlay on the undertaking, including the above-mentioned £34,026, is £16,676,690, but as we have often remarked, Manchester and all the surrounding district has gained much more by the outlay upon the canal and the benefits accruing therefrom than any the mere balance-sheet or profit and loss account could reveal.

Millwall Dock Company.

During the past half-year 642 ships of a nett registered tonnage of 559,020 entered the company's dock, an increase in numbers of 21 and in tonnage of 30,948 compared with the corresponding period of 1906. The improvement, however, has yielded only a small profit to the company, the directors say, it being mainly composed of vessels entering to load outwards or going to dry dock. In the former case the goods for such vessels are mostly shipped overside and the company is debarred by statute from making any charge thereon, although accommodation has to be provided for the craft carrying these goods. In the latter case the dues are only nominal. Revenue, indeed, shows a sharp falling off, and it appears that the heavy decrease in the imports of grain from North Russia, of oilcake from Egypt and Russia, and the reduced boiler rates have seriously affected the earnings. Receipts from all sources were less by £5,547 at £99,219, against which the expenses were lowered by £4,419 to £80,360, so that after providing for interest on the debenture stock the balance remaining was something more than £1,000 down at £6,573. On December 31 last there was a balance standing to the credit of the perpetual 5 per cent. preference stockholders 1866 of £12,250, and this sum will be distributed on September 2 next. In regard to the Port of London question the directors boldly remark that the President of the Board of Trade announced in April last that it was the intention of the Government to deal effectively with this problem in the course of the next session of Parliament.

South Metropolitan Gas.

Every item on the credit side of the revenue account for the six months ending June 30 shows an increase. Total receipts were £984,586, an advance of £61,150, working expenditure amounted to £764,995, including £45,590 paid to the workmen's co-partnership for the whole twelve months; last year, including £43,962 paid to the same account, the total was £715,801. Nett revenue is better by £11,955 at £219,591, to this is added balance brought forward £165,261 and £295 interest on bankers' balance, the dividend for the latter half of 1906 took £174,625, interest on debenture stock, temporary loans and deposits £33,396, leaving a balance of £177,127 for dividend on the ordinary stock. During the year £79,895 additional capital was issued at a premium of £22,371, so the dividend at the same rate of 5½ per cent. per annum will absorb £176,822 leaving £305 over. Reserve, leasehold, renewal and insurance funds have been increased by the interest on the amounts invested from £310,467 to £315,543, including £300 added to leasehold renewals from revenue account. Of this sum £231,414 is represented by investments, cash in hand and at bankers amounts to £70,053, stores to £388,324, various debtors for rentals, arrears, fittings, &c., to £332,342, the total being £1,031,553. Among the liabilities the balance of capital was £316,223, creditors £72,616, consumers' deposits £20,202, debenture interest £27,010, workmen's bonus and savings deposited £61,202 and superannuation and guarantee funds £40,427, so the company's financial position is good. Owing to the increased cost of coal the directors have been compelled to raise the price of gas from 2s. to 2s. 3d. per thousand and stockholders are warned that their dividend for the coming year must be reduced under the sliding scale. On a 2s. basis the maximum rate of dividend allowed is £5 14s. 8d., but only £5 10s. has been distributed, the immediate shrinkage is therefore only 3s. 4d.

South Suburban Gas Company.

This neighbour of the South Metropolitan did very well in the June half-year, and the ordinary shareholders get their usual dividend at the rate of 5½ per cent. per annum. As in the case of the South Metropolitan, Sir George Livesey, the chairman of the company, devotes most of the space at his disposal in the report to an exposition of the consequences of the rise in the price of gas. Consumers supplied by this company have now to pay 3d. more, or 2s. 7d. per 1,000 feet, and by rights, according to the sliding scale, the dividends paid to the stockholders ought to be reduced by 6s. 8d. per cent. or £2,016 per annum, but as since the last reduction in price it has been 3s. 4d., or £1,008 a year below what the shareholders were entitled to, the actual reduction is only to be 3s. 4d. This means that shareholders, as long as the price of gas is maintained at 2s. 7d., will get £5 6s. 8d. in dividends instead of £5 10s. Everything is all right in the balance-sheet and profit and loss account, so that we need only add the information that employees also will suffer in the amount of bonus to be paid to them, which will be 5 per cent. instead of 6½ per cent., or about £700 less.

Brentford Gas.

An increase of 6.70 per cent. in the quantity of gas sold during the half-year is regarded with great satisfaction by the directors, and rightly so. Revenue shows advances in all departments and amounts to £218,580, an increase of £16,929, working expenses rose by £14,922 to £173,379 leaving a balance of £45,201 or £2,007 more to be taken to nett revenue account. Including the balance from last year and deducting debenture interest the total available for dividends amounts to £94,539. Dividends on the 5 per cent. preference stock and on the consolidated stock at the rate of 12½ per cent. and on the new ordinary at the rate of 9½ per cent. require £39,250 leaving £55,289 to carry forward as against £53,306 brought in. The balance-sheet shows a comfortable financial position and careful management. Cost of coal, &c., will no doubt increase during the current half-year, but there is a good margin for the company to fall back upon.

Workington Iron Co., Limited.

"In these circumstances the company's sudden jump into prosperity may not turn out to be a mere flash in the pan, and if the price of the shares seems high the modest capitalisation and the good financial position must be taken into account. In a word, an eye should be kept on this enterprise." That is how we wound up our comments on this company's report a year ago and the shares which then stood at under £3 have since been up to £7, the present price being about £6. Last twelve months to June 30 the trading revenue and interest came to £96,223 or £25,768 more, rents and transfer fees gave a few pounds and £7,000 is transferred from reserve making £103,421 in all. A sum of £5,000 is allowed for depreciation, re-lining, revenue and repairs, leaving £98,421 exclusive of the small sum of £101 brought in. Preference dividend requires £3,750 and besides giving the ordinary shareholders a dividend of 50 per cent. or 20 per cent. more the directors declare a bonus of £1 per share or another 100 per cent. This bonus will take the form of a fresh issue of shares, proprietors getting one new share for every one held, so that in future the ordinary capital will be £125,000 instead of £62,500 and the money will still be retained in the business. At the same time any shareholder who likes can have the cash, but in view of the company's prospects we may be sure that all will go for the shares. The company is interested to the extent of £50,000 in the New Mysore Manganese Company and the directors are highly pleased with the position of this concern. It ensures a regular supply of manganese ore and now that the railway from the mines to the Southern Mahratta Railway has been practically completed transport will be greatly facilitated. Another interest is in the Bigrigg Mining Company and apart from these investments the undertaking possesses a good supply of liquid resources. Trading accounts are well in favour, cash is £16,793 and £40,000 of Consols are taken in at 84. The reserve fund now amounts to £30,000 or nearly a third of the ordinary capital outlay.

Normanby Iron Works Co., Limited.

Business was so good in the year to June 30 that even this company further improved its position. Profits were up about £3,700 to £30,249 and after meeting the regular fixed charges the directors write off special expenditure incurred in the year on furnaces and stores, relining, &c., £9,200, besides transferring £2,500 to the depreciation fund. Three years' preference dividends are then paid and for the first time since 1901 the ordinary shareholders stand in for a 6 per cent. return. A balance of £1,896 is carried forward against £1,619 brought in. No expenditure was charged to capital in the year, although £675 was paid on account of purchase of additional land, making the total of the property account £153,013. The directors have

not yet commenced a reserve fund. Trading accounts are adverse, stocks are valued at £36,048 and the cash balance is £11,685.

Bryant and May, Limited.

Trading for the year has been on the whole satisfactory say the directors of this company in their annual report made up to June 30, and the figures bear out the statement. Gross profit was the substantial sum of £282,908, interest and dividends produced £7,600, and transfer fees £98, making an aggregate of £290,606. After meeting expenditure of every kind, including debenture and other interest, repairs, maintenance and depreciation, besides £8,584 reserved for depreciation on investments, the balance over is £116,857. Including £11,567 brought forward the sum for appropriation is £128,424, and after paying the fixed dividend of 14 per cent. on the preferred shares, 6 per cent. is provided for the deferred shares, £25,000 goes to general reserve, and £12,224 is carried forward. The company is interested in a Californian business which is said to have made much progress, resulting in the period under review in a nett profit for Bryant and May of £17,921. The property is jointly owned by this concern and the Diamond Match Co., and it has been agreed to purchase a large adjoining property belonging to the Sierra Estates Co. of San Francisco, the total half cost being estimated at £145,000. In due course a separate company will be formed to work the Californian business, and any capital that may be offered to the public will go in the first place to this company's shareholders. The directors have appropriated £18,416, which appeared in the last account under the heading of "interest on Californian outlay reserved," to the credit of a new reserve to cover depreciation of investments, and have added £8,584 from profits making £27,000 in all, which is the actual depreciation at the date of the accounts. All told, the company's reserve funds now amount to £237,000, and the property valuation is £779,164. Investments, including the pine lands and works in California, reach £550,056, stocks-in-trade are valued at £116,459, debtors owe £74,579, and cash and bills stand at £23,535. On the other side £61,223 is due on bills payable, largely on account of Californian purchase, and £57,747 to sundry creditors.

Royal Brewery, Brentford, Limited.

Once again this brewery company sends forth an excellent statement of profits to its shareholders, and 12 per cent. is not to be sneezed at in these retrograde brewery days. Gross profit, everything included, was £73,867, an increase against the previous twelve months of £5,135—the accounts cover the year to June 30—and after meeting the usual charges, which embrace with this company repairs to brewery £1,875, repairs and alterations to houses with compensation £6,026, and depreciation on leases and plant £5,000, the balance over is £48,820. Debenture interest £11,358 indicates a fairly heavy debenture debt, and £5,238 is applied to the payment of directors, auditors and trustees' fees and London office expenses. These things done, and there is still enough left to pay the preference dividend and 12 per cent. on the ordinary shares, allowing £15,000 for the cancellation of "B" mortgage debentures, and carrying forward £5,444 against £5,320 brought in. Reserve is not increased, but we are inclined to think the company does even better to reduce its debenture debt, the "B" issue having now been brought down to £45,000. Additions to property in the year were £4,257 and the depreciation of £2,834 does not look very great. Reserve, however, is £58,000, and there is a special rebuilding fund of £31,799, which, however, has been spent. Depreciations on loose plant, &c., were in excess of additions, but the free resources are not specially lavish.

Parker's Burslem Brewery, Limited.

Trading profits for the year ended June 2 showed a further improvement of £7,890 at £92,459, and with a few pounds more at £13,919 from rents and transfer fees the total income was £7,908 larger at £106,378. On the other hand, expenses rose by £2,027 to £22,703, repairs took £10,479, and after providing directors' and trustees' fees and £3,729 for licensing contribution and writing off £2,000 in respect of licences surrendered, the nett profits came to £66,617 compared with £62,729. Debenture and other interest required £915 less at £19,891, and with a considerably larger balance of £10,079 brought in, the total available for distribution was £10,076 up at £56,355. Out of this £7,500 is again put to contingency fund, but this time the directors also make a much needed addition of £7,000 to reserve, after which they pay an extra 1 per cent. at 9 per cent. on the ordinary shares and increase the sum carried out from £10,079 to £11,105. No depreciation allowance on the property seems to be considered necessary and the capital outlay, after deducting the amount received as compensation for loss of licences and the sum written off out of revenue, shows a nett decrease of no more than £3,222 at £1,102,901. Against this the reserve will now stand at £190,000, but with the exception of £15,070 in "trade investments" taken at cost, it is all employed in the business. Liabilities to sundry creditors come to £16,836, and the loans from the bankers have risen by £2,386 to £73,993, and to meet these there are sundry debtors £20,021, mortgages and loans granted £19,022, and cash £83,481, while stocks have increased by £5,981 to £31,878.

J. P. Restaurants, Limited.

Not only its own shareholders but those of the British Tea Table Company will study with interest the second annual report of this promising venture. The why and the wherefore of its existence need not be again referred to, for we deem an amalgamation between the two concerns inevitable one day. Only in that way can the services of Mr. John Pearce be made more secured for the British Tea Table and without his shrewd knowledge of the mysteries of profitable cheap catering the outlook for the older concern seems dismal indeed. It is a great pity the rupture was ever allowed to come about, but Lord Iveagh, who holds a kind of swamping vote, seemed to think that a chartered accountant and the chairman of a New Zealand sheep farming business knew more about the game than Mr. Pearce, and there you are. More capital was raised by the "J. P." during the year ended June 30 last, the total now outstanding being £27,931 consisting of £24,301 in ordinary shares and £3,630 in preference shares, while £3,000 has been borrowed from the Bank. At present the company has 13 branches in active working order, viz., eight "J. P. Restaurants" and five "John Pearce Depôts," as against 10 open at the end of the last financial year. Moreover the directors have secured premises for a "J. P. Restaurant" in Blomfield-street, near Broad Street Station, which will come into their possession on September 30, and they are also negotiating for two more suitable premises. Last 12 months the gross profit, interest on deposits and transfer fees made up a total of £4,404, and after providing administration expenses, interest on loan and income-tax, the balance remaining was £3,049. Depreciation to the amount of £941 was provided before arriving at the gross profit, and from the nett credit the preference dividend is met, and 10 per cent. paid on the ordinary shares with £500 to reserve, £100 written off preliminary expenses and £146 carried forward against £108 brought in. Leases are valued at £853 only in the balance-sheet but £26,751 has been spent on furniture, fittings and vans. A sum of £3,860 is due to sundry creditors against £97 owing by debtors, but provisions, trade utensils, &c., stand at £4,193 and about £5,000 is held in cash.

Australian Agricultural Company.

This company managed to do well during the worst period of the long Australian drought and now that conditions are more favourable is enjoying very prosperous times. The coal trade at Newcastle showed a great improvement compared with the previous 12 months although the company did not benefit, thanks to the existence of contracts at comparatively low prices which were not completed until after the expiration of the year. A much better return is looked for in the current year consequent on the increased prices now obtainable, and it is good to learn that the developments at the Hebburn colliery are satisfactory. Revenue derived from the Warrah station including the proceeds of the 1905 wool clip amounted to £67,308 or an increase of £20,430, an improvement partly due to the larger amount realised from the wool clip and partly to the additional number of sheep sold. The first part of the year was not favourable to pastoral operations and at one time the situation was somewhat critical but plentiful rain fell during the month of August. From that time till the end of the year the season was all that could be desired, the run being covered with a plentiful amount of feed and the water supply was ample. Demand for land at Newcastle was limited and only a few sales were made the nett receipts being £16,789 against £23,784. Profit from the colliery was £17,816 bringing up the total nett income to £91,116. There was brought forward a sum of £15,080 making £106,196 from which income-tax takes £3,438 and debenture interest £3,544, while £10,000 is added to reserve. Shareholders have already received a dividend of 40s. per share absorbing £40,000, and another payment at the same rate is now proposed making 80s. or 10s. more, and leaving £9,214 to be carried forward. During the year the capital account was credited with a further instalment of £40,861 received on account of the sale of the Gloucester estate and £15,000 was written off for depreciation of colliery plant. On the other hand £37,018 was expended on a half share of the Aberdare Assnock Railway and £128 for land purchased at Worral, while £23,000 of debentures due on August 1 were repaid leaving £33,840 to the credit of the account. The company's reserve fund is now £60,000 and the general financial position quite satisfactory.

General Electric Co., Limited.

This business was again handicapped during the year ended March 31 by the continued advance in the cost of raw materials, and nett profits showed a further drop of £1,603 at £68,546. Debenture interest and preference dividend having been met, £17,951 or £397 more was written off for depreciation and the ordinary shares received their usual 5 per cent. Owing to the issue of further shares to the directors and staff this distribution required an extra £732, and after giving the managing director and staff a bonus of £3,000 the surplus added to reserve was £2,533 smaller at £9,701. The factories at Salford, Witton, Birmingham and London were again increased by new buildings and more machinery and the funds for this were apparently provided by the issue of 1,405 ordinary shares of £10 each, making the paid-up capital £505,850. Expenditure on property was £19,272 and the nett addition £1,321 at £444,850 against which the reserve will now amount to £118,850, represented as to £55,850 by investments in debentures, stocks and shares. Sundry creditors have been reduced by £13,195 to £245,710 and sundry debtors are £2,107 lower at £342,043, while stocks have risen by £10,288 to £324,803, and cash is slightly up at £9,779.

Electric Supply Corporation, Limited.

During the year ended December 31 this company brought three more of its undertakings up to the revenue earning stage, but so far the increase in numbers has not helped the revenue. Of the various systems at work those in Dalkeith, Dollar, Jedburgh, and St. Andrews earned small profits, but in the case of the Exmouth, Dumbarton, Falmouth and Hitchin enterprises the outgo exceeded income by sums ranging from £58 to £337. The dividend on the Chelmsford undertaking was £260 less at £1,873, but with interest and transfer fees received the gross receipts were £3,071 larger at £7,285. Expenses absorbed £4,499 of this leaving nett profits at £2,786 compared with £1,099. A debit balance of £294, however, was brought forward and as interest on debentures and temporary loans required £2,635 the guarantors have again had to be called upon to complete the sum necessary to pay the final dividend on the ordinary shares for the year. Capital expenditure for the year was £82,933 and the total is now £271,924 in addition to which £1,809 has been spent on temporary plants and deposits and preliminary expenses still figure as an asset for £15,994 against which the repairs and renewal account, thanks to £1,277 contributed by the guarantors, shows a balance of £1,160. Issued capital is £209,480 and the debenture debt amounts to £50,000, but these have proved insufficient and £37,000 has been borrowed from the bankers on the security of £40,700 debenture stock. Creditors are small at £1,630 against debtors £3,562 and cash £1,515.

Electrical Power Storage Co., Limited.

The results laid before the shareholders of this concern in respect of the year to May 31, 1907, are very similar to those of the preceding twelve months, and the directorial remarks are almost precisely the same. There is the complaint about keen competition and the unprecedented rise in the price of raw materials; unquestionably copper has been desperately dear. Profit for the year is returned at £8,751 or £147 more, but the sum brought forward was a trifle down at £425 and the total for disposal is £9,176 against £9,315. This time £2,000 or £500 less is written off patents and goodwill, but another £1,000 is credited to the contingency fund and £786 remains to be carried forward. Patents account will now be reduced to £67,885, but the buildings, plant, tools, &c., were increased by £2,381 and depreciated by £1,650, leaving the item at £17,225. The outlay on maintenance charged to revenue was £3,597. Special reserve is £10,000, and the credit from the past year's profits increases the contingency fund to a similar sum. In other ways the position gives little cause for complaint. Only £11,458 is due to sundry creditors against debtors £18,792 and stocks £24,794. Investments, chiefly high-class, are £15,116 and the cash balance is £12,381.

International Tea Company's Stores.

A considerable falling off occurred in this company's revenue for the year to April 27 last. Trading profit was £115,078 or as near as may be £16,000 less than in the preceding twelve months, and appropriations have to be cut down all round, excepting, of course, the directors' fees, which are actually a trifle higher at £10,329. Audit fee is £400 as usual, but £2,000 less at £17,000 is allowed for depreciations and only £20,000 instead of £26,000 is added to reserve. Interest and income-tax take £3,015 between them, preference dividend is £36,000 and £30,000 is applied to the payment of a dividend of 6 per cent. on the ordinary shares, all vendor-held, being 2 per cent. less, and £13,334 is carried forward. Reserve will now be £227,384, a good sum at first sight, but surely none too much when we take into account the size of the goodwill, £651,675. Most of it is kept in the business, separate investments being only £25,280, and while the cash balance is pretty fair at £45,997, a temporary loan of £45,996 accounts for much of it. Creditors of £139,225 are not heavy for a business of the size, debtors owe £117,779 and stock is valued at £305,803. Fixtures, fittings, leaseholds, plant, machinery, trade marks, &c., are in at £134,144, and the policy of acquiring the freehold of properties occupied continues, freeholds being now valued at £222,239 against the long leasehold account of £31,179.

Millars' Karri and Jarrah Co. (1902), Limited.

Several adverse influences helped to injure the earning power of this company in the past year, especially the dispute with the men as to wages. This caused a general strike in October, 1906, which lasted for three weeks. An agreement was patched up and the dispute referred to arbitration, but after the award was given in the middle of March last the men refused to accept it and struck work again, the cessation lasting for 14 weeks. Further concessions were then made by the Government in railway rates and an industrial agreement for three years was entered into by the company with its men fixing hours and wages. As yet the increased cost of production resulting from this compact cannot be stated, but in the year ended December 31 last profits show a decrease of £12,029 at £96,613 after deducting debenture stock interest, gross profits having been only £2,540 down at £106,102. With the balance of £40,083 brought forward the company had £136,696 to deal with and of this £35,000 was set aside as reserve for depreciation, &c., while £31,758 went to pay the preference dividend for the year. No dividend is paid on the ordinary capital of £714,300, but a balance of £50,521 is left to carry forward. The balance-sheet shows a decrease in bills payable of £20,451 at £128,528. Money borrowed by the company is also £7,055 less at £62,138, but sundry creditors have risen by £7,471 to £90,400. The capital value of the property or purchase account, as it is called, is now £1,342,527, having been increased by £17,870 during the year, which is an increase greater by £6,330 than that of the preceding year. Stocks of hard and soft wood taken together show a decline of £18,220 at £486,740, the reduction being about equal to the increase shown a year back. Sundry debtors owe the company £33,232 more at £175,823 and cash is down £17,562 to £35,012. Bills receivable are also £3,414 less at £7,749. The company still holds the capital of the Purfleet Wharf and Saw Mills, Limited, at the par value of £100,000 and that company expended £4,745 on capital account last year against which £5,018 was written off for depreciation. It does not appear to earn anything.

Forestal Land, Timber and Railways Co., Limited.

This important Argentine enterprise was put before the public in April, 1906, in a very straightforward fashion, and, we believe, met with a favourable response. It deserved to do so because the business is unquestionably a good one, and for the year to December 31 last the trading profit was £231,505 or comfortably close to the best prospectus figures. After deducting £88,672 for general charges, depreciation, and amortisation of debentures and £36,525 for proportion of profits attributed to the period from January 1 to April 5, 1906, the date of the purchase contract, the nett credit remaining is £106,308. Interest, transfer fees, &c., gave £1,957, making £108,265, from which London office expenses absorb £1,017, debenture interest £11,542, and trustees' fees and income-tax £951. Then £9,475 goes to reserve in accordance with the articles and £85,279 is left. Under the division of profits the preference shares receive enough to give them their fixed dividend of 6 per cent. per annum, and an additional 3 per cent. with £649 carried forward, and ordinary shareholders receive an actual payment of 9 per cent. practically for nine months, with £1,946 to next account. Remuneration of directors takes £3,966, and of the local board £1,983. Of the profits earned prior to the date of purchase amounting to £36,525 as already mentioned, £10,645 is applied in reduction of preliminary expenses and expenditure connected with the issue of debentures and preference shares, and £25,880 is added to reserve. These preliminary outlays are to be written off in five annual instalments, the amount still remaining to be dealt with being £42,579. Properties purchased have a balance-sheet value of £1,372,826, and the directors intend to build up a depreciation fund instead of writing sums off direct, the first contribution being £27,702. The sum applied for amortisation of debentures was £9,111, of which £8,368 has been used in the redemption of £9,100, meaning a moderate profit to the company. Reserve fund now stands at £35,355. Total sum due to creditors is £396,725 against debtors £114,159, but stocks are worth £343,395 and the cash balance is £65,031. In speaking of the year's business the directors say that notwithstanding the increase of the duty in Germany on quebracho extract, the demand there has been good and prices remunerative, while the requirements of the United States, England and other parts of the world are increasing. The market for quebracho logs was, however, sluggish during the latter part of the year and prices ruled lower than in 1905.

Crompton and Co.

There is a cheerful note in this report, which is justified by the improvement in revenue. Nett profits have risen from £20,060 to £38,291, less loss on old stock sold or scrapped £6,572, leaving £31,719 to credit of nett revenue. After adding balance brought in £5,816 and deducting debenture interest, directors' fees, &c., amounting to £7,370, there is a balance of £30,165. A dividend of 5 per cent. comparing with 2½ per cent. for the previous twelvemonth absorbs £12,750, provision for doubtful debts £1,500, and reserve fund £10,712, making that account up to £20,000, leaving £5,840 to carry forward. Freehold land and premises are valued at £68,686, plant, tools, &c., £79,688, stock and work in progress £141,155, and debtors £142,550 as against creditors £85,727. Nine thousand Electric Supply Corporation shares are valued at £42,750, other investments £13,762, and reserve fund investments at cost £5,921. Patents stand at the trivial sum of £10, but goodwill remains at £10,000. Cash at bankers amounts to £18,896, but there is a loan on the other side for £42,000, so the free resources of the company are not great. The outlook for the coming year is considered satisfactory, but the borrowing powers are to be increased. Several important contracts are on hand, and it is to be hoped that the proceeds of these will be cash. The company is already interested in other undertakings to quite a respectable amount, and such assets are not easily realisable.

Direct United States Cable Company.

This company's report for the first six months of the year shows an increase of £791 in gross receipts or a total of £57,056, a satisfactory result, as last year's receipts were £6,794 in advance of 1905. Working expenses were up £775, so the net increase is not large; but including £17,032 brought forward, there is an available balance of £49,389. Three quarterly dividends amounting to 12s. have already been paid, and a final dividend of 4s. with a bonus of 2s. 6d. is now recommended. These dividends are equal to 4⅝ per cent. as compared with 4¼ per cent. a year ago. Reserve fund is credited with £15,000, and with interest on investments £8,790 and profit on sales of securities £2,367. Maintenance of cable, which is charged to reserve, cost £4,184 or nearly £3,000 less than a year ago, but the directors have decided to make provision to the extent of £40,000 for market depreciation of securi-

ties, reducing the amount to the credit of reserve from £509,905 to £491,968, still a respectable sum. A list of the investments accompanies the report, and shows that they are well spread.

Dublin United Tramways Company (1896), Limited.

Traffic receipts for the six months ended June 30 improved by the substantial amount of £9,902 to £136,213, and as miscellaneous receipts were also better the total income came to £142,362 against £132,033. Working expenses, however, increased by £6,924 to £79,252, the ratio to receipts being 58.18 per cent. compared with 57.26 a year ago, and in addition £3,158 is provided for balance of cost of reconstruction of portion of Dalkey line, and £999 is written off for cost of substituting side for centre poles. The nett income after meeting sundry charges was £894 down at £57,111. To this were added £6,665 or £422 less brought in and £39 from interest giving a total of £63,815 of which debenture and other interest, wayleaves, &c., took £22,100. A year ago the profit and loss account was credited with £2,500 brought forward for current maintenance and charged with £2,000 for the same purpose, but this method has been dropped and there are no such entries on this occasion. The nett surplus now shown is £5,788 down at £41,715, but by omitting to transfer anything to reserve against £5,000 added in 1906 the dividend on the ordinary shares is maintained at the rate of 6 per cent. per annum, and £1,212 more at £6,615 is carried forward. Expenditure on capital account in the half-year was £26,059 making a total of £2,018,617, and the capital is now overdrawn to the extent of £21,817, while the discount on "B" debenture stock masquerading as an asset is £769 up at £25,473 against which the reserve and insurance funds stand at £35,000. Liabilities to sundry creditors have increased by £1,914 to £7,665, but the loan of £9,116 appearing a year ago has been paid off. On the other hand, sundry debtors are £679 up at £4,254 and cash amounts to £4,081, but the sum on deposit which last year was £65,900 has disappeared.

British Steamship Investment Trust, Limited.

This company did pretty well in the year to June 30, the income being £49,135, including £110 brought forward, against £48,549 with £565 from previous account. After carrying £7,460 to the depreciation fund for depreciation on investments, meeting all charges, including directors' fees £2,500, debenture interest £8,550, and interest on bills discounted £3,271, the balance over is £25,491. Dividend of 6 per cent. on the preferred stock takes £14,250 and a final 3 per cent. on the deferred stock, making 5 per cent. for the year, £7,125, leaving £4,116 to be carried forward. It is further proposed to transfer from reserve to deferred stock dividend reserve out of the surplus revenue credited in former years a sum of £4,750 to provide for an interim dividend on the deferred stock in January next. During the year the company had an opportunity of selling a considerable number of shipping investments, mostly in the older type of steamships, and the balance of profit on the realisation of these and some other investments, amounting to over £18,000, has been carried to the reserve fund, increasing it to £95,461. In addition to this the company has a depreciation fund of £74,000, which in the directors' opinion more than covers the depreciation in the value of shipping investments held by the trust. Investments under all heads are valued at £781,031 apart from the separate securities on account of the accumulations.

Milner's Safe Co., Limited.

This is a satisfactory sort of company to be interested in, if one favours industrial enterprises. All the assets are tangible and seem good, there is a moderate reserve fund and profits are on a satisfactory scale. The main items on the credit side of the account are freehold property and building £76,021, stocks of materials and finished goods £53,496 and machinery, plant and fixtures £26,222. Trading accounts are a long way favourable, about two-thirds of reserve amounting to £32,000 is separately invested and cash and bills make up a total of £11,894. Profit for the year to May 31 last was £16,777 and after paying a 10 per cent. dividend there remains a sum of £7,479 to be carried forward against £5,702 brought in. Share capital is £150,000 and there is no debenture debt.

D. and J. Fowler, Limited.

Again a good business was done by this company in its year ended March 31 last and the directors were able to make the dividend up to 7 per cent. per annum on the ordinary shares. The gross profit was only £214 up at £34,451 and the additional payments to the directors for departmental management was rather less than a year ago at £560. After paying the increased dividend £5,614 will be left to carry forward against £4,963 brought in. In the balance-sheet freehold properties, &c., at £109,271 show an increase of £5,461 attributed to the improvements made in the accommodation for the company's business at Adelaide. Goodwill, trade marks, &c., remain at £111,723. Stock-in-trade stands at £146,827 and sundry debtors at £119,262. Machinery is £3,590 more at £22,025, but sundry trade investments at and under cost are entered at £80,809 or £1,152 less, and there is also a decrease of £2,014 in the company's advances against security provided for entirely by a banker's loan. Cash is rather poor at £2,087. Liabilities show no change so far as capital and mortgage debt is concerned, but the company owes sundry creditors £2,018 more at £97,511, and bills payable are £8,359 up at £43,528.

David and Wm. Henderson and Co., Limited.

Rather a poor year was experienced by this respectable shipbuilding and engineering company on the Clyde, and the directors blame two strikes which marred fully [illegible] of the working year and bad weather during the past [illegible] for the mean results exhibited. Profit, at any rate, was only £16,750, and even with the £6,957 brought forward there was only £22,706 available for distribution, out of which £[illegible] was set aside for depreciation at the rate of 2½ per cent. on buildings and 5 per cent. on machinery. Then the preference share dividend was provided which took £15,000 and, this done, only £1,800 was left to carry forward. Business is poor but inquiries for new tonnage being scanty and orders [illegible] secured for Repairing work has also been on rather a smaller scale, but the depression may only be temporary. We, at any rate, hope so.

Armitage Brothers, Limited.

This Nottingham business of wholesale and retail grocers made a profit for the year ended May 1 of £11,861, to which was added £4,922 brought forward. Directors' fees took £1,200, and after providing for debenture and other interest and preference dividend the balance remaining was £9,085, out of which the ordinary shares receive 5½ per cent. and the directors take £600 as additional remuneration, leaving £[illegible] to be carried forward. The café business of F. Morley and Son was taken over at the commencement of the year, and two other businesses were also acquired, the additions to capital account being £15,184, of which £10,098 had not been paid at the date of the balance-sheet. Freehold properties and goodwill now stand at £133,870, while plant, &c., is valued at £11,[illegible], and although the company has been in existence since 1847, there is no sign of any attempt to form a reserve, and the old first and second debentures, which matured on May 1, have had to be renewed. Creditors, including bank overdraft, amount to £15,[illegible], but debtors owe £21,147 and stocks come to £22,[illegible]. Cash, however, is poor at £369.

Imperial Colonial Finance and Agency Co., Limited.

This company's revenue for the year ended [illegible] 1 was £11,053, and after providing interest and administrative charges £9,395 was left. From previous account the [illegible] was £1,347, making £10,742, and the directors find themselves able to pay two dividends of 2½ and 3½ per cent. respectively or 6 per cent. for the year, with an increased balance of £2,211 carried out. The founders' shares do not participate in the profits unless 7 per cent. is paid on the ordinary stock, and contributions are made to reserves. Capital issued is only £150,850 out of £1,150,850 authorised, but investments come to £169,908, so that £15,905 has been borrowed from bankers. Reserve is small at £3,000, but the investments are fully supported by market values.

Gaiety Theatre Co., Limited.

Last Wednesday's meeting of the Gaiety Theatre was rather a lively affair. Agitation has been afoot for some time and a bad report gave the opposition a chance they [illegible] to neglect. The play "The New Aladdin" was a [illegible] and resulted in a heavy loss, the theatre being closed during July, August and September. Income slumped from £[illegible] to £[illegible], but, curiously enough, the profit was only £677 less at £8,[illegible]. Note though that before last year's figures were [illegible] £[illegible] was allowed for depreciation of stage properties [illegible] in the present accounts. But the wastage must be provided for and it is so considerable that almost all the profit disappears in the process as well as the reserve of £12,[illegible]. Hence there is no dividend against 15 per cent. last year and that is where the trouble comes in. Altogether £19,258 is written off stage properties reducing the item to £9,500 and the [illegible] carried to next account is £2,381 against £1,102 brought in. The directors say all this will place the shareholders in a more satisfactory position and as "The Girls of Gottenburg" are [illegible] they have no doubt that for 1907-8 the rate of dividends of late years will be resumed. Perhaps it will be as well to give the present directors a chance of fulfilling this [illegible] rather than put new men on the board who probably know nothing about the business.

New Tivoli, Limited.

An interim dividend of 4 per cent per share was paid last January and the directors now recommend that another 4 per cent. should be distributed together with a bonus of 2s per share, making 12 per cent. for the year. Out of the surplus then left £5,000 is added to the general reserve, making it £15,000, leaving £640 to be carried forward. Other earnings from all sources came to £30,481 and the [illegible] meeting interest on debentures, writing [illegible] £292, and paying all working charges, [illegible] £[illegible]. The balance-sheet looks healthy enough as [illegible] the £[illegible] mortgage upon the property, since the [illegible] £9,000 invested in Consols and County [illegible] £13,122 in cash.

British Oil and Cake Mills, Limited.

This company's interim report, after referring to the death of Mr. Isaac Pearson, the vice-chairman and [illegible], goes on to say that the anticipation of [illegible] carried out at the last general meeting has been realised, the net trading profit for the six months to June 30 being £[illegible], compared with £62,252. Dividends, transfer and other fees produced £709, and after providing all charges, including debenture interest and depreciation, the sum remaining is £[illegible]. Balance brought in was £6,1[illegible], making £[illegible], from which the interim preference dividend takes £[illegible]. The continued increase in the volume of the company's trade is considered

very encouraging, and the board is sanguine that it will be able at the end of the year substantially to increase the reserve.

Colne Valley Water Company.

An improvement of £1,707 to £20,889 in the gross income for the half-year ended June 30 was secured at the cost of an increase of £714 to £8,279 in expenses, leaving the nett revenue £993 better at £12,610. Less, however, was brought forward at £1,660, and the revenue from interest was also smaller at £71 so that the total income was £728 up at £14,341. Of this £1,000 is again put to contingency fund and £71 is written off investments, after which the full dividends are paid on the 10 and 7 per cent. maximum shares against 9 and 7 per cent. a year ago, and £1,292 is carried forward. Capital expenditure was £10,066, mostly in connection with the new well on the company's land in Eastbury Road and the pumping main to the reservoirs at Bushey, but £3,482 was received from debentures issued, including premiums, and the credit balance is now £6,030. The contingency fund was charged with £600 written off old engines and £39 for renewal of mains leaving a balance of £6,223. Creditors are light at £3,984 against £10,118 to come in from debtors, and in addition to £1,545 in cash the company has investments valued at £3,122.

Australian Mutual Provident Society.

So great is the business done by this Australian life office that one wonders its directors should think of going outside their own continent. In the year ended December 31 last the company wrote £4,585,436 worth of new policies, giving it £217,830 in new premiums, of which £59,498 was in single premiums. This was in the ordinary department, and it also did a considerable business in the industrial branch. At the year's end the accumulated funds had been increased by £990,747 to £22,413,827, and the actuarial report showed a surplus of £765,341, of which the board allotted £664,693 for distributing among the members. This sum is calculated to give them reversionary bonuses amounting to £1,200,000. For a colonial company the business is conducted with remarkable economy, and even including in the current expenses such items as the establishment charges of the industrial department, money laid out on improvements to the society's premises, writings off cost of office furniture or writings off loss on foreclosed properties, but excluding the £27,059 paid in colonial taxes, the proportion of expenses to premium income was only about 14.32 per cent. There is nothing to grumble at in that.

London Trading Bank, Limited.

Deposits fell off £4,336 compared with the June half of 1906 and amounted on June 30 last to £72,800. Profits, however, were £81 up at £3,604, and the directors again pay a dividend at the rate of 5 per cent. per annum for the past six months leaving £1,707 to be carried forward, gross profits having been £3,604. There is nothing to say about the balance-sheet, except to mention the fact that the investments remain at £24,381.

Manchester Trust, Limited.

The report for the year ended June 30 states that the Trust has received from the Manchester Investors, Limited, further sums on account of their purchase of the investments of the Trust amounting to £15,138, making the payments to the end of June on account of principal £309,044 and leaving £101,205 still owing. Revenue for the 12 months was £5,411, and £3,234 came in from previous account, so that after providing general charges and debenture interest £6,725 was left. From that a dividend is proposed of 1s. per share on the ordinary shares, carrying forward £4,230. Except that the Scarisbrick Hotel Company, Southport, defaulted on its debentures the income would have been larger by £400, but it is anticipated that the bulk of this will be received during the present year. The investment in this hotel is £10,263, and there is also a guarantee account of £401, while Colonial Government and other securities are held to the value of £21,021. On the other side there is a suspense account in connection with the Manchester Investors of £2,628, but the remaining items are not important.

Mitchells and Butlers, Limited.

The Birmingham imperialists evidently try to drown their tariff sorrows in beer, because this huge brewery business made another stupendous profit in the year to June 30. How many barrels of liquor have to be consumed in order to yield a nett revenue of £218,014 we do not know, but it must be something enormous. This was the nett income for the past 12 months, a moderate increase over 1905-6, and the trifle of £117,570 was brought forward making £335,584 in all. Interest on debentures, mortgages, loans, and deposits makes away with £45,182, and directors' salaries and fees are £6,900. Preference dividend takes about £20,000, and the directors add £40,000 to reserve, feeling bound to strengthen the financial position by every available means, "having regard to adverse licensing legislation rumours." There is not the slightest reason to growl about this, and since the ordinary shareholders still get 18 per cent. they are not likely to complain. The balance carried forward is £118,442. A year ago the mortgage and debenture fund stood at £102,913 and £2,952 was received from interest during the year. On the other hand, £24,200 has been used to pay off mortgages leaving £81,665, and the directors now propose to build up the account to £126,665 by a transfer of £45,000 from the available cash balance. This, by the way, amounts to £188,592. Trade creditors, rents payable, &c., amount to £93,641, loans and deposits are £13,808, and mortgages £348,190. Reserve fund will now be £470,000, and the book value of properties is £2,252,291, without doubt a very powerful position wherever tested.

Chilian Electric Tramway and Light Co., Limited.

Although an English company, this enterprise is entirely controlled by Germans, there being only two Englishmen on the board of nine. Sir Julius Wernher is the chairman, and all his colleagues except these two are of his nationality. This does not make the enterprise any less trustworthy, on the contrary, we should regard it as one likely to be well managed, well furnished, and well looked after. In 1906, however, it suffered misfortune through the earthquake which struck Santiago as well as Valparaiso, and the consequence is that after deducting interest and redemption of debentures, London office and other charges, the year ended with a revenue debit of £23,736. Thanks, however, to £21,289 brought forward, the nett loss carried into the new accounts is only £2,448. Otherwise the enterprise appears to be prosperous and promising. Its business is expanding in the matter of private and public lighting, although not to any very noticeable extent, and the fact that the number of passengers carried was 9,098,500 fewer than in 1905, was simply a product of the interruption caused by the earthquake, which stopped the service altogether for 11 days. Tramways receipts accordingly fell off by $329,366, but a temporary loss of that kind will doubtless soon be recovered, and the company's financial position, as judged from the balance-sheet, does not seem to be in any way unsound, although it does owe £488,000 on debentures and has a formidable-looking capital outstanding of £1,150,000. Debtors and debit balances in Chili come to nearly £50,000 and creditors in London and Chili are owed by the company nearly £46,000. Cash is £25,190. In spite of the effects of the earthquake, &c., the directors assure the shareholders that the power station is now in thoroughly efficient order and condition and that its power capacity has been increased to 5,700 kilowatts. Rolling stock was increased by 10 new cars during the year, and there are 20 more on order.

Midland Railway Carriage and Wagon Co., Limited.

In its year ended June 30 last this fine old company made a gross profit of £36,950. Adding in £3,008 brought forward, there was thus 39,958 to be dealt with, and out of this the directors put aside £4,000 for depreciation of plant and machinery, and £2,000 as reserve against depreciation in its investments. Then the dividend upon the ordinary shares is made up to 7½ per cent. and a bonus of 10s. per share added, making the usual 12½ per cent. for the year. Besides this, £5,000 is added to the reserve, making it now £107,792, after which £3,358 was left to be carried forward. Throughout its history this company appears to have written down on a very liberal scale, and the great quantity of rolling stock, let out on purchase leases or on ordinary hire, manufactured and put upon the rails by the company now, therefore, stands at a comparatively low figure in the balance-sheet. Some additional expenditure, however, has recently been entered into with a view to the production of larger and heavier types of rolling stock than those for which the works at Birmingham and Shrewsbury were designed. Freehold land at Washwood Heath, Birmingham, has been bought, and new works will shortly be erected thereon to meet the growing requirements of the trade. That is all right and proper, and the company will doubtless be able to effect this improvement without getting into debt. Only £33,066 of the reserve fund is invested in marketable securities, but in present circumstances that may be just as well, since, as mentioned above, £2,000 has to be set aside as a reserve against their depreciation. As an example of other writings down, rolling stock lent on purchase leases, originally entered at £276,341, is now in the balance-sheet at £134,203, and rolling stock on ordinary hire costing £172,277 is written down to £14,424. On the items freehold lands, works, &c., at Birmingham £55,328, plant and machinery £23,618, and freehold land, plant and machinery at Shrewsbury £44,521, making an aggregate of £123,466, £57,600 has been written off for wear and tear, making the sum in the balance-sheet only £65,866.

Bank of New Zealand.

As this bank has now absorbed the Assets Realisation Board, its figures for the year ended March 31 last cannot well be compared with those of the preceding year, when the balance-sheet showed, for example, a holding of £1,025,000 of Assets Realisation Board debentures. This item has now disappeared, and has been replaced by Assets Realisation Board assets amounting to £758,199. Taken as they stand the profit figures for the year are good. After providing for all charges and bad and doubtful debts, as well as making provision for an annual donation to the provident fund and bonus to the staff, they were £350,881. Gross profits, in other words, came to £563,688, and expenses of all kinds to £212,807. The directors take no account of the balance of £274,329 brought forward, because it was all distributed either in dividends on the preference and ordinary shares of the bank or handed over to the Assets Realisation Board, which got £174,392. Hence the profits of the past year are alone handled, and after paying away £40,000 as interest on the bank's guaranteed stock and setting aside £16,000 to premises and furniture accounts, about the same as a year ago, the preference shareholders get their dividend made up to 7½ per cent., and the ordinary shareholders get their dividend made up to 10 per cent. for the year, after which £168,705 is transferred to reserve, raising that fund to £250,000, while the officers' provident fund gets £7,000, leaving £31,675 to be brought forward. The changes in the balance-sheet are generally indicative of growth. Thus the bank's liability on deposits rose by £488,883 to £12,909,159. Bills payable and other liabilities

went up by £642,553 to £2,194,814, the aggregate of the balance-sheet, including the £2,000,000 of capital, one-half of which is in guaranteed stock, being £18,395,330. Amongst the assets, cash and bankers' balances are lower by £65,276 at £2,160,605, but call for short notice money is £193,868 up at £3,589,915, and bills receivable are also £383,198 higher at £1,611,842. Investments in the colonies amount to £1,027,840, and the Assets Realisation board assets to the sum already mentioned, while bills discounted show a decrease of £124,144 at £2,389,969. Advances and other securities and debts due to the bank are larger by £909,639 at £6,423,633. Landed property, premises, &c., including £2,865 representing property of the absorbed Colonial Bank of New Zealand, appear for £322,725.

PUBLIC INCOME AND EXPENDITURE.

COMPANY MEETINGS.

CENTRAL MINING AND INVESTMENT CORPORATION.

THE POSITION AND PROSPECTS OF THE RAND MINING INDUSTRY.

The ordinary general meeting of the Central Mining and Investment Corporation, Limited, was held on Thursday, August 8, at the company's offices, 1, London Wall Buildings, London, E.C., Sir Julius Wernher, Bart., chairman of the company, presiding.

The Secretary (Mr. L. Bluen) read the notice convening the meeting and also the report of the auditors.

The Chairman: Gentlemen,—With your permission we will take the report and accounts as read. I am sorry to say that the hopes and expectations to which I gave expression at our last annual meeting have not been fulfilled, and a year's working show, a further heavy depreciation has taken place, principally in the last few months, for up to the end of February last we had about held our own. Our accounts reflect the condition of affairs in South Africa, and highly unsatisfactory as they are in themselves, they present by comparison rather the light than the shadow of a most gloomy picture. According to financial statistics, the value of 44 leading South African securities per end of June was £65,000,000, as against £85,000,000 per end of January, and £154,500,000, compared with the mid-December accounts, 1904. It may be asked how it is that, in the face of a larger output and increased earnings, the price of securities remains on the downgrade. The reply is not to be given in a few words, but one thing is certain—that there is an entire want of confidence generally, and more particularly in South African affairs, and even at the extremely low prices of the day, neither public nor speculators appear inclined to take an interest. Our own case reflects the general feeling, which is that, until all this uncertainty is removed, people will be very careful before putting more money into the Transvaal. The general depression is against us too, and it must not be forgotten that many other Stock Exchange securities have dropped this year from 25 to 50 per cent. within a few weeks, and that Consols are only 75 per cent. of their former value. They fall in spite of there being still about £13,000,000 to invest for the Sinking Fund this year, as we were informed the other day by one of the financial authorities. Some of our largest shareholders in France are so discouraged that they approached us with a view to reconstruction and distribution of our cash assets. We are not inclined to recommend that course yet—we still have confidence. During the 37 years that I have been engaged in mining business at the Cape, I have seen so many changes, so many ups and downs, that even this longest and most fatal period of depression has not crushed all my courage. This is because I know the country and the Rand are all right. Our troubles arise from human errors and shortcomings; but I admit there is a limit to everything, and if after another period we can see no daylight we shall be prepared to discuss the matter. Meanwhile we shall not fail to continue to be on the lookout, and as we are not bound to South Africa we may venture cautiously on other fields. You will see from the accounts that during the last year we nursed our resources to the utmost, and the cash position has not changed much since the last balance-sheet. We examined endless propositions—amongst them very good ones, but the terms asked were such that very little could be entertained, and so in the main we carry forward the position from last year. Except for South Africans and a few other exceptions, prices were much inflated, but there has been a great reaction since, which may allow us to have a better chance in the future. It is worth remembering that some of the Transvaal gold mining companies have dropped to such prices that the properties themselves—that is to say, the claims—stand in for nothing or next to nothing; and it is reasonably certain that if we get settled conditions again, and some return of confidence, this state of affairs cannot last, and that there must be a substantial recovery.

THE COMPANY'S FINANCIAL POSITION.

Our accounts show increased depreciation of about £475,000 as against last year, and we have had to set aside the very large total of £1,925,000 for that purpose. We earned profits and dividends from various sources amounting to £234,000, and the result is that against the depreciation we have £419,000 profit on hand, with which we cannot deal until depreciation account has been wiped out. We are at present about £1,550,000 to the bad, which makes our shares worth intrinsically nearly £15, but such is the loss of confidence that they can be bought at about £11, although we have virtually £8 per share liquid assets with the dividends just coming in. We keep the two accounts separate, that is to say, depreciation and profit and loss, so as to show the position more clearly, and anybody having the slightest knowledge of bookkeeping will understand. Of our [illegible] investments one certainly, and possibly two, will become dividend-paying during the current year. The balance [illegible] future working expenditures, and will take time to [illegible]. What we call investments consist practically of Consols, [illegible] we had to make provision for depreciation amounting to about £45,000. "Loans at short notice" is [illegible] security and "bills receivable" are bankers' [illegible]. I think the other items are quite clear, but I shall be glad to answer questions presently. But in moving the adoption of the report and accounts, and if it does not [illegible] you, I would like to say something on the general condition of South Africa in connection with our industry. I have neither the time nor the

clination to answer all the statements, ambiguous or false, which are published from time to time, and this must be my excuse for using an opportunity like the present to say a few words. We have seen great changes during the last year, and we have been attacked with bitterness and rancour. It is often painful to feel that those who devote all their best and most honest efforts to an industry which they have created should be exposed, almost without defence, to such baseless accusations and insinuations. As somebody said the other day, it seems almost a crime to be actively connected with the mining industry in South Africa, although I again assert that no industry has ever been conducted more honestly and more seriously. Perhaps the worst that can be said is that we took too high an estimate of its potentialities, but our answer to that is, that owing to circumstances frequently quite beyond our control it has never been possible to work the mines as they should and could be worked under more favourable conditions, and it is in this possibility to work under more favourable conditions that lies the recuperative force which may still make it possible to bring back appreciation of value and restore the mines in the estimation of investors.

THE CHINESE LABOUR QUESTION.

During the last year we have seen the Transvaal become a self-governing country, and though many had doubts as to the wisdom of full representative institutions and would have preferred to see the material conditions improved before party politics became the order of the day, all agree in their desire to make the new Constitution a great success and to assist the Government in their most dicult task. I think our new rulers are animated by the very best intentions, and have the ardent wish to see their country happy and prosperous. We all hope that the old suspicions will vanish before long, and that the old residents will realise, what I believe their leaders realise to-day, that in giving up the old narrow liberty possessed by the few they have exchanged it for a fuller and greater liberty, shared, cherished and defended by the millions of this great world-Empire. Another great change is the one regarding imported labour—or rather I should say Chinese labour; for the Transvaal has but a small labour contingent of its own, and most of our labourers come from over the border. We have been attacked so fiercely on this subject that I cannot pass over it. We must carry our minds back to the time following the war to fully understand what has happened. Virtually the whole British population had been in exile for two or three years, driven out of the country, no wages were earned, there was no income of any kind, and the people had to exist as best they could, and many were in the field, taking part in the war. That on their return they were eager to get to work needs no explanation, but without sufficient native labour it was impossible to come back to the pre-war conditions, and the problem was to wait possibly several years and starve, or to fill up the gap and procure a temporary supply from outside. I cannot give the situation better than by quoting the speech of a prominent politician in 1903. At a meeting of the Imperial South African Association in 1903 he said: "Of this I am quite sure, that supplies of labour will have to be obtained from the natives of the country or from Indian or Chinese sources if ever the mining industry is to be completely rehabilitated and if ever South Africa is to turn her back upon the dark shadows of the past and march steadily and firmly towards the rising day." The speaker also said that the Chinese should be the last of all sources to be considered, but that the responsibility rested with South Africa, and that those who hold strongly to the opinion that external labour will have to be imported must set out upon the task of educating South African opinion up to that point. The speaker was Mr. Winston Churchill, the present Under-Secretary for the Colonies, and my object in quoting him is merely to describe the position as it was. He has changed his opinion since—as he has a perfect right to do—but perhaps he is a little hard on those who, being mainly interested and sufferers, could not follow him in that and other matters so quickly. The Legislature of the day introduced a Chinese Labour Ordinance which received the Royal Assent. There was certainly no important opposition in the country; the Boer representatives voted for the measure, but it is fair to say that the recognised Boer leaders were not sympathetic, though scarcely hostile, although opposition to anything proposed by the other side was then the order of the day. The Boer population was passive, the industrial population, with small exception, strongly in favour, and some of the honest opponents pronounced their satisfaction after the experiment had been tried. On the strength of the Royal Assent a large expenditure was incurred, and the experiment, though not without its difficulties and drawbacks at the early stages, was highly successful. The Chinese, far from taking the bread out of anybody's mouth, increased the openings for white men, and 40 per cent. of our present output is due to their labour.

"A CATCH-VOTING CRY."

I think the people in the country would have been perfectly satisfied to continue until such time as the imported Asiatic labour could have been replaced and supplied from South African sources. But an election had to be fought in this country, and the groundless catch-vote cry of Chinese slavery was too good to be missed. The most unjustifiable statements and bloodcurdling cartoons were circulated to attain the desired end. You may remember that a short time ago there was great excitement in India, which has not yet subsided. It was stated that the Government had poisoned the wells and committed other atrocities, and the simple population believed it and grew restless. Well, here the minds of the people were poisoned in a similar way, and thousands actually believed, or pretended to believe, that their kinsmen abroad were capable of allowing inhuman treatment for the purpose of gain. In India the instigators were speedily and rightly consigned to prison or exiled; here they were sent to Parliament to make laws for us—different states of civilisation! We do not hear anything of slavery or semi-slavery now; they only talk of "servile conditions," and they introduce the New Hebrides Ordinance to show their impartiality. Now, what are the "servile conditions"? The men came under certain contracts, which they fully understood, they got big wages, they had to return at the end of their contracts or renewal thereof, they were to live in barracks which had to be built at great expense—you could hardly expect them to hire cottages, which, by-the-by, did not exist—and they were to be back at their quarters at a certain hour of the night. They required a pass or permit to leave their residences. All these conditions, as Lord St. Aldwyn pointed out in a speech at Cape Town, exist in contracts with white labour, and there is nothing harsh, unusual or servile about them. It is an old rule in the colony that natives must carry passes for identification, and that they must be indoors by a certain time of night. Police regulations obtain in white men's countries and are willingly obeyed. In this country, for instance, people are turned out of the public-houses or restaurants shortly after 12 o'clock—they are simply driven into the street, whether they like it or not. In South Africa we sent them to bed, or, anyhow, home at a decent hour, and I leave you to judge which is the better system for South Africa.

THE TRANSVAAL GOVERNMENT'S ASSURANCE.

The Chinese experiment never had a fair trial, and now, under pressure from this side, the men are to be sent back. We have the assurance of the Government that nothing will be done to hinder the industry, and that the pace will be regulated according to circumstances. We have General Botha's word for that, and I, for one, believe in his sincerity. Any difference with our rulers is only one of degree. We say, "Proceed slowly, and do not let them go unless you are sure of substitutes." They are inclined to take certain risks, and say, in effect, "We are justified by our belief that the departing foreigners can be replaced." I think myself the risk with the first lot (equal to about 10 per cent.) is not a great one; if you work with 100 men and lose 10, you say you can manage; to lose 20 would cause a strain unbearable for any length of time; but if you lose 30 you know that no extra efficiency can fill the gap. You feel that your business is declining, and that is what we have to face in the Transvaal unless wisdom prevails, as I feel confident it will. Whatever the evil the employment of Chinese may be in the eyes of some, it cannot become greater by an extension of contracts until we are sure of our position. The removal of the Chinese may mean a period of stagnation and deferred expansion, and the enormous depreciation in the value of property in the preparatory developing stage and still in need of more capital is due almost exclusively to the fear that there will be a shortage of unskilled labour. We may be left without any reserve of labour, and, if to-morrow new discoveries were made in other districts, they could not be pushed, except at the expense of the Rand. No valid argument has been brought forward for immediate repatriation. The Chinese are a hard-working, law-abiding lot, and, from every standpoint, compare favourably with Kaffirs. No principle is involved, and you may remember that in the compact made by the Het Volk and National parties it was a condition that the consideration of the Chinese question was to stand over for five years. The only reason adduced by Mr. Schalk Burger, as spokesman of the country Boer party, is that their presnece has not helped the farmers to more Kaffir labour. It seems an ungenerous view, and their removal, far from being a remedy, will accentuate the deficiency. The other reason is that they eat rice and not mealies (this latter being the staple grain crop raised by the Boer farmer), but this argument is valueless, because the Chinese do not reduce the number of natives eating mealies, and it often happens that this grain has to be imported from oversea. Then we had that mysterious document, the Bucknill report. It was alleged to be so terrible that it was unfit for publication. Only a few members of ascertained bias and reliable indiscretion were allowed to read it. I think if a document is so indecent the Prime Minister might have kept it out of the reach of his young men.

THE RECENT LABOUR DISPUTE.

But, gentlemen, numbers are not everything, and the Chinese question is only a part of our troubles. We suffer from an increasing inefficiency of all labour employed, and this has become a serious question. In many cases it is fast becoming a question of closing down or of readjustment. Unless our workmen will view the matter in a proper light and help us, we cannot help them, and many will find themselves without occupation. The mines have been worked for twenty years, and until recently there had never been a strike; indeed, there have hardly been misunderstandings between employer and employed—a thing almost unheard of in any other part of the world, and certainly unheard of in mining camps. I think that speaks well for both, and that state would have continued but for the professional agitator. Indeed, the men had no serious reason to complain, and matters of difference were capable of adjustment. The miners could earn almost what they liked—that is, any intelligent and serious miner who understood his business could not only lead a most comfortable existence, but save to an extent unknown elsewhere. No other class of labour had such steady, highly-paid employment, and if there was one section

of the community unaffected by the high cost of living it was the miner; but still, in the midst of great general distress and unemployment, these men struck. No wonder that the country was out of sympathy, and that men rushed in from all sides to fill the places. I am deeply sorry, for, although the average standard was low, we had a good proportion of splendid men who allowed themselves to be fooled. I wish to add that the Government acted with great impartiality throughout, and with prompt decision to protect life and property once they realised the danger. The result of these high wages is that many married men leave their families at home, never settle in the country, and after a few years retire with a comfortable sum and can take it easy at home. The high wages do not benefit the country; they actually keep the most desirable people—that is, families—away. The agitators say, "Unless you strike the Chinese will take your places"; but is that the true reason? The Chinese are only allowed to do unskilled labour, and have to leave the country after expiration of their contracts. That is stipulated by law. They were never intended to be permanent residents, and a special measure was framed for the purpose of protecting the white men. No, I take it that this agitation is directed against the natives, many of whom have become efficient. You may restrict the Chinese, who leave shortly, but can you prevent the Kaffir, the son of the soil, from rising to a higher plane? It will be interesting to see the attitude of the Labour party when that problem presents itself in a more acute form than at present.

CAUSE OF THE STRIKE.

Now, how did the quarrel arise? It is said the men were forced to work three drills. I emphasise the word "work." No man can work more than one drill, and the white man's function in the mines is principally supervision. We have had men supervising three drills for a long time without the slightest objection; the men were paid for it, and were glad of the opportunity. It has become the rule on the Rand that if a good example is set or an improvement made, all the mines follow in course of time. No manager could expose himself to being behind his colleagues in efficiency. Well, one of the companies found they were behind and paying more than their neighbours for the same services, and not unnaturally they tried to come into line. That was the beginning of the strike, and intimidation did the rest. Fortunately, not all lost their heads; a good many men resisted and remained loyal, and the surface men and artisans were entirely out of sympathy with this artificially created movement. The managers and all heads of departments had an anxious time, and the thanks of all shareholders are due to them for their cool behaviour and the way they managed to keep the mines going under very difficult circumstances. The mineowners, who created all these opportunities for white men and who maintained the most friendly attitude towards those who by their labour helped to turn the mines to account, are accused of all kinds of sinister designs, which their past belies. We are anxious to increase these opportunities by widening the field, but everything is done to prevent it. If the industry is allowed to slide back fewer men will find employment. Nothing can alter that. If there is no work at Woolwich men have to go, sad as it is. You cannot turn a workshop into a workhouse, and we are in the same position. The black man cannot be eliminated; South Africa will always be a white man's country three-quarters black. We also hear a good deal about labour-saving machinery and its want of application on the Rand. This, coming from the Labour party, always strikes me as a particularly insincere accusation. When it suits too much machinery is made responsible for unemployment, but in our case any stick is good enough to beat us with. Surely the mineowners and managers can be trusted in that respect, and for their own personal peace, leaving business aside, they would be glad to reduce the constant trouble, anxiety and expense of looking round for manual labour. Nowhere are new ideas more readily taken up, and I do not know of any labour-saving appliances *qua* mining and applicable to our industry which do not get a fair trial; but it must not be forgotten that mining proper consists of a few very simple manipulations, and that from the time the ore is in the mining skips it is with us practically all machine work. The mines all the world over are interested in improving work underground, but the onus of invention apparently rests on our industry alone.

THE RECRUITING OF NATIVES.

There is yet another matter connected with labour which, although of purely local concern, was interfered with from this side. I am speaking of the Witwatersrand Native Labour Association, which was formed after the war for the purpose of more systematic and uniform recruiting and to give protection to the natives. I think in the latter respect it was and is entirely successful. We hear no longer of the abuses which disgraced the old touting system. Also from the recruiting point of view it did good service, and endeavoured to secure natives from every corner of the land. Differences arose, however, between the association and one of its members, which I think could have been adjusted, but the group preferred to separate, which, of course, was quite within their right, though not a friendly act, and I sincerely hope the separation is not permanent. The association was accused of regulating the supply—of turning on or shutting off the tap to suit political purposes—and the Under-Colonial Secretary, without the slightest proof, repeated this statement, and made a bargain to the effect that the seceding group was to surrender the right to import 3,000 Chinese, which they did not want, and which cost them nothing to get up, and that Portugal [illegible] coerced into breaking its long standing arrangement with the association and allow free recruiting—but not for those but for the one group alone in competition with the [illegible] representing all the rest. It was [illegible] privilege, but were refused. Fortunately, Portugal was not to be bullied, and gave a license for only one year. The [illegible] was further, that more white men should be employed [illegible] the direction of Mr Creswell I have not heard that Mr Creswell has been engaged, nor does the [illegible] employ a larger proportion of whites than others. I must say the attitude of the former and present Transvaal Government has been entirely sympathetic to the association. We should have been glad to see the Government more closely associated with the work by having an official chairman and a few of the members, but the Government finally decided to appoint a consulting official to co-operate with the association. Mr [illegible] that the British Government here went out of their way to interfere with and injure the mining industry, and that the [illegible] piece takes a delight in doing so. Let me give another proof of the prevailing spirit the £5,000,000 loan. Nobody knew of the intention to raise a loan. The Transvaal Ministry had only been a few days in power when General Botha left. There was no Budget; no public discussion. The matter is entirely one for the Legislature and Government of the Transvaal, and if, as it appears, a loan is necessary, everybody is only too thankful to the Imperial Government for [illegible] generously to the assistance of a struggling colony. But of course, even such a guarantee act would not be done without the usual kick to the mining industry from Mr Chamberlain. He seems to add to his many accomplishments the power of thought-reading. Nay, he goes one better, he anticipates thoughts which might come into people's heads. Before anyone knew of the proposal, before any out-sider could guess a thought, he knew what the minds of the magnates would evolve—he knew they would intrigue against the raising of a loan and spoil it if possible. The very people who have to pay most of the extra taxation for the service of the loan, and who would save most by the Imperial guarantee, are accused of vicious designs—the very people who for years running were held under a guarantee for a much larger amount. Where all strive to establish peace and a better understanding, he makes it his special and pleasurable business to sow dissension. The rancour displayed by this enfant terrible of South Africa is indeed beyond measure.

HOPE FOR THE FUTURE.

I said, gentlemen, that I had not lost hope in spite of many distressing factors. We shall rely in the future, as we have done in the past, mostly on ourselves. We know well that not the best intentioned and wisest Government and thousands of labourers can help us unless we help ourselves. Bearing this in mind, my firm engaged an expert of world-wide experience to examine our working conditions, and the results of his labours have lately been published. I recommend them to all who take an interest in the subject. Mr Ross Browne did not pay a hurried visit: he stayed two years, collecting and studying the facts. He pointed out our weaknesses, and clearly demonstrated that working costs could and should be reduced. It is not a thing which can be done in a day, but in order to work with a profit the large deposits of low grade ore which are awaiting exploitation it must be done. I am [illegible] by this mail that in Rhodesia ores of from 3½ dwts to 4 dwts are being treated at a profit, and Mr Ross Browne points out the curious fact that, though Rand gold costs more to produce than gold in any other mining centre, the coal mines in the same region are worked more cheaply than anywhere else, not excepting England. The reason is simple. Coal is an article subject to competition; gold is not. Coal mines are therefore forced to work economically or to go under. If the gold mining industry is to prosper and expand, the same system of rigid economy must be applied to it. We recognise that success depends much upon the co-operation of our workmen and their putting forth their best efforts. This has been proved by twenty years' work, and I may say friendship. Capital and labour are necessary to one another in most places, but they are inseparable in Transvaal gold mining. We pay £6,000,000 annually for white labour alone, and our white labour is only about one-tenth of our total labour. It is also necessary to our success that we should have a sympathetic Government, and I have complete confidence in that respect. Of course, there will be differences of opinion; but the Government of the day have shown themselves ready at all times to discuss frankly the important questions that constantly arise. There seems to be an impression that the Government is against rapid progress, but I do not believe that, because General Botha, which he was our honoured guest at the Savoy Hotel, used the following words: "Be assured of this fact, that we shall do nothing without having instituted a drastic inquiry, and that our object is to see not only the present mines continue working, but also to see other mines open up in the near future." The Government here and the great Britain nation had openly proved that they had accepted his word, and he pledged his word that he would do his best not to disappoint the confidence reposed in him and the people of the Transvaal. Gentlemen, I have now the honour to move "That the report and statement of accounts be adopted," but before putting it to the meeting I shall be glad to answer any questions which you may wish to ask. (Cheers.)

SPEECH BY MR. LIONEL PHILLIPS.

Mr. Lionel Phillips: I have much pleasure in seconding the motion for the adoption of the report and statement of accounts

I shall only detain you one second, because the chairman in the admirable address which he has made has, so to speak, travelled from John o'Groats to Land's End in his survey of the situation in South Africa; but perhaps you would like me to tell you this—that the whole of the population of the Transvaal, not only those who are, comparatively speaking, new arrivals, but the older portion of the inhabitants—are very anxious to see prosperity brought back to the land after all the troublous and difficult times they had in recent years been called to pass through. (Hear, hear.) It is not merely the gold mining industry that has suffered from the evils which the war brought in its train, but the whole population of the country have felt the terrible effects of some of the most appalling times that can be imagined, and it is for this reason that everybody is so anxious to see a radical change in the existing depressed conditions out there. (Hear, hear.) We have every reason to believe that before very long we shall see a change, and I am convinced that if the measures now being taken with regard to the Chinese labour supply are proved to be unsatisfactory and to have an injurious effect on the mining industry, we shall find the Transvaal Government taking other steps to bring about that restoration of commercial prosperity which is so vitally necessary to the progress and expansion of the Transvaal. (Hear, hear.) I myself have, so to speak, torn up my roots from the soil of this country and have transplanted them again after many years absence in South Africa. I cannot say that life out there offers the rosiest of aspects under the existing conditions which have prevailed so long. I cannot look forward with delight to returning, which I intend to do almost immediately, with the object of helping to restore the prosperity that we have lost for a time, and, if possible, to re-establish the confidence that has been so terribly shaken in consequence of past events. At the same time one feels prepared to give the best of one's life to do the things that are best worth doing so long as there is any prospect or hope of success. (Hear, hear.) Of course, there is a time when one's spirit quails before the obstacles which seem to be insurmountable, impossible to overcome, but I am satisfied that in going back to South Africa I shall not have to face obstacles of such a character. I hope that we shall meet again under conditions which will be more satisfactory all round, more especially to the shareholders in this corporation.

The motion was then unanimously agreed to.

The Chairman next proposed the re-election of Comte Isaac de Camondo, one of the French directors, who, he said, was unfortunately prevented by illness from being present to-day.

Mr. Kitzinger seconded the motion, and it was agreed to unanimously.

Mr. Bam then proposed that Messrs. Cooper Bros. and Co. be and are hereby reappointed auditors of the company until the next ordinary general meeting at the same remuneration as before.

Mr. Bergson seconded the proposition, and it was carried.

The Chairman mentioned that the auditors' fee as sanctioned last year was exclusive of their remuneration of extra work in connection with the examination of transfers, share warrants, &c.

Mr. Carl Meyer: Before we separate, gentlemen, I would ask you to join me in giving a sincere vote of thanks to our chairman for what I think I may call his masterly address—an address which has contained the ablest and the most complete survey of the events of the last few years that we have had from any authority on this question. (Hear, hear.) Short of receiving dividend warrants from the board I think the chairman's speech is the most acceptable substitute that we could have. From my own personal knowledge, which is more limited than his, of the state of affairs in the Transvaal, and from what I learned during the visit I paid there a few months ago, I should like to add that the impression I brought back of the feelings and intentions of the new Government, which had then just been installed, was certainly identical with that conveyed to us by our chairman. Like him I am convinced they are animated by the best wishes and intentions, and that they will do what they can to carry out those intentions. Of that I have no doubt. It may possibly take a little longer than we could wish it to be, because I believe the old Boer motto, "Wacht een Beetje," is still one that actuates them in a great many questions, but as we have waited so long we can all afford to wait a little longer if only the result is such as we could wish. Gentlemen, I ask you to give a very hearty vote of thanks to our chairman.

Mr. Bayliss said he had pleasure in seconding the proposition.

The motion was agreed to unanimously.

The Chairman: I am very much obliged to you, gentlemen, for this vote of thanks. It is not one of the pleasantest duties to come to a meeting of shareholders when the report shows such unfavourable results, but one can only do one's best. Circumstances have been frightfully against us, but I am sure we shall see brighter days in the future. (Hear, hear.)

The proceedings then terminated.

LODDON VALLEY GOLDFIELDS.

A general meeting of the Loddon Valley Goldfields, Limited, was held on Wednesday at Salisbury House, London Wall, E.C., for the purpose of considering a reorganisation scheme. Sir Gerard Smith, K.C.M.G. (chairman of the company) presided, and in a long speech gave the reasons for the step:—"The loans which for some months past we have been living on have come to a stop, and we are face to face with the immediate necessity for money. The balance-sheet will show you that on December 31 we had but a very small amount of money left, and it is obvious on the face of the report that we have been living on borrowed money ever since. We have to provide money, with the alternative of having to stop all work, which I need hardly remind you would be disastrous, as it would mean the flooding of the workings and the practical destruction of all the work already done at enormous expense. Encouragement is afforded by the offer of the Victorian Government to lend the company up to £8,000 if the shareholders do as much. The company has overcome its water difficulty, always a serious thing with such undertakings. Mines may have to pump millions of gallons a day for years before any gold can be got from them. The area in which we are working is only a very small portion of the total area. Within this area already explored a number of patches of rich ground have been found. Some of these have been very rich, but proved to be of local extent and insufficient to form the basis of a workable, steadily progressing mine. One area—that disclosed at No. 5 rise—proved of considerable extent, though of low grade, and as set out in the report that rise shows a width of wash of 275 ft., averaging over 40 dwts. per fathom. The terms upon which the Government of Victoria have agreed to lend the sum of £8,000 are that this money is to be secured by a first charge upon the property and one of the pumping plants, and that the loan is to be repaid out of the first profits from the mine. We have had to borrow money from time to time from some of the largest shareholders for the purpose of carrying on the work, and we owe the Consolidated Deep Leads, I believe, £10,000 on debentures and a considerable amount on open loan. The question is whether, after all this work and with the promise of results that we have before us, the property is to be abandoned, or whether we shall reconstruct the company and find the necessary money to go on with. To my mind the strongest argument would be that wherever we have bored or wherever we have gone up into the wash we have always found gold. Therefore I think it would be very foolish not to reconstruct this company. We consider that it would not be prudent to arrange for a smaller assessment than 5s. a share, which, if all the shares were taken up, would produce £58,000. Before I sit down I want to say a word about the underwriting. Some people say, why not underwrite the amount, so as to make certain of obtaining it? Well, that would cost £4,000, and that amount is a serious consideration to us. We think that if the shareholders of the Loddon Valley do not see their way to come forward and support their own property, it would not be right for us to hold a pistol at their heads, as it were, and say we have got the money from another source, and whether you like it or not, we are going on with another company. To-day we leave it to you, and we hope you will accept the scheme which we lay before you. I should add that it would not be prudent to carry this scheme through to allotment unless a minimum amount were subscribed, and after careful consideration we have determined in our own minds and are advised that we should not have less than 160,000 shares subscribed, which would give us £40,000. Therefore, unless this subscription is forthcoming or the directors can make some arrangement with the creditors which would be equivalent to the company having the use of the same amount of money for the mine, the board could not see their way to going to allotment." Sir Gerard concluded by moving "That the reorganisation scheme submitted to this meeting be and the same is hereby approved."

Mr. T. W. Wellsted seconded the resolution.

In answer to Mr. Leslie, the Chairman explained that if only a minimum subscription of 160,000 shares, which would produce £40,000, were secured it would pay off the debts and leave sufficient to comply with their obligation to the Victorian Government and carry on the work. There would arise, then, the question of debentures, and something perhaps might be done in regard to that. The directors, however, did not look forward to such a bad subscription as only 160,000 shares; they thought that the shareholders would take the whole issue.

Mr. Lionel Harris asked whether there was any possibility of getting rid of the iniquitous liability of 20 per cent. to the Australian Commonwealth Trust. They did a certain amount of duty at first, for which they were very well paid, having got rid of a large portion of their holding at high prices.

The Chairman said that the arrangement was not a satisfactory one, and he considered that the time had arrived when some alteration should be made.

After some further discussion the motion was put to the meeting and carried *nem. con.*

FREDERICK HOTELS.

At the ninth ordinary general meeting, held yesterday, Sir Horace G. Regnart (chairman of the company) said: Gentlemen, I am sure you will understand how pleased we are to meet you, particularly as the result of the past year's working has been so satisfactory. In times of such keen competition, to say nothing of the extremely bad weather we have experienced, it is more than gratifying to see that we have not only been able to hold our own, but to increase our business. As you will see from the balance-sheet, this increase of business was £13,369, which if the weather had been more propitious during the last three months would undoubtedly have been more, for at the March quarter, which is nine months of the company's trading, our figures promised better than those of the final balance-sheet. There is a satisfactory increase in our profits and in the business done. You will notice we have spent a much larger sum on advertising than in previous years, and

although we could reasonably have carried part of this forward, as the advantages from this source are not reaped at once, yet we thought it better to debit the whole at this sum to the year under review. You will also note that a sum of £4,821 has been expended in fitting up and furnishing the botanical gardens, the Cross-Channel steamers, the refreshment rooms, and also in building a motor garage at the Royal Pavilion Hotel, Folkestone. I may tell you that at the expiration of our agreements with the various companies for this catering most of these furnishings and equipments will be taken over by them at a valuation, so that really it was scarcely necessary to write anything off this outlay, as it is undoubtedly an asset, or at the most an amount of 10 per cent. for depreciation. Still, we thought that, as we found ourselves in the position we have, it was better to treat this matter in the way we have done, and to write off the large sum of £1,440. This we hope to continue for the next two years, so as ultimately to leave only the sum of £500, which will be specially marked to stand to this account. There has been a large amount of money spent on keeping the hotels in a high state of repair and efficiency, and although this amount was £1,800 more than that spent last year, yet we thought it wiser to carry another £1,000 to repairs and maintenance reserve account. You will see that we have not made our accounts as favourable as they might have been, and that through this the carry forward has been somewhat reduced, but I think on the whole you will be well satisfied with the results. The sum of £10,000 has also been transferred to reserve account, this being the second time we have found ourselves in the happy position of being able to do this. This sum is a large amount to transfer, but it is the policy of the directors to build up this reserve as much as possible to strengthen the resources of the company. I am glad to be able to tell you that the business of the company has a most healthy tendency. Our visitors appear to be well satisfied with the treatment they receive, and, as I said last year, I think this is due in great measure to the fact that we are carrying out our policy of providing everything of the best, at reasonable prices, and making our hotels as attractive and comfortable as possible. Naturally, the consumption and the working expenses have somewhat increased owing to the extra volume of business done, but this matter is watched very carefully by the directors personally, and we are satisfied that no money has been unnecessarily spent in this direction. We propose this year to increase the dividend paid on the deferred ordinary shares from 4 per cent. to 5 per cent., so that these shares will carry the same dividend as the preferred ordinary shares. I do not think there is much more left for me to say to you to-day. Should any gentleman wish to ask any questions, I shall be pleased to answer them. I now propose: "That the directors' report and annual statement of accounts for the year ended June 30, 1907, be, and they are hereby approved and adopted, and that a dividend be paid on the preferred ordinary shares at the rate of 5 per cent. per annum, and on the deferred ordinary shares at the rate of 5 per cent. per annum for the year ended June 30, 1907."

Mr A. Bird seconded the resolution, and it was carried unanimously.

The retiring directors, Col. Oldham and Mr. Bird, were re-elected, and

A vote of thanks to the chairman, the directors, and staff terminated proceedings.

STRAITS SETTLEMENTS (BERTAM) RUBBER

The ordinary general meeting of the Straits Settlements (Bertam) Rubber Co., Limited, was held on Thursday at Winchester House, Old Broad Street, E.C., the Right Hon. Sir West Ridgeway (Chairman of the company) presiding.

The Secretary (Mr. H. Read Smith, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: The report and the accounts, I hope, convey to you a very clear idea of the operations of the company for last year—its finance and generally its condition. I hope you will agree with me that the situation is eminently satisfactory. This is one of those rare and happy exceptions in which the prospectus has failed to do justice to the property sold. For instance, in the prospectus the output of rubber for twelve months was estimated at 10,500 lbs.: actually the output for eleven months has been nearly 20,000 lbs. A good deal of this is due to the fact that the age of the trees was underestimated. The revenue from other sources was estimated in the prospectus at £1,000. This will be realised, and we hope that in future years it will be considerably exceeded. Cocoanuts, for instance, are a valuable source of revenue, but they have been greatly neglected in past years. Much care and attention has now been given to them, and I hope you will reap the benefit of that in future years. So with the collection of rents: that has been slackly done in past years. The policy of the board as at present advised is to farm out these revenues to some responsible middleman—probably a Chinaman—and thus to give relief to the manager and enable him to devote to the cultivation of rubber the time and labour which is now absorbed in other directions. In regard to rubber, everything is satisfactory. The yield per tree has been an average of 1¾ lbs. and the average price has been 5s. 2d. If you look at the profit and loss account you will see that the profit for the eleven months was £1,744, and if this estimate is borne out that profit will be largely exceeded next year. The programme of the board, as stated in the prospectus, was to plant 100,000 trees per annum till the number reached 750,000 trees. There will be no difficulty about this, for even if only two-thirds of the acreage is tapped there will be plenty of room for 500,000 trees. The soil has been proved by experts to be eminently suited to rubber; the climate is ideal, rainfall is very good, there are no pests and the cost of working is very small. As to labour, there is an abundant supply on the [illegible]. I am pleased to be able to say that the [illegible] is a very valuable property at any rate, that is the opinion of the men on the spot. They did not always look upon the matter with such favourable eyes, but the [illegible] have now been demonstrated by the results of the working, and I believe that, excluding the large holding of Messrs. William Dunman and Co., no less than 20,000 of the shares in this company are now held in the Straits Settlements. I now beg to move: That the directors' report and accounts submitted to this meeting be and they are hereby adopted.

Mr. G. M. Douglas Mann, in seconding the motion, gave details of his visit to the property, stating among other things that up to the end of November, when he left the estate, only 10,800 trees had been tapped. Some had only just been opened, while others had been in full tapping all the year, and the average of that the average was 1¼ lb. per tree. That was very satisfactory indeed. Some 13,000 more trees would come into tapping this year, and he did not think there would be the slightest difficulty in realising the figure which the chairman had stated, 20,000 lbs. was a very low estimate indeed on those figures. They had already proved that the land was eminently suited to rubber by the fact that in the first year they had obtained such a very large average from the trees. Chinese and Malay squatters were settling all over the land and opening up vegetable gardens, over which the company planted rubber. That meant that the land was kept clear and clean, and that the rubber came into bearing practically without any cost to the company. The policy of the directors was, therefore, to encourage as many settlers as possible. The resolution was then put to the meeting and carried unanimously. The retiring directors and auditors having been re-elected, a vote of thanks to the Chairman closed the proceedings.

John Lovibond and Sons, Limited.

A fairly brisk recovery took place in this company's [illegible] during the year ended March 31, the trading balance, [illegible] fees included, being £28,778 compared with £25,520 in the previous twelve months. Glad are we to note that the directors seize the opportunity provided by this increase to allow a good £2,000 more at £10,089 for repairs, upkeep, and depreciation, while the remuneration of directors and others, managing director's commission, &c., runs away with a little extra at £3,524. A sum of £4,050 is then absorbed by debenture interest, and the balance left is £887 higher at £9,397. Only a trifle was brought forward, making the total available £9,[illegible], and after meeting the preference dividend the directors again provide 7½ per cent. for the ordinary shares, writing £831 off leaseholds, £1,500 off freehold and leasehold properties and goodwill and carrying forward £803. Ordinary reserve remains at £14,000, and there is a special fund to meet bad debts and losses in stocks of £3,661. Property account now amounts to £[illegible], additions for the year being £545 in excess of the sum written off, and plant, utensils, &c., were increased by a nett amount of £866 at £51,557. Sundry creditors are heavy at £[illegible], apart from the secured loans of £3,000, and debtors [illegible]. Cash, too, is not very startling at £2,352, but the stock-in-trade, &c., is valued at £42,874.

New Zealand Agricultural Co., Limited.

This company's business is happily in process of liquidation, and the report for the year ended March 31 to New Zealand and June 30 in London recalls the interesting fact that practically the whole of the company's land was [illegible] part of the period under review. The balance, consisting of some very small sections of a value of about £[illegible], has since been disposed of. Profit on [illegible] was £3,084, and interest, commission, &c., gave £[illegible], £7,120 in all. Expenses of all kinds took £[illegible], and income-tax £152 leaving an available credit of £4,303. This is added to £2,180 brought forward and £[illegible] is written back so that all [illegible] and the directors use £5,384 in the payment of a dividend of 1s per share carrying forward £1,580. The balance-sheet is a curious [illegible] which have [illegible] as so many colonial agricultural and pastoral companies have done. Capital outstanding is only £[illegible], and the principal items on the debit side of the account are sales of land, [illegible] amount, after providing expenses and £[illegible] for redemption fund, £[illegible]. This redemption [illegible] profit on working to June 30, 1907, and interest [illegible] entry. Debtors for deferred [illegible] interest, appear at £[illegible] and Mr. A. W. [illegible], late secretary of the company, who is now looking after the company's interests in New Zealand, [illegible] the new settlers on the Wairoa Estate will be able to meet their engagements under the mortgages held by the company. The [illegible] for land taken over from the liquidator of the old company, consisting of debenture stock and ordinary shares, stands at £118,587 and other assets are investments £[illegible], cash £8,082 and distributions already made in respect of surpluses £40,072. We hope those who have received the report and balance-sheet thoroughly understand them and in that case they will be a lot wiser than we are.

The Times

WEEKLY EDITION.

Every Friday. Price 2d.

CONTAINS A CAREFUL

Epitome of the Events of Interest

DURING THE WEEK.

TOGETHER WITH THE MOST IMPORTANT

LEADERS AND SPECIAL ARTICLES FROM "THE TIMES"

IN EXTENSO.

1. Parliament (when sitting) and Politics.
2. Colonial and Foreign News.
3. Naval and Military matters.
4. Trade, Money, and Stocks.
5. Ecclesiastical and Social Notes.
6. Law and Police. Reviews of Books.
7. Home and Domestic Events.
8. Correspondence. Chess by Special Expert.
9. News Interesting to Every Class of Reader.

And a SERIAL STORY by a popular and well-known Author.

SPECIAL EDITIONS for India and Australasia, for Canada and the United States, and for South Africa, containing, in addition to the above, matter particularly interesting to dwellers in those countries.

The Times issues three Supplements every week, viz.:—

THE FINANCIAL & COMMERCIAL ON MONDAYS;
THE ENGINEERING SUPPLEMENT ON WEDNESDAYS;
THE LITERARY SUPPLEMENT ON FRIDAYS.

Purchasers of THE TIMES WEEKLY EDITION residing abroad can have *any one* of these Supplements as an inset with the Weekly Edition.

MAY BE HAD OF ALL NEWSAGENTS.

THE

BOOK MONTHLY.

An Illustrated

RECORD, GUIDE, AND MAGAZINE,

for

BOOKSELLERS, LIBRARIANS, & PUBLISHERS,

for

BOOK-BUYERS, READERS, AND WRITERS.

This is **A MAGAZINE *DE LUXE*,** a most tasteful and dainty sample of the typographer's skill, and at the same time one of the most painstaking and useful serials of the kind ever published. Its **ILLUSTRATED ARTICLE** is always packed with interesting Notes and Pictures, its **GENERAL ARTICLES** are both Useful and Entertaining, and its **LIST OF BOOKS ABOUT TO APPEAR** and of **BOOKS THAT HAVE APPEARED** are month by month Complete and Valuable as a **GUIDE** to the Bookbuyer and for **REFERENCE.**

The price is only

SIXPENCE NETT PER MONTH,

or Eightpence post free, or 6s. and 8s. per annum, post free, and its publishers are

SIMPKIN, MARSHALL, HAMILTON, KENT & CO., LIMITED.

*** Kindly order it of your bookseller, and judge for yourself.*

"'**Public Opinion**' was very much prized by Thomas Carlyle, and was one of the last journals he read," said Dr. W. R. Nicoll in *British Weekly*, May 2, 1907.

"PUBLIC OPINION,"

Twopence Weekly.

Edited by PERCY L. PARKER.

The purpose of "PUBLIC OPINION" is to provide a weekly review of current thought and activity as they are expressed in the world's newspapers, magazines, and books, and to put on record the ideas and activities which make for Religious, Intellectual, Political, and Social Progress.

It seeks to provide the busy man with a lucid summary of what is happening in the different fields of human activity, and to focus within readable compass something of that teeming interest which comes from being in touch with many phases of life.

This object has been achieved with considerable success ever since "PUBLIC OPINION" was started in 1860. In the 47 years since then it has consistently carried out its policy.

The need for a paper like "PUBLIC OPINION" increases with the years, for life becomes more complex and the busy man, though anxious to keep in touch with new developments of thought and activity, has not the time to read the many papers which would give him the needed facts. "PUBLIC OPINION" seeks to do this for him, and to present just that *précis* of life and thought which will enable him to quickly understand what is going on in the world.

"PUBLIC OPINION" (published every Friday, Price Twopence, 32 pages) can be obtained from any Newsagent or Bookstall, or will be sent post free for one year to any address in the United Kingdom for 10s. 10d., and to any place abroad for 13s. per annum. Orders should be addressed to—

"PUBLIC OPINION,"

30 and 31, Temple House, Tallis Street, London, E.C.

"I know of two Prime Ministers who have read regularly 'PUBLIC OPINION,'" said the *Daily News*, May 15, 1907.

"We know of at least one who has misread it," added *Punch*, May 29, 1907.

Specimens sent free on application.

Printed for the Proprietors by St. Clements Press, Limited, Newspaper Buildings, Portugal Street, Kingsway, London W.C., and Published by Clement Wilson at Norfolk House, Norfolk Street, Strand, W.C.—August 10, 1907.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 502. New Series. SATURDAY, AUGUST 17, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,

"Investors' Review" Office,

Norfolk House, Norfolk Street,

London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Price of Consols.

A great deal has been written about the present price of Consols, some of the writing exhibiting, as you showed in your issue of the 10th, a plentiful lack of knowledge; more still, I venture to say, oblivion of one of the chief things to be taken into account in making any estimate of the situation. That is, the part played by the Post Office Savings Bank in determining the price of the stock. In existing circumstances, there is, as I think I can show, nothing extraordinary in the fact that the price of Consols has fallen to 81.

When I first became acquainted with banking, now more than 50 years ago, it was a maxim among bankers that it was always safe to buy Consols below 90. This was, of course, the 3 per cent. stock, giving an equivalent price for the 2½ per cent. stock of 75. If we look at the White Paper, issued at the request of Dr. Macnamara, No. 108 of 1905, we shall find that the average price of 3 per cent. Consols bought for the Post Office Savings Bank during the 14 years 1861 to 1874 was 91.65, the equivalent price of a 2½ per cent. stock being 76.37. If we exclude the years 1865 and 1866, the latter the disastrous year which witnessed the failure of Overends and several other important houses, we get 91.94, or, for a 2½ per cent. stock, 76.62. The lowest quotation established in this time of difficulty, exceeding all that the present generation has known, was 84¾, the 2½ per cent. equivalent being about 70½. In spite of the present long-continued liquidation we have not yet got to that, nor to anything like that. I expect to be told that no comparison can be drawn between times so distant as 1860 and 1907. I am not sure of that. If the Boer War swept away the national savings of 50 years, it would not be surprising to find that the national credit had suffered in like measure. Manifestly, the credit of the nation cannot at this time be rated at quite so favourable terms as a 3 per cent. basis. If the Government had now to borrow it would have to issue a 3 per cent. stock at somewhat less than par, or a 2½ per cent. stock at a corresponding price. Therefore Consols might be expected to stand at something less than 85 as a mean, subject to fluctuations.

The fact is that the public, even the instructed public, has persistently neglected to take into account the chief factor, in late years, in determining the price of Consols. Let us hear no more of the time-honoured maxims that there is no sentiment in business and that capital is timid. In March, 1900, the Government then in power succeeded in issuing a National War Loan (the prospectus being printed on khaki-coloured paper) of £30,000,000, bearing interest at 2½ per cent., the price of issue being 98½. In April, 1901, we had an issue of £60,000,000 of 2½ per cent. Consols at 94½. In 1902 we were already at some distance from the glorious day when the Governor of the Bank of England assembled the staff in the rotunda, and all sang with heart and voice "God save the Queen!" But in that year it was still possible to issue £32,000,000 of 2½ per cent. Consols at 93½, equivalent to 112 for a 3 per cent. stock. Taking these three loans together they constitute issues of an aggregate of £122,000,000 of stock at prices equivalent to 111.6 for a 3 per cent. stock. How came this to be possible? To answer

the question we must consider the part played in national finance by the Post Office Savings Bank.

Here, again, we are far from the day when the Encyclopædia Britannica could justly describe the Savings Banks as "an institution for the purpose of receiving small deposits," "in general managed by benevolent persons who seek no remuneration for their services." The Savings Banks have become "auxiliaries of the Treasury," managed, nominally, by the Chancellor of the Exchequer for the time being, actually by permanent officials. These gentlemen have shown themselves to be ignorant or careless of the grave consequences of attracting enormous deposits; they would have done more in this direction but for the refusal of Parliament to go further.

During the earlier history of the Post Office Savings Bank, established in 1801, its action on the price of Consols is not marked. The inflation of the price due to these banks begins to show itself about 1876, when the deposits in the two classes of Savings Banks amounted together to £70,000,000, of which only £26,000,000 was in the Post Office Savings Bank. In this year the price at which the Bank bought Consols reached an average of 95: it had not previously exceeded 93. Year by year, with scarcely a break, the price rose, till in 1883 it was close on 101. In 1888 came the reduction in the rate of interest, made possible only by the deposits of the Savings Banks. Not only was no corresponding reduction made in the rate of interest allowed to depositors, but soon afterwards measures were taken to attract further deposits. In 1893 the annual limit for deposits was raised from £30 to £50. This happened to be the very time when the action of the commercial banks tended to discourage deposits by the low rate of interest allowed. From February, 1894, to September, 1896, a period of two years and a-half, the London deposit rate, based on the Bank of England rate, and therefore a natural rate, was 10s. per cent. per annum. The Post Office Savings Bank offered, together with the State guarantee, compound interest at £2 10s. per cent. per annum.

Just as surely as high import duties produce smuggling and tricks of evasion, so it was certain that a portion of the public would not lose the opportunity of quartering themselves on the taxpayer. In the four years 1890 to 1893 the excess of deposits over withdrawals averaged annually £2,695,000. These are the figures for the following six years:—

	£
1894	6,653,000
1895	6,380,000
1896	7,769,000
1897	5,132,000
1898	4,409,000
1899	3,951,000

Mr. Asquith has recently denied that any large proportion of the deposits belongs to the well-to-do classes. He has all the probabilities against him. He is also at issue with the late Chancellor of the Exchequer, Mr. Austen Chamberlain, who, on March 15, 1904, admitted that "a great deal" of the money was so owned. He is also in conflict with the evidence given to the Select Committee of 1902. On this evidence I showed in the Investors' Review of March 18, 1905, the probability that two-thirds of the deposits belong to the well-to-do classes.

The investment of these vast sums, swollen by compound interest, drove up the average price at which the Post Office Savings Bank bought Consols (soon to become a 2½ per cent. stock) to 101, 105.96, 110.27, 112.30, 111.23, 109.15 for the corresponding years. Deposits were at the same time pouring into the Trustee Savings Banks, though not at so alarming a rate. Taking the two classes of banks together, we find that in these fateful years the Government purchased on behalf of the banks £60,000,000 of Consols at an average price of nearly 108.

It is clear that these most serious facts were not present to the investing public. The absurd price of 114 for a stock bearing interest at 2¾ per cent., soon to be reduced to 2½ per cent., was assumed to be natural, whereas it was highly artificial, due to the fact that in the six years 1894 to 1899 the Government was constantly buying against itself, a fact perfectly well known to the dealers in Consols, who did not fail to take full advantage of the situation. A huge bubble had been blown: it was certain to burst through one cause or another. It was pricked by the Boer War.

Looked at in this light, the wonder is not that Consols should have fallen from 114 in 1897 to 81 in 1907, but that the fall should have been so long in coming about.

Alfred Marks.

The New Australian Tariff.

A suggestive summary of the proposed new tariff submitted to the Federal Parliament of Australia by Sir William Lyne appeared in some of Monday's newspapers. It is called a "British Preference Tariff," and the, doubtless official, explanation appended to the lists sets forth that it represents an average preference of 44 per cent. to British producers and manufacturers "on the goods which have been selected for preference." The examples given help to indicate that this average is sub-divided as follows:—"The varying percentages of preference and the number of items at each percentage are as follows: 3 at 4¾ per cent., 1 at 6 2-5 per cent., 6 at 7 9-13 per cent., 1 at 8⅓ per cent., 23 at 9 per cent., 2 at 10 per cent., 11 at 11 per cent., 5 at 12½ per cent., 11 at 14⅓ per cent., 22 at 16⅔ per cent., 27 at 20 per cent., 1 at 22¼ per cent., 17 at 25 per cent., 18 at 28½ per cent., 18 at 33⅓ per cent., 3 at 40 per cent., 3 at 50 per cent., and 75 at 100 per cent." What is a preference of "100 per cent."? Does it mean "British goods duty free?"

All the nice parade is interesting, but will fail, it is to be feared, to console the home manufacturer and merchant for the drastic increases which British goods will none the less have to submit to. Exact comparisons between the old tariff and the new are difficult and in places impossible because the classification in the new tariff is not always the same as in the old. Enough, however, emerges from a comparison of the existing with the proposed tariff to indicate how severe the blow aimed at British manufacturers is. Take a few examples. At present candles of all sorts appear to pay a duty of a 1d. per lb. Under the proposed tariff British paraffin candles will pay a duty of 2d. per lb. against 2½d. per lb. charged to the foreigner, but apparently other descriptions of candles remain at 1d. for us, the foreigner being charged 1½d. We send a great deal of ready-made clothing to Australia every year—no less than £746,000 worth last year—and at present the duty charged thereon at Australian ports is 20 per cent. *ad valorem*. Under the new tariff the foreigner will be charged 45 and 40 per cent. according as the apparel and attire consist of woollen or silk goods or fabrics containing wool or silk and are partly or wholly made up. Other apparel and attire of any material not elsewhere included, such as lace collars, handkerchiefs and the like, will be charged 40 per cent. to the foreigner, duties levied upon our goods being for the first class 40 per cent. and for the other class 35 per cent., or 5 per cent. less than the despised "foreigner" has to put up with. At present the general duty seems to be 20 per cent. *ad valorem*, so that it is double to us upon some classes of goods and increased by 75 per cent. on others. The duty on gloves is to remain at 20 per cent. for us, but to be raised to 30 per cent. for other countries not possessed of the British flag as an asset. Under the present tariff miners' hats are admitted free, as well as a number of articles for use in the making-up or trimming of hats, but the general tariff upon hats of all descriptions outside this special class is 20 and 30 per cent. according to their character, dress hats and suchlike being charged 30 per cent. This varied tariff is apparently to be made 30 per cent. all round upon British goods, but the goods of the foreigner will be charged 35 per

cent. At present certain kinds of woollens for military and police uniforms and so forth are admitted free, and cloth to be used in waterproofing is charged 7½ per cent. *ad valorem*, blankets 15 per cent., furniture drapery 20 per cent. and all other kinds of woollen materials 25 per cent. The new tariff is to be 35 per cent. on non-British goods and 30 per cent. on British. This means on some kinds of British tissues a barbaric increase.

Cotton tissues, of which £3,471,171 worth was sent to Australia last year, are at present admitted under various scales of duty, the highest being 25 per cent. *ad valorem*, but a variety of small articles, such as bindings and webbings, tassels, surgical bandages and so forth, are admitted free, while piece goods used in waterproofing are charged only 7½ per cent. *ad valorem*. On tents, sails, flags and tarpaulins the duty is now 5 per cent. *ad valorem*, and on velvets, velveteens, plushes, ribbons, lace and flannelette 15 per cent. *ad valorem*, as also upon curtains, towels, handkerchiefs, trimmings and embroideries. Apparently this classification is to be simplified and most seriously to our disadvantage, since British cotton goods of all decriptions are to be charged 15 per cent. *ad valorem* and foreigners 20 per cent. The silk tariff is also to be pushed up in the same insidious fashion, although nominally it looks lower, a general tariff of 20 per cent. on non-British and 15 per cent. upon British goods being substituted for a mixed tariff under which certain small articles are admitted free, sails and flags at 5 per cent. *ad valorem*, piece goods to be used in the manufacture of cloth with indiarubber at 7½ per cent. *ad valorem*, other piece goods and ribbons at 15 per cent. *ad valorem*, cosies, cushions, mantle and furniture drapery, bed covers, &c., at 20 per cent. *ad valorem*, only unspecified tissues being charged 25 per cent. Arms and ammunition, of which Australia imported last year £590,120 worth, are also now admitted under various scales of duty or else put upon the free list, what are called match and cadet rifles as well as military rifles being at present duty free. Under the new tariff goods of this class, if of foreign origin, are to be charged 5 per cent., and the duty on British goods will be 3 per cent. Other rifles and shot guns are at present admitted under a 10 per cent. *ad valorem* duty, while revolvers, air guns, stores, &c., are charged 15 per cent. The duty on these last-named is not to be raised, but a change is to take place in the tax put upon most rifles. This is now to be 10s. per rifle for the foreign made article and 5s. per rifle for the British. How this works out the manufacturer will be better able to say than we are, but it does not seem much of a boon.

Most kinds of cutlery and tools are at present free, although there are certain exceptions like "waving" tools, on which 20 per cent. *ad valorem* is charged. Plated cutlery is also charged 20 per cent., and the general duty on cutlery not specified is at present 15 per cent. *ad valorem*. Saws, for example, are now admitted free of duty, but will be charged 20 per cent. *ad valorem* if British and 25 per cent. if foreign under the new tariff. The duty on plated goods is to remain the same for British, but will be raised to 25 per cent. on foreign made articles. Mining machinery is at present admitted free, but will be now charged 25 per cent. if British and 35 per cent. if foreign. The same process is applied to electrical generators and motors, which are now either free or charged only 12½ per cent. *ad valorem*. The new tariff proposes to raise the duty on British goods of this description to 25 per cent., and to add 5 per cent. additional on the foreign article, by way of ornament. To us, however, the duty is just doubled. Last year we sent upwards of £100,000 worth of electrical goods and apparatus to these colonies. What will we be able to send now? Still another class of taxed articles are china, porcelain, &c., and the present duty on such, as well as on earthenware, brownware and stoneware goods is 20 per cent. *ad valorem*. The new tariff will raise the duty on china and porcelain to 25 per cent. if the goods are British and 35 per cent. if foreign, while on earthenware the new duty is to be raised to 30 per cent. on British goods and 35 per cent. on foreign. The present duty upon wooden furniture imported is 20 per cent. *ad valorem*, the new will be 30 per cent. for foreign goods and 30 per cent. for British. Watches are to remain under the present tariff scale of 20 per cent., so far as our producers are concerned, but the foreigner will have to face 30 per cent. Articles employed in the manufacture of boots and shoes are at present admitted free, but rubber and sand shoes are charged 20 per cent. *ad valorem* and infants' boots and shoes and slippers 15 per cent. *ad valorem*, while on boots and shoes completely manufactured the present duty is 30 per cent., except certain classes, including goloshes, together with uppers, soles, &c., which are admitted at 25 per cent. *ad valorem*. The new tariff is apparently to be inclusive, and under it British boots and shoes will be charged 30 per cent. and foreign boots and shoes 35 per cent., but it would seem that goloshes and slippers will be reduced from 25 per cent. to 20 per cent. for British productions, though kept at 25 per cent. for foreign. On slipper forms and miscellaneous stuff, much of which at present is admitted free, the respective foreign and British duties will be 10 and 5 per cent. Paper-makers, however, should have no cause to grumble at the new tariff, and perhaps this has been thought of in framing it, as several of our newspaper proprietors are also paper-makers. At present most printing papers are charged 15 per cent. *ad valorem*, and they will now apparently be admitted free. On the other hand, what are called browns, which at present pay 3s. per cwt., will have to be charged 6s. 6d. per cwt. if foreign and 6s. if British. The duty on stationery remains at 25 per cent. to the home country, but is raised to 30 per cent. on foreign productions. To balance, printed papers will pay 6d. per lb. instead of 3d. as now.

Still another class of article is composed of bicycles and tricycles and motor-cycles with parts thereof, the duty on which is at present 20 per cent. *ad valorem*, but the new duties will mostly be specific and are proposed at £5 5s. for the foreign article and £5 for the British, or, if valuation is resorted to, 30 and 25 per cent. *ad valorem*. On motor-cycles the duty is to be £10 10s. for the foreign article and £10 for the British. Cycle parts at present charged 10 per cent. *ad valorem* will be 20 per cent. when the new scale becomes law, with an extra 5 per cent. put against the foreign manufacturer or exporter. Pianos are now charged 20 per cent. *ad valorem*, but the duties on most of these also will now be made specific and range from £10 10s. each on grand and semi-grand pianos charged to the foreigner and £15 each levied on the home producer, with an alternative of 40 per cent. *ad valorem* to the foreigner and 30 per cent. to us, to £5 10s. on foreign and £5 on British upright pianos, also with the alternative of respectively 40 and 30 per cent. *ad valorem*.

All descriptions of horse vehicles are admitted at present at 25 per cent. *ad valorem*, but minor articles used in the manufacture of vehicles are admitted duty free, as well as certain unspecified vehicles and parts thereof, including parts of motor vehicles, on which 20 per cent. is charged. The new duty is split up and made specific, two-wheeled vehicles on springs being charged £6 12s. each to the non-British producer and £6 to the British, while on buggies the specific duty is £9 18s. each if of foreign production and £6 if British. Hansom cabs, single and double-seated wagons and wagonettes, four-wheeled buggies with tops will be charged to the foreigner £13 4s. each and to the home exporter £12. The duty on mail and passenger coaches is to be £27 10s. each to the foreigner and £25 to the home manufacturer, but on berlines, broughams, drags, landaus, mail phaetons and Victorias the duty levied upon non-British producers will be £44 each vehicle as against £40 charged to us. So far as *ad valorem* duties remain they will be 30 per cent. to the foreigner and 20 per cent. to us, except for certain unspecified vehicles, on which the duties will be respectively 35 per cent. and 25 per cent. Here again we

are unable to say what the increase amounts to, but the duties are surely prohibitive enough in most instances, and we are unable to see what good is to arise either to the colonists or to anybody else through the imposition of drastic fines of this description upon the products of industry.

The question, however, has a much graver aspect than that which merely relates to the handicap put upon our manufacturers and exporters, and we are thankful that Australia has been endowed with self-government. Were it not so, we should almost certainly be embroiled with some of our best customers because of this bare-faced and unstatesmanlike effort to penalise their productions, an effort the real motive underlying which would seem to be anything but friendliness to us. The foreigner is penalised, we judge, in order to try and beguile us into thinking that our interests are not to be ruthlessly sacrificed. But through the agency of British merchants and shippers £2,552,447 worth of foreign and colonial merchandise was exported by us to the colonies last year, and surely this trade alone will be very severely punished and disorganised, if not killed, by the proposed new tariff to our additional hurt, while those Continental and American manufacturers who have hitherto sent their goods direct to Australia will suffer still more severely and will often find themselves wholly shut out. It is conceivable enough that if the German Empire felt its trade seriously affected by a so-called preferential tariff of this description, and its rulers thought they could bring us to book, something like a tariff war might be started by this ill-judged Australian measure. Happily we are free from this risk, but a step such as the Federal Government of the Commonwealth is now taking cannot add to the friendliness of nations or tend to improve the commercial intercourse between the British Empire and countries outside its borders. What the effect of a measure of this kind is likely to be upon the people of Australia themselves we shall not now attempt to estimate, but we have grave fears that under the blight of this drastic tariff, should it be passed into law, social disorders will breed, slum communities arise and progress in many directions be seriously retarded. The prime interest of young countries like these Australian settlements lies in the direction of filling the land with prosperous cultivators, in spreading the population over the land instead of huddling it into towns where want supervenes and discontent. The Australian tariffs hitherto in force have contributed to gather the people into cities already altogether overgrown when contrasted with the sparseness of the rural population. The new tariff will intensify this tendency. Huddled in towns, the masses will be more and more divorced from the soil, more and more become dependent for a living, which may soon become a precarious living, upon a scattered rural community whose fortunes will also be rendered increasingly precarious by the enhanced cost of nearly everything they will have to buy when the new tariff comes into force. The prospect does not seem altogether cheerful, and we cannot but regret that a tariff of this description should ever have been thought of, still more that it should be gravely put before the citizens of the Commonwealth, as well as before the British people, as something generous and beneficial to them and to us. Its enforcement might contribute powerfully to give the Japanese the industrial hegemony of Asia.

Rhodesian Goldfields, Limited.

The *Morning Post* has got hold of the official report in bankruptcy upon this company now in liquidation, and in publishing extracts from it we are glad to see our views endorsed by it regarding the inexpediency of withholding these official papers from the Press. This is done under the specious shelter of "counsel's opinion," the true reason for the reticence being a determination on the part of the departmental oligarchs by whom we are ruled to protect their society friends as much as possible from independent criticism and wholesome exposure. Good administrator though Mr. Lloyd George is, he does not appear to be strong enough to break through the interested class secrecy thus established, and the *Morning Post* had to get its copy of Mr. Burgess's report from "a correspondent."

A most instructive report it is from many points of view and full of entertainment, because the senior assistant official receiver has done his duty without favour and with much ability. In the summary of accounts presented by him a deficiency of £417,202 is displayed against contributories, and set off in a mirage sort of way by an estimated surplus of £83,581 on the accounts between the company and its creditors. Altogether this company has had the handling of over £640,000 of shareholders' and creditors' money, including £58,000 received in premiums and debentures for over £80,000. We judge that most of this money has been lost, and the board has received within three years upwards of £3,250 in fees for losing it. Up to the date of the winding up order, and since December 31, 1903, general expenditure had run away with £54,718, leaving £2,591 then due. Between December 31, 1903, and February 28, 1907, the conductors of the company wrote off about £23,612 for losses and depreciation, and the losses and depreciation "not written off in the company's books" came to nearly £449,000 more, against which income from all sources, including £19,888 drawn from the "reserve fund"—presumably capital—come to no more than £112,259. Hence the above noted shortage.

This seems a sufficiently remarkable example of directorial zeal and business capacity as illustrated by the board and managers, but our dominant feeling after looking at the facts is one of thankfulness that the product is not worse. For the poor Rhodesia Goldfields Company had an Atlas-bending task given it to do—a task of absorption and upholding, no less than the duty of putting stock market life into many other concerns in which its promoters, Messrs. Partridge and Jarvis, had an interest. "Purchases of shares on the company's behalf were made through the agency of Messrs. Partridge and Jarvis," who "gave instructions to brokers on behalf of the company," and shared said brokers' commissions. The same firm converted its agency business, whose profits, Mr. Burgess says, never appear to have exceeded £1,000 per annum, into "Rhodesia Agency, Limited," with a share capital of £100,000, and bye-and-bye the Rhodesia Goldfields, Limited, took the thing over altogether, paying apparently £100,000 in paper for it. The largest shareholders in the Agency Company were Partridge and James, who received £39,525 in debentures and the same amount in Goldfields shares for what they surrendered, the debentures being secured on the assets of both companies. That was lucky, surely, or perhaps, for the Agency business has disappeared, and the £100,000 standing in the books of the Rhodesia Goldfields against it is worth to-day never a brass farthing.

But an equal capacity was shown to realise handsome losses in other directions, and in the way of gambles on the Stock Exchange money disappeared like the traces of a summer shower. At first brisk profits came, and were not netted. Then the *tertian ague* of markets played its part, and the ultimate loss on the book value of "investments" in Matabele mines, Matabele Gold Reef and West Nicholson Gold shares was no less than £240,896. All the time this kind of business flourished Messrs. Fuller, Wise, and Fisher looked after the accounts, audited them, and generally kept a presumably vigilant eye on how the money went. They acted as bookkeepers in general for the whole group in fact, and do not seem to have thought themselves overpaid at £1,000 or even £2,000 per annum, which they at last attained as annual "honorarium," for they also got separate fees as auditors from each of the companies of the group—100 guineas latterly from Rhodesia Goldfields alone—and Mr. Burgess does not seem to be altogether pleased about it. This is what he says, and here we must leave the entertaining history for this week:—

> The Official Receiver is unable to point to any instance in which the dual capacity of Messrs. Fuller, Wise, and Fisher has resulted to the detriment of the company's interest, but in his opinion the position was most undesirable, and must have rendered it difficult

for them to maintain the independence of action so necessary to auditors. Under Section 21 (3) of the Companies Act, 1900, an officer of a company is made incapable of appointment as auditor, and even if the present case was not within the terms of that provision, it should have called attention to the danger of the position.

Economic and Financial Notes.

Transvaal Guaranteed Loan.

Particulars about this forthcoming issue have now been made public, and are, on the whole, of a reassuring description. The loan, as already intimated, is to amount to £5,000,000, but the Ministers of the colony state that probably not more than £1,000,000 will be required before June 30, 1908. The whole sum is to be divided into two equal parts of £2,500,000 each, one-half being devoted to the establishment of a Land and Agricultural Bank as recommended by the Commission, and the other to railways, public works, irrigation, agricultural settlement and development, all worthy objects on which to spend money. They ought also to be remunerative objects, for there can be no question that a judicious feeding of agriculture with capital lent at moderate rates of interest will do much to bring back vitality, and we should hope durable prosperity, to the farming and pastoral industries in the Transvaal. The expenditure on railways is also expected to increase the earning power of the lines, and the money to be laid out on public buildings will, it is said, save the greater portion of the annual rental charge of £50,000 which the revenue has at present to bear. There are certain other services provided for in the loan schedule which will not be immediately reproductive, but such services are not to be immediately undertaken—will perhaps be postponed until the general finances of the colony assume a more satisfactory aspect. At present they do not seem to be particularly flourishing, and it is interesting to note that in spite of the outpouring of borrowed money to the amount of £35,000,000, which was the total of the guaranteed loan issued after the war, the revenue for 1907-8 is estimated at no more than £4,469,000. A few months before the war the estimate of revenue for the year 1899-1900 put forth by the Government of the South African Republic was £4,462,193, of which £1,200,000 was expected to come from Customs, £482,000 from gold prospecting licences, £322,327 from the railway, £275,000 from transfer dues, and £200,000 from stamps. What the particular branches of revenue in the estimates for the current year may be expected to produce the memorandum sent by the Acting Governor to the Secretary of State does not state, but the expenditure is estimated to exceed the revenue by about £51,000, although the revenue estimates include a new income, £40,000, expected to be gathered from the beer excise of fourpence per gallon. That is not the yield of the tax for the entire year, but even if it were fully included the deficit would not be made good, since a full year's income from the beer tax is put at only £60,000. Some reduction in administrative expenditure, however, is looked for to reduce the deficit, and the outlay upon the South African constabulary is also to be cut down, so that the accounts should balance on the right side at the year's end. It seems a pity that a full exhibit of what has been done with the £35,000,000 loan already granted to the Transvaal is not now furnished for the information of Parliament and the public. What became of all that money? Only £2,550,000 of it seems to have allocated to the Transvaal and the Orange River Colony for public purposes, the one receiving £1,300,000 and the other £1,250,000, all but £85,000 of which appears to have been spent. What has been done with the remainder of the loan? Has it been frittered away? Are any accounts available relative to the land settlement scheme which was so much talked and written about a few years ago? We are not objecting to this second loan—that would be useless and ungracious—but it is just as well that we should not put our names to bills even for rich colonies without inquiring with some minuteness into the way help already granted has been utilised.

The Finances of Cape Colony.

They assuredly cannot be described as flourishing, and although Mr. Walton, the Treasurer, tells us that "it is unnecessary to cry stinking fish just yet," we are really unable to see where the comfort comes in. The revenue has fallen, he said, from £11,250,000, which it was four years ago, to £7,000,000, and the growing use of colonial products has interfered with the Customs receipts, although it may have been good for the country. The railways show a deficiency of £218,650, and on other public services the loss was £421,840 in the year ended June 30. Expenditure exceeded income by £640,455, an appalling deficit for a small and comparatively poor community. The gross accumulated deficit since 1903-4 is £2,261,500, reduced, however, to £912,847 nett by debt redemption to the amount of £1,348,653. Cape Colony, nevertheless, has no business whatever to be spending £8,373,696 in any one year, yet so feeble is the effort at retrenchment that for the current year the expenditure is put at £8,062,821, and a deficit of £298,261 is budgeted for. The retrenchments talked of amount to £355,000 in the salaries of the public servants, and Dr. Jameson's Cabinet is also valiantly bent upon increasing taxation, but diamonds are not to be directly taxed; that would not at all suit a Government which embraces members of the De Beers Company, the real governing force still in Cape Colony. The income-tax, however, is to be graduated, and in a manner that looks fantastic. Incomes up to £10,000 are not to be burdened with any addition, but the tax on incomes of from £10,000 to £20,000 is to be raised to 1s. 3d. in the £. On those between £20,000 and £100,000 1s. 6d. in the £ will be levied, and on incomes above £100,000 the toll 1s. 9d. in the £. How much will all this do to reduce the deficit? Beyond De Beers, where is there any individual or corporation in Cape Colony in the enjoyment of an income of £100,000 per annum? This kind of budget-framing appears to be trifling with a very serious state of affairs. But the cry for federation in South Africa on the part of the Cape and the Natal Governments is sure to grow in volume and shrillness in proportion as the plain policy of retrenchment and honest taxation is shirked, for soon again, as heretofore, the one chance to avoid open insolvency will seem to lie in the absorption of the wealthy Transvaal. When is the next Cape loan coming?

A Debenture Trust.

The subjoined mixture is calculated to pay the investor over 4½ per cent. on the prices given, which are those of the mid-week. All the stocks seem to us of a good kind and reasonably well secured.

Central Vermont Railway 4 per cent. mortgage bonds enjoy the guarantee of the Grand Trunk Railway of Canada, and their immediate security is the line running from St. Lambert, opposite Montreal, to New London, on Long Island Sound. It forms an important link of the Grand Trunk system, and we do not think that in the worst circumstances conceivable there could be any danger of default.

City and West End Properties 4 per cent. debenture stock is also a tolerably good security, although we fear there can be no doubt that the company is over-capitalised. It is the inferior securities, however, that suffer from that defect, and this stock is not only secured on the leasehold properties possessed by the company in various parts of London, but the principal of it is protected by a policy taken out with a leading insurance company, the premium on which ranks as a charge upon revenue before the preference dividend. There is a speculative element in the stock, but it is discounted in the price.

No particulars are published about the brewery business of E. Lacon and Co., which is a pity. We should be glad to see all semi-private brewery companies follow the example recently set by Messrs. Bass

and Co., but, from all we can gather, we think this company's first mortgage debenture stock would probably stand higher than it does if the facts were known. According to the figures published when the debenture stock was originally issued in 1894, the freehold, leasehold, and copyhold properties possessed by the firm were worth £136,582, and it had also £135,947 out on loans and mortgages, apart from cash, book debts, and miscellaneous assets. As the issue we have in view is the £200,000 4 per cent. first mortgage stock, that ought to be amply covered, in spite of the fall which has taken place in the value of licensed premises. The stock is redeemable at 110, at the company's option, after 1914, and there is a second debenture stock amounting to £300,000 ranking below it.

Another much over-capitalised company is the Apollinaris and Johannis, but even its 4 per cent. irredeemable debenture stock seems to us a security that deserves attention at 85, at less, of course, if you can get it. The business is a good one, and yields quite sufficient revenue to meet the dividends on the preference capital, although the dividend on the ordinary shares is squeezed out with difficulty. The worst about the debenture stock is its amount, £850,000, but here also the risk is discounted in the price, and there should be enough property of one sort or another to protect even this amount of stock.

Finally, there is the Rangoon Electric Tramways 4½ per cent. debenture stock still to be picked up under par. It is a new enterprise, formed at the beginning of last year to take over the existing steam tramways in Rangoon, and convert them to electric traction. In addition to the tramways, the company has the promise, at least, of a fair income from the supply of electricity for motive power and light. The old tramway system was a small one, yet its nett earnings were more than sufficient to pay the debenture charges, and the new system has been much extended. A considerable portion of it was opened in February last, and we understand the traffics have been good. Dividends are payable on this stock in January and July, on Apollinaris stock in March and October, and on the Lacon and City and West End Properties debenture stocks in June and December.

	Price.		Cost.				Interest.

Bass, Ratcliff and Gretton, Limited.

A very steady and, we should judge, satisfactory business was done by this powerful brewery company in the year ended June 30 last. The nett profit, before charging interest on debenture stock, was £11,274 greater than in the previous year at £372,106, while £1,632 more was brought forward at £9,350. It follows that the amount available for distribution was raised to £381,456, out of which interest on the debenture stock, the dividends on the preference stock and an interim dividend of 5 per cent. on the ordinary stock swept away £216,800. Out of the balance the ordinary shares received another 9 per cent. making 14 per cent. for the year, or the same as twelve months ago, while £30,000 is added to the reserve fund against £20,000 then, bringing it up to £1,400,000, leaving £12,256 to be carried forward. The balance-sheet shows no change in the capital account or in the amount of the debenture debt, but the contingent liabilities on mortgages appear to have declined by £21,376 to £98,339, while the company owes directly £9,595 more on mortgages included under "creditors," the total of which is now £85,613. Deposits are less by £21,280 at £178,868. Amongst the principal assets are cash at bankers and in hand £162,888, investments—£200,000 in Consols, written down to 85 and taken into the balance-sheet at £170,000, the figure a year ago having been 88, together with railway debenture and preference stocks and sundry other shares and debentures taken at current quotations or valuations, the total amount of which is about £177,000, making the entire investments £346,876. Debtors on trade and loan account, less reserves, have risen by £46,477 to £2,108,987, and the stocks of barley, malt, &c., &c., including casks and movable plant, show an increase of £46,812 at £887,895, the total of the balance-sheet, including £3,031,018 set down against properties of all descriptions, goodwill and trade marks, being £6,542,556. From the profit and loss account we learn that some £52,000 more has been written off on various accounts, the total being £231,000 for the past year as against about £179,000 for the previous year. Slightly less has been devoted to repairs and renewals of premises and plant, but depreciation has been allowed for to the extent of £70,464 which is £13,723 more, while £38,889 more at £112,637 has been set aside for bad and doubtful debts, depreciation on investments, &c., &c. Gross profits on sales of the brewery productions came to £886,441, and other income, including rents, interest and dividends to £119,655. Whatever happens, the preference and debenture stocks of the company would appear to be more than well secured, and there is nothing in legislation past or threatened that ought to terrify holders into selling.

Waring and Gillow, Limited.

The directors, after expressing their deep regret at the death of their late chairman, Mr. Samuel J. Waring, and intimating that Mr. S. J. Waring, jun., has become chairman, proceed to speak with no small complacency about the business of the company for the year ended December 31 last. They dwell on the successful progress of the company, its daily increasing reputation, its difficulties surmounted and the eminently satisfactory results accruing from the opening of the new palace of luxuries at modest prices in the busiest centre of London's shopping district. Further, they recite the number of contracts in hand, and are, not without reason, self-congratulatory on the success with which they have entered into the business of fitting up and decorating steamships not only in the mercantile marine but in the Royal Navy and on the Royal yachts. All this activity and far-spreading business, they say, resulted in a profit for the past year large enough to meet the debenture interest, the dividend on the 6 per cent. cumulative preference shares and on the 7 per cent. cumulative ordinary shares, with enough left to enable them to write £10,000 off preliminary expenses and to add £20,000 to the reserve against £30,000 a year ago, making its total £165,000, with £14,926 left to carry forward or about £122 more. The total profit for the year would seem to have been £153,741, and it is by no means an excessive amount when we consider the enormous magnitude of the company's engagements and the total of the capital involved. The balance-sheet foots up to £3,368,810 without taking into account at all £859,694 of mortgages and charges upon the properties owned by, leased to or in the hands of the company, deducted before the value of these properties is brought into the balance-sheet, and ranking ahead of the company's own debenture stock so far as they are affected. Altogether the debts of the company, either upon properties in which it is interested or for which it is directly responsible, in the shape of debentures and amounts due to creditors, exceed £2,260,000, and we should imagine that many an inconvenient conjuncture of affairs arises in the conduct of trade where credit is so liberally drawn or depended upon. The directors, however, are to be congratulated upon the improved balance-sheet, which now shows the amount of these charges upon properties and investments hitherto hidden, and also the amount of the goodwill,

which figures at the sufficiently handsome total of £579,549. Stock in trade and works in progress, taken together, show an increase of £41,738 at £528,631. Cash and investments (including interest in allied companies) in hand and deposited, less reserve for depreciation—an item we cannot make head or tail of—is put down at £418,637 nett or £9,246 more, but the gross amount is £737,921, the smaller figure being reached after deducting £319,284 borrowed against the security thus created. Debtor balances, independent of these, are up by no less than £284,390 to £802,462, which surely is rather suggestive of overstraining. Freehold and leasehold properties are put at the gross figure of £1,283,525, but there are mortgages and other prior charges on these to the amount of £540,410. Preliminary expenses, it should be added, remain at £43,995, this being in connection with the debenture and share issues and the premium paid on the redemption of the "A" debenture stock, "less amount written off," a legend also rather of the *lucus a non lucendo* type. What the cash may be or what the true position of the company is in regard to dependence on credit we have still no means of knowing in spite of the improved balance-sheet, but we notice that the auditors, Messrs. Franklin, Wild and Co., C.A., gave their certificate "subject to our report to be submitted to the shareholders in general meeting." That is not a clause we like to see, and yet the business is a magnificent one.

The Canadian Pacific Railway.

The revenue of the Canadian Pacific Railway for the year ended June 30 was greater than that of many a kingdom. Put in dollars it came to $72,217,528, and after meeting working charges amounting to $46,914,219, or barely 65 per cent. of the gross income, a brilliantly low ratio, there was a nett income of $25,303,309, or over £5,600,000. This is exclusive of the unreckoned on nett earnings from the steamboats, presumably from the lake vessels, giving $723,629 and $1,040,832 from other sources. These added brought the total free revenue up to $27,667,790, or, say, £5,550,000, and fixed charges took only $8,511,576 of this, leaving $19,156,034 to be otherwise dealt with, or nearly £4,000,000. The directors have been quite unable to stow all this money away, in spite of the fact that they propose to pay a dividend on the ordinary stock at the rate of 6 per cent. per annum, besides a supplementary dividend at the rate of 1 per cent. per annum, drawn from the interest received on the proceeds of land sales. With all this done, there will still be $9,339,000 left to carry forward. Thus the Canadian Pacific Company appears to have falsified the anticipations of all who at one time regarded it as a doubtful, if not a dangerously speculative enterprise, but then it opened up a new world, and has hitherto had that world almost entirely to itself. Is it backing the "all-red" boodle for the sake of its dead-loss Pacific mail service?

American Business Notes.

A superficially favourable change took place in the New York Associated Banks' averages for the past week, loans and discounts being down £3,300,000, and deposits £4,480,000 less. Unfortunately, the specie and greenback reserve fell off by £1,062,000, so that the surplus reserve was inappreciably better at £1,553,000, and the market continues as strained and uncomfortable as ever, with every prospect of money becoming extremely dear before many weeks have past. As yet, it has not risen much above 6 per cent. on call, and has been often 4 per cent. or less. Six per cent., however, has become about the lowest figure for time money, and there is great difficulty in getting loans for long terms at anything like reasonable rates. What the decrease in the loans and deposits means nobody seems able to say in any intelligible fashion. It is probably the mere shifting about of commitments, but one fact is clear enough, that New York banks are in no position to stand the autumn drain to the West, and the prospect is rendered all the more ugly by their impotence as against European markets. Last autumn when the internal pressure became acute, New York was able to import gold from London and within a fortnight took £3,185,000. The sentimental effect of that arrival of gold was enormously valuable in quieting public apprehension, but this year the strain is the other way; Europe is clamouring for gold in all directions, and in the face of rising charges for short loans in New York the exchanges on Europe are going up. From facts such as these we cannot but infer that the coming autumn is going to be a season of grave stress in American banking and finance. Already demands are being made that the secretary to the Treasury should come to the rescue of the market by lodging Government deposits with the banks. But if this be done, and money is in consequence made cheaper with exchanges rising, exports of gold are sure to be resumed. Even without the Treasury help call money has become cheap towards the end of the week, and the consequence has been a further sharp advance in the exchange.

How terribly the blight on the stock markets is we can, perhaps, estimate in some degree from the second failure which the municipality of New York City has encountered in its efforts to place a new loan. It tried to get out about $29,000,000 on June 28 last in 4 per cent. bonds and only sold $2,122,000. Last week it again tried to place $15,000,000 in 4 per cents. at par, viz.: $13,000,000 to consist of bonds running for 50 years, until May 1, 1957, together with $2,000,000 in ten year assessment bonds, and the total sales amounted to $2,712,000. When New York is unable to place a security of this first-class description, the market must be indeed in a stifled condition, and we cannot see how it is to be saved from further liquidation, so much has it outrun discretion in its commitments, so deeply is it wounded by the operations of the meteoric financial world-slingers.

Following the calamity that overtook the large steel manufacturing firm of Milliken Bros., some time ago, the failure of the Pope Manufacturing Company of New England is now announced, and in both cases the assets are declared to be ample. Money, however, could not be procured to finance maturing debts, and there was nothing for it but to suspend payment. The Pope Company is the largest of its kind in New England, a leading producer of automobiles and bicycles. It took over the business and properties of the American Bicycle Company in 1903, and has a share capital of £4,500,000, of which £2,000,000 is in 5 per cent. preferred, £500,000 in 6 per cent. preferred, and £2,000,000 in common stock or shares. Can it be that industrial businesses are being starved in order that the Stock Exchange may be propped up?

The figures of the Pennsylvania Railroad's earnings and expenses for the month of June are just as unpleasant as those we have already frequently drawn attention to. The gross earnings on the entire system east and west of Pittsburg rose by $2,647,800 in the month, and only $634,400 of that remained as increase in the nett income. With the half-year ended with June it is just as bad, since the two important branches of the Pennsylvania system together earned no less than $14,235,000 more than in the first half of 1906, an increase of well on to £3,000,000, but all this except a paltry $1,218,000 or £244,000 was swept away by increased expenses such are the effects of the higher wages obtained by the men and of the enormously enhanced cost of materials of all descriptions. The railroads, in other words, are being insidiously ruined by the tariff and its consequences. The tariff and the trusts together will, when supplemented by the blind indignation of the public, play havoc with all this class of investment. Meanwhile industries flourish, and as yet give no indication of serious recoil. We have already dealt with the United States Steel Trust for the past quarter and its brave exhibit of profits; its exhibit also of a policy which the

New York *Chronicle* describes as having been directed towards "raising the corporation to a state physically and financially where it could pass through a lean period without experiencing any serious ill effects." The lean period is almost at hand, if not quite upon us, but the production of iron in the United States for the first half of this year was altogether dumfounding, amounting as it did to no less than 13,478,000 tons, or more than Germany and England make, or ever have made, in any entire year. So tremendous is the speed with which the American iron production has gone ahead that last half-year's output was greater than that of any entire year prior to 1899. Mr. James Swank, the able secretary of the American Iron and Steel Association, points out that as late as 1894 the production of pig-iron in the entire world amounted to only 25,600,000 tons, whereas the production of the United States alone for the first six months of this year has been at the rate of 27,000,000 per annum. What is done with the metal? A large part of it is made into rails, more or less brittle, which the Trust and its associates have sold to the consuming railroads at the uniform price of £5 17s. 8d. per ton since October, 1900. That is for "standard" rails, lighter kinds being charged £6 16s. 4d.

The President of the United States appears to be at the present time a man deserving of much sympathy. Within the lines permitted to him under the conditions attending his election he has striven to bring about reforms, and much popular support has been bestowed upon him in his attacks upon those trusts and monopolising corporations by which the American people are robbed. Now, however, he is confronted by serious dangers in two directions. First of all the financiers have laid their heads together with a view to squelch him, to prevent his administration from going on with the exposure and punishment of trusts constituted on a basis inimical to the public interest, and then he, or rather the machine he governs, has come into collision with the individual States through the zeal with which some of these States have sought to out-distance him in devising checks to be put upon the railroad and other corporations. The parties struck at claim to have been injured and are raising a tremendous opposition. Many of the individual States, however, are up in arms against the trusts, and some of them have sought to regulate railroad affairs and otherwise to interfere with the conduct of the common carrying business of the Republic. They have passed laws and sought to impose penalties. Appeals by the corporations attacked have been taken into the Federal Courts. Thus conflict has arisen or threatens to arise between State and Federal jurisdiction, and the trouble might become serious enough, not only to put out of sight all possibility of another term of office for Mr. Roosevelt, but to involve something like a political crisis such as that which preceded the slavery Civil War.

It is stated that the St. Louis Car Company has arranged to place £600,000 of its 7 per cent. preferred stock in France, such stock to have no voting power. Also the same company is contemplating an issue of £300,000 in six short term notes, which some say will be used as collateral or additional security for the share issue.

American papers report the purchase by Messrs. J. P. Morgan and Company of the balance of the $26,000,000 5 per cent. convertible bonds of the Atchison, Topeka and Santa Fé Railway Company not sold when recently offered to the public. This balance is said to amount to about £3,000,000, and report puts the price given by the firm at 98 or 98¼. Messrs. Morgan are offering the bonds to the public at 100¼ plus interest. Another item of news is to the effect that the Consolidated Gas Company has sold £1,000,000 of 6 per cent. one-year notes at a price that yields the buyers about 7 per cent.

The Calumet and Hecla Mining Company of Boston, Massachusetts, used to be without question the finest copper mine in the world. It is still a great mine, but we are not sure that its directors are not now entering upon a policy which may bring them affliction. They have begun to imitate the Standard Oil people by acquiring an interest more or less "controlling" in a number of other mining companies. We do not gather that this has been done because the company's own ore beds are becoming exhausted, and the only object we can guess at is a desire to reach out towards something like a monopoly of the production within a certain region. Particulars are given in the report just issued of Calumet and Hecla holdings in no less than eight such companies and the money risk must be considerable. In addition to mere financial contingencies, however, the company is threatened with pains and penalties by the State of Michigan, which has entered actions against it on various grounds, one being that it is contrary to Michigan statute law for any company to own more than 50,000 acres of land. Apart from this rather unpleasantly suggestive side of President Agassiz's story, the record for the year ended June 30 last was again one of unusual prosperity, the company being able not only to distribute dividends aggregating 300 per cent. on the paid-up capital, but to show a balance of assets at the end of the year amounting to $7,029,000. The paid-up capital of the company is only £500,000 and the amount distributed in dividends for the past fiscal year was £1,500,000 as against £1,000,000 distributed in the previous year and £900,000 paid away in 1904-5. The wealth thus disclosed, however, does not all come from the additional amount of copper produced, although that was rather larger than in the previous year, but almost entirely from the trust-made high prices, which cannot be expected to continue. During the twelve months the price of copper varied from 18¾ cents to 26¼ cents per lb. From the higher of these figures it has been since steadily receding, and the lean years may be at hand.

Passing Events.

It is the opinion of Mr. Sears, M.P., that the work of the Inland Revenue should be separated from the work of the Divorce Court, and we feel disposed to agree. But there are other reforms which Mr. Sears sketches out equally to the purpose, and he deserves the vigorous assistance of income-tax payers in his attempts to put an end to the odd mixture of trained efficiency, ineptitude, nepotism, incompetence, spying, indulgence and multiplication of red-tape nuclei now so characteristic of the department. The other day we came across a letter from a local "assessor" addressed to a taxpayer which showed that the man had been unwarrantably prying into the recipient's private affairs. At the same time returns and particulars are being demanded from the victim by the "assessor" of another district. The waste of money on stationery alone thus induced must be heavy, and the waste of time and temper to which the unhappy victim is forced to submit is unassessable. Simplification, concentration, the removal of the busybody, and a well ordered co-ordination of functions might, if wisely carried through, almost make the tax tolerable.

What the *Times'* Tokio correspondent happily describes as the "three great capitalists of Japan" either have done or promise to do well by the country this year. These are the barley crop, the silk crop and the rice crop. Already the barley has been harvested and the yield has been far above the average. The silk crop is also excellent, "promises a record year" and rice, incomparably the most important crop of the three, was also promising well at the date of the letter, July 4, for the rainy season had been "ideal." All these helps and more Japan requires, not for this year, but for many years, to sustain her in her labours of Hercules, but a good harvest now should do much to mitigate the consequences of over-speculation last year. Japan, in short, has had to be in the fashion with a gambler-induced crisis on its Tokio Bourse. So severe was this that securities valued on the market at £83,500,000 or so on January 18 last had fallen to £50,350,000 by June 17, although in the interval nearly £10,000,000 additional had been paid up on

them. This is the story of Tokio alone, but the same shrivel occurred elsewhere, so that the total fall or loss is put at £50,000,000 as a minimum by the *Times'* correspondent. Japan survives and her markets seem to be recovering tone.

The gentlemen who have been quietly busy for some time in restoring prosperity to Cornish mining deserve a word of encouragement. The speculative element will doubtless become visible in this quarter as always where mining is prosperous, but it does not appear to be visible in such enterprises as the South Crofty, whose report is before us. The company's manager, Mr. C. F. Thomas, tells of much work unostentatiously accomplished, and the directors are able to say that the whole of the expenses incident to the work of reorganisation have been met, leaving a profit of £1,040 which has been used to write off existing debits. But then the company got an average of £150 5s. 6d. per ton for its wolfram and an average of £111 13s. 1d. per ton for its tin and the demand for wolfram is so keen that a second separator has been ordered and is now in course of erection. "Underground developments are now far ahead of the 40-stamp Californian mill" is another item of pleasing information, and the remaining 32 heads of Cornish stamps are now being taken out to make room for 20 more heads of Californian. There seems to be plenty of ore everywhere, and near the surface too, with good prospects at depth.

Enthusiastic news agencies must be labouring under some mistake. It is impossible to believe that a man of the age and business experience of Lord Strathcona could have gone over to Canada to assure Sir Wilfrid Laurier and his colleagues that the British Government is favourably disposed towards that fantastic "All-Red" mail route project and ready to further it as soon as the plans have been perfected on the other side. If his lordship has been guilty of an indiscretion of this kind he is likely to be rudely disillusioned when he returns. The strength of our present Ministry is decidedly not on its financial side, but however pliant and ill-informed the Chancellor of the Exchequer may be, he is not likely to be so far left to himself as to commit the country to any scheme of this worse than "wild cat" kind. Surely even permanent officials have had a severe enough lesson in the "All-Red" cable fiasco which cost so much money and is such a dead loss. Whether or not, publicists with the good of the Empire at heart will do well to keep an eye upon this shipping and railroad subsidising scheme and on those who are trying to get it carried through at our expense. Its backers do not really care at all for the Empire, and by the very fact that they are promoting an enterprise of this description proclaim their uttter indifference to existing British commercial interests. What help can the threatened Atlantic mail services of the country give the journalist and politician in combating this dangerous and unprofitable adventure?

There is really to be a Brazilian Federal Loan for the State of San Paulo, and not all the efforts of the prudent or frightened financiers on this side have been able to keep it back. The sum is to be the £3,000,000 already reported, and we hope San Paulo will make a profit on the money. Its Government has entered upon a conflict with the coffee middleman, which is obviously proving, as wars usually do, much more costly than had been originally estimated. It will have the sympathy of all enemies of "forestallers and regretters," but sympathy will not pay debts, and the loan will not be easily raised just at present. We hope the tyranny of the financier will not in the end prove to be more galling and profit-sapping than that of the coffee crop gamblers has been in past years.

Last month's output of gold in the Transvaal and neighbourhood was 532,711 ozs. fine, of the value of £2,262,813. This is an increase of 25,152 ozs. in weight and £106,837 in value on the June output, but there is one more day in the past month. Even so, no trace whatever is to be found in the return of any loss springing from the recent strike of white miners, and the average daily yield of gold was higher last month than in June. It amounted to 17,184 ozs. per day as against 16,918 ozs. in June and only 15,864 ozs. in July, 1906. Added to the returns for the first six months of the year the value of the total output for the seven months has been raised to £15,595,305, and if gold were really the salvation of nations, all Money markets ought to be perfectly happy at this splendid result. Unfortunately, abundance of gold is often the reverse of a blessing, and the gold hunger develops in many directions besides that exemplified in the recurring furores of the share market.

The German Money market is just as unhappy as our own and prices of German Government stock are at a considerably lower figure than Consols. German 3 per cents., for instance, have dropped below 82 and the 3½ per cents. stand at 92½d, the fall in these two stocks having been 10 to 15 per cent. in the course of the past ten years. Yet Germany has not had any war to finance nor are the affairs of the Empire suffering from any peculiar distress. What, then, is the cause? The main cause is the wasteful expenditure of the Imperial Government, whose budget, superimposed upon those of the various individual States, has become an intolerable burden. The German people have also extended their industrial and mercantile enterprises by means of borrowed money, or by what are called operations in finance, to an extent far beyond their present strength. It would therefore be little or no remedy, as some suggest, to force the savings banks to invest a larger proportion of their money in German or Prussian Consols. The proposal appears to be seriously made, and were it adopted the next state of the German Money market would be worse than the present. It seems these banks hold over £500,000,000, and the less of that they give to the custody of the Government the better for their ultimate solvency. But savings bank money or none, the bourses will have to go through with their liquidation, and money promises to be again very dear in Germany before the end of the year.

We are glad to see that Chile has no intention at present of issuing a loan for £10,000,000. The loan actually required is one of £3,000,000 only, and will take the form of Treasury bonds of one or two years' currency, the money to be used in the reconstruction of Valparaiso and of the ports and railways damaged by the earthquake. This is a legitimate and necessary "borrow," and we hope the money may be obtained on easy terms.

We cut the following from Thursday's *Manchester Guardian*, no London paper that we have seen having given questions and answers with the same completeness. It is to be hoped that Mr. Myer will not take Mr. Asquith's refusal of a Committee as a final rebuff, for that gentleman is merely screening the permanent officials, and will have to give way before long or take the consequences. The insolvency of the Post Office Savings Bank is too patent and notorious, the improvidence of its administration also, to make it possible for the most thick-skinned of Chancellors of the Exchequer to resist the demand for investigation much longer. And no one ought to know better than Mr. Asquith the composition and purpose of the Committee of 1902. It was given the task of finding a way to conceal the ghastly mess into which the Government Savings Bank has drifted, and it did what was required of it.

Mr. Myer (L.—Lambeth) asked the Chancellor of the Exchequer whether there were at the present time deficiencies in the capital accounts of the Post Office Savings Bank, the Trustees' Savings Bank, and friendly societies estimated to amount to at least £15,000,000, and whether he would consider the advisability of appointing a Select Committee to inquire into the whole question.

The Chancellor of the Exchequer (Mr. Asquith) said the hon. member's calculation of the capital deficiency rested upon the method of valuation of securities at current market price, which was condemned as misleading by the Select Committee of 1902. As regards the deficiencies of annual income, it must be borne in mind that in the case of the Post Office Savings Bank the Exchequer had gained considerably more than the surpluses on that account in former years than it had had to provide to make good the deficiencies of recent years, while the deficiency on the

Trustees' Savings Bank's account last year was less than £10,000; and was being gradually reduced. The position of these funds was fully inquired into by a strong Committee of the House five years ago, and he did not think that anything had since happened to require the appointment of a new Committee.

In answer to a further question from Mr. Myer,

The Chancellor of the Exchequer said that the total nominal amount of Consols purchased on account of the Post Office Savings Bank Fund in 1897 was £6,349,485, and the average price paid was £112.

MINING NEWS AND NOTES.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Mining markets had a little spurt of cheerfulness in the tail-end of last week, but the holiday air is still very apparent, and it only needed a little selling from Paris, coupled with talk of trouble in Berlin, to dispel any hopes there may have been of reviving business. Monday was contango day, and that gave dealers something to occupy their time, but otherwise there has been little enough doing in most sections. Carrying over rates on South Africans were much the same as at the last settlement, ranging at 6½-7½ per cent. on the general run of things, with Randfonteins and Johnnies done at 5½-6½ and East Rands at 3½-4½ per cent. On Rand Mines, however, the rate was 3½-4½ per cent. against 4-5 per cent., and on Modders it was 4½-5½ per cent. against 5½-6½ per cent., while on Gold Fields the charge rose from 4½-5½ to 5-6 per cent. In the Diamond section the contango on De Beers jumped from 1½ to 4 per cent., and then eased off again to 2 per cent., but the rest of the favourites were continued at 5½-6½ per cent. Rhodesians, too, cost the same as before—viz., ½d.-1d. on Chartereds and 6-8 per cent. on the others, and the latter was also the general range on West Africans and most West Australian things, the only exceptions being Oroyas, Perseverance, and Great Boulders, which were down at 5½-6½. On Australian Copper shares and on the American contingent 6-8 per cent. was likewise the ruling rate.

Making-up prices were nearly all in favour of the "bears," but, as might have been expected from the stagnant condition of the markets, the changes in Kaffirs rarely amounted to as much as ¼. In Diamonds, however, De Beers lost as much as ⅞, Roberts Victors were ¾, and Montrose ½ lower, while Premier preferred were a brilliant exception with a gain of ¼. The Australasian group contributed falls of 1⅜ in Kalgurlis and ¼ to ½ in Broken Hills, and a rise of $\frac{3}{16}$ in Talismans. Siberian Proprietary dropped $\frac{9}{16}$ and Sesan ¼. Copper things generally showed sharp declines, the heaviest being losses of 1⅜ in Great Cobars, 1$\frac{3}{16}$ in Utah Consols, and 1$\frac{1}{16}$ in Bostons, but the movements are not surprising in view of events in the metal market.

The new account opened without much animation, and although a certain amount of option dealing caused one or two of the principal South African counters to harden, the changes on the week were insignificant enough. While Kaffirs were idle, speculators struggled hard to arouse interest in Rhodesians and made play with Tanganyikas. The alleged reason for this activity was a favourable report from some unnamed expert who had recently visited the property, and some tall talk of the shares going to £50 was indulged in. So far, however, the nearest to that figure that the shares reached has been 4$\frac{13}{32}$, and even that was not held for long, the nett gain on the week being only 5-32. Other things in this group have not moved more than 1-32 in either direction. In Diamonds De Beers fell pretty sharply at first, but recovered the greater part of the loss on "bear" covering. Premiers took the opposite course, rising at first, only to drop back, and New Vaal Rivers moved steadily downwards, but Roberts Victors followed De Beers.

Apart from a little movement in Amalgamated, West Africans were left to themselves, and Egyptians were equally neglected. Kalgurlis were in demand from the colonies, and Lake Views met with some support on the cable announcing the continuance of good ore at the 1,900 ft. level, but otherwise Westralians were dull and Horse Shoes might almost be called flat. The Broken Hill group suffered from forced liquidation in the early part of the week, rallied again on the removal of the selling pressure, but closed dull on the position of the metal market.

Copper shares were the worst section of the markets throughout the week, prices tumbling rapidly in sympathy with the fall in the metal. Tintos, as usual, acted as bell wether and at one time slumped to 72¾. Better advices from New York, where a fresh cut in the price of electrolytic was ignored, helped to bring about a rally, but it was not long-lived, and a fresh relapse carried the price down to 72, but just at the end a few covering orders caused a spurt to 73½. Anacondas also fell heavily, and the news of the termination of the strike did not help Arizonas in the slightest. Tharsis exceptionally advanced a fraction or two at the outset, but the improvement disappeared in sympathy with the general weakness, and Mount Lyell, after rising slightly, slipped back on the death of a large shareholder, while Great Cobars dropped on Dutch liquidation. Tin shares were not influenced by the fluctuations in the metal, as they tended to improve when the metal was falling and relapsed when it hardened.

Amongst Miscellaneous Mines Americans were better under the influence of a demand for Esperanzas, but the inquiry brought out shares, and the market eased again. Le Roi No. 2 fell back to an appreciable extent, and the Alaska group was also lower. The downward movement in Siberians made further progress, but Indians and New Zealands were steady.

The mineral output of Southern Rhodesia for July was:—Gold, 54,271 ozs.; silver, 13,421 ozs.; lead, 67 tons; coal, 9,677 tons; copper, 7 tons; scheelite, 9 tons.

Mount Morgan Gold Mining Company.—In the twelve months ended May 31 the output of oxidised ore from the open cut workings dropped by 14,837 tons to 120,373 tons, and the yield owing to a reduction in the grade was 17,569 ozs. less at 35,313 ozs. At the same time, the quantity of sulphide ore treated was 6,730 tons larger at 115,466 tons, but the proceeds were only 2,504 ozs. up at 61,370 ozs. Receipts from gold sold and in transit, therefore, dropped by £69,248 to £413,553, but a very considerable increase was shown in the receipts from blister copper at £479,500, and with £39,068 from copper precipitate, £2,311 from sundries, and £4,922 from the previous account the total revenue was £939,354 against £546,703. Expenses came to £571,618, and dividends paid took £162,500 or £12,500 more, leaving a balance of £180,536, out of which £50,000 is set aside to form a reserve fund and £30,000 for an insurance fund, and £24,699 is written off for depreciation. A final dividend of 1s. 3d. per share then took £62,500, leaving £13,337 to be carried forward. The only item in the balance-sheet requiring mention is a contingent account of £52,521, which the directors explain has arisen from surpluses on copper shipments already sold, and is due to the advance in the market value of the metal while in transit to the refinery. Any reclamations that may occur through fluctuations in the market will be charged to this account, which has been opened as a safeguard against possible violent depreciations. With regard to the question of the erection of an electrolytic refinery for treating the blister copper in Australia, instead of shipping it to America, negotiations were entered into with Messrs. Hirsch and Sohn, of Halbustadt, Germany. These resulted in the formation of the Electrolytic Refining and Smelting Company of Australia, in which an interest was secured for this company, and an agreement for the treatment of all blister copper for a period of ten years has been arranged on terms that will effect a considerable saving compared with present charges.

Main Colliery Company.—Work at the No. 1 pit belonging to this company was seriously hampered during the year ended June 30 by an influx of water, while an explosion at the Court Herbert Colliery interrupted the raising of coal and involved a heavy expenditure for reopening the workings. The output consequently fell off to 318,976 tons, and on this a nett profit of £15,802 was earned, after providing for administration charges and writing £428 off investments. Adding £15,350 brought forward, the disposable total was £31,161, out of which dividends aggregating 10 per cent. have been paid on both preference and ordinary shares, £10,000 is put to reserve for capital expenditure and depreciation and £1,000 to steamer insurance and depreciation, leaving £5,161 to be carried forward. Freehold and leasehold properties, plant, &c., less £15,000 received for wagons, are valued at £298,794, and against this the reserves of various kinds amount to £157,212, of which £23,665 is separately invested. Creditors are fairly heavy at £26,671 and £4,636 is due to the bankers, but, on the other hand, debtors owe £30,059, stocks are valued at £10,436 and bills in hand amount to £2,226.

Russian Collieries Co., Limited.—The accounts are made up to April 30 last, and both the figures and the report show that the year was not a good one, in spite of the fact that £5,102 more was earned than in the previous year at £13,650. This sum, however, was not enough to meet the whole of the London charges, and the year's operations resulted in an increase of the debit balance of the profit and loss account from £3,839 to £6,862. The district where the company's collieries are has been less disturbed than it was in the previous year, but the period of unrest has left a legacy of high costs, and the company, the directors say, cannot hope to make large profits as in the past until its output is materially increased. Therefore it is proposed to create and issue £50,000 in profit-sharing debenture stock, which will take precedence of the existing debenture stock, whose holders have already sanctioned this new charge. The new stock will be offered to shareholders and debenture-holders, so that they can provide the money if they so please. We trust it will be sufficient, the more so as the company is already about £277,000 in debt under one form or another.

"O.K." Copper Mines Development Syndicate, No Liability."—That seems to be the complete name of this North Queensland copper company, whose 10th half-yearly meeting was held, presumably at the company's head office in Cairns, North Queensland, as long ago as May 29 last. We confess we never heard of the company until the present report reached us, but it seems to be prosperous, and we gather that dividends, amounting to about 50 per cent. for the half-year, were distributed on the paid-up capital of £33,745. The shares are 2s. shares each fully paid, and as there are 112,550 of them in reserve it is quite possible that we may hear more of this undertaking. It has no doubt gained something by the high price of copper, and will be ready to welcome opportunities.

Iron, Steel, Coal and Allied Companies' Results.—We have received from the *Joint Stock Companies' Journal* a card, handy for hanging up in the office, containing an exhaustive comparative statement of the profits, reserves, dividends, &c., of upwards of 100 iron, coal, steel and allied companies. It is reprinted from the *Journal*, and covers a period of three years. The price is 1s., post free.

Letters to the Editor.

BRAZIL RAILWAY COMPANY.

SIR,—We notice an article in your esteemed publication of the 10th inst. in reference to the Sorocabana Railway, which has been leased by the Brazil Railway Company, and beg to point out that the loan of £3,800,000 referred to was issued by the Dresdner Bank in 1905, and is not a new loan about to be issued.

The issue is referred to in the Stock Exchange Official Intelligence, page 115.

The Sorocabana Railway has now been leased to Mr. Percival Farquhar and Mr. Hector Legru on behalf of the Brazil Railway Company, which also controls the Sao Paulo and Rio Grande Railway (1,200 miles in length).

Important extensions to the Sorocabana Railway are being built by the State of Sao Paulo at its own expense. These extensions should further increase the large surplus already being earned by the Sorocabana Railway, and benefit the Brazil Railway Company.

The most important of these extensions is the one linking up with the Sao Paulo and Rio Grande Railway at Itararé. This extension is in active construction, and, when completed, will provide through connection between the City of Sao Paulo and the States of Parana, Santa Catherina and Rio Grande do Sul.

Yours faithfully,
DUNN, FISCHER AND CO.

41, Threadneedle Street, London, E.C.,
August 13, 1907.

MILLARS' KARRI AND JARRAH COMPANY (1902), LIMITED.

To the Editor of THE INVESTORS' REVIEW.

DEAR SIR, May I point out a couple of errors in the notice with reference to this company that appeared in your issue of 10th inst.? The amount of £60,013, taken from the profit and loss account for 1906, is the figure struck before, not after, deducting debenture stock interest. Again, the profits for 1906 do not show a decrease of £12,029 as compared with those for 1905, but a decrease of £3,131 only. The larger figure must have been arrived at by setting the amount of profit for 1906, after charging administration expenses and income-tax, against the balance of the trading account for 1905 before those charges were brought in.

Perhaps you may think it well to make a correction in your next issue.

Yours faithfully,
ROBT. L. ALLEN, Secretary.

72, Bishopsgate Street Within, London, E.C., August 14, 1907.

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

B.M.—In the present state of the market we think you should avoid Nos. 5 and 6, but see no objection to a small purchase of Nos. 1, 2, 3, and 8. About No. 7 we have doubts, mainly because of the present state of the market, and the rather too distended condition of that particular industry. Still, no harm might come from the holding of a few shares. No. 4 ought also to be all right, but you might wait a little before buying, as the market is heavy with unplaced stuff. Of those we have mentioned as the best to purchase, we should put No. 8 first, No. 2 second, No. 1 third, and No. 3 fourth.

Cropper.—We almost think you had better take the profit upon these shares, because a reaction seems impending in that particular trade.

P. M.—All are about equally good, but on the whole we prefer the first named.

Cardigan.—We should be disposed to take the profit on, say, half of your holding.

Grasmere.—No. The price is not tempting at present.

LONDON AND COUNTY BANKING.—Liabilities on July 31, amounted to £46,147,203 on simple contracts and £2,538,211 on acceptances, against which the assets were £9,010,305 in investments, £11,037,032 in bills of exchange, £19,077,205 in loans and advances to customers, £6,022,202 in cash at the Bank of England and on hand, and £2,405,443 in money at call and notice.

Coupons due September 1 of the Imperial Japanese Five per Cent. bonds, 1901-1902 for yen 50,000,000 will be paid by the Yokohama Specie Bank, Limited.

PUBLIC INCOME AND EXPENDITURE.
